"Follow this argument to its rational conclusion. Suppose the railroads lowered their rates—which is clearly the aim—to such a point as would enable them to compete successfully with water transportation through the Panama Canal; then the freight would continue to move by rail from coast to coast, and the Panama Canal, so far as interior freight movement is concerned, would be idle. The railroads would either have made impossible profits before the opening of the Panama Canal—and their financial reports belie this—or they are now suffering heavy financial losses, on account of the lowering of these coast to coast rates. Therefore the natural and logical consequence of the ruling of the Interstate Commerce Commission is that the $400,000,000 for the Panama Canal is spent in vain, its only result being a heavy loss to our trunk lines. The writer goes a step farther and claims that, in consequence of the ruling of the Interstate Commerce Commission, a law should be made either forbidding the use of the Panama Canal to coastwise traffic or creating prohibitive tolls, thus permitting the railroads to do business on the old basis, as the United States can not afford to have railroad capital unprofitably invested.

"It is the opinion of the commission that, had the railroads been denied their request for permission to readjust rates to meet part way the lower charges via the canal, there was 'grave reason to think that the Atlantic seaboard is the future would have supplied by water the Pacific coast with the commodities in question, and that many industries in the neighborhood of Chicago would have either lost their Pacific coast customers or have been compelled to migrate nearer to the Atlantic seaboard'—or, the writer would add, be forced to use the Mississippi River.

"Under the original order of the Intermountain case, the carriers from the Missouri River westward were forbidden to charge more to an intermountain point than to a Pacific terminal. East of the Missouri River, the stringency of the rule was abated, so that from Chicago to intermountain points the excess charge permitted over the rate to the Pacific terminals was 7 per cent; from Pittsburgh, 15 per cent; and from the Atlantic seaboard, 25 per cent. The shrinkage of rates from New York to San Francisco by way of the canal put the transcontinental carriers in serious straits. On certain heavy commodities, moving largely by water, a serious loss in through earnings was inevitable, if the roads reduced their rates to the Pacific coast to compete with the lower water rates. In addition to this loss on through revenues, the commission points out, the carriers would have had to take a double loss in their revenues to intermountain points: First, because the intermountain rates would have to be lowered; and second, because the percentages over the terminal rates would have been calculated on a lower basis.

"Additional relief was sought by the carriers as to the rates on about 100-carload commodity items and about 50 less-than-carload items. These carload rates to the Pacific coast range from 55 to 95 cents per 100 pounds, and the less-than-carload commodity rates range from $1.10 to $1.75 per 100 pounds. These commodities are such as originate in large quantities at or near the Atlantic seaboard and are particularly adapted to water transportation, on which the rates are relatively low.

"On about 25 items which move in carloads from the Missouri River to the Pacific coast at rates of less than 75 cents per 100 pounds carriers are permitted to establish the rates proposed to the California terminals and to continue rates to intermediate points not higher than 75 cents per 100 pounds. On all other traffic rates from the Missouri River to the Pacific coast must be carried as maxima at intermediate points.

"From Chicago, Buffalo, and New York carriers are permitted to carry carload rates to intermediate points at 15, 25, and 35 cents, respectively, higher than from the Missouri River to the same destinations.

"Less than carload-commodity rates on articles classed as first or second class in western classification, which are less than $1.50 per 100 pounds from the Missouri River to the Pacific coast, may be exceeded at intermediate points, but the rates on such articles to such intermediate points must not exceed $1.50 per 100 pounds.

"Less than carload-commodity rates on articles classified as third class or lower in western classification, which are less than $1.25 per 100 pounds from the Missouri River to the Pacific coast, may be exceeded at intermediate points, but the rates on such articles to such intermediate points must not exceed $1.25 per 100 pounds.

"Less than carload-commodity rates from Chicago, Pittsburgh, and New York to intermediate points may exceed the rates from the Missouri River to the same destination by 25, 40, and 55 cents, respectively.

"Carload rates on coal and pig iron may be less to the Pacific coast than to intermediate points, but the rates on such articles to the higher rated intermediate points must not exceed 5 mills per ton-mile.

"A suggestion is made that rates to intermediate points near Pacific coast terminals may be made by adding to the rates to the terminals something less than the locals from terminals to destination or by making basing rates to the terminals less than the local rates to such points, to be used in connection with the local rates from the terminals to destination in making through rates from eastern points to points intermediate to the terminals.

"The Pacific coast terminals to which these rates will apply are the points at which the Atlantic-Pacific steamships deliver their freight.

"In December, 1914, Commissioner Harlan, in his dissenting opinion on the railroad rate increase, said:

"'I can not but think that a general increase in the standard rates of this country, while the rate structures of these carriers remain full of inconsistencies, discriminations, and wrongful practices that deplete their revenues, is morally wrong; that the placing of additional burden on the interstate commerce that is not also placed upon the State is also wrong; and that the course approved in the supplemental report will ultimately be as disastrous to the carriers themselves as it will be harmful to the general interest.'

"Commissioner Clements, in his dissenting opinion on the same question, said:

"'I can not but regard the action now taken by the commission as out of harmony with the spirit and purpose of the law and as taking a step that leads away from the sound principles necessary to conserve the ends of justice. If the legislative authority of the commission is as broad and unrestricted as this, then I must confess that I have gravely misunderstood the limitations upon our statutory authority as well as the constitutional power of Congress to delegate its legislative power. If now, to strengthen and maintain the credit of the carriers, regardless of the causes of its exhaustion or impairment and with the application of the usual tests of reasonableness, these increases are justified, then it seems to me that we are only at the beginning of what I fear will be a train of demoralized results, disappointing and embarrassing to all concerned. It is by no means certain that it would not in the long run be cheaper to

the public to guarantee the bonds of the weak roads unable to meet their obligations rather than for all to try to take care of them by increasing their rates, which inure to the strong roads as well as to the weaker.'

"The New York Times (Feb. 13, 1915, after the decision of the Interstate Commerce Commission became known) gave the railroad point of view in the following editorial, which, when read by engineers trained as such, will appear to them to be surcharged with inconsistencies and improbabilities:

"'The Interstate Commerce Commission has allowed the railways doing transcontinental business to modify the established rates in a manner to meet the competition by the canal route. The spokesman for the railways most concerned is pleased, but only moderately so. The railways would have liked a free hand to meet competition, without regard to other rates, whereas the commission still insists upon preserving a relation between the through rates and the intermediate rates. Moreover, only some 25 commodities are concerned in the decision. Its effect regarding earnings, therefore, is not so great as might be imagined, but the decision is important for another reason.

"'In principle it is the adoption of the railway theory of rate making over the ideal or commission theory upon some of the most contentious points in the long controversy. After a quarter of a century of regulation the commission finds itself under the compulsion of submitting to a control stronger than the law's. The economic consequences of its methods were so intolerable that it has been found necessary to defer to the methods which it was resolved to abolish. Having begun, it is difficult to say where the process of reconsideration will stop. The first step was the most difficult to take and the second step is longer than the first, with others just ahead.

"'Congress decreed that the railways should not charge more for a short haul than for a long haul which included the short haul. A higher charge for a shorter distance is indeed illogical, if there is nothing more to be considered. Congress, to provide for other conditions, gave the commission discretion to grant exceptions when conditions were unlike. The commission made a decision, which it now modifies. The length of the haul is subordinated to the necessities of competition by water, and the charge to intermediate points is to be calculated by adding to the through or competitive rate a charge for the "back haul"—that is, the haul back from the coast to the point passed on the way to the coast. The railways are not allowed to have an entirely free hand. The commission itself names rates not to be exceeded as a precaution against the railways raising the intermediate rates unreasonably in order to compensate for the reduction enforced by water competition. The main thing is that the earlier decision under the perplexing long-and-short-haul clause is set aside and that the effect of competition is recognized. It will be easier to break the rule on another occasion, and the tyranny of a theoretical relation of rates established by the commission itself is shaken.'

"The second reason given by the writer for the decline of water transportation in the United States is the obsoleteness of the river craft. In order that it may be clear how obsolete the present river boat is, there are submitted some comparative data between a modern self-propelled steel barge which operated on the Mississippi River between New Orleans and St. Paul, and the prevailing type of Mississippi River boat, the like of which, in one instance, constitutes the entire fleet of one of the least inefficient companies on the Mississippi River. The 1,000-ton, self-propelled, twin-screw, shallow-draft, steel barge, operated by two gas-producer engines, has been described in a recent technical paper (Engineering News, Dec. 4, 1913). The barge had a crew of seven men and a speed of 8 miles per hour when loaded with only 1,000 tons of cargo. It consumed fuel at the rate of 30 cents per hour, proceeding quietly, with the total absence of wave, so that a rowboat would hardly rock in its wake.

"The cost of this 1,000-ton barge complete, with all equipment, was $32,000. The average cost of a Mississippi River boat of like capacity is from $60,000 to $70,000. Such Mississippi River craft has an average crew of 54. Insurance on the barge was 4 per cent for fire and marine; on the steamboat it is 12 to 15 per cent; fuel consumption on the barge was 30 cents per hour, on the Mississippi River craft it is $4 per hour, both boats traveling at a speed of 8 miles per hour.

"The total cost of operation of the barge, including 6 per cent interest and all other charges (wages, fuel, supplies, subsistence, repairs, insurance, depreciation, etc.), was $2,100 per month; on the Mississippi River steamboat it is $8,100 per month.

"That these barges can be constructed strongly might be proved by the fact that the Lloyds Co. classified one of this type recently as 'A–1' for ocean travel. Compare with this the remarkable weakness of the present steamboat, which might easily be described as a raft consisting of several thousand dollars worth of junk; in fact, the prevailing Mississippi River steamboats are built of wood, tin, shingles, canvas, and twine.

"In addition to their weakness, these boats are distinguished by the frivolity of their management. In the past, races have been of frequent occurrence, and descriptions would be comical were they not pathetic sketches of the lack of efficiency caused by trifling with serious navigation.

"'No,' the riverman objects, 'our boats are not obsolete; we have kept pace with the times, and our boats are to-day a great improvement on those of the fifties.' The other day a captain said to the writer:

"'You are not familiar with the improvements we have brought about on our river craft; our steamers are now almost fireproof; we have patent tapered floors, balanced rudders, steel and asphalt decks; we have the improved tandem-compound or cross-compound piston-valve engine, steam capstan and steering machine, a locomotive type of boiler, wire railings and tiller ropes, electric lights, combined breeching shield and furnace damper, insulated pipe coverings, and many more important improvements that substantiate the statement that our present side and stern wheel steamers are the best type of boats for river craft in the world.'

"This enthusiastic description of the important improvements of the present Mississippi River boat, from one of its ardent champions, illustrates, better than anything the writer can say, their total obsolescence and inefficiency. However, this is not the only difficulty under which inland navigation in the United States is laboring at the present time. Added difficulties are the navigation laws and regulations. With a traffic of 50,000,000 tons on the Rhine, and a proportionately heavy traffic on the other inland waters of Holland, Germany, Belgium, and France, it has never been found necessary to make it compulsory to employ Government licensed labor; yet, with the small tonnage transported on the waters of the United States, the Government enforces the employment of licensed captains, pilots, and engineers, and now even of able-bodied sailors; and the latter licensed persons are permitted to form unions, and thereby create what might be the most absolute monopoly one can dream of. To this must be added the fact that, to all intents and purposes, there is a surplus of demand over supply of available labor in the market, so that one might frequently have to pay heavy traveling expenses to get a desirable crew together.

"Another trouble on our alluvial streams is the so-called 'Aids to Navigation.' Great difficulties are caused by the tardy adjustment of the Government channel lights, which adjustment, as a rule, is so much behind the actual changing of the channel, that the Government marks do not show where the channel is, but where it was. To offset this the Government from time to time publishes reports, of which the following are cited as fair examples:

"'Magnolia: From Crooks Lower Light to White Sand Depot Warehouse, until from the first big tree showing just under the head of Turkey Island, to the upper side of the upper bald rock on the lower side of Magnolia Hollow. (Channel depth, 12 feet both.) This is taking you out square under an upper reef. Over this way, until from the corner of the Willows opposite Crooks Lower Light to Magnolia Light (16½ feet channel depth).

"'Crooks: From the head of the big cotton woods on Establishment Island to the head of the Rip Rap shore above Crooks Upper Light, until from the Illinois point opposite Snells Point to straw stack nearest the river, showing half way between the two Crooks Lights, until from Fort Chartres Landing to head of Turkey Island (12 feet both). Going to the head of the big cotton woods on Establishment Island to foot of the first bunch of timber, about 300 yards above Crooks Upper Light, until from the Illinois point opposite Snells Point, to straw stack nearest the river, showing halfway between the two Crook Lights, until from Fort Chartres Landing to head of Turkey Island (12 feet both). Going to the head of the big cotton woods on Establishment Island to the foot of first bunch of timber, about 300 yards above Crooks Upper Light, until from the Illinois point opposite Snells Light to the same straw stack halfway between the two Crook points.

"'Montesano: From the field on the hill above Fines Fluff Light to Jim Smiths Upper Light (12 feet) until from the middle of the middle bar abreast of Fines Fluff to Waters Points Light. Down this way, passing the rock pile about 150 yards off, until from what shows the head of timber on the Illinois side above Jim Smiths rock light, to the first white house below foot of Montesano Light (no less than 10½ feet in the above marks).'

"In discussing this matter with George R. Putnam, M. Am. Soc. C. E., commissioner of lighthouses, the writer did not receive any other argument against the installation of the proper system than financial considerations.

"Now, considering the fact that approximately $100,000 is spent yearly on the channel lights of the lower Mississippi River alone, mostly showing where the channel was and not where it is, the writer asks: Is a slight increase, say of 15 or 20 per cent of the above cost, objectionable if it will secure a light system which shows always where the channel is, so that navigators may navigate on these lights instead of avoiding them? Is it just to criticize the navigators for a decline in their business under such conditions? What railroad could exist to-day if, instead of sending track walkers daily over the roadbed, it employed a number of high-salaried officials to go over the entire track once or twice a year with a special train and on returning home issue a report, after which another train would be sent out with the necessary crew and high officials to make repairs, as suggested by this report? Yet this is the very method adopted for channel lights on the Mississippi. Is the author correct in stating that the dwindling in traffic is proof that the availability of the channels is in advance of the use being made of them?

"Another obstruction to economical navigation is caused by the total absence of banking accommodations. Bills of lading are frequently considered as bank securities unless they happen to be for freight on inland water craft, and then the bank refuses them. With a blind mule or an automobile as security, one can get at least a certain percentage of its value as a loan, but with the cheapest tool of transportation—a river boat—one might well have to sift the entire United States in order to find a single man or bank willing to furnish reasonable banking accommodations.

"Yet the combined ship-mortgage banks in Holland, including all their losses, have made an average profit of 18 per cent per year during the last five years. In Holland, with a boat as collateral, one may obtain almost invariably up to two-thirds of its estimated value as a loan, at a rate which would show a total expense of 6½ per cent.

"Another important obstacle is the insurance rates. A barge carried from New Orleans to St. Paul, 1,921 miles, 90 tons of coffee, on which a freight rate of $4.25 per ton was paid. The insurance rate was 90 cents per $100 value, or $2.70 per ton, and the terminal charges were 0.43 cent, leaving a net total of $1.12 for carrying the ton 1,921 miles.

"This rate of insurance is actually several times larger than insurance on the same commodity from Brazil to St. Paul, provided it is moved by rail from New Orleans to St. Paul; and why is this?

"There are three reasons for this flagrant injustice: (a) The small inland water-borne traffic makes it no fair average risk; the laws of average are hardly applicable for this limited movement. (b) The insurance companies, like most of the people in the United States, do not take water transportation seriously; they are not willing to accept the movement as a growing one, as one with a bright future, and therefore they do not care to foster it, because they only see possible losses and not even the promise of a future. (c) Most of the insurance companies have invested their securities in railroad bonds, which circumstance seems to strengthen their belief that water transportation should not be taken seriously; at least they have no burning desire to foster it. Some may feel inclined to add a fourth reason by speaking of the 'river pool,' but the writer prefers to ignore this factor, as he has been successful, in his business, in doing without it, and therefore knows little about the working of this combine.

"The greatest obstacle and handicap to inland navigation in the United States to-day, however, is the absence of terminals. This is especially true of the Mississippi River, which is cited because its conditions are typical of the entire United States. On the Mississippi we are still living in the ante bellum days where the drowsy negro roustabouts draw the preposterous wages of from $80 to $100 per month, barring modern loading and unloading apparatus. We on the Mississippi are still content with mud levees, slippery and cumbersome, and feel fully compensated for economical inefficiency by the great smokestacks of our steamers belching forth clouds of smoke, in their large whistles which can be heard for miles, and in the wheels that beat the water up in waves higher than a man—steamboats having daily expenses which surpass the weekly expenses of more modern craft of larger capacity. So important is the terminal question that it may be said that the problem of inland transportation is more a shore than a water problem. Almost invariably the shore expenses are higher than the actual cost of transportation from harbor to harbor.

"With the present river terminals, the height of inefficiency seems to have been reached. The shipper must carry his freight by wagon over poor roads, move it somehow down a poorly paved and usually very steep bank, laboriously unload it by hand, roll it to the edge of a muddy levee, watch it until the steamboat may arrive, when it is carried piece by piece and stowed away under the towering superstructure of an American steamboat, amid a forest of deck supports; and the process must be reversed at the other end of the voyage. The only exception to these conditions is the city of New Orleans, where covered sheds are provided and where mechanical loading and unloading devices are now tried. Economical navigation of the stream or efficiency of the carrier are greatly handicapped under such conditions.

"The elimination of the steamboat gangplank, as the highway of water traffic, and the abolition of the roustabouts are necessary for the restoration of commercial activity on the river; and modern river terminals, constructed by the combined initiative of State and municipality, with a municipally owned belt railroad, are to take their place. The passing of the gangplank is to be marked by the construction of concrete walls, against which the craft may be moored for convenient loading and unloading by huge cranes.

"Instead of the droll chants of the indolent negro roustabouts, as they toil with the freight, we should hear the creak of machinery and the rattle of chains as the loads are hoisted from boat to warehouse. The old conditions along the levee must give way to immense warehouses and the mechanical handling of freight, if river transportation is to be revived.

"The present excessive terminal cost often offsets the advantage of the lower river rate as compared with the higher rate by rail. Without an exception there is no port in the Mississippi Valley at which freight can be transferred directly from car to boat, or vice versa, except with a heavy switching arbitrary, or by an added labor cost equal to from 10 to 50 cents per ton.

"For shipments originating or consigned locally, the drayage cost and the inconvenience of the present landings are such that each alone is sufficient to divert to rail routings a large volume of freight which otherwise would move by water at a distinct saving to the shipper, even under the other adverse conditions.

"Not only in quays and facilities for freight exchange between rail and water, or in loading or unloading devices, do these river terminals fall short, but even the most commonplace and every-day necessities have been denied to them in the United States in general, and to those in the Mississippi Valley in particular.

"Decent streets or trolley-car connections, even the telephone and telegraph, are strange and are improvements on the river banks. New Orleans, which is the best river terminal in the United States, can at least show sheds and a municipal belt railway (even if the latter is often expensive by being frequently far from the water). This city has only four trolley-car lines to a 9-mile harbor front, with an hour's walk between each; but what about all the other cities in the United States?

"St. Louis has no trolley car within four blocks of the used river front, four blocks which are paved with large, irregular cobblestones, with a slope on which it is difficult to walk, impossible to climb with horses, and dangerous to descend. Land anywhere on the river front of St. Louis and attempt to telephone, telegraph, or buy anything except beer and whisky, and one will notice the total absence of necessities for the serious-minded man on business bent. It is the same in St. Paul and all other large cities, and what is true of them is certainly true of all the smaller ones.

"These high terminal expenses are a serious menace to water transportation with the old-fashioned stern or side-wheeler, and are even more unproportionate and out of all reason where modern craft are used. The 1,000-ton, self-propelled barge that went to St. Paul from New Orleans in August, 1914, brought this forcibly to light. The most serious handicaps this barge encountered were terminals; in almost every instance it cost more to load and unload the cargo than to carry it to the place of destination.

"The New Orleans freight was received, watched, and loaded, including the receiving clerk's time, for a total of 26½ cents per ton. The time consumed for loading was 5 hours, or 46½ tons per hour, during which time the barge expenses increased at the rate of $3.86 per hour, or a total of $19.30.

"At Jeffries, La., 554.6 tons of lumber were received, being loaded and unloaded by the shipper. The loading took from Thursday at 3 p. m. until Monday at 10 a. m., working night and day and Sunday, a total of 91 hours, or 6.1 tons per hour. The loading cost the shipper 27 cents per ton. Loading the

lumber on the barge cost, in time loss, 91 hours, or $351.26. The entire cost of loading and unloading, to the shipper, was $245.72, and this, together with the time loss to the barge, expressed in dollars and cents, makes a grand total of $807.35, as compared with the transportation of the entire lumber cargo of 554.6 tons for $998.37, or $1.80 per ton to carry the lumber 1,000 miles, and $1.46 to carry it to and from the barge.

"With any proper semblance of an opportunity this lumber should have been loaded on the barge in 12 hours, causing a saving in this item alone of 79 hours, or $305, and it is safe to say that what now cost $807.35 to load and unload should not have cost more than $210 under fair conditions, permitting an increase or decrease in rate of 60 per cent.

"At Hannibal, Mo., 200 tons of cement were loaded at a total cost to the shipper of $73, or 36.5 cents per ton. This was done in 7 hours, or at the rate of 28½ tons per hour. As the best 'terminal facilities' were found here, a short description follows, the writer's criticisms being such as are justified by usual and average conditions in Europe.

"Hannibal is on the Mississippi, has a population of about 14,000, and has a fairly flat and low bank. The city seems to be prosperous and its streets are well paved and clean. The railroad station is practically on the river. The main line and some switch tracks of the Burlington Railroad are near the 'river terminal,' being about 80 feet from the water's edge. This is partly due to the fact that the river bank does not run in a straight line, but is irregular. From the switch track nearest to the water the bank has an easy slope to the river. The bank is paved with irregular cobblestones on which it is very difficult to walk, so that there is little wonder that the laborers who loaded the cement and crossed this path every minute for seven hours were far from efficient.

"The bank is approximately 4 feet above the water level, the side having an inclination of about 15° from the vertical. This bank is made up of stone blocks, which apparently were meant to be thrown neatly on top of each other and thus form a bank, but the work had been poorly done, for some of the stones were lying in the river in front of the wharf, and one could see the rock blocks on the bottom close to the bank, so that any barge coming near the bank and being gradually loaded would settle down on these sharp blocks to the great detriment of the barge bottom and preventing a quick departure after the boat was loaded.

"Just at what would be called the head of this 'river terminal' is the wharf shed of the Streckfus Line. This projects into the river about 25 or 30 feet, and in the angle formed between this wharf house and the quay there are some piles which are now rotten. To the south of this bank, about 150 feet from the Streckfus wharf, there is another wooden shed, but on the bank, and at that point the river terminal practically stops. A number of small and very frail motor craft and rowboats are anchored near by, the outermost one about 30 feet from the river bank.

"The writer desires to state that he is not exaggerating, but is really describing what he believes was the best landing place on the Mississippi River at that date, August, 1914, with the exception of New Orleans, and equal to those at St. Paul or St. Louis.

"On this bank the barge was to receive 200 tons of cement, at a rate of 50 cents per ton less than that by rail, or at two-thirds of the rail rate. It might be stated here that, besides the loss in time to the barge, the shipper, who saved $100 on his 200 tons by freight-rate differences, paid $103 for loading and unloading, causing in the final transaction a loss to him of $3, notwithstanding the fact that the rail rate for a distance of 400 miles was reduced 33 per cent by the barge.

"Owing to the slope of the wall and the visible rock at the bottom of the river, the barge was lying about 3 feet out from the bank; luckily, her bow happened to be at just about the same height as the river bank. The Atlas Cement Co., which was to load the cement, had arranged everything to the best of its ability. The cement was in eight box cars on the sidetracks. To bridge the 3-foot gap between the barge and the shore, a temporary platform was constructed.

"The contract of transportation made with the Atlas Cement Co. stipulated that the barge would carry no terminal facilities or any facilities whatsoever for the handling of freight, not even a gangplank, and that the loading and unloading was to be at the expense of shipper and consignee. The only gangplank on the barge was a 2 by 10 inch board for the crew.

"The cement was taken from the cars and placed on horse-drawn dump carts, which were then drawn across the 80 feet of bank to the platform, where they were dumped; there the bags of cement were loaded on hand trucks and rolled on deck to the place provided. This method of loading—at the best terminal on the Mississippi River except New Orleans—was the cheapest and occupied the least time.

"While the barge was being loaded a deck hand was kept busy sounding for rocks in order to prevent the barge from sticking on one of them.

"A switching engine was kept in waiting to move the box cars up to the place where they could be unloaded. The loading was done at the rate of 28 tons per hour. The wages of the engine driver and fireman amounted to, say, 84 cents per hour; or, only on their account, the cost of loading increased 3 cents per ton; or, on the tonnage moved in this instance alone, their idle time would have paid interest for the entire year on $100 worth of terminal equipment.

"Of the overhead charges of the barge, the book charges, hull insurance, and liability insurance, are affected directly by the time of loading. Indirectly, the traveling expenses and administration charges are increased; to this is to be added the proper proportion of wages, and fuel for light, subsistence, supplies, and tarpaulin hire, which give the amount to be used in calculating the money loss during the loading and unloading. For 54 days and 8 hours this gives:

Overhead book charge	$819.18
Hull insurance	221.68
Liability insurance	25.13
Wages	2,244.13
Traveling and administration expenses	1,017.52
Light	29.16
Subsistence	400.00
Deck supplies	270.72
	5,027.52

or $3.86 per hour.

"The total cost of loading and unloading the barge on this trip was $1,733.12, or 63 per cent of the gross freight receipts.

"As a final word about the problem of inland navigation the quarantine regulations which have to be contended with are worthy of a few remarks. Should there be bubonic plague in New Orleans and should a vessel leave for foreign harbors with a health and inspection certificate from the Federal health officers, then such vessel will see such certificate honored wherever it goes; but should the authorities in the first harbor it touches desire to have it go through certain formalities, then at least all subsequent harbors will not further bother the vessel regarding its stay in New Orleans; but should a craft turn its prow upstream and dare to remain within the jurisdiction of the United States officials, then any city or State health officer, regardless of any reasons to the contrary, and indifferent as to the number of former inspections and fumigations, may, on the boat's arrival within his 'sphere of influence,' stop, inspect, and fumigate to his heart's content; and so it came about that this steel barge, which was in New Orleans only six hours during the daytime, while the loading was in progress, and had been officially declared 'absolutely rat proof,' was frequently detained by the various health officials along the route until the very end of its journey. At St. Paul, 1,921 miles from New Orleans, 35 days after its departure, it received its last health inspection, although it had lain 5 days off Jeffries, 3 days at St. Louis, and shorter periods at various other places, had been officially fumigated, and had had hundreds of visitors. The writer firmly believes that it escaped more serious delay because many officials were puzzled as to how to fumigate such an air-tight, steel structure, which had an open engine room and pilot house, carried its freight out in the open on deck, had its hold sealed with water-tight bulkheads, and had a deck without hatches. It is possible that some of these inspections were due more to curiosity about the construction of the barge than to sanitary reasons.

"The barge left on July 6 at 4 p. m. and returned on August 29 at 2 p. m., a total of 54 days and 8 hours, including loading and unloading, and during that time covered 3,843 miles, spending 240 hours and 45 minutes in loading and unloading 1,182 tons. She lost 8 hours and 4 minutes on account of engine trouble, was grounded for 174 hours and 10 minutes, or waiting for the pilots to ascertain the location of the channel, notwithstanding the fact that at no time was a less depth than 6 feet found.

"The barge carried coffee, rice, sugar, cement, molasses, lumber, flour, paper, and chemicals. Out of the total of 1,921,000 upstream ton-miles capacity, it delivered 1,066,986 ton-miles, and of the 1,921,000 downstream ton-miles, it carried 183,181 ton-miles, or a total for the round trip of 32 per cent of the barge's capacity. The total gross receipts were $2,762.57, or 2.21 mills per ton-mile; the same freight moved by rail would have cost $4,932.98; thus the water rate caused a saving of $2,170.41, or 45 per cent of the rail rate, which was an average of 5.98 mills per ton-mile as against 2.21 mills per ton-mile by water or 4 mills per ton-mile over the same mileage—the rail distance being shorter than the water distance.

"The total expenses of the barge were high, and some items were out of all proportion on account of the lack of organization and other consequences of this 'isolated' trip—guests, extra crew, etc. For instance, the extra pilots, needed because the crew was totally unfamiliar with the route, received for this single trip in wages $1,014.13, or $18.67 per day, an item entirely in addition to the usual pay roll.

"Heavy expenses incurred through slow loading, etc., to a large extent caused by the fact that this was an isolated trip, all made the expenses extraordinarily high. Under usual conditions, with a regular service and more boats than one to carry all the overhead and administration charges, the total expenses would have been less than $3,500, but the total expenses for this 3,842-mile journey were $5,740.42.

"The overhead charges, including 6 per cent interest on investment, 6 per cent depreciation, one-half per cent for repairs not covered by insurance, harbor dues, taxes, traveling expenses, and traffic manager—who, on account of this trip, was six weeks on the road—his wages, advertisements, photographs, traveling expenses of general manager, office and administration expenses, telegrams, telephone, soliciting expenses, salary of clerks, etc., gives a total of $2,011.66.

"The following are the details of the cost of the trip:

Fuel	$261.37
Deck supplies	270.72
Subsistence	400.00
Engine-room supplies	140.00
Wages of crew, including supercargo at $150 per month	1,230.00
Extra pilots	1,014.13
Hull, liability, workmen's compensation, cargo and freight insurance	412.34
Overhead charges	2,011.66
	5,740.22

or a total of 1.65 mills per ton-mile of carrying capacity.

"Had the barge been fully loaded both ways, the gross receipts would have been $8,491, at the rate of 2.21 mills per ton-mile (the average of her freight charges), yielding a profit of $2,750.78, even under these adverse conditions, on this single trip, and this, notwithstanding the fact, that, in mills per ton-mile, the freight rate of the barge was 37 per cent of the rail rate, so that on the lumber alone the barge saved the shipper $1,300.52, making a rate of $998.65 as compared with a rail rate of $2,300.17, or $2,750.78 profit on a single trip, or 8½ per cent on the investment.

"The author argues that the United States is now in the second stage of waterway development. The writer might agree with Col. Harts if he would agree that we are now on the eve of the third stage and, as a matter of fact, going through the transformation stages.

"Conferences are frequently held between the various interested parties, shippers, navigators, and officials. Only recently a conference held in St. Louis resulted in a permanent organization for the creation of modern terminals in the Mississippi Valley. Various organizations have been formed, one of the most active being the Upper Mississippi River Improvement Association.

"Minneapolis is constructing a modern river terminal, well equipped with loading and unloading machinery, including a belt railway. St. Paul has similar work under consideration. Davenport has completed the first portion of her river terminal, Quincy has plans prepared, and St. Louis is making decided progress.

"New Orleans is spending $3,000,000 on river cotton warehouses, and the State of Louisiana has recently passed a constitutional amendment commanding the dock board to dig or acquire a canal from the Mississippi River to Lake Ponchartrain within the city limits, the canal to be used for river boats and the shores to be dedicated to private ownership, with warehouses suitable for river traffic. The writer believes that this canal will cost not less than $3,000,000. The Panama Canal has brought the two coasts together so that the Middle West can no longer compete with the Atlantic coast at the Pacific coast or with the Pacific coast at the Atlantic coast. A clear illustration may be given by citing a paper published by the Corn Exchange National Bank of Philadelphia on January 5, 1915, in which it is pointed out that since the opening of the Panama Canal general cargoes are being received at the Atlantic coast from the Pacific coast and transhipped by rail throughout 15 different States, including Kentucky, Tennessee, Indiana, Missouri, Illinois, Michigan, and Wisconsin. This means that the Atlantic coast warehouses and wholesale jobbers can undersell the Middle West houses in their own territory, and the only recourse the Middle West houses have is to establish warehouses at the Atlantic coast (which means becoming Atlantic firms), or to secure cheaper transportation to and from tidewaters than their rail rate is at present to the Atlantic or Gulf coasts.

"The writer has another reason for being confident that we are now approaching what Col. Harts calls the 'third stage.' During the past six months the writer has received more than 300 letters from substantial firms urging river transportation as a solution of their problems. In one city alone 181 firms have signed a binding pledge to ship all their freight by water provided the rates are less than those by rail and the freight moves faster than the average by rail. Many cities and commercial organizations have made public pledges supporting water transportation. One instance may be given: Hannibal, Mo., on March 18, 1915, made the following pledge:

"'We, the Hannibal Commercial Club, fully realizing the great necessity and advantages of an economical and efficient navigation upon the Mississippi River, hereby pledge ourselves on behalf of our members to patronize a Mississippi Navigation Co. through our members to the extent of 10,000 tons of freight outbound and 10,000 tons of freight inbound to Hannibal to be offered during the open season for navigation.

"'These 10,000 tons of freight every year to be evenly distributed from April 15 to October 15, providing that such navigation company that wishes to avail itself of this pledge maintains, at least, two sailings a week to and from Hannibal and eventually not less than three sailings a week; makes a rate of not more than 75 per cent of the current rail rate, which rate is to cover transportation from warehouse at point of origin to warehouse at place of destination, or to the bottom of the ocean carrier, and to absorb all the switching and transferring charges, provided the place of origin and place of destination are on the rail track, in lack of which the rate is to apply only from the dock or to the dock, as the case might be; provided further that such a navigation company include in its rate a blanket insurance against all damages and losses of whatsoever nature during the time that the cargo is in the possession of the navigation company.

"'*Provided further*, That such navigation company will only be considered to act as agent for the shipper or consignee where the freight is moved on through bills of lading over other carriers; and provided further, that such navigation company guarantees that the average time of transportation of cargo will not be less than an average of 100 miles per 24 hours from warehouse to warehouse.'

"Now, the question is, Can water transportation be cheaper and faster than rail transportation? The last contention will be discussed first. It is not generally known, but nevertheless it is a fact, that, with the exception of some through freight, transportation by water is faster than by rail. Freight from New York to New Orleans by water is delivered in five days. What time would be required by rail? The many carloads shipped from New York to the writer in Alabama rarely took less than 10 days, and more frequently 20 days. A barge entirely inadaptable for Mississippi River service, having only 150 horsepower for 1,000 tons carrying capacity, and spending 18 days for loading and unloading and other delays along the river, on account of the poor terminals and channel lights, averaged on its round trip 3 miles per hour, inclusive of all delay, which, however, is more than 72 miles per day. What railroads to-day can show such a speed in their average shipments?

"The writer does not want to use in this argument the oft-repeated statistics from the Interstate Commerce Commission 'that the average movement of a freight car in the United States is only 25 miles per 24 hours,' because the commission in reaching this figure has taken into consideration also the days that a car stands empty in the yards; but he affirms that no railroad in the United States can show an average movement of all its freight of more than 75 miles per 24 hours, and yet with a proper system it is very feasible to maintain on any water route an average speed of freight of 150 miles per 24 hours.

"Water shipments—even with the present-day obsolete steamers on the Mississippi River and its branches—are everywhere faster than the average rail movement, which, after all, is natural, considering the yard delays of the railroads. Anyone in doubt about these statements is cordially invited to make a trip with freight trains.

"The writer refers now to carload shipments, and a considerably stronger story is told if shipment is made in less than carloads.

"Many water transportation companies with which the writer has been identified have promised faster delivery than the railroads, except, of course, where they had to compete against milk or fruit trains—so-called fast or through freight-train service.

"For the foregoing reasons the writer reaches opposite conclusions when the author states that 'the usefulness of interior rivers as lines of communication has become much less important.' The great importance of these lines of communication is

just about dawning on the public. This, of course, is of value only if it can be shown that water transportation can be made cheaper than railroad transportation. That this is the case is quickly proved.

"Beginning with ocean rates: From the Pacific coast through the Panama Canal to the Atlantic coast, inclusive of canal tolls, the average rate is $6 per ton and the time of transport is 15 days. The average rail rate from coast to coast, in a more direct line, not paying canal tolls, is $22 per ton.

"On the Lakes: Nowhere in the world are coal and ore moved more cheaply than on the Great Lakes, where the average charge is 0.4 mill per ton-mile. Compare this with the ideal rate held up by the author when he states that 'some of the coal roads having easy grades and flat curves boast that their tonnage cost has been cut to 2.3 mills per ton-mile,' or approximately six times higher than the Lake charges.

"As to general package freight on the Great Lakes, this would still be handled at a great advantage over the rail rate were it not for the fact that water competition has been throttled by the railroads. To prove this the following is quoted from the Chicago Daily News of June 13, 1914:

"'On several occasions the Daily News has called attention to the throttling of water traffic between the Atlantic seaboard and western Lake ports. The Chicago Association of Commerce has been active in trying to protect the interests of shippers by keeping open the water route between this city and the East. Through its traffic expert, Henry C. Barlow, the association of commerce has made vigorous protests before the Interstate Commerce Commission against any further advance in lake and rail rates as a part of the present rate-raising move of the railroads.

"'New York City merchants are now beginning to wake up to the importance of the issues involved, though they are not meeting the situation with as practical suggestions as are offered by Chicago. In a recent report the Merchants' Association of New York calls attention to the facts brought out by the Committee on Merchant Marine and Fisheries of the National House of Representatives in that rail and lake and canal and lake rates have been advancing in recent years, while the all-rail rates have remained constant, with the result that shippers have found the water route less attractive.' (This is shown in Table 4.)

"'The recommendation of the Merchants' Association of New York is that the Interstate Commerce Commission requires the railroads to surrender all their boat holdings and leave the ownership and operation of boat lines on the Great Lakes to concerns independent of this recommendation. It fears the principal effect of it would be to diminish service. The Daily News has heretofore questioned the wisdom of this recommendation.

TABLE 4.—*Freight rates from New York to Chicago.*

Year.	Rate.	Classes.					
		1	2	3	4	5	6
1887	All rail	75	65	50	35	30	25
1887	Rail and lake	54	47	37	27	23	20
	Difference	21	18	13	8	7	5
1914	All rail	75	65	50	35	30	25
1914	Rail and lake	62	54	41	30	25	21
	Difference	13	11	9	5	5	4
1892	All rail	75	65	50	35	30	25
1892	Canal and lake	30	25	20	18	16	14
1913	Canal and lake	42	36	29	23	21	18
1913	All rail	75	65	50	35	30	25
1914	No canal and lake rates.						

"'The railroads now own all the boats in regular service between Buffalo and western lake ports. Driving those boats out of commission would do the public no good unless assurance could be given that others would be operated in their places. Independent lines do not develop quickly. The important thing is cooperation with the railroads so as to give satisfactory and cheap through service. Without that cooperation, independent boat lines would not help the public much.

"'The Chicago Association of Commerce made a more practical recommendation when it asked the Interstate Commerce Commission not to permit further advances in lake-and-rail rates between western ports and the Atlantic seaboard. The important thing is to establish rail-and-water rates that should be substantially lower than the all-rail rates, and thus afford to points on the Great Lakes the advantages to which their location on the water naturally entitles them.'

"As to rates on canals: Take the old Erie Canal as an example—a canal completed in the first quarter of last century, with practically no improvements since its construction, and which held its own until the latter years of the seventies—and to-day, with the old canal fallen into disuse, the average rail rate between Buffalo and New York paralleling this canal is $1.96, or 4½ mills per ton-mile, while the average cost in the United States is 7½ mills per ton-mile. Seventy per cent of the population of New York State is within 2 miles of this canal; 90 per cent within 9 miles. This old canal is hardly a ditch, permissible only to boats with a beam not wider than 18 feet and a length of 100 feet, entirely thrown into discard and not maintained in the last years on account of the new canal, yet to-day freight is moving through it, with the same old methods of a century ago, at a charge of 3 mills per ton-mile. Iron ore is to-day moved from Port Henry, Lake Champlain, through the Champlain branch of the Barge Canal and the Hudson River, to Kill von Kull, a distance of 260 miles, at a total charge of 80 cents per ton. So well is this canal thought of that New York State is expending $130,000,000 for a new canal constructed for more modern requirements.

"Through Lake Borgne Canal—8 miles in length, widened to 100 feet and deepened to 9 feet by the writer—freight has been moved at a charge of 0.4 mill per ton-mile.

"The New York State Barge Canal will reduce the cost of water transportation between Buffalo and New York considerably more, and reference is made to an article (International Marine Engineering, August, 1914) by the writer in which in detailed figures it is shown that the cost of transportation between New York and Buffalo can be reduced to 26 cents per ton for the basic ton—that is, a ton of 2,000 pounds and occupying a space of 40 cubic feet. Plans are now being carried out as suggested in a report made two years ago by the writer to a well-known steel corporation, by which it is expected to move iron ore through the canal at a cost of one-half mill per ton-mile.

"Can boats be built that will give as low rates on the rivers? Most decidedly, yes. The writer knows of no more difficult route in the United States than that from Tuscaloosa, Ala., to New Orleans, La. A description of the barges used on this route, with details of costs, etc., may be found in a recent technical publication (Engineering News, Dec. 4, 1913), to which the reader is referred.

"To-day these barges are moving coal at a cost of three-fourths mill per ton-mile over this route and returning empty. Just such a barge, entirely unfit for the Mississippi service, was used by the writer in August, 1914, in the trip from New Orleans to St. Paul and back.

"To illustrate how cheap and profitable inland navigation in general, and Mississippi navigation in particular, can be, the writer gives some figures which he compiled recently for a group of financiers, who, on the strength of them, have agreed to furnish the needed capital of $5,000,000 for the Inland Navigation Co.

"This company, by May, 1917, will place on the lower Mississippi, between New Orleans and St. Louis, five barges (one reserve barge), each of 3,000 tons carrying capacity and an upstream speed of 15 miles per hour, so that a schedule may be maintained of a 3,000-ton barge leaving New Orleans and St. Louis every Tuesday, Thursday, and Saturday.

"These barges will have a maximum draft of 7 feet, will carry 1,800 tons at 5 feet, their minimum draft, and will be propelled by four propellers. The power will be furnished by four gas-producer engines, with a total of 2,400 horsepower. The barges, entirely of steel, 310 feet long, 56 feet beam, and 9 feet depth, will have a weather-proof cargo box.

"Each barge will be equipped with wireless apparatus, motor launch, 15 water-tight bulkheads, three 9,000-candlepower searchlights, distant anchor placer—new patent—and many important factors of economy. Each will be manned by a captain, 3 mate pilots, 1 chief engineer, 3 assistant engineers, 2 oilers, 2 quartermasters, 4 deck hands, 2 clerk wireless operators, 1 cook, and 2 stewards, or a total of 21 men, with a combined monthly pay roll of $1,970.

"The complete cost of each barge will be $312,000. The estimated cost of operation is based on an open season of 8½ months to St. Louis, 9 months to Cairo, 10 months to Memphis, and 12 months to Vicksburg. During the winter freight will be received as during the open season, but will be transferred to railroads where necessary, and in the winter it is anticipated that operations, at least for the first years, will take place at an actual loss.

"The cost of operation of the barge is roughly as follows: Four per cent for marine, fire, public (property and life), liability, and cargo insurance; 6 per cent interest on investment; 1 per cent for repairs not covered by insurance; and 7 per cent depreciation (12 years life); a total of 18 per cent of $312,000, or $56,160 per year. For an every-other-day schedule, all fixed

charges, wages, crew's insurance, and subsistence are to be increased by 25 per cent to cover the reserve barge. Thus the total fixed charges are $280,800 per year. The working capital may be computed at the rate of $48,000 per barge, or $240,000; this makes a total needed capital of $1,800,000 for five barges. To this should be added auxiliaries, such as fast and powerful inspection tugs, each costing approximately $45,000, three of which are needed; two fast inspection launches for the management, at a total cost of $15,000; and a number of smaller launches stationed so that any stretch in the river may be reached within nine hours by any of these tugs or launches. There will be wireless stations at Memphis, St. Louis, and New Orleans, each having sufficient power to send messages a distance of at least 300 miles, the total cost of these stations to be $40,000. This, with $10,000 for office equipment and extras, makes $200,000 for extra equipment and shore installation, or a total of $2,000,000; 20 per cent over this capital as profit must, at least as a conservative estimate, be assured to justify capital to invest with safety in such a new enterprise to such an extent, which is $400,000 per year, or $100,000 per working barge, or $170,200 including fixed charges.

"In theory the barge will make the trip from New Orleans to St. Louis in 80 hours running time, but in practice, when fog, wind, engine troubles, and grounding play an important part, an upstream trip of 4½ days—which gives 35 per cent extra time—should be estimated.

"As explained later, the loading and unloading at each terminal should not take more than 12 hours, so that the round trip may safely be based on 9 days, estimating a speed for the downstream trip at an average of 17½ miles per hour, with 22 miles in theory. On this basis the 5 barges will make 187 trips per year, so that the fixed charges with the profits amount to a total of $3,640.60 per trip.

"The crews' wages are estimated on a full year's pay of 5 crews for 4 barges, with 300 effective working days.

"The wages per month are:

Captain (also pilot)	$200
3 mates (also pilots) combined salary, $160, $140, and $120	420
2 quartermasters	120
4 deck hands	180
Chief engineer	200
3 assistant engineers, $160, $140, and $120	420
2 oilers	120
2 clerk wireless operators	200
1 cook	40
2 stewards	70
Total per month	1,970

"Thus the total wages are $1,970×12×5=$118,200. The workmen's compensation and employers' liability insurance amount to $1.10 per $100 of pay roll, or $1,300.20 per year. Thus, the yearly charge for labor is $119,500, or $639 per trip. The subsistence, at 50 cents per head per day, 21 men per crew, and 5 crews per 365 days, is $19,162.50 per year, or $102.47 per trip.

"The fuel, estimating a total of 200 running hours per round trip, burning breeze coal, with 2,400-horsepower engines, amounts to $840 per trip. For each trip the supplies for deck and engine, including lubricating oil, will cost $400, and the extras and contingencies $250, so that each trip will cost:

Fixed charges, including interest and profits	$3,640.60
Wages, including insurance	639.00
Subsistence	102.47
Fuel	840.00
Supplies	400.00
Extras, at 3 per cent	291.00
Total	5,913.07

or, in round numbers, $6,000.

"With the barge fully loaded on each trip, freight could be moved from New Orleans to St. Louis for $1 per ton, which would give a yearly dividend of 26 per cent and establish a 100 per cent sinking fund within 12 years. In this the following factors make various changes: The protection against the yearly loss through part-rail movement in winter, the loading and unloading charges, switching charges, administration, soliciting, advertising, and the fact that the barge might not always be loaded to full capacity.

"Each barge has a total yearly capacity of 224,400 tons each way. It seems safe to estimate that the barges will soon be loaded to 80 per cent of their capacity, or 4,800 tons per round trip, or $1.25 per ton from New Orleans to St. Louis.

"The barges will make 140 trips to St. Louis between April and December, 8 trips to Cairo during the late spring and late fall, 12 trips to Memphis in early spring and early winter, and 27 trips to Vicksburg in middle winter.

"To St. Paul, for which services 1,000-ton barges, with four propellers and with a maximum draft of 4½ feet, will be used, it is estimated that there will be an open season of seven and one-half months.

"During the winter freight will be transferred to railroads at Cairo, Memphis, and Vicksburg.

"The rail rates are such that during the winter—until these rates are adjusted by the Interstate Commerce Commission—the company should be prepared to stand an estimated loss of $180,000, because in many cases the rail rate from Vicksburg, Memphis, or Cairo to St. Louis is more than the water rate from New Orleans to St. Louis. This $180,000 merely represents the final figure after having for one month moved freight to Cairo, transferred it to the railroads, and paid the rail rate from there to destination, and done the same thing for one month at Memphis and two months at Vicksburg. This makes a total additional charge of 17½ cents per ton over the entire year. The administration, soliciting, and advertising is estimated to be $70,000 per year, or about 7½ cents per ton. Thus, outside of loading and unloading or switching charges, the total rate per ton from New Orleans to St. Louis should be $1.50 per ton, and commands an investment of $2,000,000.

"There will also be needed some small repair stations along the route, because of the total absence of efficient shipyards, a floating dry dock at St. Louis, and a small sectional dock at Memphis. This entire equipment may be secured for $300,000; to this may be added about $100,000 for cost of organizing expenses and $50,000 for various shore equipments, so that the total capital necessary for this company is $2,500,000, of which $500,000 should be incorporated as a separate company—a shipbuilding company. Detailed estimates have satisfied the writer that such a shipbuilding company will be sufficiently profitable through outside work to be self-sustaining, and that it will be proper not to put this $500,000 burden on the earning power of the barges.

"The foregoing gives a fairly good idea of the operating conditions of the new Mississippi River Transportation Co., as far as the water transport is concerned.

"Relative to the shore expenses, there remains the cost of loading and unloading and the switching charges. The cost of loading and unloading includes only the removal of freight to and from the barge. The problem is to do this as economically as possible, with the greatest safety to the cargo, and with the greatest dispatch to the boat. It should not be forgotten that the value of the barge is $32.22 per hour; thus every hour's delay is equal to a tax of 1.34 cents per ton, so that economical transport with the greatest dispatch is of the utmost importance, because 12 hours for loading and unloading purposes means 16 cents per ton of the freight expenses, and somebody pays the bill.

"To accomplish this quick dispatch, it is the intent to make stops only at cities where there are proper modern terminal facilities, or which, either as a community or through individual shippers, have signed for sufficient freight to and from to justify the company in establishing its own river terminals at such cities.

"The loading and unloading, and, in fact, all shore charges, are to be taken care of by a separate company, which will be known as the River Terminal Co. This company will look after the loading and unloading of barges, the receipt of freight from shippers, and delivery to consignees.

"In order to give municipal enterprise ample opportunity to build its own terminals without finding the River Terminal Co. in its way at any time, and in order to keep before the public the fact that this River Terminal Co. is only a makeshift necessitated by the very poor river terminal conditions, the company will be ready at any time, if so desired, to exchange local property for municipal terminal bonds.

"In order to remain independent it is proposed to build some of these terminals as floating terminals, so that they may be removed. The deck of such a terminal can always be at the same height as that of the barge deck, and the terminal is to be connected by tracks, running over the roof of the terminal barge cargo box, over a hinged apron, to the belt railway, if there is such, or otherwise, to the various railroad tracks.

"This floating terminal collects and disburses the freight, and care will be taken that it is ready for loading on the arrival of the barge, and also that preparations are made to have the loading and unloading proceed simultaneously.

"Such a terminal will always have a little more than twice the capacity of the barge which it serves; in other words, for St. Louis—not, of course, the smaller places—the transfer barge will have a capacity of 6,100 tons.

"These terminals will be equipped with wireless apparatus, two 10-ton traveling cranes with 40-foot booms, and also telphers, conveyors, and electric trucks.

"The main deck of the terminal barge will connect directly with the street by a roadway 40 feet wide running through the center of the barge from end to end. At each end of the roadway there will be an automatic track scale where the driver will

receive a scale ticket giving the total weight of wagon and freight. On leaving he will pass over another scale at the other end of the barge, and on the same ticket the weight of the wagon will be recorded and subtracted automatically from the first weight, thus showing the total weight of the freight left behind or received while on the transfer barge. The freight will be unloaded, assorted, inspected, rated, stacked, and the results concisely marked on the weight ticket after the driver has passed the last scale. He will turn his ticket in at the office at the end of the barge and receive his bills of lading in return.

"The height of the transfer or terminal barge will be regulated by ballast water, pumped out or let in as necessary, so that the transfer and transportation barges will be always at the same height during the loading and unloading. The transfer barge will also be equipped with electric light and a lunch counter, which will facilitate day and night loading. As a barge will come and go every other day, and freight will be received or delivered every day, the crew of the barge will find steady employment. By having regular employment, these longshoremen will become efficient in receiving, loading, and unloading freight from the barges or transferring it to and from the railroad cars. The company will load and unload cars for local distribution, so that freight can be delivered to and from the warehouses in river towns or to the railroads for delivery in the interior.

"Three belt conveyors for general bagged, boxed, or barreled materials—such as coffee, rice, sugar, flour, cement, and so forth—and four telpher trains (four cars in each train) for smaller freight, like canned goods, will enable 75 men to handle this general merchandise at the rate of 500 tons per hour, thus completely unloading a barge in six hours. The loading can commence practically within an hour after the unloading is started, so that the total time required for loading and unloading should not exceed 7 hours. If it really requires 10 hours to unload and load the entire cargo, the time is still well within the 12-hour limit set for this work.

"It is assumed that the total crew on shore will consist of 75 laborers, 5 mechanics and electricians, 2 weighmasters, 2 wireless operators, 8 clerks, 10 receiving clerks, 1 dock captain, 1 supply agent, 2 policemen, 2 watchmen, 1 carpenter, 2 engineers, 3 messengers, 3 cashiers, and 5 bookkeepers, all at a combined yearly pay roll of $125,000, plus insurance, or about 14 cents per ton received or delivered. The cost of power is estimated at 1½ cents per ton received or delivered.

"The transfer barge, complete with all its machinery and mechanical appliances, power, and so forth, will cost $300,000; and interest, depreciation, insurance, repairs not covered by insurance, and harbor dues will amount to 15 per cent per year, or 4½ cents per ton.

"Thus the total shore expenses, outside of switching charges or car hire at each end, will be 20 cents per ton; estimating the profits at 20 per cent of the cost of the terminal barge, the charge would be 25 cents per ton.

"The switching charges will be from $2 to $10 per car, or from 5 to 30 cents per ton. The company's charges to the shipper will always read about like this:

"'Switching charges from your warehouse in your town to river, plus loading charges in your city, plus river transportation, plus loading at consignee's town, plus switching charges in his town, gives a total of ———.'

"Thus the total charges from New Orleans to St. Louis are: Ten cents for switching charge and car rental, 25 cents for loading, $1.50 for transportation, 25 cents for unloading, and 20 cents for car hire and switching charges in St. Louis, or $2.30 per ton. This charge will be reduced to $1.92 as soon as the Interstate Commerce Commission has readjusted (or rather corrected) the present switching and rate arbitraries. This rate covers receiving in cars at warehouse and delivery at warehouse of consumer (during both winter and summer), within a guaranteed time of eight days, except where rail movement is necessary, when the customary indefinite and greater time must be allowed, under full insurance against all damages; or at a rate of $2 when received and delivered at the river terminals, which charge will be reduced to $1.82 per ton when the rates are corrected; and if it is guaranteed that the barge will be loaded to full capacity, the charge will be reduced to $1.45 per ton. The latter should be the ultimate and total charge, and it is the aim of the Inland Navigation Co. to be able to make a rate of 1.2 mills, water distance, or 2 mills per ton-mile, rail distance.

"The barge line will be classified as a common carrier and will be controlled by a bill of lading which is now being drawn up by expert lawyers. This bill of lading will contain some very novel clauses; for instance, it will have one clause protecting the cargo against all damage or loss and another guaranteeing the time of delivery. It will be a through bill of lading and the rate will be scientifically based, as shown below, so that anyone knowing the rules may know what the freight charges will be for each commodity, in his case, without ever looking at the tariff sheets.

"Thus far the general cost of carrying the freight per ton was estimated without taking into account the variation in the character of the freight carried, which, of course, is essential. The ton was considered as 40 cubic feet bulk capacity, and not more than 20 feet in length, width, or height; not fragile or too weak to have a load placed on top of it, 10 feet in height and weighing not more than 50 pounds per cubic foot; not subject to damage on account of weather conditions; to the contained in individual packages weighing not more than 3 tons; without offensive odor or susceptible to odors; deviation from any one of these conditions will alter the charge. Taking the freight rate of $1.50 (or 1.2 mills) per ton-mile as a basis: For each cubic foot that the freight occupies in excess of the 40 cubic feet per ton, one-fortieth of this charge shall be added; for each fraction that the individual package is in excess of the 20-foot length, width, and height, the freight increases proportionately. Commodities in individual packages, which, when dropped from a height of 10 feet are subject to breakage, will have their freight cost increased at the rate of 0.02 mill for each inch this fall is shortened, so that for a commodity which might break at a drop of 1 inch, 2.4 mills per ton-mile are added to the basic rate.

"In addition, the freight will be subject to extra insurance on values greater than $100 per ton, so that for each dollar of additional value 2 mills will be added, regardless of distance; thus, if the commodity is worth $300 per ton, the additional cost for moving it will be 40 cents.

"A material which is too light in construction to have any cargo safely placed on top of it will be charged as if it occupied a height of 10 feet (the height of the cargo box). If any material has an odor (such as fertilizer) so that it might affect other commodities or attack quickly the odor of other commodities (such as flour), it will be subject to an increase of 0.2 mill per ton-mile. This is to protect against the extra cost of placing such cargo in special compartment. Cargo which is affected by temperature will have to pay for refrigerating or heating, as the case may be.

"Cargo which is excessive in weight is charged with an increase of 0.003 mill per ton-mile for each pound more than 50 pounds per cubic foot. Individual packages which weigh more than 2 tons will be subject to a charge of 2½ mills per additional pound. Thus, a 10-ton package (transported from New Orleans to St. Louis) will cost $44.60.

"Of course, it would hardly pay for the barge to stop at each landing as was heretofore customary. This makes the following rule necessary: The barge will not stop at any landing for less than $50, regardless of the quantity of freight offered. However, one might keep loading the barge for an hour (the freight charges being at the usual rate), with this understanding: That after so much freight had been put on the barge that its cost of transport reached the $50 mark, any additional cargo put on board within the first hour would be free up to $50. The same method will be true for the second hour, etc.; further, the rate will be subject to an increase according to the decrease in distance, so that the rate might be considered as a sliding scale of 5 mills per ton-mile for distances less than 10 miles; 4 mills per ton-mile for distances less than 100 and more than 10 miles; 3 mills per ton-mile for distances less then 150 or more than 100 miles; 2 mills per ton-mile for distances less than 200 and more than 150 miles; 1½ mills per ton-mile for distances less than 500 or more than 200 miles; 1.4 mills per ton-mile for distances less than 1,000 or more than 500 miles; 1.2 mills per ton-mile for distances less than 1,500 or more than 1,000 miles; 1.1 mills per ton-mile for distances less than 2,000 or more than 1,500 miles; with the understanding that a lower rate for longer distances should never result from this, in such cases the higher rate would always apply.

"For freight consigned to interior points, the lowest rail rate from the river to the town will be added, provided such lowest rate is from a place where the company has terminal facilities, or where good facilities can be acquired.

"Such freight as will take advantage of the clause of the bill of lading guaranteeing delivery in a specified time will be charged at the rate of 0.1 mill extra per ton-mile.

"The foregoing rates are compared with railroad rates in Table 5.

"It will be seen that a rate of 2 mills per ton-mile, water distance, including all expenses (such as delivery during the closed winter season, insurance, absorbing of switch and belt railroad charges, and the warehouse delivery), is profitable.

"Water transportation in the United States has dwindled to nothing on account of artificial conditions, but there is no reason on earth why our rivers should not be teeming with traffic, and there is every reason to suppose that at a date not

far distant such traffic will start. The usefulness of our rivers is becoming more and more apparent to the public, and at the present time it is also a dire necessity that the steamers be used. Foreign competition demands an early adjustment of the methods of interior transportation.

"The writer is in hearty accord with Mr. Lavis when he states that our interior lines of communication must be developed to carry our products from one part of the country to another at the lowest possible cost per ton-mile. In our competition for foreign trade we should look on the whole United States as one large factory competing in these foreign markets with other factories (such as the English, German, and French), and it is essential for such competition that we reach a high stage of efficiency in our factory; that we put to use the potential value of our waterways. The nonuse of these rivers and water routes constitutes a voluntary penalty and handicap under which we are placing ourselves in favor of foreign competitors, and our cry in the new battle for foreign trade should be, 'Back to the waters.'

"TABLE 5.—*Comparison of freight rates between New Orleans and St. Louis.*

Commodity.	Rail rate, per ton, for car-load lots.	Rail rate, per ton, for less than car-load lots.	Water rate per ton.
Baking powder	$7.50	.....	$3.20
Beef	5.00	.....	4.10
Beer	4.20	$5.20	2.30
Bridge material	3.50	5.40	3.25
Butter	18.00	.....	4.00
Canned goods	5.20	6.90	2.80
Cement	2.50	6.10	2.25
Chairs	19.50	.....	6.00
Cocoa	13.50	.....	5.40
Coffee	4.60	6.00	3.10
Condensed milk	4.20	8.70	3.15
Copper ingots	7.00	13.00	2.50
Copper castings	15.00	.....	4.00
Dry goods	13.00	18.00	4.50
Flour	2.80	5.20	2.50
Furniture	8.50	11.50	5.80
Glassware (bottles)	10.30	13.50	3.70
Guano	61.00	73.20	8.00
Hardware	6.00	.....	3.60
Liquors	8.00	.....	3.10
Lumber	4.00	.....	2.28
Molasses	4.10	.....	3.00
Nails	4.40	.....	2.80
Nitrate of soda	3.40	73.20	3.10
Paint	4.60	.....	2.60
Paper	5.60	10.00	2.50
Plumbing material	6.00	.....	3.40
Pickles	76.00	.....	2.40
Refrigerators	10.00	.....	2.90
Rice	4.80	.....	2.40
Rubber	18.00	.....	3.00
Salt	4.30	.....	2.95
Shoes	18.00	.....	6.00
Soap	4.60	.....	2.40
Stoves	7.00	.....	3.00
Sugar	3.40	4.80	2.70
Tin	10.00	15.00	3.80
Vehicles	5.00	.....	4.00

"The writer does not believe that we need to look forward to smaller expenditures on our waterways, but believes that saner methods of spending money on them are required. Instead of making yearly haphazard appropriations, each project in itself should be approved or condemned, and, if approved, authority should be given to carry out the work, a lump sum—based on the estimate of competent engineers—being set aside for the purpose, instead of as it is now done, on the installment plan, with frequent intervals of idleness on account of some filibuster or change in politics. How frequently has it happened that important work has been stopped, costly equipment set idle, and splendid organizations dispersed, because Congress did not that year appropriate the necessary money to continue. What sane business man or contractor would attempt to carry out work on such a basis?

"The author states:

"'Work on these canals and highways requires many engineers. Up to 1824 the Military Academy at West Point was the only school in the country which trained men as engineers, and for many years thereafter it was the principal school of this kind.'

"For that very reason we are still employing as engineers for our waterways the Army engineers of the Government, trained as Army engineers and not as water or transportation engineers. It is a high tribute to the efficiency of these men that the work has been carried out in such a splendid way; but is it right?

"In reference to this the writer calls attention to the Kingdom of the Netherlands, where the Government employs in a separate department—called the 'State of Waterways' (literally translated)—a corps of engineers, only and solely trained as water and transportation engineers. These men have been sent the world over to construct waterways. The Suez Canal is to-day maintained by Hollanders; Galveston, Valparaiso, Rio de Janeiro, Buenos Aires, Bahia, Hongkong, Santiago, Macassar, Macao, Santander, Bilbao, Hamburg, and many other harbors and waterways prove their efficiency. Holland's dredges, floating equipment, levees, locks, and canals are world famous.

"The writer agrees with Mr. Lavis that our Army engineers have given ample proof of their efficiency, but this is rather a tribute to their brains than to their training. Long ago there should have been in the United States a separate department (with a Cabinet minister at its head) for waterways. The success of foreign waterways (as stated by Mr. Lavis) is largely due to the fact that the matter of deciding on the project for which public moneys shall be spent has been left generally to a comparatively small body of men of training and experience in the particular class of work or problem involved, whereas in the United States this is usually decided by popular vote.

"Notwithstanding what has been said about the splendid work performed by the Army engineers, the writer claims that it is a decided error in judgment to have them pass upon the commercial value of a project presented for their consideration, and, as stated by Mr. Lavis, it is no wonder that 'their advice is frequently ignored,' as their training and experience do not make them proper judges of the commercial value of such projects. How frequently have they stated that certain needed links between waterways were of no commercial value because there was at that date no actual freight moving over that route?

"The writer has in mind one particular case—the canal from Stillwater, Wis., to Lake Superior. What greater need of a link between waterways could have been thought of in that State? Yet the engineer in charge stated that such a link would have no commercial value.

"The author, in order to cite the importance of our waterways from a financial point of view, points with pride to the fact that the work now yearly requires $40,000,000, or more than eightfold what it required 40 years ago.

"Table 6 gives an interesting comparison of how rivers and harbors have shared in Federal appropriations during the last 40 years.

"TABLE 6.—*Federal appropriations for Army, Navy, pensions, and rivers and harbors since 1875.*

Year.	Army.	Navy.	Pensions.	Rivers and harbors.
1875	$27,788,500.00	$20,813,946.20	$29,980,000.00	$5,218,000.00
1876	27,933,830.00	17,001,006.40	30,000,000.00	6,643,517.50
1877	27,621,867.90	12,742,155.40	29,533,500.00	5,015,000.00
1878	25,812,500.00	13,541,024.40	28,533,000.00	.....
1879	25,593,486.01	14,152,603.70	29,371,574.00	8,201,700.00
1800	26,797,300.00	14,029,968.95	56,233,200.00	7,846,600.00
1881	26,425,800.00	14,405,797.70	41,644,000.00	8,951,500.00
1882	26,687,800.00	14,566,037.55	68,282,306.68	11,441,300.00
1883	27,258,000.00	14,819,976.80	116,000,000.00	18,738,875.00
1884	24,681,250.00	15,894,434.23	86,575,000.00	.....
1885	24,454,450.00	14,980,472.59	20,810,000.00	13,949,200.00
1886	24,014,052.50	15,070,837.95	60,000,000.00	.....

1888	23,724,718.69	25,767,348.19	82,152,500.00	.....
1889	24,471,300.00	19,942,835.35	85,258,700.00	22,397,616.19
1890	24,316,615.73	21,692,510.27	89,758,700.00	.....
1891	24,206,471.79	24,136,035.53	123,779,368.35	25,136,295.00
1892	24,613,529.19	32,541,654.78	164,550,383.34	2,951,200.00
1893	24,300,499.82	23,543,385.00	154,411,682.00	21,968,218.00
1894	24,225,639.78	22,104,051.38	180,681,074.85	14,166,153.00
1895	23,592,884.68	25,327,126.72	151,581,570.00	20,043,180.00
1896	23,252,608.09	29,416,245.31	141,381,570.00	11,462,115.00
1897	23,278,402.73	30,562,660.95	141,328,580.00	16,244,147.00
1898	23,129,344.30	33,003,234.19	141,263,880.00	20,832,412.91
1899	23,193,392.00	56,098,783.68	149,304,702.46	14,627,449.56
1900	80,430,204.06	48,099,969.58	145,233,830.00	25,110,038.94
1901	114,220,095.55	65,140,916.67	145,245,230.00	16,235,605.75
1902	115,734,049.10	78,101,791.00	145,245,230.00	7,046,623.00
1903	91,730,136.41	78,856,363.13	139,842,230.00	32,540,199.50
1904	77,888,752.83	81,876,791.43	139,847,600.00	20,233,150.00
1905	77,070,300.88	97,505,140.94	142,360,700.00	10,872,200.00
1906	70,396,631.64	100,336,679.94	142,750,100.00	28,726,007.41
1907	71,817,165.08	102,091,670.27	143,745,500.00	17,254,050.04
1908	78,634,582.75	98,958,507.50	147,143,000.00	43,500,813.00
1909	95,382,247.61	122,663,885.47	173,053,000.00	18,002,945.00
1910	101,195,883.34	136,935,199.05	160,908,000.00	29,190,264.00
1911	95,440,567.55	131,350,854.38	155,758,000.00	49,380,541.50
1912	93,374,755.97	126,478,338.24	156,182,000.00	30,883,419.00
1913	90,958,712.98	147,077,507.76	165,146,145.84	33,259,370.50
1914	94,416,145.51	162,097,167.53	180,300,000.00	47,868,894.00
Total	1,973,825,531.68	2,120,214,833.29	4,568,251,057.52	680,552,501.01
Yearly average for 40 years	49,345,638.29	53,005,370.83	114,206,276.44	17,013,812.53

"The total amount, $680,552,501, spent on rivers and harbors is only 4 per cent of the total amount spent on railroads, and less by far than the total value of land grants alone made to the railroads, amounting to 160,000,000 acres, larger than all that part of the United States east of the Ohio and north of Maryland; the total freight carried on these railroads in 1914 was 288,320,000,000 ton-miles; yet on the Great Lakes alone in that year the writer estimates that the freight was 30,000,000,000 ton-miles.

"This grand total of money spent on our waterways is smaller than the grand total spent on the waterways of Holland, a country one-two hundred and fiftieth in area with one-seventeenth of the population.

"Here the writer desires to point to what is apparently a discrepancy in the author's statement where he cites that Prussia spent, between 1813 and 1906, $129,000,000 for her waterways, and later he uses this in his comparison with Germany, as though this $129,000,000 spent by Prussia was all that the German Empire spent.

"The United States has not spent enough by far for waterways, and much more will have to be expended.

"Finally, the writer wishes to point out that practically not a dollar has been expended on our waterways without the approval of the Army engineers. All work must first pass their close examination, as to feasibility and need, and no project stands much chance to pass both House and Senate if not approved by them. Some small works may have passed, but certainly not costing more in total than one-half of 1 per cent of the money spent.

"In comparing rail rates with water rates, one must also take into consideration the large land grants, franchises, rights of way, and bonuses given to the railroads, in many instances representing fabulous wealth, and certainly in their present-day value far in excess of the total sum spent by the United States up to date on its waterways and harbors.

"Railroads often advance the argument given by Mr. Lavis, that, to estimate the actual cost of water transportation, the true expenses of maintenance, interest, and operation should be charged against the water traffic; but, granting that this is correct, which the writer is not at all inclined to do, would it not be equally just to demand of the railroads interest on the land grants and royalties on the minerals granted to them? If such argument held true, we should charge tolls on our streets and country roads; our waterways are just like them—free and open to all; anyone, from a rowboat capitalist to a trust magnate, may use them, just like our streets and roads. Why only charge for the use of the streets? Why not also charge for underground use, for the rail tunnels in New York City, Baltimore, Washington, and so forth? Such faulty arguments lead to ridiculous conclusions. Suppose we did not improve our rivers and just permitted them absolutely to pass away as useful channels of trade, then, of course, there would not be any charge to collect, and we would save the interest, depreciation, and operating expenses of our waterways; and does Mr. Lavis think that this would be very constructive to our prosperity and national wealth? If he does, the writer may cite for him a few instances where the river channels became useless and where rail rates jumped in leaps and bounds. If this argument held true, streets should be torn up in the cities and everybody forced to move by trolley car; buses should be forbidden by law; country roads should be made impassable; and it should become a criminal offense to walk instead of patronizing the railroads.

"Often the argument is advanced that our railroads move freight at greatly less charges than those of Europe. Mr. Lavis says:

"'It is probably true that in the development of inland waterways some of the European nations have attained a greater measure of success than we have, but in economic progress in the general realm of transportation, including that by railways, it is undeniable that we have far outdistanced the rest of the world.'

"He also says:

"'In comparison with the rates of wages, the cost of freight transportation on the railroads of this country is only from one-third to one-quarter as much as in Germany.'

"Now, this general assertion is incorrect. It is granted that the official figures show a higher cost per ton-mile for the freight carried in Germany, England, or other European countries than in the United States, but here is where statistics lie, because they are misrepresented.

"The low-class commodity and bulk freight in Germany, France, Belgium, and Holland moves by water, and in England, where the inland water system is killed by private ownership of railroads, it is chiefly hauled coastwise. If all such low commodities as move by water in these European countries, with their low rates, are eliminated from the figures for the United States, the general average cost of transportation would be considerably higher. In those territories of the United States which have no large tonnage of low-class, bulky, freight commodities the average per ton-mile is from 2 to 3 cents per ton, or considerably higher than the average in European countries.

"To get at a fair comparison between rates in America, Germany, France, Belgium, Holland, and England there should be omitted from the American figures all those pertaining to the movement of coal, ore, lumber, grain, oil, and steel. There would also have to be taken into consideration the fact that European railroads had no land grants, but very expensive rights of way, together with a vast number of terminals per mile or per ton carried.

"Another phase which must be taken into consideration is that, on account of the density of population in Europe, the demand for smaller cars is strongly felt, so that carload shipments there average from 10 to 15 tons, resulting again in the fact that the rolling stock per ton-mile is far greater than in the United States. Intershipment of freight between small communities has reached a greater percentage of efficiency because of these small cars than in the United States, where many good-sized shippers find that their requirements of space still fall short of the prescribed carload shipment, which means a higher rate and greater reduction in the speed of movement, as a natural consequence of mixed shipping in part carloads.

"When all these facts are taken into consideration it will be clear that an empty comparison between the published European rail cost per ton-mile and the average cost in America is an unjust basis on which to assume that the rail cost of transportation is cheaper.

"The author states:

"'It is a wise policy, amply justified by experience, to have harbor facilities always a little in advance of the immediate necessities, and many of our seaports have responded admirably to efforts in this direction.'

"In reference to this statement it may be proper to remark that there are no efficient harbors in the United States; even the best and cheapest of them compare very unfavorably with European or South American ports, with the possible exception of England, more especially London, where the harbors are noted for their expensiveness. The second harbor in the United States, which is also the cheapest, namely, New Orleans, up to a recent date, could not show a single crane, and in general this harbor would be considered far from being a model of efficiency. Anyone who has visited large modern foreign ports will remember their floating, stationary, and movable cranes, and other mechanical appliances for loading and unloading.

"This being a discussion of rivers and railroads, the writer will restrict himself to these general statements, although a comparison of the cost of handling freight to and from steamers in the harbors of the world would be interesting. It would bring out many a fact of which we would feel ashamed, though the cheapest methods of loading and unloading coal and ore are on the Great Lakes, where (thanks to private enterprise) they are handled with remarkable dispatch at a cost per ton never heard of in Europe.

"The author says:

"'A practical test, almost infallible in its application, that will show whether a waterway project can be economically considered for further improvement is a progressively increasing commerce, and the measure of saving in cost of transportation will always be a guide as to the extent of work that is justified.'

"The writer can not agree with this. Such a test can not be the right one. Decrease of traffic on a water route (or on any other route, as far as that goes) does not necessarily indicate the need of the stopping and abandoning of all further improvements; it merely indicates that there are causes which handicap the use of such routes, and it becomes necessary to find out what these causes are before further improvements are made or abandoned. After such investigation it may be clear that the absence of these very improvements brought about the decline in traffic.

"Mr. Lavis gives two arguments that influenced the people of the State of New York to authorize by vote the construction of the new canal; first, that by providing competition the canal would compel the railroad lines to keep freight rates down; and second, that the actual cost of transportation would be less by the canal than by railroad.

"That the water routes have kept the railroads down in the past has been proved so often that this does not need to be thrashed out again. That such should not be the case the writer has frequently contended. He is convinced that waterways built with the sole idea of bringing down rail rates, not of

using the routes, proves an error in judgment. A water route should be created only if wanted for its direct advantages, not because it becomes a club to beat down rail rates.

"Mr. Lavis agrees that the actual cost of transportation by canal is less than by rail, provided the interest on the investment and the cost of administration and maintenance of the canal are ignored. It is clear that his statement, that such overhead charges are about 8.6 mills per ton-mile, is only based on an estimated tonnage that would move through that canal; thus, with every ton in excess of Mr. Lavis's figures, this overhead charge of 8.6 mills per ton-mile decreases.

"The water distance between Buffalo and New York is approximately 500 miles, so that the overhead charge for this distance is 43 cents per ton. Now, it has been shown (International Marine Engineering, August, 1914) that the cost of transportation could be 26 cents per basic ton from New York to Buffalo, which makes a total of 69 cents per ton. Compare this with $1.96, the average railroad charge between Buffalo and New York, and $1.09, the lowest rate. It is clear that with an efficient service on this canal, and a rate which includes 22 per cent profit—is in fact 46 per cent of the rail rate—a very much larger tonnage would move through the canal than that on which Mr. Lavis has based his figures. This in turn would automatically decrease this 43 cents overhead charge.

"When Mr. Lavis states that the new canal cost considerably more per mile than the New York Central Railroad it must be remembered that the capacity of the canal is many times larger than that of the railroad.

"Mr. Lavis advances the argument that if the New York Central Railroad had been presented with, say, one-half the cost of the Barge Canal and one-half the estimated annual cost of administration and maintenance, it would have been glad to guarantee a freight rate of 2 mills per ton-mile on such items of bulk freight as may be expected to pass through the canal during the season when it is open. This sounds all right, theoretically, but it is very hard to agree as to what might move through the canal. In reports made by the writer to various individuals and corporations, and in his last report to one of the cities along the canal, he pointed out that undoubtedly a very large tonnage of general package freight and first and second class freight would move through this canal; and numerous are the instances that could be cited where water transportation companies handle first-class freight and package freight in preference to the railroads.

"Attention is invited to the Sacramento in California, the Trenton Transportation Co., of Trenton, N. J., or to the various transportation companies in Florida where, for instance, the Howard Transportation Co. handles fruit—especially citrus fruit—to the exclusion of the railroads, because it can forward it more rapidly and at a lower rate.

"Mr. Lavis contends that in the United States the railroad, as an efficient and cheap means of transport, has made possible the development of its principal industries where the soil, climate, and other conditions were best suited to them. Far greater credit is due to the waterways. Even to-day, at the ebb of water transportation in the United States, there is no city with a population of more than 250,000 which is not on a navigable waterway, and such States as lack the necessary water routes show, indeed, a very low stage of development when compared with those which are more favorably situated. The writer does not know of any city, in the entire history of the world, which has had more than 300,000 inhabitants, which was not situated on a navigable water route. Railroads alone have never been able to build a large city.

"Mr. Lavis also states that it is necessary for water transportation routes that business shall come to them, but why should not the railroads feed the water routes? Why should it not be said that water routes can reach the interior—through rail service—as it is now admitted that railroads reach the other side of the oceans—through water routes.

"The statement that some cargoes, notably coal and grain, deteriorate from wet and dampness when moved by water, and that there are other inherent difficulties in connection with inland water transportation—such as increased hazard and insurance rate—is contradicted by the statement of the Chamber of Commerce of Rotterdam that during 1913 more than 4,000,000 tons of grain and more than 6,000,000 tons of coal were moved on the Rhine to and from Germany.

"In connection with the experience of Mr. Lavis in Argentina, which is very hard to consider properly without all the facts in connection therewith, the writer wishes to mention Alberta and Saskatchewan, in Canada, where the rivers are developing the country and supporting the railroads. Only recently, in a report on the Peace River, running from British Columbia through Alberta to Great Slave Lake, and on the Athabaska, the writer claimed that these rivers alone could develop the country and that these water routes would never be fully supplanted by railroads.

"Because the Santa Fe, in Argentina, was accepted by Mr. Lavis as not able to solve the transportation problem of that country, it is just as little proved that all the waterways in the world are out of place, as the writer's opinion that the Peace River in Alberta will always remain a serious competitor of the railroads proves that all water routes of the world will supplant railroads.

"The great trouble with water transportation in the United States is its absence. Unknown makes unbeloved. There are very few people in the United States familiar with the problems of water transportation, and its almost total absence makes the number of its competent champions small. In lieu of these it has an army of politicians who fight for 'water improvement' for the sake of the spoils; a large number of well-meaning, poorly led, and frequently ill-advised citizens, and a considerable legion of highly trained and experienced transporters, who can only regard water transportation from their standpoint in life—that of railroad men.

"Inland water transportation is sadly needed, and the writer believes that it can be revived through the following measures:

"First. That waterways, harbors, bridges, and quarantine should be combined in a new department, with a Cabinet officer as head; this department should employ engineers specially educated for this at West Point. These engineers, though commissioned officers in the United States Army, should not be under direct charge of the Army officials during the time they are engaged in this waterways department.

"Second. That the decision which of the new waterways, if any, are a commercial necessity, should not be made by such engineers, but be considered by a group of transportation experts specially employed by the Government for such purpose.

"Third. That a definite, concise, uniform plan—a system of waterways improvement and development, etc.—should be prepared by this department for the entire United States. Congress to modify or improve this and appropriate a yearly lump sum to be spent in approaching this ideal of approved waterways.

"Fourth. That all States and communities are in duty bound to build inland water terminals, just as they now feel obligated to build sea terminals—harbors.

"Fifth. That an educational campaign in municipalities for the building of belt railroads, warehouses, and other facilities of communication to the harbor should be instituted.

"Sixth. That this measure shall provide for the public ownership of the river front. This, however, is not to be accepted as being antagonistic to private ownership, or at least to private leases ranging from periods not shorter than 20 years, unless so desired by the tenant.

"Seventh. That it is an absolute necessity that the abuse of the rail rate to meet water competition shall be stopped; that successful water transportation means rail rates tied down to fixed charges per ton-mile, plus terminal charges, and enforced exchange of freight between water and rail terminals.

"Eighth. That this measure is opposed to the licensing of pilots or to the compulsory employment of licensed officers.

"Ninth. That this measure provides for a uniform and Federal quarantine law.

"Tenth. That our waters and coasts should be open for navigation to any nationality or trade. It is necessary that the United States shall make use of all its waterways; this will bring work to our shipyards and supply houses, and employ, under the present laws, American labor. The stimulation of industries depending on water transportation brings life to it."

Mr. RANSDELL. I also ask permission to publish in the RECORD a very brief address delivered by Mr. Samuel A. Thompson, secretary and treasurer of the National Rivers and Harbors Congress, before the Third National Foreign Trade Convention at New Orleans, La., on January 29, 1916. It occupies 11 pages in this document, but it is printed in very narrow columns, as you see. The subject was the relation of improved waterways to foreign trade, and I hope every Senator will read it. It is a remarkably able discussion and a real contribution to the subject.

The VICE PRESIDENT. Without objection, it is so ordered.

The matter referred to is as follows:

THE RELATION OF IMPROVED WATERWAYS TO FOREIGN TRADE.

[An address by S. A. Thompson, secretary and treasurer of the National Rivers and Harbors Congress, before the Third National Foreign Trade Convention, New Orleans, La., Jan. 29, 1916.]

"Mr. Chairman and gentlemen, it may seem presumptuous for anyone, on this closing day of the convention, to attempt to add anything whatever to the able addresses and the interesting and enlightening discussions to which we have already listened. I crave your indulgence for a few minutes, however, while I

briefly discuss a factor which bears a fundamental relation to trade, both foreign and domestic, one which is of vital importance to commerce, both under the normal conditions of peace and in the emergencies produced by war. I refer to transportation.

"Transportation affects the price of everything bought or sold by any individual. It limits the territory tributary to the trade of any city. It determines the development of the resources of any State; and, far more than any other one thing, it fixes the share obtained by any nation in the commerce of the world.

"Unlike manufacture, which transforms crude materials into products adapted for human use, transportation changes the location of things without changing their character. The cost of transportation, therefore, is a tax, which must be paid either by the producer or the consumer, or, as is sometimes the case, divided between the two.

TRANSPORTATION AND OTHER TAXES.

"This transportation tax is by far the heaviest one we pay. Official figures for the year 1913 show that if to the total expenditures made by the National Government for all purposes we add all those made by the 48 States, by every county in all these States, and by every city, town, and incorporated village in the country with a population of 2,500 or over, the whole vast total sum could have been paid out of the gross earnings and income of our railways for the same year, and there would then have been left a surplus of $152,000,000.

"So, as you see, one form of transportation alone—the railway—collects from the average citizen of the United States more than he pays for the support of the Nation, the State, the county, and the city or village in which he lives. A little study of the cost of transportation by different methods may give us some light on the possibility of getting our transportation taxes reduced.

COMPARATIVE TRANSPORTATION COSTS.

"The experts of the Agricultural Department estimate the cost of transporting a ton of freight a distance of 1 mile by horse and wagon on the average road in the United States at 23 cents. In England, where the roads are much better than most of those in this country, and where much attention has been given to the development of what the English call a steam lorry and we would call a steam truck, it is said that goods can be carried for 5 cents per ton per mile.

"The average rate on all the railroads in the United States during the past few years has been about 7½ mills per ton per mile, but I can pick out a special group of roads upon which the average has been about 5 mills.

"On the Erie Canal in recent years the ton-mile rate has been about 3 mills, while on certain canals in Europe, which are deeper and wider and on which electric or other mechanical systems of haulage are used, the rate is 2 mills.

"The official records kept at the 'Soo' show that the average rate on the freight carried into and out of Lake Superior in 1913 was two-thirds of a mill per ton-mile; and while coal is habitually carried from Buffalo to Duluth, and I have the authority of the Pittsburgh Coal Exchange for the statement that it has often been carried from Pittsburgh to New Orleans, for one-third of a mill per ton per mile.

THE TON AND THE DOLLAR.

"These are microscopic figures. Let me translate them into something with which the average business man is more familiar. Here is something [holding up a dollar bill] with which I hope all of you are very much more familiar than I am. Suppose you have a ton of freight to ship and a dollar to spend in shipping it. How far will the dollar carry the ton by these different methods and at these different rates of transportation?

"By horse and wagon, a little over 4 miles; by English steam truck, 20 miles; by rail, at the average rate for United States railways, 133 miles; at the rate on the group of selected railways, 200 miles; on the Erie Canal, 333 miles; on the European canals, 500 miles; by lake, at the average rate through the 'Soo' Canal in 1913, 1,500 miles; while at the rate at which coal is carried both on the Great Lakes and on the Ohio and Mississippi Rivers, the ton of freight can be shipped 30 miles for a cent, 300 miles for a dime, 3,000 miles for a dollar.

"The difference in the rates of transportation by different methods seems to be sufficiently great to be worthy of serious consideration, but there is more in this matter than has yet been made apparent. Taking any point as a center—and naturally each one of you will think of your own city as a center—over how great a territory will a dollar carry a ton by these different methods and at these various rates of transportation?

"By horse and wagon, over a circle a little more than 8 miles in diameter; with the English steam truck on the English good road, the diameter of the circle becomes 40 miles; at the average railway rate in the United States, it expands to 266 miles; at the rate on the selected railways, to 400 miles; at the Erie Canal rate, to 666 miles; at the European canal rate, to 1,000 miles; at the 'Soo' Canal rate, to 3,000 miles; while at the coal rate which has been named, the dollar will carry the ton to the outer limits of a circle 6,000 miles in diameter.

A STRIKING ILLUSTRATION.

"Let me give you a concrete illustration of the difference in the cost of transportation by water and by rail. Through the 'Soo' Canal, at the outlet of Lake Superior, there were carried, in 1913, 79,718,344 tons of freight. This was carried an average distance of 820 miles at an average cost of two-thirds of 1 mill per ton per mile. If this same quantity of freight had been sent an equal distance by rail, at the average rate received by United States railways for that year, it would have cost $445,555,488—and 59 cents, if you want to be particular about it—more than was actually paid for its transportation by water.

"Let me hasten to add, however, that if Noah had prophesied a drought, instead of a flood, and had issued bonds to construct an irrigation system, instead of building an ark, he would have been a bright and shining example of business sagacity compared to a railway man who opposes the improvement of waterways. For, paradoxical as it may seem, the truth is that the best thing that can happen to a railway is to have a waterway paralleling every mile of its track. Indeed, I have never been able to find an instance where the improvement of an existing waterway, or the creation of a new one, has done anything else than to increase the business and the dividends of competing railways. Can any gentleman present tell me of a different result? [After a pause, no one replying.] I have been asking that question for 25 years, Mr. Chairman, and that is the same answer that I have always received.

CREATORS OF PROSPERITY.

"The reason that waterways benefit railways is also one of the fundamental reasons why improved waterways benefit foreign trade. It goes without saying that internal development must precede external commerce, and the more intensive the internal development the more extensive the external trade may be. Now, waterways have what may properly be termed a creative effect. If a whole mountain is full of valuable minerals only a small portion of the metal can be secured by a tunnel which enters the mountain near the top, but the lower the level at which a tunnel can be driven the greater the number of veins which can be tapped.

"A country may be full of natural resources, yet if none but a costly form of transportation is available few of them can be developed. Every decrease in cost of transportation, like the driving of a tunnel at a lower level, makes possible the utilization of additional resources.

"There are vast quantities of crude, raw materials which can only be profitably moved at a rate which is below the absolute cost of railway operation. But these crude materials, when moved by the cheap transportation which waterways can give, furnish the foundation for great industries, to the benefit both of the territory developed and of the railways by which it is served. Let me give you a concrete illustration.

WHAT HAPPENED TO FRANKFORT.

"The city of Frankfort, in Germany, is said to have been founded by the Romans about the year 150 A. D. Through the slow movement of the centuries Frankfort grew until, in 1881, it had a population of about 140,000. Something happened to change the rate of growth, for, in the 20 years following 1886, Frankfort grew more in industry, in commerce, in population, and in wealth than it had grown in all the previous seventeen hundred years. Just one thing was changed, and the conclusion is therefore irresistible that this one changed condition produced the results which have been stated.

"Frankfort is situated upon a little river, the original condition of which I have heard described as being 'too much dried up in summer, frozen up in winter, and flooded in the spring to be of any account for navigation.' However, a few small boats, drawn by horses, occasionally came up to the city. But in October, 1886, the river as far as Frankfort was given a dependable channel 8 feet 3 inches deep, and then things began to happen.

"The German Government, when it agrees to improve a waterway, compels the cities along that waterway to build harbors so that the channel can be used. Frankfort, from 1883 to 1886, spent $1,750,000 on a harbor, and one indication as to the effect of the improved river upon the city's growth is given by the fact that when the war broke out they were at work upon a new harbor, the estimated cost of which was nearly $18,000,000.

"Talking, some time ago, with a gentleman who was born on the banks of the Main, and who still has the accents of the Fatherland upon his tongue, he said to me, 'I make two visits, 12 years apart, one before, one after, the river was improved; und now my frendts think I lie ven I say dere are schmokestacks all der vay from Frankfort to der Rhine.' But he was telling the literal truth.

HOW THE RAILROADS FARED.

"There is a railroad running along each bank of the Main, all the way down to the Rhine. What happened to them? Did their business fall off? Did they go into the hands of receivers, or anything like that? On the contrary, their business began to grow by leaps and bounds, and at the time the war broke out they were handling almost four times as much tonnage as they hauled when they had a practical monopoly of the business of Frankfort.

"And that is not all; it is only the beginning. Formerly Frankfort had little to sell and much to buy. The cars, and such boats as came at all, came in loaded and went back empty. With the development of commerce and industry, Frankfort had also much to sell, and cars and boats went loaded in both directions. Thus the traffic was not only quadrupled in quantity but equalized in direction, and every traffic man present knows what an advantage that is.

"Nor is that all, or even the best of it. The traffic was not only increased in volume and equalized in direction, but it was raised in grade. It could afford to pay, and did pay, a very much higher rate, and, in addition to all else, with the growth of population and prosperity, there was a great increase in the passenger traffic. Following the improvement of the Main, the Prussian railway administration found it necessary to spend $11,000,000 for increased terminal facilities—in order to take care of the traffic which the river created and brought to the railway.

TRANSPORTATION VITALLY AFFECTS TRADE.

"A striking instance of the dominating influence which cost of transportation exercises over foreign trade is to be found in the report of the British Royal Commission on Waterways. The sworn testimony of a manufacturer in the Midland district of England, located only 85 miles from a first-class port and 105 miles from London by rail, declares that he has not only been beaten in the markets of the world, which he once dominated in his line, but actually driven from the capital of his own country by manufacturers in Frankfort and Mannheim in the heart of Germany, 500 miles farther away—but with water transportation available all the way.

A VALUABLE LESSON FROM MANCHESTER.

"Improved waterways tend to develop resources and industry widely throughout a country, while sole dependence upon a costlier form of transportation tends to concentrate manufacturing upon and near the seaboard. Manchester, England, in the early eighties was a dying city. Five thousand dwelling houses were tenantless; hundreds of warehouses were vacant, and factories by the score were closing their doors or moving to the coast. A dozen years later, a marvelous transformation had been wrought. The 5,000 dwelling houses had been reoccupied and 20,000 new ones had been built and were occupied; all the vacant warehouses and hundreds of new ones were teeming with business; and factories both old and new, some of the latter being among the largest in England, were humming with industry. The disease which was threatening to destroy the life of the city was costly transportation, and the remedy, which wrought the wonderful change that has been outlined, was the building of a ship canal.

"Liverpool and the railroads leading from that city to Manchester fought with the energy of despair against the building of this canal, thinking that their business would be destroyed, and it was eight years from the time the application was first made until the charter was granted. But what happened? Although Liverpool, in the effort to retain the business built up through generations of effort and the expenditure of vast sums of money, made repeated reductions in dock charges, the revenues of the Mersey Docks and Harbor Board increased five times as much during the 13 years following the opening of the canal as they had done during the same number of years before. The 7,000,000 tons of traffic developed at Manchester was not stolen from Liverpool, it was created anew. And incidentally every railroad leading to Manchester from Liverpool has had to increase its trackage and its terminals three and four times over in order to accommodate the enlarged traffic which the canal has produced.

IF FIFTY FAILED, CAN A THOUSAND WIN?

"If Manchester could not compete with Liverpool when it was only 50 miles from the sea, how in heaven's name can cities in the interior of the United States, a thousand miles or more from tide water, hope to develop a foreign trade or retain that which they may have now, in competition with cities on and near the coast? And if there be anyone here or elsewhere who thinks it might be well for the coast cities if manufacturers and population should move to them from the interior, let me ask him one question: Have New York, Boston, New Orleans, and the other cities on the coast grown rich and great in spite of the development of the interior, or because of it?

"It is my conviction that unless the waterways are improved and used the opening of the Panama Canal will be one of the greatest disasters that ever happened to the Mississippi Valley. And it is impossible that dry rot should disintegrate the industry and creeping paralysis destroy the commerce of the heart of the country, without working disaster to the port cities upon our seaboard.

COMPETITION TO BE INTENSIFIED.

"It is unsafe to go very far in prophesying how the present war will end or what its results will be. But one thing seems to me to be beyond all question, and that is that when peace comes again the competition for foreign trade will be far more intense than it has ever been before. It is true that many workers have been killed and disabled, but the warring countries have discovered that their women can do almost if not quite everything that their men have done. There will be, especially in Germany, a nationalization, perhaps even what might be called a militarization of industry. Possibly by the impulsion of patriotism, if necessary by the compulsion of governmental power, labor will accept the lowest living wage, the manufacturer the smallest possible profit, and in every way cost of production will be reduced to the lowest possible point, until the foreign markets, which are absolutely necessary to national rehabilitation, shall have been regained.

ALMOST UNBELIEVABLE, BUT ABSOLUTELY TRUE.

"In view of what is to come, it is important to consider what has already come to pass. In every one of the 20 years ending with 1913 the foreign commerce of Germany has exceeded that of the United States, and the excess has been steadily growing greater. Divide the 20 years into four periods of 5 years each. In the first 5 years the foreign commerce of Germany exceeded that of the United States by an average of $207,000,000 per year. In the second 5 the excess was $221,000,000. In the third it was $400,000,000. In the fourth, the average excess for each year was $712,000,000. For the single year 1912 it was $853,000,000. And for the whole 20 years it was $7,700,000,000.

"There is nothing in that record for the United States to be proud of, even if the two countries stood somewhere near on an equality. But we have an area more than seventeen times as great; we have 50 per cent more population; we have nearly three times the accumulated national wealth; and we have national resources greater by ten, possibly by twenty fold. If Mr. Farrell should ever find that a competing plant covering only 10 acres was doing far more business than one of the Steel Corporation which covered 175 acres, and that the difference was getting greater every year, I feel absolutely certain that he would not wait 20 years before he found out the reason or reasons for such an astounding discrepancy.

THE GERMAN TRANSPORTATION SYSTEM.

"Now, I frankly admit that I have 'water on the brain,' and I never expect to get over it, but I am not so completely a man of one idea that I attribute this startling difference solely to the transportation system of Germany, but I do attribute it mainly to that system. In 1905 Prussia passed a bill appropriating $80,500,000 for waterways. That German Kingdom had already spent $129,000,000 on waterways and had $2,225,000,000 invested in State-owned railways.

"These figures are not insignificant, even when standing alone, but their full significance must be shown by a comparison. And if the United States had already invested nearly $60,000,000,000 in State-owned railways and had spent $3,465,000,000 on waterways, and should then pass a single rivers and harbors bill appropriating $2,160,000,000 more, it would then occupy the same position in regard to transportation that Prussia had reached 11 years ago.

"What the Germans think of waterways, how absolutely vital they are regarded under all conditions, is shown by the fact that even in the midst of the greatest war in all history, when the Empire is fighting for its very life, they are not only maintaining and operating the waterways they already have but are actually building more. The great new waterway from the Oder to the Vistula, although not entirely finished, was opened to traffic in April of last year; the Rhine-Hanover Canal was finished in December; and Berlin, which had already spent $8,000,000 on a harbor in the eastern part of the city, has since the war began

started and almost completed a harbor on its western borders, at a cost of more than $9,000,000. And yet there are people in the United States who gravely tell us that all work upon waterways must be suspended in order that we may have money to make a needed increase in our Army and Navy.

OUR GREATEST ECONOMIC WASTE.

"The passage of time warns me that I must bring these remarks to a close. Improved waterways are of importance in connection with foreign trade, because they make possible the fullest development of natural resources; because they provide the cheapest form of transportation, both for the assemblage of raw materials and the shipment of finished products. I have given you an illustration of the tremendous difference in the cost of transportation by rail and by water, and it should be remembered that while money paid for a costly form of transportation when a cheaper form is available or can be made available undoubtedly benefits the transportation company to which it is paid, so far as the shipper is concerned it is just as much wasted as if it were burned up or thrown into the depths of the sea. On some of our largest rivers freight can be carried in fleets of barges at as low a cost as on the Great Lakes. It is interesting to note in passing that the greatest amount of cargo ever moved at one operation was not upon the Great Lakes, or even upon the high seas, but was on the Mississippi River when the towboat *Sprague* brought 56,000 tons of coal to New Orleans at one time.

"While the possible saving on smaller waterways is not as great as on the Lakes or our largest rivers, it is still vast in the aggregate. To my mind, the greatest economic waste in our country to-day and one of the greatest handicaps in the extension of our foreign trade, arises from the fact that we have failed to follow the example of Germany and develop and use our waterways. There is very little, if any, sentiment in trade; the buyer in South America, in China, or anywhere else, will always take the goods which are cheaper in price while equal in quality, and it matters little, or nothing at all, to him in what country they were made.

CUMULATIVE TRANSPORTATION COSTS.

"Sometimes figures are published to show how small a percentage of the selling price is due to transportation, but such figures as I have seen count only the freight on the finished product. This is a superficial view and leads to a false conclusion, for crude materials often go through many processes in different parts of the country. The finished product goes from factory to wholesaler, from wholesaler to jobber, and from jobber to retailer, before it reaches the consumer, and every time it moves from place to place it must bear a transportation cost. Besides, transportation affects the cost of the home in which the workman lives, of the food which he eats, and of the clothes which he wears; and what it costs the workman to live affects the wage which the manufacturer must pay, so the price of the finished product when it reaches the consumer's hands has been increased, not merely once but possibly a score of times, by the cost of transportation. It is evident, therefore, that the nation which has the lowest transportation cost has a tremendous advantage in the competition for foreign trade.

ENLIGHTENED PUBLIC OPINION NEEDED.

"As was well said by Mr. Vanderlip last evening, this body of men, and the business men of the country whom you represent, can control public opinion; and every consideration, from the loftiest patriotism to enlightened self-interest, demands that the business men of the United States should put their feet down hard on the senseless and slanderous charge of "pork barrel" and see to it that the Government of the United States immediately begins and continuously prosecutes the work of improving our rivers and harbors until we have a great, connected national system of waterways, working in complete harmony and cooperation with our splendid system of railways and the magnificent system of highways which is already begun.

NATIONAL PREPAREDNESS.

"Much is said in these days concerning national preparedness, and improved waterways promote national preparedness, either for peace or war, for sustained military efficiency and continued commercial supremacy are both founded upon industrial development; industrial development depends upon cheap transportation; and the cheapest of all transportation is water transportation."

The VICE PRESIDENT. The question is on the amendment of the Senator from Colorado [Mr. SHAFROTH].

Mr. CLARKE of Arkansas. Mr. President, it is perfectly evident that we shall not make much progress this afternoon, and I therefore ask that the bill be temporarily laid aside.

I move that when the Senate takes a recess this afternoon it be until 11 o'clock to-morrow.

The motion was agreed to.

EXECUTIVE SESSION.

Mr. STONE. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After 30 minutes spent in executive session the doors were reopened.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had passed the following bills and joint resolution, in which it requested the concurrence of the Senate:

H. R. 13670. An act amending an act entitled "An act making appropriations for the naval service for the fiscal year ending June 30, 1916, and for other purposes," relating to the authorization of fleet submarines;

H. R. 14864. An act to alter and amend an act entitled "An act granting lands to aid in the construction of a railroad and telegraph line from the Central Pacific Railroad, in California, to Portland, in Oregon," approved July 25, 1866, as amended by the acts of 1868 and 1869, and to alter and amend an act entitled "An act granting lands to aid in the construction of a railroad and telegraph line from Portland to Astoria and McMinnville, in the State of Oregon," approved May 4, 1870, and for other purposes; and

H. J. Res. 214. Joint resolution increasing the number of sheets of customs stamps and of checks, drafts, and miscellaneous work to be executed by the Bureau of Engraving and Printing during the fiscal year 1916.

ENROLLED BILL SIGNED.

The message also announced that the Speaker of the House had signed the enrolled bill (H. R. 12843) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war, and it was thereupon signed by the Vice President.

PETITIONS AND MEMORIALS.

Mr. TILLMAN presented memorials of sundry citizens of South Carolina, remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

Mr. OLIVER presented a petition of the Chamber of Commerce of Harrisburg, Pa., praying for Federal aid for vocational education, which was ordered to lie on the table.

He also presented a petition of the Chamber of Commerce of Harrisburg, Pa., praying for an investigation by the Interstate Commerce Commission into the differences between the railroads and their employees, which was referred to the Committee on Interstate Commerce.

He also presented a petition of sundry citizens of Washington County, Pa., praying for the enactment of legislation to found the Government on Christianity, which was referred to the Committee on the Judiciary.

He also presented petitions of sundry citizens of Pennsylvania, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. PHELAN presented a petition of Nelson A. Miles Camp, No. 10, United Spanish War Veterans, of San Francisco, Cal., praying for the enactment of legislation to grant pensions to widows and orphans of veterans of the Spanish-American War, which was ordered to lie on the table.

He also presented a petition of the Chamber of Commerce of Los Angeles, Cal., praying that an appropriation be made for the construction of a road to the summit of Mount Whitney, which was referred to the Committee on Appropriations.

Mr. LIPPITT presented a petition of Local Lodge No. 850, Benevolent and Protective Order of Elks, of Woonsocket, R. I., praying that the United States remain at peace, which was referred to the Committee on Foreign Relations.

Mr. LODGE presented a petition of the congregation of the Congregational Church of Royalston, Mass., and a petition of sundry citizens of Newton, Mass., praying for national prohibition, which were referred to the Committee on the Judiciary.

REPORTS OF COMMITTEES.

Mr. BORAH, from the Committee on Irrigation and Reclamation of Arid Lands, to which was referred the bill (S. 5014) to amend section 1 of the act of August 9, 1912, providing for patents on reclamation entries, and for other purposes, reported it with amendments and submitted a report (No. 484) thereon.

Mr. THOMAS, from the Committee on Military Affairs, to which was referred the bill (S. 1584) for the relief of George M. Bryan, reported adversely thereon, and the bill was postponed indefinitely.

He also, from the same committee, to which was referred the bill (S. 3479) for the relief of Sylvester Howe, reported adversely thereon, and the bill was postponed indefinitely.

He also, from the same committee, to which was referred the bill (S. 5175) to remove the charge of desertion from the military record of Albert Tousley, reported adversely thereon, and the bill was postponed indefinitely.

ADJUDICATION OF PRIVATE CLAIMS.

Mr. LODGE. On March 22, 1916, I submitted amendments intended to be proposed by me to the bill (H. R. 6918) to relieve Congress from the adjudication of private claims against the Government, and they were referred to the Committee on Claims. I learn that the bill is before the Committee on the Judiciary. I ask that the Committee on Claims be discharged from the further consideration of the amendments and that they be referred to the Committee on the Judiciary.

The VICE PRESIDENT. Without objection, it is so ordered.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. JONES:

A bill (S. 6179) granting an increase of pension to Commodore P. White (with accompanying papers); to the Committee on Pensions.

By Mr. THOMAS:

A bill (S. 6180) granting an increase of pension to Christopher C. Kelly (with accompanying papers); to the Committee on Pensions.

By Mr. CURTIS:

A bill (S. 6181) for the relief of Wilson Warford (with accompanying papers); to the Committee on Military Affairs.

A bill (S. 6182) granting an increase of pension to Dennis Willard;

A bill (S. 6183) granting a pension to Amanda M. Haner;

A bill (S. 6184) granting an increase of pension to Minerva Stevenson (with accompanying papers);

A bill (S. 6185) granting a pension to Sarah Smith (with accompanying papers);

A bill (S. 6186) granting an increase of pension to Martha E. Sims (with accompanying papers);

A bill (S. 6187) granting a pension to Julia Rumbley (with accompanying papers);

A bill (S. 6188) granting an increase of pension to Joseph H. Rowland (with accompanying papers);

A bill (S. 6189) granting an increase of pension to Sophronia A. McKenzie (with accompanying papers);

A bill (S. 6190) granting an increase of pension to John Mahafa (with accompanying papers);

A bill (S. 6191) granting an increase of pension to Henry D. Macomber (with accompanying papers);

A bill (S. 6192) granting an increase of pension to Stephen Lampman (with accompanying papers);

A bill (S. 6193) granting a pension to James F. Hargett (with accompanying papers);

A bill (S. 6194) granting an increase of pension to Robert P. Gailer (with accompanying papers);

A bill (S. 6195) granting a pension to Elizabeth Forsythe (with accompanying papers);

A bill (S. 6196) granting an increase of pension to Lemuel Evans (with accompanying papers);

A bill (S. 6197) granting an increase of pension to Thomas Edens (with accompanying papers);

A bill (S. 6198) granting an increase of pension to Arba Capron (with accompanying papers); and

A bill (S. 6199) granting an increase of pension to Mary S. Burnam (with accompanying papers); to the Committee on Pensions.

By Mr. HUGHES:

A bill (S. 6200) granting an increase of pension to John McGuire; to the Committee on Pensions.

By Mr. KERN:

A bill (S. 6201) to restore to officers on the retired list of the Army the rank of which they were deprived by regimental promotion; to the Committee on Military Affairs.

By Mr. PHELAN:

A bill (S. 6202) for the relief of Augusta Reiter; to the Committee on Claims.

A bill (S. 6203) granting a pension to Martin Forrest (with accompanying papers); to the Committee on Pensions.

A bill (S. 6204) to amend the act entitled "An act to amend sections 2275 and 2276 of the Revised Statutes of the United States providing for the selection of lands for educational purposes in lieu of those appropriated," and to authorize an exchange of lands between the United States and the several States; to the Committee on Public Lands.

A bill (S. 6205) to provide for the establishment of a national Employment Bureau in the Department of Labor; to the Committee on Education and Labor.

By Mr. OLIVER (for Mr. PENROSE):

A bill (S. 6206) granting a pension to Carl Reed (with accompanying papers); to the Committee on Pensions.

RIVER AND HARBOR APPROPRIATIONS.

Mr. NEWLANDS submitted an amendment intended to be proposed by him to the river and harbor appropriation bill (H. R. 12193), which was ordered to lie on the table and be printed.

PENSIONS AND INCREASE OF PENSIONS.

Mr. HUGHES submitted the following concurrent resolution (S. Con. Res. 23), which was considered by unanimous consent and agreed to:

Resolved by the Senate (the House of Representatives concurring), That the Secretary of the Senate be authorized, in the enrollment of the bill (S. 4856) "granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors," to change the word "Hentry" to "Henry," where it occurs in line 21, page 7, and to change the word "him" to "her," where it occurs in line 1, page 18.

EMPLOYMENT OF ADDITIONAL MESSENGER.

Mr. NELSON submitted the following resolution (S. Res. 205), which was referred to the Committee to Audit and Control the Contingent Expenses of the Senate:

Resolved, That the Sergeant at Arms of the Senate is hereby authorized and directed to place on the Senate rolls one additional messenger at the rate of $1,200 per annum, to be paid out of the contingent fund of the Senate until otherwise provided for by law.

NATIONAL DEFENSE (S. DOC. NO. 447).

Mr. CHAMBERLAIN. Mr. President, there has been a great deal of conflict of opinion as to what the Army reorganization act contains. I have submitted the bill to the Secretary of War, with the request that he analyze the law and transmit it to me, so that I might have it to lay before the Senate. I have received a communication from the Secretary of War, transmitting the analysis he makes of the bill, which I desire to ask to have printed as a public document.

The VICE PRESIDENT. Is there any objection? The Chair hears none, and it is so ordered.

HOUSE BILLS REFERRED.

H. R. 13670. An act amending an act entitled "An act making appropriations for the naval service for the fiscal year ending June 30, 1916, and for other purposes," relating to the authorization of fleet submarines, was read twice by its title and referred to the Committee on Naval Affairs.

H. R. 14864. An act to alter and amend an act entitled "An act granting lands to aid in the construction of a railroad and telegraph line from the Central Pacific Railroad, in California, to Portland, in Oregon," approved July 25, 1866, as amended by the acts of 1868 and 1869, and to alter and amend an act entitled "An act granting lands to aid in the construction of a railroad and telegraph line from Portland to Astoria and McMinnville, in the State of Oregon," approved May 4, 1870, and for other purposes, was read twice by its title and referred to the Committee on Public Lands.

H. J. Res. 214. Joint resolution increasing the number of sheets of customs stamps and of checks, drafts, and miscellaneous work to be executed by the Bureau of Engraving and Printing during the fiscal year 1916 was read twice by its title and referred to the Committee on Appropriations.

RECESS.

Mr. STONE. I move that the Senate take a recess until 11 o'clock to-morrow morning.

The motion was agreed to; and (at 5 o'clock and 25 minutes p. m., Friday, May 26, 1916) the Senate took a recess until to-morrow, Saturday, May 27, 1916, at 11 o'clock a. m.

NOMINATIONS.

Executive nominations received by the Senate May 26 (legislative day of May 18), 1916.

POSTMASTERS.

ALABAMA.

W. H. Ballenger to be postmaster at Dora, Ala., in place of Noah S. Daniel. Incumbent's commission expired February 19, 1916.

John M. Graham to be postmaster at Stevenson, Ala., in place of R. L. Wilson. Incumbent's commission expires May 28, 1916.

ARIZONA.

Don C. Babbitt to be postmaster at Mesa, Ariz., in place of W. M. Newell. Incumbent's commission expires June 14, 1916.

John D. James to be postmaster at Metcalf, Ariz., in place of Charles E. Dermont, resigned.

CALIFORNIA.

Samuel T. Moore to be postmaster at Gilroy, Cal., in place of Catherine T. Ryan. Incumbent's commission expired December 18, 1915.

COLORADO.

Taylor B. Geer to be postmaster at Delta, Colo., in place of Ella New. Incumbent's commission expires June 7, 1916.

CONNECTICUT.

James E. Cuff to be postmaster at Danbury, Conn., in place of F. B. Croffutt. Incumbent's commission expires June 7, 1916.

Charles W. Leet to be postmaster at Chester, Conn., in place of R. C. Tyler. Incumbent's commission expires June 12, 1916.

ILLINOIS.

W. C. F. Albrecht to be postmaster at Dundee, Ill., in place of William Hawley. Incumbent's commission expired May 17, 1916.

John H. Daley to be postmaster at Tampico, Ill., in place of George Isherwood. Incumbent's commission expired April 9, 1916.

Hugh A. Mason to be postmaster at Mound City, Ill., in place of Alfred Schuler. Incumbent's commission expired May 10, 1916.

William H. Meyer to be postmaster at Lombard, Ill., in place of D. H. Fleege. Incumbent's commission expired April 24, 1916.

Alta A. Rose to be postmaster at Atwood, Ill., in place of C. C. Hamilton. Incumbent's commission expired April 24, 1916.

INDIANA.

Daily C. Beverly to be postmaster at Lynn, Ind., in place of Frank Daly. Incumbent's commission expires June 12, 1916.

Earl K. Shalley to be postmaster at Berne, Ind., in place of Anna Egly. Incumbent's commission expires June 14, 1916.

IOWA.

O. S. Barber to be postmaster at Creston, Iowa, in place of W. H. Robb, resigned.

Paul Krueger to be postmaster at Jesup, Iowa, in place of Fred S. Stoddard, resigned.

W. F. L. Merrill to be postmaster at Hazleton, Iowa, in place of Jacob Kiefer. Incumbent's commission expired May 17, 1916.

LOUISIANA.

Mrs. George H. De Clouet to be postmaster at La Fayette, La., in place of J. R. Domengeaux. Incumbent's commission expired March 21, 1916.

Teresa M. Stewart to be postmaster at Welsh, La., in place of W. M. Terry. Incumbent's commission expires June 12, 1916.

Alvyn L. Woods to be postmaster at Lutcher, La., in place of M. P. T. Prescott. Incumbent's commission expires June 12, 1916.

MARYLAND.

Alcenus E. Cooper to be postmaster at Denton, Md., in place of John T. Carter. Incumbent's commission expired May 24, 1916.

Raymond L. Westerfield to be postmaster at Port Deposit, Md., in place of Albert N. Vannort, resigned.

MICHIGAN.

Clara R. Howell to be postmaster at Caro, Mich., in place of O. S. Pattison. Incumbent's commission expired April 5, 1916.

MINNESOTA.

Earl Q. Stanley to be postmaster at Alden, Minn., in place of F. L. Walker. Incumbent's commission expired May 20, 1916.

MISSISSIPPI.

John A. Collier to be postmaster at Leland, Miss., in place of John B. Collier, deceased.

NEBRASKA.

J. C. Chatelain to be postmaster at Peru, Nebr., in place of J. D. Bishop, resigned.

NEW YORK.

Manly A. Aiken to be postmaster at Kenwood, N. Y., in place of Manly A. Aiken. Incumbent's commission expired January 22, 1916.

C. J. Carey to be postmaster at Saranac Lake, N. Y., in place of W. E. Johnson. Incumbent's commission expired January 25, 1916.

John Lenney to be postmaster at Potsdam, N. Y., in place of J. J. Keenan. Incumbent's commission expired April 11, 1916.

NORTH DAKOTA.

Thomas Rowan to be postmaster at Sherwood, N. Dak., in place of Edward L. Dougherty, removed.

OKLAHOMA.

D. W. LeCrone to be postmaster at Forgan, Okla., in place of Earl E. LeCrone, resigned.

OREGON.

John P. Houston to be postmaster at Vale, Oreg., in place of V. B. Staples. Incumbent's commission expired March 8, 1916.

PENNSYLVANIA.

Bert B. Bowen to be postmaster at Sheffield, Pa., in place of M. H. Shick. Incumbent's commission expired March 1, 1916.

John C. Bradley to be postmaster at Birdsboro, Pa., in place of H. E. Brinley. Incumbent's commission expired May 10, 1916.

Milo G. Coulin to be postmaster at Duquesne, Pa., in place of J. S. Edmundson. Incumbent's commission expires June 7, 1916.

Sorado Miller to be postmaster at Coopersburg, Pa., in place of Thomas Stephens. Incumbent's commission expired May 20, 1916.

Joseph Smith to be postmaster at Elkland, Pa., in place of J. H. Buckbee. Incumbent's commission expires May 31, 1916.

SOUTH CAROLINA.

Lawrence O. Harper to be postmaster at Honea Path, S. C., in place of Lawrence O. Harper. Incumbent's commission expired May 17, 1916.

Achilles W. Knight to be postmaster at Bamberg, S. C., in place of A. W. Knight. Incumbent's commission expires June 12, 1916.

TENNESSEE.

W. S. Regenold to be postmaster at McKenzie, Tenn., in place of W. A. Hill. Incumbent's commission expires May 31, 1916.

WEST VIRGINIA.

James J. Dunn to be postmaster at Rowlesburg, W. Va., in place of C. V. Hooton. Incumbent's commission expired December 14, 1914.

WISCONSIN.

Gilbert C. Roberts to be postmaster at La Farge, Wis., in place of Gilbert C. Roberts. Office became presidential January 1, 1916.

HOUSE OF REPRESENTATIVES.

FRIDAY, *May 26, 1916.*

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

For the joy of life and the fullness thereof we bless Thee, O God. For this day and the glory of it we bless Thee, O our Father. Strengthen us, we pray Thee, for each newborn duty. Fill our hearts with zeal and enthusiasm that we may follow in the wake of the world's great Exemplar, and thus fulfill to the uttermost our mission upon the earth, to the glory and honor of Thy holy name. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Waldorf, one of its clerks, announced that the Senate had passed the following resolution:

Resolved, That the Secretary be directed to request the House of Representatives to return to the Senate the bill (S. 4797) entitled "An act to amend an act entitled 'An act concerning foreign-built dredges,' approved May 28, 1906."

The message also announced that the President had approved and signed on May 25, 1916, bill of the following title:

S. 5221. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors.

DISTRICT OF COLUMBIA APPROPRIATION BILL.

Mr. PAGE of North Carolina. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 15774, the District of Columbia appropriation bill.

Mr. MADDEN. Mr. Speaker, pending the consideration of the motion just made by the gentleman from North Carolina, I desire to submit a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. MADDEN. The Post Office Committee agreed to ask for a rereference of two bills from the Committee on Reform in the Civil Service back to the Post Office Committee, and it was the understanding that this would be brought up at this hour, this being the time at which, under the rules, the motion should be made. If that motion be not made at this time, when the District of Columbia appropriation bill is completed will the Chair give recognition for the making of that motion?

The SPEAKER. The rule provides that the motion shall be made immediately after the reading of the Journal. That, however, has not been the practice, and under the circumstances in this case if the gentlemen interested in the motion are willing to have it go over to accommodate the Committee on Appropriations the Chair will feel that he ought to recognize them when they make the motion later.

Mr. MADDEN. That will be satisfactory to the committee, I think.

Mr. COX. Mr. Speaker, in response to the inquiry of the gentleman from Illinois [Mr. MADDEN], I desire to state that no member of the Committee on the Post Office and Post Roads who will oppose the motion to be made will raise the point of order upon the word "immediately" in the rule, which requires that it shall be done immediately after the reading of the Journal. We expect to make a point of order against the motion, but we will not press that point as to time.

Mr. MADDEN. It will be understood, then, that regardless of the rule we can have the matter considered later?

Mr. COX. Yes; reserving to us who oppose the motion the right to a point of order on other grounds.

The SPEAKER. The Chair will hold it in order, so far as time is concerned, if given the opportunity.

The question is on the motion of the gentleman from North Carolina that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the District of Columbia appropriation bill.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the District of Columbia appropriation bill, with Mr. FERRIS in the chair.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Juvenile court: Judge, $3,600; clerk, $2,000; deputy clerk, who is authorized to act as clerk in the absence of that officer, $1,350; financial clerk, who is authorized to act as clerk in the absence of that officer, $1,200; stenographer and typewriter, who is authorized to act as a deputy clerk, $900; stenographer and typewriter for judge's work, and to aid in keeping records in clerk's office, $900; probation officers—chief, $1,800, assistant chief, who shall also be investigating officer for children's cases, $1,500; 2 at $1,200 each; 4 at $1,000 each; clerk for probation office, $900; 2 bailiffs, at $900 each; telephone operator, $600; janitor, $600; charwoman, $240; in all, $23,790.

Mr. MONDELL. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Page 64, after line 10, insert as a new paragraph the following:
"For the payment of two inspectors to carry out the purposes of the act approved May 28, 1908, entitled 'An act to regulate the employment of child labor in the District of Columbia,' as provided by section 10 of said act, $2,400."

Mr. PAGE of North Carolina. Mr. Chairman, I make the point of order against the amendment.

Mr. MONDELL. Mr. Chairman, I desire to be heard on the point of order. The child-labor act provides for the regulation of child labor in the District of Columbia, and section 10 of that act is as follows:

That the Commissioners of the District of Columbia are hereby authorized to appoint two inspectors to carry out the purposes of this act, at a compensation not exceeding $1,200 each per annum.

The amendment which I have offered provides for the payment of those two inspectors.

The CHAIRMAN. Have these inspectors been appointed before?

Mr. MONDELL. The District Commissioners, acting under authority of this section, detailed two police officers to this work. It is not a matter of law; it is a matter of detail. If this amendment is adopted, that payment will either go to those two officers or the commissioners acting under their authority may detail other officers or appoint officers. At the present time they have simply detailed two police officers.

The CHAIRMAN. The Chair thinks the gentleman is right about that. Does the gentleman from North Carolina desire to be heard upon the point of order?

Mr. PAGE of North Carolina. Mr. Chairman, I have an impression that that provision of the child-labor law has been repealed or modified to the extent that would justify my point of order, and I will ask the gentleman from Wyoming if he will not permit this to be passed over for the present?

Mr. MONDELL. Certainly.

Mr. PAGE of North Carolina. And we will revert to it later.

The CHAIRMAN. Without objection, the Clerk will read, and unanimous consent is given to return to this point.

There was no objection.

The Clerk read as follows:

For rent of building at 203 I Street NW., $2,400.

Mr. PAGE of North Carolina. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Page 64, lines 12 and 13, strike out the words "of building at 203 I Street NW.," so that the paragraph will read:
"For rent, $2,400."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The Clerk read as follows:

Municipal court: Five judges, at $3,000 each; clerk, $1,500; 3 assistant clerks, at $1,000 each; messenger, $600; janitor, $600; in all, $20,700.

Mr. MANN. Mr. Chairman, I reserve a point of order on this paragraph.

Mr. JOHNSON of Kentucky. Mr. Chairman, I was going to make the point myself, or at least reserve it.

Mr. PAGE of North Carolina. Mr. Chairman, I assume that the point of order is aimed at the increase in the salaries of the five judges. These judges are receiving $2,500 a year, and your committee has increased their compensation to $3,000. This matter has been presented to the subcommittee making up this bill since I have been a member of the Committee on Appropriations at each recurring session of Congress with very convincing reasons why the salaries for these judges should be increased to $3,000. In the paragraph just passed the judges of the police court are paid a salary of $3,600 a year, while the judges of this court have been paid $2,500 a year. This court has absolute and original jurisdiction in all civil cases where the amount involved does not exceed $500. It is the court of the great mass of litigants in the District of Columbia. I do not remember exactly, but to the best of my recollection from 75 to 80 per cent of the civil cases tried in the District of Columbia are tried before this court, and these judges have very much harder work than do the police court judges, if that is possible. Your committee believes that the compensation should be increased to that sum; and while, if the gentleman insists upon his point of order, of course, it will go out, I would like to call the attention of the committee to the fact that this is the only court in the District of Columbia whose receipts are $15,000 more than the cost of the entire court—the only court that turns into the Treasury more than is expended upon its maintenance. A special committee of the subcommittee framing this bill visited the court and are familiar with it; and I believe, Mr. Chairman, that the Committee of the Whole will make a mistake if it does not allow this increase of salary to the overworked judges upon this bench.

Mr. DAVIS of Minnesota. Mr. Chairman, I desire to say just a few words on this particular paragraph, especially upon the salary. It has been my occupation for quite a number of years—thirty-odd—to practice before the various courts of the United States—municipal, district, State, and others. I wish to say this: That if the judges of this court are qualified—and I must assume that they are, and they do a large amount of business—they must of necessity be good lawyers. They must of necessity be better lawyers than are required of any police judge. They must, and usually are, of greater ability than any juvenile court judge. The matters that come before them involve the whole gamut of law. They must be constitutional lawyers, because questions of that kind are submitted to them.

Mr. COX. Will the gentleman yield for a question?

Mr. DAVIS of Minnesota. Yes.

Mr. COX. Do they perform the duties now that formerly were performed by justices of the peace?

Mr. DAVIS of Minnesota. Yes; and all others except certain criminal jurisdiction in the District of Columbia which is apportioned to the police judges.

Mr. COX. And the District does not have any justices of the peace any more?

Mr. DAVIS of Minnesota. They do not.

Mr. COX. This court does all the work?

Mr. DAVIS of Minnesota. Yes; and in addition have jurisdiction up to the amount of $500 in civil cases.

Mr. COX. What criminal jurisdiction do they have?

Mr. DAVIS of Minnesota. They have none. I believe that is apportioned to the police court judges.

Mr. JOHNSON of Kentucky. Mr. Chairman, if the gentleman will permit an interruption, I think it is the intention in a bill now before the Committee on the Judiciary, in reference to the code of the District, to have the civil jurisdiction of these judges quite largely increased. I understand so.

Mr. DAVIS of Minnesota. I understand they are overworked now. They perform the work of practically all the civil cases in the District of Columbia.

Mr. JOHNSON of Kentucky. My attention was just called to that phase of it, and so far as I am concerned I am ready to withdraw my point of order.

Mr. DAVIS of Minnesota. A real lawyer, a real judge, who performs the duties of municipal judge, gets only $2,500, while a police judge gets $3,600 a year, and a juvenile court judge, who has to deal with greatly inferior matters from a legal standpoint, gets $3,600 a year. Two thousand five hundred dollars for a man capable of filling this position is an absurdity. I hope the gentleman will withdraw his point of order. It has been before the committee ever since I have had anything to do with it. I for one would put the salary slightly above any police judge or a juvenile court judge, whereas the difference is $1,100 in favor of the police and juvenile court judges. The receipts from the office more than balance all the expenses.

Mr. CARY. Is it not a fact there is $100,000 to the credit of this court now?

Mr. DAVIS of Minnesota. I think the gentleman is right.

Mr. MANN. Will the gentleman yield?

Mr. DAVIS of Minnesota. Yes.

Mr. MANN. How could they have a large sum to their credit?

Mr. DAVIS of Minnesota. The receipts have been $100,000 greater than the expenses.

Mr. MANN. Oh, I do not suppose they solicit business. They have nothing to do with that. You might as well apply that principle to our own salaries.

Mr. DAVIS of Minnesota. It shows—I have tried to show, at least—that their work is enormous, and it is of the best legal quality. They should receive a greater salary. The matter has been pending so long that it ought to receive favorable attention now.

Mr. JOHNSON of Kentucky. Mr. Chairman, one of the members of the Committee on the Judiciary has suggested that, if he remembers correctly, a bill is now pending before that committee relating to this subject, and in all probability it will be reported out, increasing the civil jurisdiction of this court to $1,000. In view of that, so far as I am concerned, I wish to withdraw my point of order.

The CHAIRMAN. The point of order is withdrawn. The Clerk will read.

The Clerk read as follows:

Writs of lunacy: For expenses attending the execution of writs de lunatico inquirendo and commitments thereunder in all cases of indigent insane persons committed or sought to be committed to the Government Hospital for the Insane by order of the executive authority of the District of Columbia under the provisions of existing law, including the employment of an alienist at not exceeding $1,500 per annum, and a clerk who shall be a stenographer and typewriter, $840, $4,840.

Mr. JOHNSON of Kentucky. Mr. Chairman, I make a point of order against the increase of salary there, $1,500; and also for the extra clerk at $840.

Mr. HOWARD. Mr. Chairman, if the gentleman from Kentucky will reserve that point of order, I would like to make a statement.

Mr. JOHNSON of Kentucky. I will reserve it.

Mr. HOWARD. I want to say, Mr. Chairman, that the subcommittee, looking into this question of the alienist, found that the alienist who passes upon the mental condition of the people in the District here was receiving $1,000 a year.

Personally I have very little confidence in the opinion of a good many alienists that I have run across in my day and generation, and I have seen some that had the reputation of being great expert alienists, who received enormous fees for making examinations, and I did not have very much confidence in their diagnoses when made or in their reports. But the proposition here resolves itself into this: That if there is going to be any expert examination of these people at all, the examination ought to be conducted by a man who at least has some "smattering" of knowledge of mental disease.

The committee thought that the remuneration of $1,000 a year would not attract a man who was capable of making a proper diagnosis, and for that reason, at the earnest request of the Commissioners of the District of Columbia, who thought this salary was inadequate, we fixed the salary at $1,500 a year.

The report here shows that under the observation of this particular alienist there were 1,611 cases last year. We thought that, in view of the recommendation of the commissioners, who looked into this matter very carefully and who always make recommendations from the conservative standpoint, so far as the economic operation of the District affairs is concerned, we ought to adhere to their recommendation and increase the salary to $1,500 a year.

Of course, we realize that this is subject to a point of order. But those are the facts, and I think the members of the subcommittee on the other side will agree that we looked into the matter very carefully before we recommended the increase of this salary to $1,500 a year. We think that any man who properly performs his duty during the year should receive that amount.

My attention has been called to the fact that the alienist had under his supervision in the Washington Asylum and the juvenile court and all other courts in the District of Columbia 1,611 cases during the year 1915, so at that rate, even at the increased salary, this alienist, who is supposed to have expert knowledge, would have received less than $1 per case during the year 1915. We feel that any person taking this position will earn the salary, and I hope the gentleman from Kentucky will withdraw his point of order.

Mr. JOHNSON of Kentucky. Mr. Chairman, an alienist for the lunatic asylum has already been employed and paid $4,500 a year. This, perhaps, seeks the employment of another man to relieve the alienist of his work while he is testifying as an expert in other courts and in other cases.

Mr. HOWARD. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of Kentucky. Yes.

Mr. HOWARD. Does the gentleman mean to convey the idea that this office has any connection, directly or indirectly, with St. Elizabeth's?

Mr. JOHNSON of Kentucky. That is exactly what I mean; yes; it is under that head. This man is supposed to hang around the local courts down here as an alienist, while the superintendent of the asylum, who is acknowledged to be one of the best alienists in the country, holds his job at $4,500 a year because of his reputation as an alienist. I am not now in favor of employing somebody to do his work while he is testifying in other courts as an expert alienist, and, Mr. Chairman, I insist upon my point of order.

The CHAIRMAN. The point of order is sustained.

Mr. PAGE of North Carolina. Mr. Chairman, I offer the following amendment: In line 13, where the figures "$1,500" are stricken out, I offer "$1,000."

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from North Carolina.

The Clerk read as follows:

Amend, page 56, line 13, by inserting "$1,000" in lieu of "$1,500."

Mr. JOHNSON of Kentucky. And with that, Mr. Chairman, also should go out the words "and a clerk, who shall be a stenographer and typewriter, $840."

Mr. PAGE of North Carolina. That went out on the point of order.

The CHAIRMAN. Yes; that went out on the point of order. The question is on agreeing to the amendment offered by the gentleman from North Carolina [Mr. PAGE].

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

For interest and sinking fund on the funded debt, which sum shall be paid out of funds and accounted for in accordance with the acts of Congress in relation thereto, $975,408.

Mr. PAGE of North Carolina. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Committee amendment: On page 66, strike out all of lines 18 and 19 and in lieu thereof insert the following: "payable one-half out of the revenues of the District of Columbia and one-half out of any money in the Treasury not otherwise appropriated."

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from North Carolina.

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Support of convicts: For support, maintenance, and transportation of convicts transferred from the District of Columbia; for expenses of shipping remains of deceased convicts to their homes in the United States, and for expenses of interment of unclaimed remains of deceased convicts; for expenses incurred in identifying and pursuing escaped convicts and for rewards for their recapture; to be expended under the direction of the Attorney General, $100,000.

Mr. MONDELL. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Wyoming moves to strike out the last word.

Mr. MONDELL. Mr. Chairman, the estimate under this item, if I am correct, is $165,000, and the expenditures for the current year are $150,000.

Mr. PAGE of North Carolina. I will say to the gentleman that there was an appropriation of $60,000 in one of the deficiency bills at this session in addition to the appropriation in the last act of $90,000, making in all $150,000. The amount in this bill, $100,000, is $10,000 more than the current law. This is in consonance with the provision carried further over in the bill that covers the reformatory for the District of Columbia and under which, during the life of this bill, the prisoners will be assigned to an institution here. That will save a great deal of the expense of caring for these District prisoners in United States penitentiaries.

Mr. MONDELL. That is the new institution at Occoquan?

Mr. PAGE of North Carolina. Yes; at Occoquan; and this has been done after full consultation with the authorities as to the amount.

Mr. MONDELL. Is the gentleman quite certain that that new institution will be ready for these people during the coming fiscal year?

Mr. PAGE of North Carolina. We are assured by the authorities that if the provision contained further on in this bill is enacted into law, they will be in a position, during the life of this bill, to take care of 300 of those prisoners at Occoquan, that being half the number now in Federal penitentiaries.

Mr. MONDELL. The intention, I understand, is to bring them up here and to quarter some of them at least temporarily while they are putting up the new buildings.

Mr. PAGE of North Carolina. That is the proposition; and this also provides that the court may sentence prisoners to this institution rather than to the Federal penitentiary.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn, and the Clerk will read.

The Clerk read as follows:

Columbia Hospital for Women and Lying-in Asylum: For maintenance and operation, $20,000. Upon the passage of this act the terms of the members of the present board of directors shall terminate, and thereafter the board shall consist of the Surgeon General of the Army, the Surgeon General of the Navy, the Surgeon General of the Public Health Service, and one Senator and two Representatives in Congress, to be appointed by the Vice President and the Speaker of the House of Representatives, respectively, each for the term of a single Congress and be eligible for reappointment, and five members, who shall be residents of the District of Columbia, to be appointed by the commissioners. Of the number of directors appointed by the commissioners first after the passage of this act, one shall serve for one year, two for two years, and two for three years; all subsequent appointees of said commissioners sha'l serve for three years, except that appointments to fill vacancies occurring during a term shall be for the unexpired term. The said board shall have full power to appoint all officers and employees of said hospital, including the medical staff, subject to the approval of the commissioners. There shall always be at least three members of each sex upon said board. The said hospital shall continue to operate as a hospital (and dispensary) for the treatment of diseases peculiar to women and lying-in asylum, and shall continue to furnish board, lodging, medicine, and medical attendance gratuitously to those unable to pay therefor, when so duly certified by the Board of Charities of the District. It shall also receive patients who are willing to pay their expenses, and all money received from said patients shall be paid daily to the collector of taxes of the District, to be deposited by him to the credit and to constitute a part of the annual appropriation for support and maintenance of said hospital, which money, together with all appropriations made for said hospital, shall be expended under the direction of the board of directors of the hospital and the supervision and control of the commissioners.

Mr. MANN. Mr. Chairman——

Mr. PAGE of North Carolina. Mr. Chairman, if the gentleman will allow me, I have several amendments that I would like to offer to this section and to have them read from the Clerk's desk and considered. After consultation with various gentlemen interested, I think these amendments will make this satisfactory to the gentleman.

Mr. MANN. I hope the gentleman is proposing some amendments which I would have proposed.

The Clerk read as follows:

Committee amendment: On page 74, line 15, after the word "District," strike out the period and insert a comma and the following words——

Mr. MANN. There is no such word in that line.

Mr. CARLIN. That should be in line 22.

The CHAIRMAN. Without objection, the amendment will be considered as ordered after the word "District," in line 22.

The Clerk read as follows:

Page 74, line 22, after the word "District," strike out the period and insert a comma and the following words: "And to be paid for by the said Board of Charities."

The amendment was agreed to.

The CHAIRMAN. The gentleman from North Carolina offers a second amendment, which will be read by the Clerk.

The Clerk read as follows:

Committee amendment No. 2: On page 74, line 16, strike out the words "of each sex."

Mr. MANN. That would make the paragraph ridiculous.

Mr. CARLIN. There is another amendment there which provides for an insertion.

Mr. MANN. I do not know what they propose to insert.

Mr. PAGE of North Carolina. I ask unanimous consent that this section as to Columbia Hospital may be passed over temporarily and the amendments withdrawn, so that they may be offered properly.

Mr. FOSTER. If the gentleman will permit, I have a copy of the section here with the amendments written into it, and I think that will cover it.

Mr. PAGE of North Carolina. Then, Mr. Chairman, I ask unanimous consent to withdraw the amendment just read and the other amendments sent to the desk, and to offer an amendment in the way of a substitute for the section.

The CHAIRMAN. The gentleman from North Carolina asks unanimous consent to withdraw the amendment just read and the other amendments sent to the desk, and that in lieu thereof a substitute be offered. Is there objection?

There was no objection.

The CHAIRMAN. The gentleman from North Carolina offers an amendment, which the Clerk will report.

The Clerk read as follows:

Strike out all after the word "necessary," in line 20, page 73, down to and including line 7, page 75, and insert the following:

"Columbia Hospital for Women and Lying-in Asylum: For maintenance and operation, $20,000. Upon the passage of this act the terms of the members of the present board of directors shall terminate, and thereafter the board shall consist of the Surgeon General of the Army, the Surgeon General of the Navy, the Surgeon General of the Public Health Service, and one Senator and two Representatives in Congress, to be appointed by the Vice President and the Speaker of the House of Representatives, respectively, each for the term of a single Congress and be eligible for reappointment, and five members, who shall be residents of the District of Columbia, to be appointed by the commissioners. Of the number of directors appointed by the commissioners first after the passage of this act, one shall serve for one year, two for two years, and two for three years; all subsequent appointees of said commissioners shall serve for three years, except that appointments to fill vacancies occurring during a term shall be for the unexpired term. The said board shall have full power to appoint all officers and employees of said hospital, including the medical staff. There shall always be two female members upon said board. The said hospital shall continue to operate as a hospital (and dispensary) for the treatment of diseases peculiar to women and lying-in asylum, and shall continue to furnish board, lodging, medicine, and medical attendance gratuitously to those unable to pay therefor, when so duly certified by the Board of Charities of the District, and to be paid for by the said Board of Charities. It shall also receive patients who are willing to pay their expenses, and all money received from said patients shall be paid daily to the collector of taxes of the District, to be deposited by him to the credit and to constitute a part of the annual appropriation for support and maintenance of said hospital, which money, together with all appropriations made for said hospital, shall be expended under the direction of the board of directors of the hospital. The Commissioners of the District of Columbia shall have supervision of said hospital and the board of directors thereof shall account for all receipts and expenditures of them, in such manner as they, the said commissioners, may prescribe, and all estimates for appropriations to be made by the Congress for the operation and other expenses of the hospital shall be submitted by the board of directors to the District Commissioners, and by them submitted to Congress in the same manner as all other estimates for the operation of the District government are now submitted."

The CHAIRMAN. The question is on agreeing to the substitute.

Mr. MANN. I should like to offer a verbal suggestion or two myself. I move to strike out of the substitute, in line 16, as it appears in the original bill, the word "always."

The CHAIRMAN. The gentleman from Illinois offers an amendment, which the Clerk will report.

The Clerk read as follows:

Line 16, page 74, strike out the word "always."

Mr. PAGE of North Carolina. We accept that amendment, Mr. Chairman.

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. MANN. I move to strike out, in line 24, page 74, the word "daily."

The CHAIRMAN. The gentleman from Illinois offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amend, on page 74, by striking out, in line 24, the word "daily."

Mr. MANN. I do not suppose they receive very much money there, and to make a daily report will probably be more expensive than is worth while.

Mr. PAGE of North Carolina. The gentleman is mistaken. They receive quite a good deal of money there. They have an average of about 60 pay patients in the hospital, and the receipts are very considerable.

Mr. MANN. I doubt whether the daily receipts are very considerable. I move to strike out "daily" and leave it so that they will make the report. I have no doubt they will send in the money when they have it.

Mr. PAGE of North Carolina. Personally, I have no objection to that, but there is a good deal more money handled there than the gentleman from Illinois thinks.

Mr. MANN. I doubt if their daily receipts amount to much.

Mr. PAGE of North Carolina. Where there are $25,000 a year taken in, I imagine that every day the receipts are considerable.

Mr. FOSTER. I saw that in the amendment offered by the gentleman from North Carolina, and, as the gentleman from Illinois says, it seemed to me that for an institution which takes in probably on an average $4,000 or $5,000 a month when it is filled with patients, it would be considerable trouble to make the report daily, and what I wanted the gentleman from North Carolina to do was to permit them to report weekly or monthly.

Mr. PAGE of North Carolina. I will not in the slightest degree antagonize any amendment offered, but I can see no objection to reporting daily. If you strike out the word "daily" they might report but once a year.

Mr. MANN. They will have to turn it in before they can use it. The money goes into the Treasury and then comes back to them; they could not use it until after it was turned in.

Mr. PAGE of North Carolina. If the gentleman will strike out the word "daily" and substitute "monthly," I shall not object.

Mr. MANN. Very well, I will offer that amendment, Mr. Chairman.

The Clerk read as follows:

Page 74, line 24, strike out the word "daily" and insert the word "monthly."

The amendment was agreed to.

Mr. MANN. I would like to ask the gentleman from North Carolina how these estimates will be made—will they be made by the board?

Mr. PAGE of North Carolina. They will be made to the commissioners and transmitted by them in the regular way.

Mr. MANN. They have no authority to change them?

Mr. PAGE of North Carolina. No; except as they have the indirect control of certain appointees on the board. They have no more authority to change them than they have the estimates of the school board. They can change them as they can other estimates.

Mr. MANN. Most of the estimates they can change.

Mr. PAGE of North Carolina. The language is such that they could change them here, I will say to the gentleman.

Mr. MANN. I doubt it.

Mr. PAGE of North Carolina. If that is not so, they ought to have it.

The CHAIRMAN. The question is on agreeing to the substitute.

The question was taken, and the substitute was agreed to.

The Clerk read as follows:

For emergency care and treatment of, and free dispensary service to, indigent patients under a contract or agreement to be made with Central Dispensary and Emergency Hospital by the Board of Charities, $17,000.

Mr. CARLIN. Mr. Chairman, I would like to ask the gentleman from North Carolina if there is not a deficiency in the Emergency Hospital not provided for in the bill.

Mr. PAGE of North Carolina. No; there was no estimate made in connection with Emergency Hospital.

Mr. CARLIN. If it should turn out that there should be a deficit, it could be taken care of in the deficiency bill.

Mr. PAGE of North Carolina. That is the proper place to take care of all deficiencies.

The Clerk read as follows:

In all, Tuberculosis Hospital, $57,960.

Mr. MONDELL. Mr. Chairman, I move to strike out the last word. The current District appropriation bill carries a provision for the preparation of plans for the construction of a municipal hospital. These plans have been prepared, as I understand it, and the District Commissioners sent in an estimate of $150,000, with a limitation of $500,000, as I recall it, for the beginning of the construction of a municipal hospital. I am not clear whether an item of that sort would be subject to a point of order or not.

Mr. FITZGERALD. I am.

Mr. MONDELL. I shall not offer it, because I realize that this is not the time and place to determine as to the construction of that hospital. But I think the House would like to understand the views of the subcommittee that has given a great deal of attention to the matter concerning the building of a municipal hospital. The matter has been agitated for a long time, many people are interested in it, and believe the hospital should be built, and the plans have been prepared. What are the views of the subcommittee upon the matter?

Mr. PAGE of North Carolina. I have no doubt of two things, Mr. Chairman—one is that the gentleman from Wyoming is absolutely certain that an amendment offered to the bill at this place for a municipal hospital would be subject to a point of order and would be so held. The other thing, of which I am equally certain, is that he reads the Washington newspapers, and he knows that there has been a great deal of agitation among the citizens of the District of Columbia relative to the location of this hospital. He has asked a question as to the attitude of the subcommittee making up this appropriation bill.

I think I am warranted in saying to the gentleman that every member of the subcommittee believes very thoroughly that there should be constructed in the city of Washington a new municipal hospital for the care of the class of patients that are now in that institution on Reservation 13, an old dilapidated building much overcrowded, where they can not be properly cared for.

The proposition submitted to the subcommittee was for the construction of this building on a piece of ground of 14 acres, belonging to the District of Columbia, and bought for that purpose 16 years ago. It is between Georgia Avenue and Fourteenth Street at Upshur Street, and is the same plot of ground on which is located the Tuberculosis Hospital. Evidently a number of residents in that section of the city were fearful that this was the disposition of the subcommittee, and every citizens' association, I think, and the chamber of commerce and the board of trade and almost every organization in this city rose en masse, protesting against the location of this institution at this place.

Mr. MONDELL. Was not this ground purchased with the understanding and with the idea that it would be used eventually not only for the location of the Tuberculosis Hospital but for a municipal hospital as well?

Mr. PAGE of North Carolina. Yes; it was so understood, and the language of the legislation so designated it; it was purchased for the construction of a hospital.

Mr. MONDELL. What is there about a hospital of this kind that need be objectionable to residents of that district, located, as it would be, in the interior of that considerable tract?

Mr. PAGE of North Carolina. My reply to the gentleman is that there is none. I think these people are unduly alarmed about the effect the construction of this hospital in the center of a 14-acre tract of land would have upon the value of their property.

Mr. MONDELL. Is the gentleman prepared to say that the failure to begin or to provide for the construction of a municipal hospital at this time is due very largely, if not entirely, to the attitude of the people of the locality referred to, supported, as it has been, by the business organizations of the city?

Mr. PAGE of North Carolina. Not only the people in that locality, but when it was suggested that it might be constructed on the present site of the Washington Asylum Hospital the people in that section of the city raised just as great a hue and cry as did those in the other sections of the city. It has resolved itself into this situation: The residents of the District of Columbia in no section seem willing that this institution should be constructed in the particular section in which they live. My office has been visited by individuals, committees, and delegations for two months, and I have said to them that their attitude meant that instead of providing for the care of these sick and indigent people in the District of Columbia no alternative was left but to either dump them into the Potomac River or send them outside of the District of Columbia and impose them upon some one else. With that feeling in the community, with the Members of this House being approached by individual friends, I felt and the committee felt that it was absolutely useless to project the construction of this hospital at this time in this bill. Personally I want to say that I believe now not only as firmly as I have in the past, but even more so, that it is not merely a necessity for the proper care of the indigent sick in the District of Columbia, but it is a crying disgrace that it is not consummated.

Mr. DYER. Mr. Chairman, will the gentleman yield?

Mr. PAGE of North Carolina. Certainly.

Mr. DYER. I want to ask the gentleman a question, and that is whether he does not think that the responsibility for this condition—which is deplorable, as the gentleman says, and as so many of us know who have visited it—is with the House and with the District Committee instead of with the people who are objecting to the various locations?

Mr. PAGE of North Carolina. I think the gentleman is entirely right—that it is a matter of the House—but I want to

say to him that I know personally the temper of this House, and that I feel the point of order would undoubtedly be made to an amendment offered now; but I can say to the gentleman from Missouri that there is absolutely not a scintilla of hope that this item could pass this House, and I was convinced of that.

Mr. DAVIS of Minnesota. What does the gentleman think about the other body in respect to this situation?

Mr. PAGE of North Carolina. I have not canvassed the other body.

Mr. DAVIS of Minnesota. Has not the gentleman had a little experience in that direction?

Mr. PAGE of North Carolina. Yes; I have had some experience, and I know the opposition there is just about the same.

Mr. GARD. Mr. Chairman, I desire to ask the gentleman if he does not think it is the duty of the committee to arrange for a place where this necessary hospital could be constructed?

Mr. PAGE of North Carolina. No. I would say that I do not think it is the business of the subcommittee taking up an appropriation bill to settle differences between a lot of citizens of the District of Columbia who are quarreling as between this site and the other site; that our action must necessarily be arbitrary if we take any action at all.

Mr. GARD. The gentleman, however, agrees that this hospital is highly necessary?

Mr. PAGE of North Carolina. Unquestionably. I would say to the gentleman that this institution now maintained in the eastern end of Washington, on reservation 13, in buildings wholly inadequate for the purpose of taking care of the sick and indigent at best, with an ordinary capacity of 125 patients, has to-day nearly 200 patients crowded into the corridors, many of them in the basement of the building; and I repeat what I said a while ago—that it is a crying shame that there is not some provision made; and yet I come before the House and in the face of conditions as at present existing I have not been able as chairman of this committee to point out a solution. It remains for this House to do at some time what should be done.

Mr. MONDELL. Mr. Chairman, I occupied but little of the five minutes that I was entitled to, and I ask unanimous consent to proceed for five minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. MONDELL. Mr. Chairman, while we are upon this subject I should like to locate the responsibility for this situation. This is an important matter and has been agitated for a long time. I feel as earnestly about it as does the chairman of the subcommittee who has just expressed himself. We all know that this whole matter could have been settled by the committee having legislative jurisdiction. They could have taken the question up, had hearings, and determined whether or not the protests of the citizens of the locality were well founded, and they could have provided for the erection of the building at that point or they could have selected some other point. Does the gentleman know why the District Committee has taken no action?

Mr. PAGE of North Carolina. I would say to the gentleman that I am not a member of the District Legislative Committee, and that I have had my hands full of District matters relating to appropriations and have not made any investigations along that line.

Mr. MONDELL. I realize that the Committee on Appropriations is not responsible for the present situation. That committee, or at least the subcommittee, would, however, have been willing to take the responsibility in the matter had it not been for the attitude of some people in the District.

Mr. PAGE of North Carolina. And some gentlemen in the House.

Mr. MONDELL. And some gentlemen in the House, unnamed and not to be named; but the responsibility was not with the Committee on Appropriations, it was with the District Committee, and as far as I know the District Committee has passed the matter over as though they had never heard of it, as though it had never been agitated and never discussed. I have never heard that the District Committee has given the slightest attention to this important matter. What is the District Committee doing? The matter is within its duties and responsibilities. The District Committee occasionally spends time on some trifling bill that few are interested in, as for instance a bill relative to the rate of interest in the District proposing to give the pawnbrokers an opportunity to squeeze a little more in the way of interest out of some poor unfortunate, but here is a great and important District matter—the building of a municipal hospital in the Capital of the Nation, practically the only great city in the Union that has not such a hospital—about which it does nothing.

The people have been demanding it for years; the interests of humanity require it, most of us are in favor of it, everybody is working for it and giving attention to it except the District Committee that is, under the rules of the House, charged with the duty and responsibility in the premises. I have never been able to understand what the District Committee was doing that it never got around to attend to matters of great importance that are being agitated and constantly pressed upon its attention.

Mr. FOSTER. Mr. Chairman, I do not want to delay the committee but a moment. The gentleman from Wyoming [Mr. MONDELL] seems to be finding very much fault because certain work has not been done. I want to say this: I have observed somewhat the hospitals of the District of Columbia, and while a great municipal hospital would probably be a very good thing in the District of Columbia and would be nice to talk about and one to begin to talk about when the people of the District of Columbia, especially if we are to believe the newspapers, are in favor of a hospital, but no one knows just where they want it. They do not seem to want it in the District of Columbia.

Mr. JOHNSON of Kentucky. They did not want any jail.

Mr. FOSTER. They wanted to move the jail out of the District of Columbia.

Mr. JOHNSON of Kentucky.. And the cemeteries.

Mr. FOSTER. The cemeteries and everything else that seemed to meet with their fancied disapproval. Now, the Washington Asylum is not a good place. There is no question about that; everybody agrees to it who has been there and examined it. I have been there and examined it and do not approve of it, but taking it as a whole in the District of Columbia the indigent poor are pretty well taken care of. They are taken care of in the hospitals of the District, and the city of Washington has as good hospitals as anywhere. We have lately completed the Columbia Lying-in Hospital in which the indigent poor are also taken care of, and there is no finer hospital in the United States than exists out there on Pennsylvania Avenue. You take the Children's Hospital and the Providence Hospital and the Garfield Hospital, the Georgetown Hospital, and the other hospitals of the city, all of them first-class hospitals, and they take care of them and the District pays the expenses, and I submit that if you ask the medical men throughout the United States they will tell you that the indigent poor are well taken care of in the city of Washington. This charge the gentleman makes in reference to hospitals here does not have any foundation except that they should do better out at the Washington Asylum. Let me tell you what probably the gentleman does not know.

When the workhouse was moved from where the Washington Asylum and Jail is now located down into Virginia they left two large brick buildings, and I understand that they cost—I do not know—three to five hundred thousand dollars. They are now used for the purpose of storing models from the Patent Office. Estimates at one time were made, I remember, a few years ago, to do something for the condition out there to make it better, and we found this, that the people of the District, or at least some of them here, were opposed to having these buildings used for a hospital. They could have fitted up those buildings—those two large brick buildings—for a hospital which would accommodate 300 patients and taken care of all that were necessary. But that was not done. They did not want it done. I remember Elliott Wood, an architect who has done splendid work here in this Capitol, and a man who has built the buildings he had anything to do with within the appropriations—he estimated, as I remember, at that time we could have taken $40,000 and made all the room that was necessary——

Mr. FITZGERALD. Is not the matter of opposition to that that it would prevent the expenditure of a half a million dollars in a new building?

Mr. FOSTER. Certainly; it would prevent the expenditure of a half a million dollars. That is what they did not want. Why should not the Government do these things——

Mr. MONDELL. Will the gentleman yield?

Mr. FOSTER. I will yield.

Mr. MONDELL. Now, there is a committee of this House charged with the duty and responsibility in regard to just such matters as that. That committee could have made provision for such changes as were necessary in these buildings, and if they were fit for a hospital they ought to have attended to it.

Mr. FOSTER. That is possibly so; but the committee has not thought best to do it, and I want to submit to the gentleman from Wyoming that there were some kind of influences that went on here to prevent it.

Mr. HOWARD. Mr. Chairman, I desire just a word or two about this situation because of my knowledge of it since I have been a member of the subcommittee of the District of Columbia. The whole trouble about this thing is that it is just a cat and

dog fight among certain interests of the District of Columbia. First, the privately owned hospitals are very active in this matter. They do not want a municipal hospital begun for several reasons. That is one source of dissension. The next source—and I happened to see an exhibition of this one day down in the District Commissioners' office; that is to say, the assembly room down there. I happened to be down there, and I think there were more than a hundred citizens from up in this Upshur Street neighborhood who were protesting against the location of the municipal hospital.

Mr. FOSTER. Some who lived a mile and a half away.

Mr. HOWARD. Yes; some of them lived a mile or a mile and a half away. Now, let us see why they were protesting, and in the meantime I want to let you gentlemen understand that these poor unfortunates that are chargeable to the District of Columbia for medical attention—there are a thousand dogs in the city of Washington this minute that are cared for better than those poor unfortunates out there in this bare, old, dilapidated hospital they have got on this low ground.

Now, 16 years ago the Government of the United States acquired this property for a dual purpose—first, for a tuberculosis hospital, which it has built. None of the privately owned hospitals want tuberculosis patients because they would keep other patients from coming in, so they raised no objection to the erection of the tuberculosis hospital, and it is out there and full of tuberculosis patients.

Mr. MONDELL. Will the gentleman yield?

Mr. HOWARD. Just one moment more. I want to state this case just as it is, and nobody is going to dispute it. After the tuberculosis hospital was there, and it was known by these real estate promoters that the municipal hospital was going to be located there, the property sold for about 50 per cent of its original value in the immediate neighborhood. People bought it and built houses on it, knowing that this hospital was going to be located there. Now, the shrewdness of these people is this: They are there now, after having bought the property at 50 per cent of its value, because it was adjacent to the hospital and obnoxious to some people. Now, they are trying to make 50 per cent on their deal by raising this protest to the Members of Congress and to the committee and to the District Commissioners. The truth is, they have been bombarding every Member of Congress to keep this hospital from going out on that street. For what reason? It will not be located somewhere else. They have made a valuable investment in going out there and locating their homes. The people who sold the property sold it at a low figure, because they knew the Government had acquired that property for a hospital, and since the purchasers bought it they have moved every influence on the face of the green earth to keep this particular institution from being located where it was intended.

Mr. MONDELL. The gentleman is simply emphasizing my inquiry. Why under those circumstances does not the committee charged with the responsibility act?

Mr. HOWARD. Why can you not climb a greased pole with an armful of eels? Tell me. [Laughter.]

Mr. MONDELL. I am attempting to do it, although I am not accomplishing it. But I would start. This committee has never started.

Mr. HOWARD. Well, you and I and probably a dozen other men in this House would start, but there are a hundred others opposed to starting.

The CHAIRMAN (Mr. SAUNDERS). The time of the gentleman has expired.

Mr. HOWARD. Mr. Chairman, I ask unanimous consent to proceed for three minutes more.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. HOWARD. Now it seems that ever since we have been trying to relieve this situation by the erection of this municipal hospital by going and occupying property that the Government of the United States bought for this specific purpose, every bit of the printer's ink that could be wielded against the Government going out there and building this hospital and relieving this congestion and this disgraceful situation down here at the municipal hospital has been used, and they have been bombarding Congress by saying it would be a disgrace to go out in a decent community and take a poor, sick man. Ah, the finger of greed is in this whole business. They do not look upon this as a humane and charitable act on the part of Congress.

Mr. DYER. Mr. Chairman, will the gentleman yield?

Mr. HOWARD. Yes.

Mr. DYER. Does not the gentleman think it is the duty of Congress to act?

Mr. HOWARD. Of course, it is the duty of Congress to act, but now you try and get action. That is the trouble about this situation. Why not be plain about it? You are not going to have a municipal hospital erected in this town unless you erect it on its present site, and the commissioners and those who are directly interested in the matter, looking to the best interests of these poor unfortunates that will be placed in this hospital as the wards of the District of Columbia, have protested against the erection of this hospital on the present site. Why? It is not a healthful location. Now, what can we do?

Mr. MONDELL. Again I inquire, Why does not the District Committee act?

Mr. HOWARD. My friend does not impute to me that much wisdom that I can tell him why the District Committee does not act. As the gentleman says, it is not our business to go out and locate this municipal hospital.

The CHAIRMAN. The time of the gentleman from Georgia has again expired.

Mr. FITZGERALD. Mr. Chairman, there are some facts connected with the proposed municipal hospital of which I have knowledge and which may interest the House. The site that was purchased for the municipal hospital 16 years ago was not purchased because Congress desired at that time either to acquire a site or to build a municipal hospital. It was agreed to, after a great protest, as part of a compromise on a number of items in the District appropriation bill. At that time there was a plan to erect a municipal hospital, to cost $3,000,000, and to care for all of the indigent sick of the District of Columbia in a Government hospital and to care for none of them in the private hospitals in the city.

There are some in this House, and I am among them, who believe that the present system, quite prevalent in other cities of the United States, of taking advantage of private institutions for the care of public patients is the most humane and best system that can be devised. I am among those who have opposed the indefensible proposition to erect a $3,000,000 municipal hospital and to discard the opportunities that exist to take advantage of many of the facilities afforded by the privately owned institutions in the District.

It is not denied that the conditions at the Washington Asylum are not satisfactory, but there are two buildings there, or just adjacent, that, by a very moderate expenditure, can be fitted and made suitable for hospital purposes. The District officials have never, in my recollection, made any estimate of what it would cost to put those buildings in proper shape, nor suggested such a use, because during my experience in the House they have always been interested in a great municipal hospital, and the possible changes in these buildings would interfere with the scheme for a Government establishment. This site was not selected for the purpose of erecting a municipal hospital and tuberculosis hospital. Congress located the tuberculosis hospital on the site in the belief that it would end the agitation for a municipal hospital on the same site. The tuberculosis hospital was placed there because the private institutions could not set aside sufficient space to care for the large number of tubercular patients needing accommodations.

We have had experience in connection with the tubercular hospital managed by the municipal authorities. A committee of women, representing various organizations in the District, made an investigation of that hospital and found conditions there so scandalous and the patients treated so indecently that the indignation expressed in Congress resulted in a very marked change.

I believe in proper facilities for the care of the indigent sick in the District of Columbia, and in so far as it is necessary for the Government to erect institutions of its own, I am in favor of that being done; but I do not favor any plan which contemplates taking care of all the indigent sick in Government hospitals when there are facilities that can be availed of in privately owned and conducted institutions. The experience in cities like Chicago, New York, and other large municipalities is to the effect that better results are obtained by availing of the facilities of such institutions, to which a large number of disinterested persons give their time and efforts, than can be secured in purely Government institutions.

I hope that something may be done to relieve the conditions in the Washington Asylum. I do not believe that it can be done by the erection of the municipal institution originally planned and still in contemplation.

Mr. PAGE of North Carolina. Mr. Chairman, I would like to ask unanimous consent that all debate on this section be closed in five minutes.

The CHAIRMAN. The gentleman from North Carolina asks unanimous consent that all debate on this section close in five minutes. Is there objection?

There was no objection.

Mr. JOHNSON of Kentucky. Mr. Chairman, at first I did not intend to pay any attention to the remarks made by the gentleman from Wyoming [Mr. MONDELL] in reflecting upon the Committee on the District of Columbia, but I am sure that if the gentleman had known the truth about the situation he would not have said what he has said. The truth is, as I was informed by the clerk of the District Committee over the telephone just a few moments ago, there is no such bill before the District of Columbia Committee.

The Board of Charities and the Commissioners of the District of Columbia, as I am informed by the gentleman from North Carolina [Mr. PAGE], have besieged the Appropriations Committee, of which the gentleman from Wyoming [Mr. MONDELL] is a member, asking that committee to take some action regarding this hospital matter. For some reason unknown to me that committee has not done so; but, speaking for myself, only 1 of the 21 members of the Committee on the District of Columbia, I can say that I am in favor of the erection of a municipal hospital. And then, speaking for the rest of the committee, I wish to say that I do not believe the gentleman from Wyoming should fall into the habit, long ago acquired by the newspapers of the city of Washington, of abusing the District Committee. I can say for them that I do not believe they should be censured and unwarrantedly criticized for not doing that which not even the gentleman from Wyoming himself, or the Board of Charities, or the Commissioners of the District of Columbia have asked them to do.

Mr. MONDELL. Will the gentleman yield?

Mr. JOHNSON of Kentucky. I yield to the gentleman.

Mr. MONDELL. If the chairman of the committee having charge of these matters is favorable to this project, it will be a very simple matter for him to introduce a bill providing for this hospital. I have no responsibility in the matter. I am not on the committee.

Mr. JOHNSON of Kentucky. The gentleman seems to have assumed very great responsibility, and is so thoroughly familiar with the subject, and his interest is so intense, if we listen to him, that I can not understand why he himself has not introduced the bill.

Mr. MONDELL. I will do so immediately, if the gentleman will assure me that it will be considered.

Mr. JOHNSON of Kentucky. As chairman of the Committee on the District of Columbia, I can not only assure the gentleman from Wyoming, but all the House, that if it is possible for me to get the attention of the committee to the matter I shall be delighted to do so; but for the last few months it has been almost impossible to get the attention of that committee beyond the one question of pensioning the firemen and policemen. That subject arises at every meeting of the committee, to the detriment of all other business. And, even if a bill were before the committee and favorably reported, to provide for a new municipal hospital, the gentleman from Wyoming will bear testimony to the fact that there has been but one occasion during this session when District of Columbia legislation could be considered upon the floor of the House.

The CHAIRMAN (Mr. SAUNDERS). Without objection, the pro forma amendment will be withdrawn and the Clerk will read.

The Clerk read as follows:

Hereafter the disbursing officer of the District of Columbia is authorized to advance to the agent of the Board of Children's Guardians, upon requisitions previously approved by the auditor of the District of Columbia and upon such security as may be required of said agent by the commissioners, sums of money not to exceed $200 at any one time, to be used for expenses in placing and visiting children, traveling on official business of the board, and for office and sundry expenses, all such expenditures to be accounted for to the accounting officers of the District of Columbia within one month on itemized vouchers properly approved.

Mr. JOHNSON of Kentucky. Mr. Chairman, I make a point of order against the word "hereafter" at the beginning of line 21, page 77.

Mr. PAGE of North Carolina. I concede the point of order, Mr. Chairman.

The CHAIRMAN. The point of order is sustained.

Mr. PAGE of North Carolina. I offer an amendment substituting a capital T——

Mr. MANN. That will be done by the enrolling clerk.

The CHAIRMAN. Without objection, that will be done.

Mr. CARLIN. Mr. Chairman, I do not understand exactly the effect of the sustaining of the point of order against the word "hereafter."

Mr. PAGE of North Carolina. The effect of that point of order is to make this the law for one year, during the life of this appropriation, instead of making it permanent law.

Mr. CARLIN. Were there any hearings had before the committee as to the work of this Board of Children's Guardians?

Mr. PAGE of North Carolina. Nothing in detail, nothing more than routine. The hearings disclosed merely their evidence touching the appropriations which they ask.

Mr. CARLIN. I want to say to the gentleman that recently I had some experience with the agent of this board and some of the members of it, which impressed me very much with the idea that there is perhaps great need for an investigation and hearing. I do not want to take up the time of the House with it just now, but a little later I may bring it to the attention of the House.

Mr. PAGE of North Carolina. Is that in connection with appropriations or with administration?

Mr. CARLIN. It was in connection with the use of an appropriation, and also in the administration of the matter.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

TEMPORARY HOMES.

Municipal lodging house and wood yard: Superintendent, $1,200; foreman, $480; cook, $360; night watchman for six months, at $25 per month, $150; maintenance, $2,000; in all, $4,190.

Mr. MONDELL. Mr. Chairman, I move to strike out the last word. I shall not offer an amendment providing for an appropriation of $40,000 for a new municipal lodging house, because I fear the chairman of the committee would make the point of order and that the Chair might sustain it, but I do want again to emphasize the importance of a new municipal lodging house.

We have a municipal lodging house in the city of Washington that is excellently conducted and kept reasonably clean and sanitary. The people in charge do their duty in caring for the unfortunates who come to them, but the building is small and the rooms are scandalously overcrowded on those occasions when there are an unusual number of unfortunates applying for temporary care. The city has, as I understand it, a piece of ground well located for a municipal lodging house, and it is estimated that a good, comfortable, up-to-date municipal lodging house could be erected for about $40,000. I do not know whether the members of the subcommittee on appropriations have ever visited our present municipal lodging house or not, but I have. There are rooms in that lodging house with double tiers of narrow bunks, with very little space between them, rooms in which men are crowded in a way that would not be tolerated under any law that I know of on any statute books regulating the amount of air space required for human beings.

It is remarkable how clean and sanitary the place is, considering its frequently crowded condition. The wood yard is a little narrow space, difficult to get at, not so located as to make it convenient or economical either to receive or deliver the wood which these men saw as a part payment for their keep. The building is about everything that it should not be. It is as clean as it well can be kept; it is as sanitary as it is possible to keep it; it is well cared for; and that is all you can say for it. It is entirely too small; it is not well located; it can not possibly be made to care for all those who may desire temporary shelter in inclement weather and in Democratic hard times. If there is anything that we need in this city above other things it is a new municipal lodging house. Yet the committee which has charge of these affairs and is responsible to the people of this District, charged by the Congress with the responsibility, has not, so far as I know, considered the matter of a new municipal lodging house. The chairman of the committee may say that there has been no bill introduced on the subject. If that is true, and the chairman will promise that the committee will do its duty, I will introduce a bill to-day and get this thing started.

Mr. PAGE of North Carolina. Mr. Chairman, I have not visited the present municipal lodging house. The truth is I might be put to sawing wood if I went down there. I am not looking for that sort of a job. I know something about it, however, because various people have appeared before the committee in connection with the plan of building a new municipal lodging house. The present building used for that purpose was a gift to the city. At certain times it has been somewhat crowded, and I will admit that there has not been a suite of rooms and a bath for each one of the people who have been forced to spend the night there.

Mr. MONDELL. The gentleman from North Carolina does not want to make an unfair statement. The gentleman knows that there are bunks for something like 16 or 18 people in rooms that are certainly not over 14 feet square.

Mr. PAGE of North Carolina. I know; but it is a very rare occasion when anything like all of those bunks are full.

Mr. MONDELL. Yes; but it is a far cry from that to a suite of rooms and a bath.

Mr. PAGE of North Carolina. If the rooms are not filled, it does not require so much air, and they are not all occupied.

Mr. MONDELL. They are frequently all occupied.

Mr. PAGE of North Carolina. You can not say that they are frequently all occupied when you consider the 365 days in the year. Some time or other when the Republicans come into power and we have a lot of tramps and bums to take care of, when there is not plenty of work for everybody to do, the subcommittee may bring in a bill for a new municipal lodging house because we will need it, but at present under these prosperous times we do not need one.

Mr. HOWARD. If the gentleman will pardon me, we do not need any municipal lodging house. There is nobody to lodge; everybody has work.

Mr. MONDELL. My understanding is that there have been more admissions or more applications for admission under this Democratic administration than ever before.

Mr. PAGE of North Carolina. The gentleman should produce his evidence and not a mere statement of understanding. My understanding is that the very contrary of that is true.

Mr. HOWARD. The rule of law is that the uncorroborated testimony of one witness in a case of this sort is insufficient.

The Clerk read as follows:

In all, $129,000, which sum shall be expended under the direction of the commissioners.

Mr. DOWELL. Mr. Chairman, I reserve a point of order against the paragraph. I desire to make an inquiry of the committee in reference to the prisoners and what character of prisoners are to be placed in this reformatory.

Mr. PAGE of North Carolina. First of all, I want to say to the gentleman that his point of order comes too late, because the Clerk has read past the paragraph he wishes to make a point of order to, and read the next paragraph. I will also say to the gentleman that this paragraph, which ordinarily would be subject to a point of order, is included in the rule adopted before the bill was taken up making it in order. So it is not subject to his point of order.

Mr. DOWELL. Then I desire to make an inquiry relative to an amendment that may be offered. I desire to inquire the intent of the committee with reference to the character of prisoners who are to be assigned to this reformatory.

Mr. PAGE of North Carolina. At the present time the District of Columbia maintains what is designated as a workhouse, located on a tract of land 25 miles down the Potomac River, and to that institution, under the law, prisoners can not be sentenced for more than one year. Consequently, the courts of the District of Columbia, under the present law, have been sentencing the prisoners whose terms are longer than one year to the Federal penitentiary at Atlanta or Fort Leavenworth, and also to State institutions. The purpose of this legislation is to create a reformatory where the prisoners sentenced in the courts of the District of Columbia for a term exceeding one year will be taken to serve that term.

Mr. DOWELL. The understanding of the gentleman is that this includes all criminals convicted in the District of Columbia?

Mr. PAGE of North Carolina. Yes; and sentenced for more than one year.

Mr. DOWELL. A life prisoner, then, is sent to this reformatory?

Mr. PAGE of North Carolina. Yes; it is called a reformatory, but it is what is known in the gentleman's State as a penitentiary.

Mr. DOWELL. The bill provides for the transfer of all prisoners heretofore placed in the penitentiaries to the reformatory.

Mr. PAGE of North Carolina. Yes; as rapidly as the institution is ready to receive them.

Mr. DOWELL. I would like to inquire why this is called a reformatory.

Mr. PAGE of North Carolina. Because Congress named it a reformatory. The institution is exactly what the penitentiary is in the gentleman's State and in my State.

Mr. DOWELL. Then the purpose is to establish a penitentiary and not a reformatory?

Mr. PAGE of North Carolina. As the gentleman understands the terms, yes. The name was designated by Congress.

Mr. DOWELL. Have we not been making additions to the penitentiaries at Fort Leavenworth and also at Atlanta for the purpose of providing for prisoners?

Mr. PAGE of North Carolina. Yes; but not for prisoners from the District of Columbia, but for United States prisoners who are sentenced there.

Mr. DOWELL. Have these improvements been completed?

Mr. PAGE of North Carolina. They are in process of completion, and I think practically completed.

Mr. DOWELL. When they are completed there will be sufficient room for all prisoners.

Mr. PAGE of North Carolina. No; the gentleman is mistaken. If the District of Columbia prisoners in the future are sentenced to these institutions there will have to be other additions.

Mr. DOWELL. How many will the new additions provide for?

Mr. PAGE of North Carolina. I do not know. The gentleman may be surprised to know that at present there are 674 prisoners in the penitentiaries outside of the District of Columbia. There is another reason why the District of Columbia ought to establish this institution. The gentleman will readily see that the character of prisoners sentenced from the courts of the District of Columbia to the Federal penitentiary for offenses are not similar to those who are sentenced to the penitentiary from his State and mine. Those prisoners are sentenced for the infraction of some Federal law.

In the District of Columbia they are sentenced for the violation of any law, where the punishment exceeds one year—perjury, for instance, and various other crimes for which prisoners are tried—and the traveling expenses from here to Fort Leavenworth, from here to Atlanta, the railroad fare, is an item of very considerable expense to the District of Columbia. The District of Columbia is charged by the National Government with the total cost of maintenance of these prisoners, whereas, of course, their labor amounts to something, and the idea of the committee is that the District of Columbia ought to have the advantage of saving the transportation charges, to begin with, and also of getting the benefit of the labor of these people that are sentenced from the District.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. DOWELL. Mr. Chairman, I ask unanimous consent to proceed for five minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. DOWELL. I want to make a further inquiry. What is the estimated expense, so far as the officers are concerned, with reference to this new reformatory, per annum?

Mr. PAGE of North Carolina. I will say to the gentleman that at this time we have not reached a place where full estimates of cost can be made. This is to be located on a tract of land owned by the District, adjoining the now workhouse of the District, and the building will be constructed out of material produced in the District institution known as the workhouse, by the labor of the people who are assigned there, and it will be supervised, at least for the present, during this fiscal year by officials who now are in charge of the workhouse.

Mr. DOWELL. Is it the purpose of the committee to transfer all of the prisoners who are now in the penitentiaries from the District of Columbia to this institution?

Mr. PAGE of North Carolina. As soon as they can be cared for in this new institution; yes.

Mr. DOWELL. I withdraw the point of order.

Mr. CLINE. Mr. Chairman, I move to strike out the last word for the purpose of getting a little information from the chairman of the committee. I would like to ask whether a parole system is in effect with reference to prisoners that are now confined at Leavenworth and Atlanta?

Mr. PAGE of North Carolina. I think so; yes.

Mr. HOWARD. As the author of that measure, I will state that it applies to all United States prisoners.

Mr. CLINE. Does it apply to Occoquan?

Mr. PAGE of North Carolina. That is a workhouse, but I think they have a parole system there.

Mr. HOWARD. The Federal parole system applies only to Federal prisoners.

Mr. TILSON. May I ask the gentleman whether it applies to offenses against Federal laws only, or to offenses against such laws as in the States would be purely State laws?

Mr. HOWARD. So far as the District of Columbia is concerned, prisoners are sent from the District who commit any character of crime or such character of crime as in the States would be regarded as a State offense as distinguished from a Federal offense.

Mr. TILSON. In a State they would be purely State offenses?

Mr. HOWARD. Yes.

Mr. TILSON. Is it the intention here to segregate those who violate Federal laws, in the sense of laws enforced all over the United States, from those who violate laws which are purely District laws or which in the States would be State laws?

Mr. HOWARD. Let me explain. The object of this appropriation is this: The character of criminals that go from the District of Columbia to Leavenworth and Atlanta and other

Federal prisons are of a kind that are usually not found in Federal prisons.

Mr. TILSON. They are generally in the State prisons?

Mr. HOWARD. Yes. They would be sentenced under the State laws to the State prisons. Very few prisoners from the District commit a technical Federal offense, but if a Federal offense is committed the prisoner would go to the Federal prison.

Mr. TILSON. Such as an offense against the revenues or the post office?

Mr. HOWARD. Yes. Suppose a man committed forgery of a bank note, and he was tried in the District of Columbia and sentenced, my understanding is that he would still go to Atlanta or some other Federal prison. This is simply intended to take care of prisoners in the District of Columbia.

Mr. ANDERSON. Mr. Chairman, I move to strike out the two last words for the purpose of asking unanimous consent to extend my remarks in the RECORD by inserting an editorial which appeared in the Washington Post on Thursday, May 25, 1916, bearing upon the speech delivered by my colleague [Mr. SCHALL] on May 23, 1916, it being a leading editorial of that date.

The CHAIRMAN. The gentleman from Minnesota asks unanimous consent to extend his remarks in the RECORD by inserting the article referred to. Is there objection?

There was no objection.

The editorial referred to is as follows:

A SPLENDID OPPORTUNITY FOR MEMBERS OF CONGRESS.

In a remarkable speech in the House this week Representative SCHALL, of Minnesota, likened Congress to the crew of the ship of state which carries 100,000,000 passengers. He held it to be the duty of the people's Representatives to "steer the ship from the dangerous maelstrom of nonpreparedness," no matter how many protests came from the passengers. "The people will approve when they understand the situation," he added. Therefore he urged the construction of "the best Navy we can get."

Now comes the House Committee on Naval Affairs with an apologetic and feeble pretense of response to the demand for preparedness on the sea. It reports a bill providing inadequately for the increase of the Navy, and couples with the appropriation a provision authorizing the President to suspend expenditures in case the nations of the world agree to establish an international peace tribunal and abandon competitive armaments.

Such is the lame and impotent conclusion of a majority of the committee, after months of consideration of a bill designed for the defense of the richest Nation on earth.

If the naval bill is not intended for national defense, what is its excuse? If it is intended to improve the naval defense, why is it whittled down and offered with apologies to the pacificos?

Few bills have ever been brought forth by a committee of Congress which exhibited plainer evidence of timidity and political cowardice. The bill is satisfactory neither to the advocates of adequate defense nor to pacificos, because it is neither one thing nor the other. It does not adequately build up the Navy, nor does it honestly abandon all pretense of preparing for defensive war.

The first, paramount, imperative duty of Members of Congress, without regard to party is to rip to pieces the makeshift offered by the majority of the committee and prepare forthwith a measure that will make the United States safe.

The country will never be safe so long as the oceans are an unguarded highway of attack by a foreign enemy. If guarded, the oceans are a strong factor of defense. If unguarded, they open the United States to the enemy. The House Committee on Naval Affairs has always the first opportunity and the duty to prepare for naval defense. It has failed to rise to its opportunity and failed to perform its duty.

Now that the matter is out of the committee's hands and in the House, the House should do the work which the committee failed to do. Surely there is patriotism, breadth of vision, and courage enough in the American House of Representatives to build up the Navy at this critical time. A splendid opportunity awaits the Representatives who will rise above section and party to perform the work demanded by the Nation. The people will take note of such service and will amply reward it.

The Clerk read as follows:

ANACOSTIA RIVER FLATS.

For continuing the reclamation and development of the Anacostia River and Flats from the Anacostia Bridge northeast to the District line, to be expended for the purposes and under the conditions specified in the item for this improvement contained in the "District of Columbia appropriation act for the fiscal year 1915," $200,000, including the amount authorized to be contracted for in the District appropriation act for the fiscal year 1916.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to strike out the last word. The appropriation carried in this paragraph is $200,000. I think last year it was $100,000. Will the chairman of the committee kindly explain whether this improvement has anything to do with navigation?

Mr. PAGE of North Carolina. No; the improvement has absolutely nothing to do with navigation. I will not be quite so positive as to that, but I do not think it contemplates any navigable projects on the Anacostia River. It is the reclamation of certain lands lying along this stream.

Mr. MOORE of Pennsylvania. Dredging is being done?

Mr. PAGE of North Carolina. Yes; and the dirt that is being dredged is put out on this land to be reclaimed.

Mr. MANN. It is to build a wall.

Mr. PAGE of North Carolina. It is to build a wall, I will say to the gentleman, and eventually will build a parkway by this reclaimed land along the Anacostia River very much as has been done along the Potomac.

Mr. MOORE of Pennsylvania. Well, is it such an appropriation as should be taken care of in the river and harbor bill?

Mr. PAGE of North Carolina. I can not understand how it could possibly get into a river and harbor bill.

Mr. GOOD. Why not? Most everything got into the river and harbor bill this year.

Mr. PAGE of North Carolina. Almost anything can break into it, but there is no reason why this should.

Mr. MOORE of Pennsylvania. Everything but Cedar River, Iowa, got into the bill; but that may break in next year, if the Iowa delegation is alive to its importance.

Mr. PAGE of North Carolina. I do not believe this is a project which even the gentleman from Pennsylvania would consider as a navigation proposition.

Mr. MOORE of Pennsylvania. I would say that if they can ever get a favorable report from the engineers as to Cedar River, Iowa, it will be in the river and harbor bill, but the gentlemen from Iowa have not been able to get a favorable report yet.

Mr. PAGE of North Carolina. I understand there are a good many things in that bill that have not had a favorable report from the engineers. That is not requisite at all for getting into a river and harbor bill.

Mr. MOORE of Pennsylvania. Cedar Creek is not——

Mr. PAGE of North Carolina. It takes something else besides the report of the engineers.

Mr. MANN. No; it is necessary to have a report from the engineers——

Mr. GOOD. It is not necessary to have a report to continue an appropriation after the engineers have made report to the effect that a stream is nonnavigable and can not be made navigable by any amount of appropriation, but we still keep on putting into river and harbor bills appropriations for those streams.

Mr. MOORE of Pennsylvania. Let me say to the gentleman from Iowa that if he does not get Cedar River in a river and harbor bill he has a chance to get it in a flood-control bill.

The work here is very largely the work of reclamation?

Mr. PAGE of North Carolina. Oh, entirely; there is no navigation.

Mr. MOORE of Pennsylvania. The dirt is being thrown up on the banks, and the ground is being improved. What about the benefits arising from the improvements?

Mr. PAGE of North Carolina. Assessments are made for benefits in a provision carried in the current appropriation bill for the District of Columbia.

Mr. MOORE of Pennsylvania. Under court proceedings?

Mr. PAGE of North Carolina. Under court proceedings.

Mr. MOORE of Pennsylvania. Have we had any return from the courts yet?

Mr. PAGE of North Carolina. We have not.

Mr. MOORE of Pennsylvania. The plan contemplates an assessment of benefits upon the abutting property owners?

Mr. PAGE of North Carolina. And must be done under the law.

Mr. MOORE of Pennsylvania. So there will be cooperation or mutual participation in the expenditure?

Mr. PAGE of North Carolina. Yes. I will say to the gentleman that while appropriations have been carried in the District bill for several years in connection with the reclamation of Anacostia Flats, until the current District appropriation bill there was no provision for the assessment of benefits, but a provision was inserted in that for an assessment against the abutting property owners.

Mr. MOORE of Pennsylvania. Two hundred thousand dollars is in this bill, $100,000 in the bill of a year ago, making a total of $300,000 for two years. How much was the appropriation before last year?

Mr. PAGE of North Carolina. I think $100,000 had been appropriated in a prior bill.

Mr. MOORE of Pennsylvania. A total of about $400,000——

Mr. PAGE of North Carolina. Yes; has been so far appropriated in connection with this item.

Mr. MOORE of Pennsylvania. That is up to date?

Mr. PAGE of North Carolina. Up to date.

Mr. MOORE of Pennsylvania. Some of that is to come back by way of benefits?

Mr. PAGE of North Carolina. Whatever amount is assessed as a benefit will be paid back.

Mr. MANN. Mr. Chairman, the two gentlemen may know all there is to know about this subject——

Mr. PAGE of North Carolina. Mr. Chairman, I do not pretend to know it all.

Mr. MANN. I may be entirely mistaken, but I have not the same idea they have about the matter. What they are doing there is building a wall along toward the river side of the overflowed flats formerly overflowed by tide water, and having built that wall they are dredging with a pump dredge, excavating the channel of the stream and pumping it over onto the property which was before overflowed by the tide. I had supposed the Government owned that property.

Mr. PAGE of North Carolina. Not all of it.

Mr. MANN. They certainly claimed to own that overflowed land. It may be that there is some private property which will be benefited. If there is any private property that will be benefited it will be assessed. I think no assessment has been made yet, because the Government claims to own this land. They have already made a considerable amount of land right across in the direction in which I am pointing on the other side of the Anacostia River, which I had supposed would eventually be turned into a parkway, I do not know——

Mr. PAGE of North Carolina. I think that was the intention.

Mr. MANN. The Anacostia River, like the Potomac River, was overflowed by the tide. We have improved the Potomac River down here in Potomac Park largely by pumping out the river, not only improving the navigation, but there is not much navigation——

Mr. PAGE of North Carolina. There is a tidal flow.

Mr. MANN. Oh, yes; but there is not much navigation now in the Anacostia River. We are improving navigation and getting land the cheapest way it can be obtained; that is, by dredge pumping.

Mr. PAGE of North Carolina. In connection with the assessment for benefits, while the Government does own practically all of this land that is to be reclaimed, it does not own it all, because there is an item in the estimates for the purchase of some land and the assessment of benefits is intended to apply to the abutting land. Here is a lot of swamp land lying along the line of the Anacostia River. When it is reclaimed and made into a park the abutting property will be greatly benefited.

Mr. MANN. I doubt it.

Mr. PAGE of North Carolina. That is a matter for the jury to decide on when the assessment is made.

Mr. TILSON. Mr. Chairman, will the gentleman yield?

Mr. PAGE of North Carolina. Yes.

Mr. TILSON. Does the gentleman claim that this land when reclaimed will be used for park purposes, or for commercial purposes or some purpose other than as a park?

Mr. MANN. I suppose that is a matter for the Government to determine. I should say there is just as little likelihood of that land being used for commercial purposes during the life of the gentleman and myself as there is of Potomac Park being utilized for commercial purposes. We have the power to do it, however.

Mr. PAGE of North Carolina. Mr. Chairman, in reply to the question asked by the gentleman from Pennsylvania [Mr. MOORE] as to the amount that has been expended, I want to say that this $200,000 will make a total of some $700,000. The clerk of the committee reminds me that $500,000 has already been appropriated.

Mr. MOORE of Pennsylvania. Five hundred thousand dollars in addition to what is carried in this bill?

Mr. PAGE of North Carolina. Yes.

Mr. MOORE of Pennsylvania. Mr. Chairman, has the gentleman's time expired?

The CHAIRMAN. It has not.

Mr. MOORE of Pennsylvania. I wish the gentleman from North Carolina to know that I was not criticizing this improvement on the Anacostia River—the clearing of those flats and the introduction of clear water. I think it is a good thing for everybody. In time it may be that that land will become one of the garden spots of this city, or it may be used for commercial purposes; but it certainly is an important improvement in the matter of sanitation for the benefit of the health of the people of this District. My inquiries were directed with respect to the jurisdiction of committees, and also as to the assessment of benefits, showing that the landowners will pay a proportion of the cost of the improvement.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

PARKS.

For the condemnation of small park areas to be acquired in accordance with the provisions relating to small parks in the District of Columbia contained in the sundry civil appropriation act, approved August 1, 1914, $25,000.

Mr. MONDELL. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Wyoming.

The Clerk read as follows:

Mr. MONDELL offers the following amendment as a separate paragraph, following line 16, on page 88:

"For acquisition for a public park of the tract of land known as the Patterson tract, assessed on the records of the assessor of the District of Columbia as parcel 129/2, lying north of Florida Avenue NE., and bounded on the east by the grounds of the Columbia Institute for the Deaf, on the west by New York Avenue and the tracks of the Baltimore & Ohio Railroad Co., and on the north by Fairview Avenue, containing 81 acres, more or less, $500,000, or so much thereof as may be necessary."

Mr. PAGE of North Carolina. Mr. Chairman, I make a point of order on that.

The CHAIRMAN. The gentleman from North Carolina makes a point of order on the amendment. The Chair sustains the point of order.

Mr. MONDELL. Mr. Chairman, I offer another amendment.

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Wyoming.

The Clerk read as follows:

Mr. MONDELL offers an amendment as a separate paragraph on page 88, after line 16, as follows:

"For acquisition for a public park of the tract of land known as the Dean tract, assessed on the records of the assessor of the District of Columbia as lots A, 818 and 819, in square 2535, containing 400 and 4,425 square feet, more or less, $625,000, or so much thereof as may be necessary."

Mr. PAGE of North Carolina. Mr. Chairman, I make a point of order on the gentleman's amendment.

Mr. MONDELL. Mr. Chairman, will the gentleman reserve his point of order for a moment?

Mr. PAGE of North Carolina. I will reserve it, but I ask unanimous consent that all debate on this amendment may be closed in five minutes.

The CHAIRMAN. The gentleman from North Carolina asks unanimous consent that all debate on this amendment may be closed in five minutes. Is there objection?

There was no objection.

Mr. MONDELL. Mr. Chairman, the two tracts proposed to be secured for park purposes under the two amendments that I have sent to the desk consist, first, of what is known as the Patterson tract, of about 85 acres in the northeast, which it is understood can be secured for about $7,000 per acre, and what is known as the Dean tract, cornering on Florida Avenue and Connecticut Avenue. I think the city should have both of these tracts. The Patterson tract will certainly be needed in the future, because there are no considerable parks in that section of the city and no tracts as available as this.

Mr. FITZGERALD. Mr. Chairman, will the gentleman yield for a question?

Mr. MONDELL. Yes.

Mr. FITZGERALD. Are there any other tracts of land in the District of Columbia whose owners are anxious to unload them on the Treasury that we might consider at the same time?

Mr. MONDELL. Well, I do not know as to that; but I will say, Mr. Chairman, that I do not know that the owners of these tracts are particularly anxious to sell them to the city. I have no information on that subject.

Mr. FITZGERALD. I understand that the owners of the tract mentioned in the amendment now pending are very anxious to get somebody to take it off their hands.

Mr. MANN. Where does the gentleman get his information?

Mr. FITZGERALD. I am not at liberty to disclose that, but I can give it to the gentleman privately.

Mr. MANN. I can give public information to the gentleman to the effect that it is not so.

Mr. FITZGERALD. I can give the information that they are anxious to unload it on the Government.

Mr. MANN. The heirs?

Mr. FITZGERALD. Yes; the heirs. It would be a good thing for them to unload it on the Government.

Mr. MONDELL. Mr. Chairman, considering the length of time that has been taken from me by the genial chairman of the Committee on Appropriations, I will ask for a moment or two in addition to what was allotted to me.

The gentleman now refers to the Dean tract. The Dean tract is the most beautiful tract of wooded land now remaining unimproved in the center of the city, or near the center of the city. It is a very beautiful tract of land. At one time it was suggested that that would be a good place to build a summer White House. I do not know but that we ought to purchase it and keep it with that object in view. At any rate it would be a public misfortune to have this tract cut up into building lots and built upon. It should be retained intact. It should be purchased, if its purchase is necessary, to prevent its being cut up into building lots and covered with apartment houses.

The price at which I understand it can be bought is certainly not excessive. I understand it is about $1.50 a foot. Those

who are at all acquainted with values in that section know that that is a low price for land in that vicinity. Within a block of the Dean tract lands have been sold, I am confident, for several times as much as that per square foot. Possibly it is not necessary to buy this year, but eventually this city should have the Dean tract; and the Dean tract can not, if this city is to grow, be cheaper in the years to come than it is now.

It will enhance in value every day, every week, every month, and every year.

The Patterson tract is offered now at a low price. It will enhance in value rapidly as the years pass. We need it, because it is in a section of the city in which there are no considerable park areas. It can be bought cheaply, and ought to be acquired at this time.

Mr. MANN. Mr. Chairman, I ask unanimous consent to proceed for five minutes.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent to proceed for five minutes. Is there objection?

There was no objection.

Mr. MANN. Mr. Chairman, I do not expect to take the five minutes. I am quite sure the gentleman from New York [Mr. FITZGERALD] is incorrect in thinking that the people who own the Dean tract have been making any effort to dispose of it to the Government. For years there has been talk about the Government buying the Dean tract. Some time last fall I had a conversation with young Mr. Dean, who certainly displayed to me no anxiety to have the Government purchase the property. On the contrary, he stated that if the Government wanted to buy it they would have to determine to do so very quickly, because the owners of the property had carried it and they were going to dispose of it, and they thought they could get a great deal more for it than the Government would be willing to pay for it. I believe they have had, through the District Commissioners or through the superintendent of public buildings and grounds, or somebody, a proposition to sell it to the Government at the assessed valuation.

That, however, is not what I am specially interested in. I look over this property every morning. I have looked at it for many years, going by it. There is not a morning now that I do not stand at my window and look at that piece of property. It is the handsomest piece of property that I ever saw in a city. I never have seen any other piece of property in any city as handsome as this. I do not know what the Government would do with it if it purchased it. I do not think there is great necessity for an additional park in that locality. But there is one oak tree on the Dean property that ought to be owned by the Government and surrounded, so that the people could go under it. It is many times older than the city of New York. There is no tree anywhere near New York City that is as old or as large as this old oak tree on the Dean place, which has a wider spread than any tree in any other city in the United States. They have a tree out in the Hawaiian Islands, planted by a man still living, that has a spread larger than this room; but I know of no place where they have as handsome an old oak tree as there is right by the Dean house, directly in front of the windows of my apartment. If I had the money I would buy the ground myself for the privilege of living under the shadow of that old oak tree. Of course, I do not expect that the Government will ever take any such delight in trees or beauty.

Mr. FITZGERALD. Mr. Chairman, I ask unanimous consent for one minute.

The CHAIRMAN. The gentleman from New York asks unanimous consent to proceed for one minute. Is there objection?

There was no objection.

Mr. FITZGERALD. Mr. Chairman, I spoke somewhat advisedly in what I said about the owners of this property being anxious to dispose of it to the Government. The amendment now proposes a price of $625,000. A few years ago it was $1,250,000. The place has a very beautiful tree and it is a very beautiful tract of ground; but it seems to me that $625,000 is a great deal of money to pay to gratify the esthetic taste of the gentleman from Illinois and for one old tree. It would have to be a very old tree to justify paying so much money, and there is no need for a public park in that part of Washington.

Mr. MANN. If the gentleman will yield, some day I will invite him to come up and take dinner with me and see this piece of ground. He evidently does not know where it is.

Mr. FITZGERALD. Oh, I have walked past it very frequently and have walked through it once or twice without interference. I know that the gentlemen who have the privilege and opportunity of living where the gentleman from Illinois lives would regret very much to see this property built upon. It would spoil their view.

Mr. MANN. Oh, that is a mean little fling. I will be out of it long before that property is built upon.

Mr. FITZGERALD. But it is a pretty big price to pay to gratify those who wish to live in a particular part of Washington. The gentleman admits that there is no need for a park at that particular place, so the only purposes we would buy this ground for would be three: First, to accommodate those who own it and wish to sell it—the Government always is a desirable purchaser; second, to gratify those who live under the same roof with the distinguished gentleman from Illinois; and third, to buy the biggest, widest-spreading tree in any municipality in the United States. The price though is pretty large, even to accomplish those three ends.

Mr. MANN. Mr. Chairman, I ask for two minutes.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent to proceed for two minutes. Is there objection?

There was no objection.

Mr. MANN. I did not advise anybody to buy this ground for the Government. I am not supporting the amendment. I did not say the amendment ought to be agreed to; but it is impossible for any gentleman on the floor of the House on this side to make a remark, even about an abstruse question, without some gentleman on the other side of the House indulging in personal abuse. The gentleman stated that I was supporting the amendment because I wanted to keep the view in front of my windows. That is just about up to the average intelligence of that side of the House. [Laughter.]

The CHAIRMAN. The question is on the amendment.

Mr. PAGE of North Carolina. I made a point of order against the amendment.

The CHAIRMAN. The Chair sustains the point of order. The Clerk will read.

The Clerk read as follows:

For distribution branch: Superintendent, $3,300; engineer, $2,400; assistant engineers—one $1,800, one $1,700; master mechanic, $2,000; foreman, $1,800; assistant foremen—one $1,275, one $1,200, one $1,125, one $900; steam engineers—chief $1,750; two at $1,100 each, three assistants at $1,000 each; chief inspector of valves, $1,600; leveler, $1,200; inspector, $1,200; draftsman, $1,505; clerks—one $1,800, one $1,500; four at $1,200 each, stores clerk $1,500, one $1,000, one $900; timekeeper, $900; two rodmen at $900 each; two chainmen at $675 each; four oilers at $610 each; three firemen at $875 each; janitor, $900; watchmen—one $875, one $700, one $610; drivers—one $700, one $630; two messengers, at $600 each; in all, $88,030.

Mr. COX. Mr. Chairman, I reserve a point of order on the figures "$1,800," in line 25, page 89. That is an increase of salary. There are two or three other increases of salary, but they are small, and I do not think I will make any point of order against them. But I make a point of order against that.

Mr. MANN. What is the point of order?

Mr. COX. That it is an increase of salary.

The CHAIRMAN. The gentleman from Indiana makes the point of order that this is an increase of salary.

Mr. PAGE of North Carolina. That salary is not fixed by statute; it is not subject to a point of order.

Mr. MANN. I think we are entitled to know what the point of order is.

Mr. COX. At the bottom of page 89, line 25, assistant engineer, one, $1,800. I make the point of order that that is an increase of salary.

Mr. MANN. But it is not an increase of salary.

Mr. COX. I thought so when I compared it with the bill of last year. What was his salary last year?

Mr. MANN. Eighteen hundred dollars.

Mr. PAGE of North Carolina. If that is the gentleman's point of order, the salary is the same as it is in the current law. There is no change.

Mr. COX. Mr. Chairman, I withdraw the point of order.

The Clerk read as follows:

SEC. 9. That hereafter the half cost of the paving or repaving of a roadway between the side thereof and the center thereof with sheet asphalt, asphalt block, granite block, vitrified block, cement concrete, bituminous concrete, macadam, or other form of pavement shall be assessed against the property abutting the side of the street so improved, such assessments to be levied and collected as now provided as to alleys and sidewalks: *Provided*, That the advertisement by publication of the commissioners' intention to do such work and the formal hearing in respect thereto required by law as to alley and sidewalk improvements shall not be required as to roadway improvements.

Mr. MONDELL. Mr. Chairman, I will make a point of order against this paragraph unless it is included in the rule.

Mr. PAGE of North Carolina. It is included in the rule and is not subject to a point of order.

Mr. MONDELL. The only change made is that it includes macadam?

Mr. PAGE of North Carolina. Yes; the word "macadam" is added.

Mr. MONDELL. So that hereafter macadam pavements are charged up against the abutting property owner?

Mr. PAGE of North Carolina. Yes.

Mr. MONDELL. It has been the practice in the District, and particularly in the outlying sections of the District, to use what they term a water-bound macadam. This word "macadam" would include that also, I suppose?

Mr. PAGE of North Carolina. Yes; I think it would include that.

Mr. MONDELL. Let me make this suggestion: So far as roads in the suburbs are concerned, they are built not so much for the benefit of the abutting property owner as they are for the public convenience, to allow people to get from one part of the city to another part, or from one part of the city to the country. Does the gentleman think it is fair to charge up the building of these roads to the abutting property owners?

Mr. PAGE of North Carolina. I do. Take the part of the northwest in which the gentleman formerly lived, and in which I live at the present time, the paved macadam street is very much less expensive than the asphalt or other kind of pavement, but it is fully as beneficial in the degree of cost to the abutting property owners as the other pavement. I see no reason why a resident of the city should have a macadam roadway built in front of his property without being assessed for any part of the cost, while the man in the next street having a way built of asphalt and other material and costing more should be assessed. We put this in because we thought it equitable as between the various residents and the different kinds of pavement.

Mr. MONDELL. I think the gentleman's position is sound as applied to improved parts of the District, but when you come to the suburbs which are not so well built up as the section to which the gentleman has referred, there is not so much equity in it.

Mr. PAGE of North Carolina. The gentleman will admit that the building of a water-bound macadam road through a man's property which is not built up in the District of Columbia will greatly enhance the value of that property?

Mr. MONDELL. Yes; generally that is the case.

Mr. PAGE of North Carolina. Then there is in that class of property a very much larger area to assess.

Mr. MANN. Mr. Chairman, I move to strike out the last two words. This provision, as I understand it, is that half the cost of paving each side of the street or roadway 25 feet in width——

Mr. PAGE of North Carolina. Not more than 40 feet, 20 feet from each side.

Mr. MANN. It says the cost of all such work beyond a line 20 feet from the side thereof. But that is not what I wanted to get at. It contemplates that the cost of the paving on each side of the street will be charged to the property owner on that side of the street. Suppose you are paving a street 40 feet in width with this imaginary line through the center; are you going to keep a separate account of how much it costs on each side?

Mr. PAGE of North Carolina. No; that was put in to meet a condition that arose under a provision carried in the last bill.

Mr. MANN. I do not care about that, but this will require the gentleman making a different assessment for each side of the street, to raise the money from the property owners on each side, to keep a separate account of the cost of each side of the street.

Mr. PAGE of North Carolina. The gentleman is wrong in assuming that the assessment is made and the money used to put down the pavement. The appropriation is made for laying the pavement, and afterwards the assessment is made to cover the cost.

Mr. MANN. But you have to keep a separate account of each side of the street in order to know how much you are going to assess.

Mr. PAGE of North Carolina. Each abutting piece of property is assessed, of course.

Mr. MANN. Here is a roadway with an imaginary line running through the center of the street, and you provide on one side of that imaginary line that the cost of the paving on that side shall be assessed to the property owner and on the other side the cost on that side shall be assessed to the property owner. You have to keep a separate account in order to know how much each side shall be charged, and if you do not that would be a good defense in court.

Mr. PAGE of North Carolina. Then they will have to keep a separate account.

Mr. MANN. It is impossible to keep a separate account of the cost on each side of an imaginary line in that way.

Mr. PAGE of North Carolina. Mr. Chairman, I will say to the gentleman that most of the pavement that is laid in Washington is laid under contract at so much per yard, and there is no difficulty in calculating the number of yards or the frontage of a lot, and so many feet out into the street.

Mr. MANN. Yes; but in nearly every case, excepting streets already paved, there is additional cost for excavation and grading.

Mr. PAGE of North Carolina. That is not charged at all. It is only for the paving. The excavating and the grading are not included in this amendment.

Mr. MANN. And they are not a part of the pavement?

Mr. PAGE of North Carolina. Not a part of it at all. It has been suggested to me that they should be, but they are not, and this applies to the paving alone.

The CHAIRMAN. Does the Chair understand that the gentleman from Wyoming withdraws his point of order?

Mr. MONDELL. Yes.

The CHAIRMAN. The Clerk will read.

The Clerk concluded the reading of the bill.

Mr. PAGE of North Carolina. Mr. Chairman, before taking up the amendment offered by the gentleman from Wyoming, to which a point of order is pending, I ask unanimous consent to return to page 11 of the bill, line 12, for the purpose of offering an amendment, to insert $1,700 in place of $2,000, which was stricken out on a point of order.

The CHAIRMAN. The gentleman from North Carolina asks unanimous consent to recur to page 11 of the bill for the purpose of offering an amendment. Is there objection?

There was no objection.

Mr. PAGE of North Carolina. Mr. Chairman, I move to amend by inserting, in line 12, page 11, after the figures "$3,500," the words "examiner, $1,700."

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 11, line 12, after the figures "$3,500," insert the words "examiner, $1,700."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. PAGE of North Carolina. Mr. Chairman, as to the point of order which was pending to the amendment offered by the gentleman from Wyoming, on page 64, the gentleman from Georgia [Mr. HOWARD] desires to be heard.

Mr. HOWARD. Mr. Chairman, the point of order is directed against the particular item offered by the gentleman from Wyoming [Mr. MONDELL]. The gentleman cited the original law, the act approved May 28, 1908, section 10 of which provides that the Commissioners of the District of Columbia are hereby authorized to appoint two inspectors to carry out the purposes of the act, at a compensation not to exceed $1,200 each per annum. The District appropriation bill approved March 1, 1911, carries this provision:

The major and superintendent of police shall hereafter detail two privates of the Metropolitan force for the enforcement of the provisions of the act to regulate the employment of child labor in the District of Columbia, approved May 28, 1908.

Mr. MONDELL. What date is that?

Mr. HOWARD. May 2, 1911, was the date of the approval of the act. Section 10 of that act provides:

That all laws and parts of laws to the extent that they are inconsistent with this act are hereby repealed.

Therefore the existing law is in conformity with the provisions of the bill, and the point of order, therefore, would not lie against it.

Mr. MANN. Mr. Chairman, will the gentleman yield?

Mr. HOWARD. Yes.

Mr. MANN. I did not hear all of the gentleman's statement. What was the item in that law? Was it merely for the current year?

Mr. HOWARD. No; it is "hereafter." It provided that hereafter the major and superintendent of the police force should designate two privates of the Metropolitan police force to perform the functions created by the act of 1908, and section 10 of that act repealed all laws in conflict with it.

Mr. MONDELL. Mr. Chairman, the amendment which I have offered provides for the pay of the inspectors required for the purpose of carrying out the provisions of the child-labor law. Admitting for the sake of argument that there is a provision of the law relative to the appointment of the inspectors, that has nothing to do with the amendment proposed which provides for pay for these inspectors. My amendment has no reference to the manner in which these people shall be appointed or detailed. It simply provides for their pay, and it is entirely in order to offer as an amendment to the District appropriation bill a provision for the payment of officers provided by law.

The CHAIRMAN. The Chair is ready to rule. The gentleman from Wyoming offers as an amendment to the District of

Columbia appropriation bill, at page 64, as a special paragraph, immediately following the end of line 12, on that page, the following:

For the payment of two inspectors to carry out the purposes of the act approved May 28, 1908, entitled "An act to regulate the employment of child labor in the District of Columbia," as provided by section 10 of said act, $2,400.

An examination of the child-labor law shows that section 10 provides as follows:

That the Commissioners of the District of Columbia are hereby authorized to appoint two inspectors to carry out the purposes of this act at a compensation not exceeding $1,200 each.

Undoubtedly that is sufficient authority for the amendment of the gentleman from Wyoming. The gentleman from Georgia [Mr. HOWARD] in response to that cites a later District of Columbia appropriation bill carrying the following language:

The major and superintendent of police shall hereafter detail two privates of the Metropolitan police force for the enforcement of the provisions of the act to regulate the employment of child labor in the District of Columbia, approved May 28, 1908.

And he further cites the fact that the bill carries the repealing clause which would repeal this if it was in any way inconsistent with the original text. The Chair does not think that the language referred to is at all inconsistent with the language carried in section 10 of the child-labor law, and therefore overrules the point of order. The question is on agreeing to the amendment offered by the gentleman from Wyoming.

Mr. MONDELL. Mr. Chairman, the Commissioners of the District of Columbia have called attention to the fact that it is impossible for these two officers from the Metropolitan police force to properly and adequately enforce the child-labor law. They call attention to the fact that in order to have that law properly enforced it is necessary to have officers peculiarly qualified and trained for that kind of work. Let me call the attention of the committee to what Commissioner Brownlow said as to the present situation, or to a part of what he said, particularly relative to children who have taken part in theatrical performances:

As long as the children who were performing here as actors only came to the vaudeville theaters or with an occasional play like the Blue Bird, or something like that, it did not amount to much. But of late, in the last eight or nine months, there have sprung up in these 5 and 10 cent moving-picture houses all over the District and in the outlying eastern and southern parts, especially Friday night amateur nights and Charlie Chaplin contests and any number of things in which these children were given tickets. Sometimes they were paid by being given so many tickets, so they could come back every night for the rest of the week. I heard of several cases of little children who were hanging around where some man who was the ticket agent was getting them to take part, or some fellow playing the piano at one of these places would make the request, and I heard a great many complaints, and it got so that these requests for these children under age which came to the commissioners, instead of being two or three a month, as it used to be when they came to the regular theaters, began coming in at the rate, especially on Fridays, of sometimes as high as 10 a day, and one day I believe I had nearly 20.

The commissioner further called attention to the impossibility of regulating these things without having officials trained to that kind of work and familiar with the conditions. He refers to the newsboys and to the patent violation of the law in regard to the sale of newspapers and notions. We see boys under age right here in the Capitol and adjacent to it in the House Office Building engaged in selling newspapers every day.

That may not be so bad, but if the law is a wise one it should be enforced. These boys are employed in several classes of work, so the commissioners say, under age, and they have not been able to enforce the law, not because the men who are detailed are not good officers but because they are not trained for that kind of work. They desire to pay some one for this work who is trained for that class of work and who will see that this child-labor law is enforced.

Now, again I appeal to the gentlemen of the House. Do you or do you not believe in the enforcement of the child-labor law? Were you or were you not entirely honest when you helped pass that law? Do you believe in its enforcement, or are you like some legislators whom I have heard of who were for a law but "agin" its enforcement? Now, here is a proposition to provide for the enforcement of this wise, just, useful, and necessary statute. Let us provide for it as the commissioners ask us to do.

Mr. PAGE of North Carolina. Mr. Chairman, at the present time there are two police officers detailed from the Metropolitan police force to the enforcement of the child-labor law in the District of Columbia. They have had this assignment since the enactment of the law some five or six years ago. Those two men have been trained for six years to enforce this law, and they are the only ones in the District of Columbia who are. Now, the gentleman from Wyoming comes with an amendment and says that we ought to dispense with those two men who have had six years' training in the enforcement of this child-labor law and select two entirely new people who know nothing about it, who will have to be trained in order that the law may be properly enforced. In other words, he would throw away the experience of these two men who have had six years of this employment, turn them back into the Metropolitan police force, where they are not particularly needed, and in their places employ two inspectors who would take six years, presumably, to become as efficient in the enforcement of this work as those who are now enforcing it. That is the argument of the gentleman.

Mr. MADDEN. Will the gentleman yield?

Mr. PAGE of North Carolina. I will.

Mr. MADDEN. Does the law refer to the territory embraced around the Capitol here?

Mr. PAGE of North Carolina. I can not say to the gentleman, but I think it applies everywhere in the District of Columbia.

Mr. MADDEN. It would enforce the law around the Capitol Building?

Mr. PAGE of North Carolina. The gentleman is referring to the boys selling newspapers? There is a provision in that law by which they can get a permit, and I assume most of those boys have permits.

Mr. MADDEN. Boys as young as 8 years of age——

Mr. PAGE of North Carolina. That is a matter of administration, and certainly if they have not a permit they are violating the law, but there is a provision by which they can receive permits in the law. Mr. Chairman, that is about all I care to say about it. It is the employment of two new officials to take the place of two old officials in the enforcement of this child-labor law. I should think the experience of these two men should be utilized, and it is certainly worth something.

Mr. MONDELL. The commissioners have said they needed these two men for other work.

Mr. PAGE of North Carolina. If we complied with all the requests of the commissioners, they not only would have those two men but they would have a hundred more. That does not amount to anything.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Wyoming.

The question was taken, and the Chair announced that the noes seemed to have it.

On a division (demanded by Mr. MONDELL) there were—ayes 34, noes 55.

So the amendment was rejected.

Mr. PAGE of North Carolina. Mr. Chairman, I move that the committee do now rise and report the bill to the House with the amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. FERRIS, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 15774, the District of Columbia appropriation bill, and had directed him to report the same back to the House with sundry amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

Mr. PAGE of North Carolina. Mr. Speaker, I move the previous question on the bill and amendments to final passage.

The previous question was ordered.

The SPEAKER. Is a separate vote demanded on any amendment? If not, the Chair will put them in gross.

The question was taken, and the amendments were agreed to.

The bill was ordered to be engrossed and read the third time, and was read the third time.

Mr. MANN. Mr. Speaker, I move to recommit the bill to the Committee on Appropriations with directions to that committee to report the bill back forthwith with an amendment striking out all of the first section except the enacting clause.

The SPEAKER. The Clerk will report the instructions.

The Clerk read as follows:

Mr. MANN moves to recommit the bill to the Committee on Appropriations with instructions to report the same back forthwith with an amendment striking out all after the enacting clause, beginning line 3, page 1, down to and including line 3, on page 2.

Mr. PAGE of North Carolina. Mr. Speaker, on that I move the previous question.

The previous question was ordered.

The SPEAKER. The question is on the motion to recommit with instructions.

The question was taken, and the Speaker announced that the noes seemed to have it.

Mr. MANN. Mr. Speaker, I make the point of order there is no quorum present.

The SPEAKER. Evidently there is no quorum. The Doorkeeper will lock the doors, the Sergeant at Arms will notify absentees, and the Clerk will call the roll.

The question was taken; and there were—yeas 111, nays 173, answered "present" 11, not voting 139, as follows:

So the motion to recommit was rejected.

The Clerk announced the following pairs:

On the vote:

Mr. HEFLIN (against) with Mr. LINTHICUM (for).

Mr. SISSON (against) with Mr. WILSON of Illinois (for).

Mr. AUSTIN (for) with Mr. STEDMAN (against).

Mr. WHALEY (against) with Mr. COADY (for).

Mr. AYRES (against) with Mr. DYER (for).

For the session:

Mr. STEELE of Pennsylvania with Mr. GRAHAM.

Mr. DEWALT with Mr. MCFADDEN.

Mr. LIEBEL with Mr. ROWLAND.

Ending May 27:

Mr. WM. ELZA WILLIAMS with Mr. KING.

Mr. THOMAS with Mr. DEMPSEY.

Mr. GALLAGHER with Mr. WINSLOW.

Mr. TALBOTT with Mr. BUTLER.

Ending May 29:

Mr. SHERLEY with Mr. LONGWORTH.

Ending June 2:

Mr. BURKE with Mr. GREENE of Vermont.

Ending June 20:

Mr. BRUCKNER with Mr. BENNET.

Until further notice:

Mr. CLARK of Florida with Mr. FULLER.

Mr. ROUSE with Mr. MADDEN.

Mr. FLYNN with Mr. GRIEST.

Mr. PATTEN with Mr. SNELL.

Mr. HENRY with Mr. JOHNSON of South Dakota.

Mr. HUMPHREYS of Mississippi with Mr. WOOD of Indiana.

Mr. SEARS with Mr. KIESS of Pennsylvania.

Mr. WALKER with Mr. PETERS.

Mr. LITTLEPAGE with Mr. SUTHERLAND.

Mr. SABATH with Mr. LEHLBACH.

Mr. CANTRILL with Mr. LANGLEY.

Mr. JONES with Mr. KEARNS.

Mr. DALE of New York with Mr. EMERSON.

Mr. LEWIS with Mr. MCCULLOCH.

Mr. WILSON of Louisiana with Mr. SNYDER.

Mr. PRICE with Mr. MILLER of Minnesota.

Mr. BARNHART with Mr. CHANDLER of New York.

Mr. GALLIVAN with Mr. COSTELLO.

Mr. BLACK with Mr. GRAY of New Jersey.

Mr. HAMLIN with Mr. DALE of Vermont.

Mr. VAN DYKE with Mr. MOONEY.

Mr. SPARKMAN with Mr. RODENBERG.

Mr. OGLESBY with Mr. MORIN.

Mr. SAUNDERS with Mr. WILLIAMS of Ohio.

Mr. CALDWELL with Mr. EDMONDS.

Mr. HART with Mr. KAHN.

Mr. TAYLOR of Colorado with Mr. WATSON of Pennsylvania.

Mr. O'SHAUNESSY with Mr. PAIGE of Massachusetts.

Mr. MCLEMORE with Mr. TEMPLE.

Mr. GRAY of Alabama with Mr. HUTCHINSON.

Mr. COLLIER with Mr. HEATON.

Mr. EDWARDS with Mr. CAPSTICK.

Mr. GODWIN of North Carolina with Mr. ANTHONY.

Mr. BORLAND with Mr. FAIRCHILD.

Mr. CROSSER with Mr. DRUKKER.

Mr. BRUMBAUGH with Mr. CHARLES.

Mr. BUCHANAN of Illinois with Mr. HICKS.

Mr. RUSSELL of Missouri with Mr. TINKHAM.

Mr. OLNEY with Mr. ROWE.

Mr. MAHER with Mr. SWITZER.

Mr. LOFT with Mr. THOMAS S. WILLIAMS.

Mr. HELVERING with Mr. CHIPERFIELD.

Mr. BUCHANAN of Texas with Mr. HUSTED.

Mr. CAREW with Mr. CRAGO.

Mr. CASEY with Mr. GREENE of Massachusetts.

Mr. CONRY with Mr. SMITH of Minnesota.

Mr. MORGAN with Mr. SUTHERLAND.

Mr. HAMILL with Mr. SANFORD.

Mr. RIORDAN with Mr. WARD.

Mr. ADAIR with Mr. SCOTT of Pennsylvania.

Mr. LOUD with Mr. SCULLY.

Mr. DRISCOLL with Mr. LAFEAN.

Mr. MADDEN. Mr. Speaker, I voted "aye." I am paired with the gentleman from Kentucky, Mr. ROUSE. I wish to withdraw my vote and vote "present."

The SPEAKER. The Clerk will call the gentleman's name.

The Clerk called the name of Mr. MADDEN, and he answered "Present."

Mr. BUTLER. Mr. Speaker, I find I am paired with the gentleman from Maryland, Mr. TALBOTT. Therefore I will have to withdraw my vote. I want to vote "present." I voted "aye."

The SPEAKER. The Clerk will call the gentleman's name.

The Clerk called the name of Mr. BUTLER, and he answered "Present."

Mr. SISSON. Mr. Speaker, I am recorded in the negative. I am paired with the gentleman from Illinois, Mr. WILSON, but he thinks I am out of the city. I had better withdraw my "nay" vote and vote "present."

The SPEAKER. The Clerk will call the gentleman's name.

The Clerk called the name of Mr. SISSON, and he answered "Present."

The result of the vote was announced as above recorded.

The SPEAKER. A quorum is present. The Doorkeeper will open the doors. The question is on the passage of the bill.

The question was taken, and the bill was passed.

On motion of Mr. PAGE of North Carolina, a motion to reconsider the vote whereby the bill was passed was laid on the table.

CHANGE OF REFERENCE.

Mr. BEAKES. Mr. Speaker, by direction of the Committee on the Post Office and Post Roads, claiming jurisdiction of House bill 6915 and House bill 10130, I move to discharge the Committee on Reform in the Civil Service from the consideration of House bill 6915 and House bill 10130, and that the same be referred to the Committee on the Post Office and Post Roads.

Mr. GARRETT rose.

The SPEAKER. For what purpose does the gentleman from Tennessee rise?

Mr. GARRETT. To make a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. GARRETT. There are two reports on order of procedure from the Committee on Rules pending, under the rule which provides that it shall be in order at any time for the Committee on Rules to report on the order of procedure. I desire to submit the inquiry as to whether these motions would take precedence over the motion of the gentleman from Michigan [Mr. BEAKES]?

The SPEAKER. The rule that the gentleman from Tennessee cites is correct and well known, but the rule about this business is that immediately after the reading of the Journal motions of this kind are made, and one of them is just as binding as the other, the Chair thinks. But the Speaker is in this fix about it anyway: The gentleman rose this morning, or somebody for him, when he had the undoubted right to proceed, and the gentleman from North Carolina [Mr. PAGE] came to the Speaker and said that the Committee on Appropriations wanted to proceed with the District of Columbia appropriation bill, and the Chair recognized him. Then the gentleman from Illinois [Mr. MADDEN] propounded the inquiry whether that would cut out this motion of the Post Office Committee, and the Chair stated in the presence of the House that it could not cut it out; and under the circumstances I hope the gentlemen will defer their matter, because I do not think this will take very long.

Mr. FITZGERALD. There was an understanding about that.

Mr. PAGE of North Carolina. Certainly, Mr. Speaker, we defer to the suggestion of the Chair.

The SPEAKER. The Clerk will report this document.

The Clerk read as follows:

By direction of the Committee on the Post Office and Post Roads, claiming jurisdiction of H. R. 6915 and H. R. 10130, Mr. BEAKES moves to discharge the Committee on Reform in the Civil Service from consideration of H. R. 6915 and H. R. 10130, and that the same be referred to the Committee on the Post Office and Post Roads.

Mr. COX. Mr. Speaker, I make a point of order against the motion of the gentleman from Michigan.

The SPEAKER. What is the gentleman's point of order?

Mr. COX. The point of order is that the matter has been adjudicated by this House. On last Monday the House by motion referred these two bills to the Committee on Reform in the Civil Service, and having been determined and passed upon by the House, it is adjudicated and disposed of.

The SPEAKER. Does the gentleman from Illinois [Mr. MADDEN] want to be heard on the point of order?

Mr. MADDEN. Mr. Speaker, I maintain that the Committee on the Post Office and Post Roads is clearly within its rights when it comes before the House and asks for the reference of a bill which it believes has been erroneously referred; that it is strictly under the rules that it comes before the House with this motion, and that the Committee on the Post Office and Post Roads has jurisdiction over the legislation which is embodied within these bills.

The SPEAKER. What does the gentleman say to the point of order made by the gentleman from Indiana [Mr. Cox] that this matter is res judicata?

Mr. MADDEN. I think I have said what I think about that. Anyway, Mr. Speaker, if I may be permitted to wander just a little, I believe that when the House acted on the motion of the gentleman from Indiana [Mr. Cox] it was not advised of the facts in connection with the case upon which it acted, and that when the gentleman asked unanimous consent to transfer the bills, if the House had been advised it would not have taken the action that it did take. And because of the fact that the House did act without information and under a misapprehension of the facts in the case, I believe that now, when the House is advised, it ought to be given an opportunity to act with the information that will give it the opportunity of considering the question intelligently.

Besides that, Mr. Speaker, when this question was up for consideration on my motion to reconsider the vote by which the House did act, while the Speaker sustained the point of order as to the action the House did take, the Speaker himself said that the remedy was with the Committee on the Post Office and Post Roads, and advised the committee that the remedy was for that committee to meet, to act, and to come to the House with a recommendation from the committee as to what disposition should be made of these bills. Now, the committee has acted upon the advice of the Speaker, upon what we presumed in good faith to be a ruling by the Speaker, and we put the question now up to the Speaker as to whether or not we have acted in accordance with his very wise suggestion. [Laughter.] And we further wish to know from the Speaker whether he wants to put himself in the attitude of overruling himself? Of course it would be perfectly in order for him to do that, but we hope he will not so far forget himself as to disagree with himself and decide in favor of the point of order presented by the gentleman from Indiana [Mr. Cox].

Mr. ADAMSON. Mr. Speaker, will the gentleman yield?

Mr. MADDEN. Yes.

Mr. ADAMSON. I want to suggest to the gentleman that it requires the very biggest order of men to overrule themselves and to find that they have been mistaken. [Applause.]

Mr. MANN. Did the gentleman ever do that? [Laughter.]

Mr. MOON. Mr. Speaker, as chairman of the Committee on the Post Office and Post Roads, that is claiming jurisdiction of these bills, I would like to be heard for a few moments not only upon the point of order but upon the question itself. And yet I do not desire to do more than to state the facts upon which this motion on the part of the majority of the committee is predicated, as well as the views of the minority. The gentlemen of the Post Office Committee are divided on this question. A majority of the committee want to assume jurisdiction of these bills. The other part of the committee do not.

Mr. GRIFFIN. Will the gentleman yield?

Mr. MOON. Yes.

Mr. GRIFFIN. Will the gentleman state to the House what is the division in the committee?

Mr. MOON. Yes; I will state it to the House, if the gentleman thinks that will do any good. A large majority of the committee, two-thirds of it, want to take jurisdiction of these bills; but that is a matter of no consequence, as to how many men were for it or against it. This is a question of parliamentary law, to be determined under the rules of the House; and I want to say to gentlemen, before entering upon discussion of the point of order or a statement of the facts upon which the jurisdiction is claimed, that you are now proposing to determine a question the ultimate effect of which will give $200,000,000 annually within 25 years as civil pensions to the employees in the service of the United States. I will not now discuss the merits of the bills.

Mr. Speaker, in order that we may understand exactly the status of this question, it is proper that I state the facts. The bills to which this motion refers are for the purpose of giving pensions to superannuated employees of the Post Office Department. I need not read all of the provisions of the bills, because it is clear from a reading of some of them that a pension of $600 per annum is to be given to those who are adjudged to be superannuated under the provisions of the bills. Now, let us see where the jurisdiction lies under the rules of the House. The bills went to the Post Office Committee in the first place, not to the Committee on Reform in the Civil Service. They were being considered in that committee, when, on motion of the gentleman from Indiana [Mr. Cox], by unanimous consent the jurisdiction of the Committee on the Post Office and Post

Roads was taken away, and that jurisdiction conferred on the Committee on Reform in the Civil Service. Was that correct? The rules of the House require that all legislation be referred to one of the committees mentioned in Rule X. The subsection of that rule provides that all matters pertaining to the Post Office, the appropriations therefor, shall go to the Post Office Committee. By construction it has been held that that includes postal banks, telegraph matters, and all matters essentially affecting the operations of the department. There is nothing in this bill that affects the operation or work of the departments, or either of them.

But there is another rule that provides that all questions of civil-service reform shall be referred to the Committee on Reform in the Civil Service. Its jurisdiction is over matters affecting the Civil Service Commission, violation of the civil-service law, and, mark the language, of all questions affecting the civil-service status of employees, clerks, and officers in the classified service.

Mr. GRIFFIN. Will the gentleman yield?

Mr. MOON. I will, if the gentleman will not interrupt me any more.

Mr. GRIFFIN. Did not the Post Office Committee report the bill for the classification act of 1907 affecting the status of carriers and clerks, and also the railway mail classification of 1912 changing the status of railway mail clerks?

Mr. MOON. Yes; but they did not involve pensions.

Mr. GRIFFIN. But it was a change of status.

Mr. MOON. The gentleman from New York begs the question. If a tariff law was referred to the Post Office Committee and the committee passed upon it without any question of jurisdiction, the action would be lawful, and there was no question of jurisdiction made.

The SPEAKER. What does the gentleman from Tennessee say as to the action of the House settling the question of jurisdiction?

Mr. MOON. I am coming to that question in a moment. Now, Mr. Speaker, this rule as to the classified civil service determines where bills affecting the status of these people shall go. These bills under consideration do not affect the postal status of these men, but their civil-service status, inasmuch as it puts them in a classified service by which pensions shall be paid and not in a class by which the work is to be performed under the law. Unquestionably the action of the House in changing the jurisdiction of the bill from the Post Office Committee to the Commitee on Reform in the Civil Service was correct.

Now, what is the attitude of the House and what is the attitude of the bill? They are not before the Post Office Committee; they have by unanimous consent of this House been referred to the Committee on Reform in the Civil Service. That committee has jurisdiction of them. The Post Office Committee has come in with a resolution to take away the jurisdiction of that committee which was conferred upon it by the unanimous action of the House itself. How many motions can there be on this question?

Now, following in chronological order the history of the case, the gentleman from Illinois moved to reconsider the motion by which the House had unanimously taken jurisdiction from the Committee on the Post Office and Post Roads and conferred it on the Committee on Reform in the Civil Service, and the point of order was made against the motion to reconsider and the Chair sustained the point of order.

Now, what was the remedy then? My judgment is—and I will show in a few moments the reason for it—that the remedy was to pursue the course undertaken at that time under the motion—that is, to appeal from the judgment of the Chair to the judgment of the House—and then the question would have been conclusively settled. But they did not appeal, and therefore the action of the Chair itself became conclusive on the question. The remedy they had was not pursued and they have no other remedy.

Mr. MADDEN. Will the gentleman yield?

Mr. MOON. Not just now.

Mr. MADDEN. I want the gentleman to yield right at this point.

Mr. MOON. No; I will ask the gentleman to wait until I get to another point. The gentleman from Illinois begs the question. He says, "Why, Mr. Speaker, you intimated from the chair that we had another remedy, and that was to come here by a majority of the committee." He says that the Speaker decided it. The Speaker did not make any such decision. The Speaker simply said that he thought probably it might be so. But suppose the Speaker had said you have the right to have a majority of your committee bring a motion before the House, the Speaker would have been wrong, because the jurisdictional fact upon which he makes that decision was not existing; there was no motion from the committee upon which the Speaker could have predicated such action. There was only the question of unanimous consent and determining the jurisdiction under it. So, whatever the Speaker did say or did not say, if construed according to the gentleman's statement, would be simply obiter dictum. It would be an expression outside of the record.

Now, under the rules of the House of Representatives the question of jurisdiction under subsection 3, Rule XXII, is [reading from the rule]:

> And correction in case of error of reference may be made by the House, without debate, in accordance with Rule XI, on any day immediately after the reading of the Journal, by unanimous consent, or on motion of a committee claiming jurisdiction, or on the report of the committee to which the bill has been erroneously referred.

On any day immediately after the reading of the Journal, by unanimous consent—that is one way—or on motion of a committee claiming jurisdiction, or under report of the committee to which the bill has been erroneously referred.

Now, if this section had said "and on motion and on report," then there might have still been some doubt whether the rule had provided that the test of jurisdiction could be made three times, if necessary. But it does not. The language is in the disjunctive. Whenever you invoke one method of determining a question of jurisdiction and have proceeded on that course to the end, the question of jurisdiction is finally and irrevocably settled.

There was some reason for this rule. Of course it would be idle to say that in a legislative body you could have three trials of the test of jurisdiction. Three methods might be provided by which it could be done; but if one is invoked and the jurisdictional question finally settled by that method, it is exclusive of the other two, under any judicial rulings ever made on any language on any rule. What was the sense of this rule? If you want to find out the meaning and purpose of anything you must test the reason for it. First, when a bill has been referred to a committee which seeks tenaciously to hold its jurisdiction, like this committee does, there ought to be some remedy somewhere for the Members of the House and the House itself to settle the question of jurisdiction, if the opinion is that it has been erroneously referred. Therefore it is provided that the Member, by unanimous consent, may move a change of reference. That is one method.

If the change of reference is made by unanimous consent and the motion to reconsider that is ruled out, and no appeal is taken, that is the end of the question, and the whole proposition of jurisdiction is settled upon that method. There is reason for the other method, too. It was intended to preserve the right of a committee whose jurisdiction had been invaded, that it might bring the question before the House. Therefore a majority of the committee whose jurisdiction has been ignored could bring the question before the House. Again, to preserve the rights of all committees, it was provided that the committee that had jurisdiction and that had exercised it up to a point of a report upon the bill might still be questioned as to its jurisdiction on the filing of that report, but it can not be held, it would be unwise to hold, that because the rule provided three methods of determining a question of jurisdiction it has to determine that question three times. Whenever once determined by either one of the tests applied under the rule, that is the end of the question. I insist, therefore, that one method having been adopted, it having been pursued to the point where the House could have obtained, if it desired, a vote upon it and did not do it, the question going out on a ruling of the Chair upon a point of order, that therefore the jurisdictional question was conclusively settled for all time, so far as that is concerned. I realize, we all know, that this House can at any time control its own action, but it must be according to the rules, and following that rule this question is res adjudicata. If you want to undo it, you have to bring in a special rule authorized by a vote of this body from the Committee on Rules to submit that question for further determination, otherwise it is a closed issue.

Mr. MADDEN. Mr. Speaker, will the gentleman yield?

Mr. MOON. Yes.

Mr. MADDEN. I wish to ask the gentleman from Tennessee what he has to say with reference to the ruling made by the Speaker of the House which included not only the question of sustaining the point of order made by the gentleman from Indiana, but the addition of the language embodied in the ruling that the remedy for the committee to apply was to meet and make a report to the House and present their case.

Mr. MOON. I have already said this upon that question, that the RECORD does not show that the Speaker advised any such thing. He said that it might be done, or he thought it might be done. I believe he said, "I think so" on the final question; but here is the point: The House was considering the question of

jurisdiction, according to the rule, and allowed it to be done by unanimous consent, and the motion to reconsider upon that question was disposed of. The Speaker decided but one question, and that was the one question before him. Any decision made on any other question would have been based on facts not there, and, therefore, obiter dicta. The Speaker held then and there that the motion to reconsider was not well taken. If the gentleman did not agree with the Speaker (and he was pursuing a fixed remedy under the law), all he had to do was to appeal; but he can not come here now and say that because the Speaker inadvertently made such a suggestion he ought, therefore, to give him another chance, in violation of the clear rule on the subject.

Mr. MANN. Mr. Speaker, we had before the House the other day a motion to reconsider the vote by which these bills were sent from one committee to the other, that change of reference having been made by unanimous consent. It was sharply contested whether a motion to reconsider could be made. The Speaker held in the end that the point of order against the motion to reconsider should be sustained, and this is what he said:

> The SPEAKER. The point of order made by the gentleman from Indiana [Mr. COX] is sustained. The gentleman from Illinois [Mr. MADDEN] has a remedy. If he does not like the decision of the Chair, he can get his committee to come in here and move to refer this bill to the Committee on the Post Office and Post Roads.
>
> Mr. MANN. A parliamentary inquiry.
>
> The SPEAKER. The gentleman will state it.
>
> Mr. MANN. Can he do that when the House itself has changed the reference once?
>
> The SPEAKER. The Chair thinks he could.

The question was before the Speaker whether the House had any remedy at all. My colleague from Illinois [Mr. MADDEN] made a motion to reconsider the vote and the Speaker held that the motion to reconsider was not in order because there was another remedy. While I thought then and I think now that the decision of the Speaker was erroneous in both particulars, they balanced each other, and it was a decision based upon a reason which preserved the rights of the House. After all, that is what good rulings endeavor to do.

There is, however, a remedy, I will say to the gentleman, that is very easily invoked. The introduction of a bill by one Member of this House does not prevent the introduction of a bill very similar in language and form by another Member of the House, and although the Speaker doubtless under the decision the other day, if a new bill be introduced, would refer it to the Committee on Reform in the Civil Service, where it does not properly belong, yet the Committee on the Post Office and Post Roads the next day can move to make the change of reference, and no point of order will lie against that motion to take it away from that committee and send it to the Committee on the Post Office and Post Roads.

Mr. FITZGERALD. Mr. Speaker, the other day when this question was up I contended that the gentleman from Indiana [Mr. Cox] had moved a change of reference of these bills by unanimous consent. The Speaker held that he had made no motion whatever, that he had suggested, and the suggestion was adopted by unanimous consent. The rule is well established, and I will read the parliamentary statement of it to the Chair:

> A question once carried can not be questioned again at the same session, but must stand as the judgment of the House.

That is section 507 of the Manual, a quotation from Jefferson's Manual, and a note explains that that situation is guarded against in the House of Representatives by a motion to reconsider. But a motion to reconsider applies to a motion that has been made, and it is only when the question has been carried or lost—the converse is also true—that it can not be questioned.

Now, as to the question before the House. The Speaker has held that no motion was made; therefore no question was put and none was adopted or rejected. But there must be some time under the rule, because the rule so provides, when the House itself can determine to what particular committee these bills shall go. Now, I believe there is not any inconsistency in the entertainment of this motion by the Speaker now. His ruling the other day that no motion had been made necessarily implied that the statement he made to the gentleman from Illinois must be accurate, that there was a remedy in the House by which the House itself could pass upon the question. It seems to me that the very question raised the other day that a motion had been made and that denied by the gentlemen who now insist that the motion had been made, and the gentleman from Indiana and those siding with him, who insist there had been no motion, but that there had been a motion by unanimous consent.

Mr. COX. Mr. Speaker, I hope the gentleman will quote me correctly. I did not make that statement at all. I said treated by unanimous consent as being tantamount to a motion. I do not care whether treated by unanimous consent or considered as a motion.

Mr. FITZGERALD. Mr. Speaker, I think there is not anyone who will cogitate long about it who will not agree that this House does not and can not do anything unless somebody moves that the House act. It is a simple fundamental of parliamentary law that the House can not act unless somebody prefers a motion. A motion may be submitted by unanimous consent or it may be submitted in order under the rules, but it must be by motion. The Chair has held in this particular instance that there was no motion or that there was no motion at that time, and that is binding on the House, the House not appealing from the decision of the Speaker; the House acquiesced in the ruling of the Speaker that no motion has yet been made and determined regarding the reference of these bills; a motion must be in order at this time.

The SPEAKER. The Chair desires to ask the gentleman a question before he sits down. Does the gentleman regard a unanimous-consent change of bills from one committee to another, with a half a dozen Members present, or any small number, without any explanation or argument, as binding on the Speaker as it is if the House—now, for instance—expresses its opinion?

Mr. FITZGERALD. I think it is because of the assumption that a quorum is always present. The Speaker assumes a quorum is present, because the minute that question is raised and a quorum is ascertained not to be present one must be brought here.

The SPEAKER. Does the gentleman think that getting unanimous consent under circumstances similar to these, the way this was done, is of equal dignity with this motion which the gentleman from Michigan offers here now?

Mr. FITZGERALD. I am not criticizing the gentleman from Indiana for getting unanimous consent under those conditions, because it is probably the only situation under which he could get it. [Laughter.]

The SPEAKER. The Chair is not criticizing the gentleman from Indiana; he is putting to the gentleman from New York, who is an expert parliamentarian [applause], this question: Is the decision of the House, so called, under circumstances like that, that arise here at times, of equal dignity with the decision of the House now, for instance, if it is submitted to it?

Mr. FITZGERALD. I think it is, Mr. Speaker. We can not determine the relative attendance in the House, because if only 300 Members vote on a question some one might suggest that it was not as important as if every Member voted; but a remedy for that was provided in the rules by a motion to reconsider. Now, the Speaker having determined that this change of reference was not by motion, then under the rule that motion is some time in order. It was not by unanimous consent. If unanimous consent is refused to any Member, then the Chair must notice this distinction of the rule. These changes of reference can be made by unanimous consent. Anyone can make that motion by unanimous consent. If unanimous consent be denied, then there are two other opportunities to test the sense of the House. First, upon a motion of the committee which claims jurisdiction, but which does not have the bill, and the other is upon the motion of the committee which has the bill, but wishes to be relieved of it. In my experience a motion by a committee to be relieved of a bill in order to send it to some other committee has been defeated by a record vote in this House. But there are three opportunities. One is the opportunity afforded any Member of the House to move by unanimous consent. Another is the opportunity afforded to the committee possessing the bill to relieve itself of it. The other, the committee which claims it should have jurisdiction to obtain possession of the bill. Now, no motion has been made so far except the motion by the committee which now claims jurisdiction and believes that the bill should be sent to it. It seems to me, in view of what has happened, that the only thing that can be done is to submit this motion to the House and let the House determine the question.

The SPEAKER. The other day when this question came up the Chair held that the motion to reconsider was not in order. The gentleman from New York devoted a good deal of his remarks to that, but that question is not here now.

After the Chair decided that point he added the obiter dictum that if the gentleman from Illinois [Mr. MADDEN] was not satisfied he had a remedy, and suggested exactly what the gentleman from Michigan [Mr. BEAKES] is doing now.

Mr. MADDEN. Will the Speaker give me the privilege of a word there?

The SPEAKER. Yes.

Mr. MADDEN. Of course, when the Speaker made that statement he left a feeling of satisfaction in my heart that prevented me from taking the remedy which the gentleman from

Tennessee set out to apply, namely, appealing from the decision of the Chair.

The SPEAKER. That is neither here nor there. The gentleman did not pursue his remedy. The Chair does not know whether the RECORD shows it or not, but the gentleman from Illinois [Mr. MANN] said, sotto voce—so that the Chair could hear it, at least—that the Chair had made two erroneous decisions at one time. [Laughter.] The Chair does not know whether that statement is correct or not. It may be.

If the Chair thought that he was wrong the other day in saying what he did to the gentleman from Illinois [Mr. MADDEN], the Chair would not have a particle of hesitancy in changing his mind and in frankly saying so.

Some of the Speakers, notably Speaker Carlisle, on several occasions—and they were fresher in the mind of the Chair four or five years ago than they are now—made erroneous rulings when matters sprang up suddenly, and within two or three days afterwards, or something like that, he would write out an opinion, stating that he was wrong on the day before and that he did not want the ruling on the occasion he was naming to be taken as having any force or effect. Other Speakers have done it. The present occupant of the chair has done it once or twice himself. A man who is not willing to change his mind when the argument is sufficient or on new and sufficient information is not fit to be the Speaker of the House or a Member of it. [Applause.]

The Chair does not believe that the Chair was wrong when he made that suggestion to the gentleman from Illinois [Mr. MADDEN]. Whether he is wrong on the question of reconsideration, the Chair does not know. The Chair is going to study that out some time when he has leisure to see if he can get any information on it. The Chair does not believe that securing unanimous consent without Members understanding what they are doing is of equal dignity with the two other remedies which were read by the gentleman from Tennessee [Mr. MOON]. It seems to me that the more rational view is that really the rule provides in effect two methods of re-referring bills—one by unanimous consent, where no two committees are fighting for jurisdiction, the other where such contest is being waged and attracts the attention of the House, and that two variations of this more solemn and elaborate process are provided in the rule. Wrong references are frequently made in the rush of business, which are generally cured by unanimous consent. The contested references are treated more solemnly and elaborately.

If Members vote here to-day upon this proposition, after the lucid statement of the gentleman from Tennessee [Mr. MOON], they vote with their eyes wide open, and, of course, the Chair—this Speaker or any other—would follow the solemn decision of this House in preference to his own opinion or in preference to the opinion of any Speaker that ever sat in the chair, or all the Speakers put together, because the House is the court of last resort on parliamentary questions. As the gentleman from Illinois [Mr. MANN] suggested, in the event of the Chair sustaining the point of order the proponents of this motion can bring the matter before the House by introducing bills almost identical with these and when the new bills are referred beginning all over again.

The Chair overrules the point of order against this proposition of the report of the committee. The question is on the motion to change the reference of these bills from the Committee on Reform in the Civil Service back to the Committee on the Post Office and Post Roads. Those in favor of that motion will say "aye"; those opposed will say "no."

The question was taken, and the Speaker announced that the noes seemed to have it.

Mr. BEAKES and Mr. MADDEN demanded a division.

The SPEAKER. A division is demanded.

Mr. BEAKES and Mr. MADDEN demanded the yeas and nays.

The yeas and nays were ordered.

The SPEAKER. Those in favor of taking these bills from the Committee on Reform in the Civil Service and referring them to the Committee on the Post Office and Post Roads will answer "yea" when their names are called; those opposed will answer "nay."

The question was taken; and there were—yeas 177, nays 112, answered "present" 9, not voting 136, as follows:

YEAS—177.

So the motion of Mr. BEAKES was agreed to.

The Clerk announced the following additional pairs:

Until further notice:

Mr. SLAYDEN with Mr. THOMAS S. WILLIAMS.

Mr. AYRES with Mr. MOONEY.

Mr. STOUT with Mr. WATSON of Pennsylvania.
Mr. SHERWOOD with Mr. ROWE.
Mr. LIEB with Mr. DALE of Vermont.
Mr. KETTNER with Mr. GRAY of New Jersey.
Mr. HOWARD with Mr. COPLEY.
Mr. HOOD with Mr. SNYDER.
Mr. HAY with Mr. EMERSON.
Mr. HAMILL with Mr. SMITH of Minnesota.
Mr. LINTHICUM with Mr. CRAGO.
Mr. WILSON of Florida with Mr. BEALES.
Mr. DOUGHTON with Mr. KREIDER.
Mr. CARLIN with Mr. GARDNER.

On this vote:

Mr. CAREW (for changing reference) with Mr. HEFLIN (against changing reference).

Mr. CONRY (for changing reference) with Mr. FOSTER (against changing reference).

Mr. DALE of New York (for changing reference) with Mr. RAGSDALE (against changing reference).

Mr. HICKS (for changing reference) with Mr. WILSON of Louisiana (against changing reference).

Mr. RAGSDALE. Mr. Speaker, I am recorded as voting "no." As I am paired with the gentleman from New York, Mr. DALE, I wish to withdraw that vote and to be recorded "present."

Mr. BENNET. I am paired with my colleague Mr. BRUCKNER, but I know that if he were present he would vote the same way as I have voted. Therefore I will let my vote stand.

Mr. MADDEN. I am paired with the gentleman from Kentucky, Mr. ROUSE. I voted "yea." I wish to withdraw my vote and vote "present." I do not know how the gentleman from Kentucky would vote if he were present.

Mr. LANGLEY. Mr. Speaker, did my colleague Mr. CANTRILL vote?

The SPEAKER. He did not.

Mr. LANGLEY. I voted "no," but I am paired with him. I do not know how he would vote if he were present, but I withdraw my vote and answer "present."

Mr. BUTLER. I voted "yea," but because of my pair with the gentleman from Maryland, Mr. TALBOTT, I desire to withdraw my vote and to answer "present."

The result of the vote was announced as above recorded.

The SPEAKER. The motion of the gentleman from Michigan [Mr. BEAKES] is agreed to, and the bills to which his motion refers will go back to the Committee on the Post Office and Post Roads.

GOOD ROADS.

Mr. HARRISON. Mr. Speaker, I desire to submit a privileged report from the Committee on Rules.

The SPEAKER. The Clerk will report it.

The Clerk read as follows:

House resolution 248 (H. Rept. No. 774.)

Resolved, That upon the adoption of this resolution H. R. 7617, a bill "to provide that in order to promote agriculture, afford better facilities for rural transportation and marketing farm products, and encourage the development of a general system of improved highways, the Secretary of Agriculture, on behalf of the United States, shall in certain cases aid the States in the construction, improvement, and maintenance of roads which may be used in the transportation of interstate commerce, military supplies, and postal matter," with the Senate amendments thereto, be taken from the calendar, the Senate amendments disagreed to by the House, and a conference asked of the Senate on the disagreeing votes of the two Houses on said bill; and the Speaker shall immediately appoint the managers on the part of the House without intervening motion, except one motion to recommit.

Mr. HARRISON. I will ask gentlemen on the other side if they desire any time on this?

Mr. CAMPBELL. I should like about 10 minutes.

Mr. HARRISON. I yield 10 minutes to the gentleman from Kansas [Mr. CAMPBELL].

Mr. CAMPBELL. I yield two minutes to the gentleman from New York [Mr. BENNET].

Mr. BENNET. Mr. Speaker, the House passed this bill originally by a vote of substantially 7 to 1. There are some reasons which could be given against this rule, but in contrast to what the Committee on Rules and the House have been doing in the recent past this is so mild that a discussion of it would be practically an anticlimax. I just want to mention the fact that we think it could be improved upon, and very possibly it could be gotten along without; but after all, as I say, in contrast to what the House has done, it really would be like soda water after brandy to say anything against this rule.

Mr. MOORE of Pennsylvania. Will the gentleman yield?

Mr. BENNET. I yield to the gentleman from Pennsylvania.

Mr. MOORE of Pennsylvania. Is this the bill that raises the good-roads appropriation from $25,000,000 to $75,000,000?

Mr. BENNET. This is a little bit of an $80,000,000 appropriation!

Mr. MOORE of Pennsylvania. And nobody had anything to say about it!

Mr. BENNET. I mentioned it.

Mr. HARRISON. I move the previous question.

The question was taken, and the Speaker announced that the ayes appeared to have it.

A MEMBER. Division!

The SPEAKER. Gentlemen must rise in their places when they demand a division. Who demanded the division? No gentleman rises to demand a division. The ayes have it, and the previous question is ordered. The question is on the adoption of the resolution.

The resolution was agreed to, and the Speaker appointed as conferees on the part of the House Mr. SHACKLEFORD, Mr. SAUNDERS, and Mr. DUNN.

NAVAL APPROPRIATIONS.

Mr. GARRETT. Mr. Speaker, I offer a privileged report from the Committee on Rules.

The SPEAKER. The Clerk will report the resolution.

The Clerk read as follows:

House resolution 249.

Resolved, That immediately upon the adoption of this resolution the House shall resolve itself into the Committee of the Whole House on the state of the Union for the consideration of H. R. 15947; that the first reading of the bill shall be dispensed with; that general debate shall continue on the bill until not later than Monday next, at 1.30 p. m., the time to be controlled, one-half by the gentleman from Tennessee [Mr. PADGETT] and one-half by the gentleman from Pennsylvania [Mr. BUTLER]; that all debate shall be confined to the subject matter of the bill; that while the bill is under consideration the House shall meet at 11 o'clock a. m.; that the bill shall be the order for all legislative days except Calendar Wednesday; that at the expiration of general debate the bill shall be read in full by the Clerk without interruption; that upon conclusion of the reading of the bill amendments may be offered to any paragraph of the bill and considered and disposed of under the five-minute rule until Friday next, at 2 p. m., when all pending amendments and amendments thereafter offered shall, without further debate, be voted on; that no matter or provision contained in the bill shall be subject to a point of order, any rule or rules of the House to the contrary notwithstanding; that it shall be in order to offer and consider as an amendment to the bill the provisions of S. 1417, to erect or purchase, or both, a factory for the manufacture of armor, now on the Union Calendar, No. 145, any rule or rules of the House to the contrary notwithstanding.

After all pending amendments shall be disposed of the committee shall rise and report to the House the bill and all amendments that shall have been recommended by the Committee of the Whole House on the state of the Union, whereupon the previous question shall be considered as ordered upon the bill and amendments to its final passage, and the House shall immediately proceed to vote on amendments, on engrossment, third reading, and final passage of the bill, without intervening motions, except one motion to recommit.

Mr. GARRETT. Mr. Speaker——

Mr. MANN. Will the gentleman yield to allow me to make a request for unanimous consent?

Mr. GARRETT. Certainly.

Mr. MANN. I ask unanimous consent that if the naval appropriation bill is under consideration next Tuesday, and its consideration is not then concluded, the order of business for Wednesday be dispensed with, and that the naval appropriation bill be in order on Wednesday, and that the House meet on that day at 11 o'clock.

The SPEAKER. The gentleman from Illinois [Mr. MANN] asks unanimous consent that the naval appropriation bill shall be in order on next Wednesday if the consideration of it extends that long, and that Calendar Wednesday business on next Wednesday be dispensed with if it is necessary to consider the naval bill, and that the House meet that day at 11 o'clock.

Mr. KITCHIN. Reserving the right to object, I should like to say that I hope there will be no objection to this request. I hope the House will give unanimous consent.

The SPEAKER. Is there objection?

There was no objection.

Mr. ROBERTS of Massachusetts. Will the gentleman from Tennessee yield for a question?

Mr. GARRETT. Yes.

Mr. ROBERTS of Massachusetts. The rule proposed provides that the so-called armor-plate factory bill shall be in order on the naval appropriation bill.

Mr. GARRETT. It provides that the provisions of the Senate bill dealing with the matter shall be in order, to be offered as an amendment and considered as such.

Mr. ROBERTS of Massachusetts. I want to see if we have the same understanding as the gentleman from Tennessee. If the armor-plate bill is incorporated in the naval bill, when we get into the House with the armor-plate factory bill included, can we call for a separate vote on that as an amendment to the naval bill?

Mr. GARRETT. Undoubtedly.

Mr. GARNER. And in case the committee decline to include the armor-plate bill in the naval bill can we get a separate vote in the House?

Mr. GARRETT. By a motion to recommit.

Mr. GARNER. Does not that give an advantage to the opponents of the armor-plate proposition?

Mr. MANN. If the gentleman will yield, that is an easy parliamentary proposition to get a separate vote on it.

Mr. GARNER. That is what I am trying to get from the gentleman from Tennessee. In answer to the gentleman from Massachusetts he stated that if the committee did put in the amendment of the armor-plate factory the opposition could get a separate vote. But if it failed to put it into the bill then those who advocate it could not get a separate vote, which is a little unfair to those who advocate the proposition. It occurs to me there ought to be an opportunity for those who advocate it to get a separate vote.

Mr. GARRETT. After the bill shall have passed from the Committee of the Whole House it will be considered under the general rules of the House, and therefore there can not be a demand for a separate vote on an amendment unless the amendment shall have been adopted in Committee of the Whole.

Mr. GARNER. Does your rule include the armor-plate factory in the naval bill?

Mr. GARRETT. It provides that it shall be in order to offer and consider it as an amendment to the bill.

Mr. ROBERTS of Massachusetts. Will the gentleman yield further?

Mr. GARRETT. Yes.

Mr. ROBERTS of Massachusetts. As the gentleman from Tennessee knows, the main question of contention in the naval bill comes in the concluding pages, in the last three or four pages, under the increase in the Navy. The rule that is proposed makes no provision whatever for any five-minute debate on that most important part of the bill unless in the ordinary course of affairs we reach that portion before 2 o'clock on Friday.

Mr. LENROOT. The bill is read through first.

Mr. ROBERTS of Massachusetts. You do not debate the amendment unless you reach that place in the bill.

Mr. MANN. A motion to amend the last line of the bill is in order.

Mr. GARRETT. Immediately after the reading of the bill.

Mr. ROBERTS of Massachusetts. Then an amendment may be offered no matter to what part of the bill, and the amendments will be considered in their order as offered?

Mr. GARRETT. My construction of the rule is that amendments will be considered and disposed of in the order in which they are offered without reference to the number of the section to which they are offered.

Mr. TILSON. If a man offers an amendment to the last paragraph of the bill immediately on the consideration being begun, it would be in order, and as soon as the 10 minutes expired, unless extended, a vote could be had on the last paragraph of the bill.

Mr. GARRETT. That is correct; but debate could not be extended beyond the hour of 2 p. m. on Friday.

Mr. ROBERTS of Massachusetts. One word further. I want to have a clear understanding of the purport of this rule in order that there may be no confusion when we reach the five-minute debate, and insure an opportunity for immediate action before 2 o'clock on Friday on the most important features of the bill which are in contention between the majority and the minority of the committee.

Mr. GARRETT. It does if the Chairman of the Committee of the Whole House on the state of the Union recognizes individuals to offer the amendments. It will depend upon recognition by the Chair.

Mr. GARNER. May I suggest in that connection to the gentleman from Massachusetts that undoubtedly under the custom prevailing in Committee of the Whole members of the committee will be given the first opportunity to offer these propositions in the form of amendments.

Mr. KITCHIN. I think that ought to be understood.

Mr. ROBERTS of Massachusetts. I simply wanted to have a clear understanding of the purport of the rule and have the House understand it.

Mr. STAFFORD. Will the gentleman yield?

Mr. GARRETT. Yes.

Mr. STAFFORD. So that the committee may have a clear understanding of the procedure under the rule, assuming that a member of the committee offers an amendment on Monday afternoon after 1.30 to the last paragraph of the bill, and it is discussed and pending, is it in order thereafter on Tuesday or Wednesday, before we finish the consideration of the bill, to take up other amendments on the same proposition involved in the amendment and have that nice medley going on until Friday?

Mr. GARRETT. If it were an amendment that involved the same principle as an amendment that had previously been voted upon, if I were in the chair I would hold it was not in order. If it involved a different principle I would hold it in order.

Mr. STAFFORD. Under this rule it is going to be a haphazard proceeding, depending on the order in which the amendments are offered.

Mr. GARRETT. The rule speaks for itself.

Mr. MANN. Will the gentleman yield?

Mr. GARRETT. Yes.

Mr. MANN. I do not see any difficulty about that part of the rule. Here is a case where practically the two sides of the House are contesting, represented upon the committee. If this side of the House wanted to fool away the time between now and Friday by offering foolish amendments and repeating them it would have the privilege, but I take it that we have too much sense to do that.

Mr. STAFFORD. It is not for the purpose of offering foolish amendments, but I can readily see and every Member can see that later in the consideration of this bill germane amendments that may not have been considered will be offered to that same section, after the section has been considered and virtually voted upon and the sense of the committee taken.

Mr. GARRETT. Mr. Speaker, I can only repeat what I said a moment ago, that if an amendment is offered and is voted upon before 2 o'clock next Friday, and then an amendment is offered subsequent to that time which involves the same principle, it will not, in my opinion, be in order; that if an amendment is offered that involves a different principle it will be in order. I yield now to the gentleman from Illinois [Mr. BUCHANAN].

Mr. BUCHANAN of Illinois. Mr. Speaker, I would like to ask the gentleman a question. The rule, I believe, provides for making in order on this bill an amendment to provide for the construction of an armor-plate factory?

Mr. GARRETT. It does.

Mr. BUCHANAN of Illinois. Would it be in order to offer an amendment to establish a factory for the manufacture of aeroplanes or any other equipment for the Army?

Mr. GARRETT. That is a question upon which the Chairman of the Committee of the Whole House on the state of the Union will have to pass. If the gentleman desires my individual view—well, I will not give it. [Laughter.]

Mr. BUCHANAN of Illinois. Mr. Speaker, if the gentleman will yield further, in my opinion the rule ought to make in order just such amendments. The Democratic caucus, for example, made known its position in regard to the matter of considering amendments providing for factories to manufacture supplies and materials for the Navy and the Army. If the Committee on Rules has not brought out a rule that makes such amendments in order, then it has not acted in accordance with the action of the Democratic caucus. I shall certainly oppose any rule that does not make that in order. I think the rule ought to be defeated if it is not in order to offer other amendments, not that I care to offer any, but if any rule does not provide for making in order amendments providing for plants to manufacture or providing for equipping yards to manufacture material for the Navy it ought to be defeated.

Mr. GARRETT. Mr. Speaker, no request came to the Committee on Rules from any source for a provision that would make in order such a proposition as the gentleman suggests. I am not certain but that it may be in order anyway. That remains to be determined.

Mr. BUTLER. Mr. Speaker, will the gentleman yield?

Mr. GARRETT. Certainly.

Mr. BUTLER. It was not the purpose of the Committee on Rules to destroy the book of rules of the House of Representatives, was it? The rules of the House will be in existence while we are discussing this bill?

Mr. GARRETT. To be sure.

Mr. BUTLER. And if an amendment is in order, it will be held to be in order and voted on?

Mr. GARRETT. Undoubtedly.

Mr. KEATING. Mr. Speaker, will the gentleman yield?

Mr. BUTLER. Yes.

Mr. KEATING. The gentleman suggests that no request was presented to the committee to liberalize this rule so as to make in order the amendment suggested by the gentleman from Illinois [Mr. BUCHANAN]. It is a fact, however, that the caucus of the Democratic Members of the House suggested that the rule should be liberalized in that fashion.

Mr. GARRETT. Against which the gentleman voted.

Mr. KEATING. I beg the gentleman's pardon; I did not vote against it. On the contrary, I voted for it; and the gentleman himself, if I do not forget, is among those who voted against it. I am speaking of the action of the Democratic caucus.

Mr. GARRETT. Oh, I beg the gentleman's pardon.

Mr. KEATING. Making in order upon the Navy bill, the Army bill, and the fortification bill amendments to provide for the Government ownership of munition plants; and I am asking if the committee acted upon that suggestion?

Mr. GARRETT. The gentleman from Colorado has an incorrect recollection of the resolution which was passed at the caucus. The resolution passed at the caucus did not provide for the specific matters the gentleman suggests. Whether it would be in order to offer an amendment for the development of aeroplanes, I do not now care to discuss. That is a question upon which the Chairman of the Committee of the Whole House on the state of Union will have to pass.

Mr. KEATING. I ask the gentleman to give a little more definite decision on that point, if he will. Does the gentleman hold the action of the Democratic caucus did not instruct the Committee on Rules to give an opportunity to vote on Government ownership of munition plants?

Mr. PADGETT. Mr. Speaker, the bill carries a proposition for a projectile factory, and this rule provides for making in order the bill for an armor-plate factory. Those are all the munition factories that are provided or were before Congress. The aeroplane question is not a munition question at all; it is outside of munitions and is not a munition question.

Mr. KEATING. Does the chairman of the committee hold that an amendment having to do with the manufacture of other forms of munitions would be in order?

Mr. PADGETT. I think that the rule meets everything that the caucus authorized and that is before the Congress.

Mr. KEATING. The chairman of the committee has no doubt about the intent of the caucus.

Mr. PADGETT. I think we are meeting everything the caucus intended.

Mr. JOHNSON of Washington. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. JOHNSON of Washington. Do I understand we are now hearing the proceedings in the Democratic caucus?

The SPEAKER. That is not a parliamentary inquiry.

Mr. JOHNSON of Washington. Mr. Speaker, if they are giving us the proceedings of the Democratic caucus, I ask for order so that we can hear it.

Mr. GARRETT. Mr. Speaker, if I should move the previous question at this time——

Mr. MANN. Well, move it.

Mr. GARRETT (continuing). It would cut off all debate, and I have understood there are gentlemen on the Republican side who desire a few minutes, so I would like to agree on time, if I can. Does the gentleman from Kansas desire time?

Mr. CAMPBELL. No.

Mr. GARRETT. Then, Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER. The question is on agreeing to the resolution.

The question was taken, and the Speaker announced that the ayes appeared to have it.

Mr. BUCHANAN of Illinois. Mr. Speaker, I demand a division.

The SPEAKER. Well, really it is too late, but, nevertheless—the gentleman from Illinois demands a division.

The House again divided; and there were—ayes 93, noes 37.

Mr. BUCHANAN of Illinois. Mr. Speaker, I make the point of order there is no quorum present.

Mr. GARRETT. Mr. Speaker, will the gentleman withhold that point for a moment? I would like to ask the gentleman from North Carolina [Mr. KITCHIN] was there an agreement that we should not vote upon this by roll call this afternoon?

Mr. KITCHIN. I think that was the understanding; yes; that we were not to have a vote on a roll call, because there are many gentlemen——

Mr. MANN. We are willing to have a vote.

Mr. KITCHIN. If the gentleman is willing to have a roll-call vote, that is all right.

The SPEAKER. The Chair will count. [After counting.] Two hundred and fifteen gentlemen are present—not a quorum. The Doorkeeper will lock the doors, the Sergeant at Arms will notify absentees, and the Clerk will call the roll.

The question was taken; and there were—yeas 158, nays 21, answered "present" 110, not voting 145, as follows:

YEAS—158.

So the resolution was agreed to.

The Clerk announced the following additional pairs:

On the vote:

Mr. COADY with Mr. MUDD.

Mr. COLLIER with Mr. FORDNEY.

Mr. BARNHART with Mr. SNELL.

Mr. HART with Mr. SANFORD.

Mr. SCULLY with Mr. GREENE of Massachusetts.

Mr. HAMILL with Mr. TINKHAM.

Mr. TILSON with Mr. WILSON of Louisiana.

Until further notice:

Mr. DRISCOLL with Mr. HICKS.

Mr. WINGO with Mr. SNYDER.

Mr. WILSON of Florida with Mr. SCOTT of Michigan.

Mr. STEPHENS of Texas with Mr. LAFEAN.

Mr. SMALL with Mr. KENNEDY of Rhode Island.

Mr. CASEY with Mr. KAHN.

Mr. ADAIR with Mr. CHANDLER of New York.

Mr. BRUMBAUGH with Mr. HEATON.

Mr. CAREW with Mr. SNYDER.

Mr. DALE of New York with Mr. SMITH of Minnesota.

Mr. CARLIN with Mr. LOUD.

Mr. CONRY with Mr. GRAY of New Jersey.

Mr. ESTOPINAL with Mr. DALE of Vermont.

Mr. FITZGERALD with Mr. MOONEY.

Mr. GOODWIN of Arkansas with Mr. BEALES.

Mr. MORRISON with Mr. GARDNER.

Mr. SAUNDERS with Mr. HINDS.

Until Wednesday, May 31, inclusive:

Mr. BOOHER with Mr. TREADWAY.

The result of the vote was announced as above recorded.

The SPEAKER. A quorum is present.

NAVAL APPROPRIATION BILL.

Mr. PADGETT. Mr. Speaker, the House goes into committee automatically for the consideration of the naval bill.

The SPEAKER. Yes; the House resolves itself into Committee of the Whole House on the state of the Union for the consideration of the naval bill. The Chair has made arrangements with the gentleman from New York [Mr. FITZGERALD] to preside over this committee, but he is not here, and the Chair will ask the gentleman from Georgia [Mr. ADAMSON] to act temporarily.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union for the consideration of the bill (H. R. 15947) making appropriations for the naval service for the fiscal year ending June 30, 1917, and for other purposes, with Mr. ADAMSON in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the consideration of the naval bill, which the Clerk will report.

The Clerk read the title of the bill, as follows:

A bill (H. R. 15947) making appropriations for the naval service for the fiscal year ending June 30, 1917, and for other purposes.

Mr. PADGETT. Mr. Chairman, it is not desired to enter into a discussion of this bill at length this afternoon, so I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. ADAMSON, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 15947) making appropriations for the naval service for the fiscal year ending June 30, 1917, and for other purposes, and had come to no resolution thereon.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Waldorf, one of its clerks, announced that the Senate had passed the following resolution, in which the concurrence of the House of Representatives was requested:

Senate concurrent resolution 23.

Resolved by the Senate (the House of Representatives concurring), That the Secretary of the Senate be authorized in the enrollment of the bill (S. 4856) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors, to change the word "Hentry" to "Henry," where it occurs in line 21, page 7, and to change the word "him" to "her," where it occurs in line 1, page 18.

ENROLLED BILL PRESENTED TO THE PRESIDENT FOR HIS APPROVAL.

Mr. LAZARO, from the Committee on Enrolled Bills, reported that this day they had presented to the President of the United States for his approval the following bill:

H. R. 12843. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war.

PENSIONS.

Mr. KEY of Ohio. Mr. Speaker, this being the regular pension day, I call up the bill (H. R. 15957) granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy and certain soldiers and sailors of wars other than the Civil War, and to widows of such soldiers and sailors.

The Clerk read the title of the bill, as follows:

A bill (H. R. 15957) granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy and certain soldiers and sailors of wars other than the Civil War, and to widows of such soldiers and sailors.

Mr. KEY of Ohio. Mr. Speaker, I ask unanimous consent that the first reading of the bill be dispensed with.

The SPEAKER. This bill is on the Union Calendar. The gentleman from Ohio [Mr. KEY] asks unanimous consent that the first reading of the bill be dispensed with. Is there objection?

There was no objection.

Mr. KEY of Ohio. I ask unanimous consent, Mr. Speaker, that the bill be considered in the House as in Committee of the Whole.

The SPEAKER. The gentleman from Ohio asks unanimous consent that the bill be considered in the House as in Committee of the Whole. Is there objection?

There was no objection.

The SPEAKER. The Clerk will read the bill for amendment.

The Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Interior be, and he is hereby, authorized and directed to place on the pension roll, subject to the provisions and limitations of the pension laws—

The name of Frank O'Brien, late of Company E, One hundred and sixty-first Regiment Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of Alice P. Knapp, dependent mother of Steth B. Knapp, alias Seth B. Knapp, late of Troop B, Fifth Regiment United States Cavalry, War with Spain, and pay her a pension at the rate of $12 per month.

The name of Charles E. Shermer, late of Company K, Thirty-fourth Regiment United States Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month in lieu of that he is now receiving.

The name of Daniel Grubb, late of Company C, Thirty-seventh Regiment United States Infantry, Regular Establishment, and pay him a pension at the rate of $12 per month in lieu of that he is now receiving.

The name of James J. McHale, late of Company M, Forty-sixth Regiment United States Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of Isaiah H. Hunnewell, late of Troop M, First Regiment United States Cavalry, Regular Establishment, and pay him a pension at the rate of $12 per month.

The name of Charles H. Lederer, late of Hospital Corps, United States Army, War with Spain, and pay him a pension at the rate of $17 per month in lieu of that he is now receiving.

The name of Ca. Spradling, late of Company I, Fifth Regiment United States Infantry, Regular Establishment, and pay him a pension at the rate of $12 per month.

The name of Frank J. Carper, late of Company E, One hundred and fifty-seventh Regiment Indiana Volunteer Infantry, War with Spain, and pay him a pension at the rate of $24 per month.

The name of Harry E. Brooks, late of Company F, First Regiment New Hampshire Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of George E. Grubbs, late of Company B, and Musician Band, Second Regiment United States Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of Ebbin A. Irvin, late of Company G, Second Regiment United States Infantry, Regular Establisment, and pay him a pension at the rate of $12 per month.

The name of William Andrews, late of Company L, Eleventh United States Infantry, War with Spain, and pay him a pension at the rate of $12 per month

The name of George W. Pinion, late of Company L, Third Regiment Tennessee Volunteer Infantry, War with Spain, and pay him a pension at the rate of $17 per month.

The name of Andrew Tanner, late of Company L, Second Regiment Tennessee Volunteer Infantry, War with Spain, and pay him a pension at the rate of $17 per month in lieu of that he is now receiving.

The name of Albert L. Daniels, late of the One hundred and sixth Company United States Coast Artillery Corps, Regular Establishment, and pay him a pension at the rate of $17 per month.

The name of Joseph Mitchell, late of Company H, Twenty-fourth Regiment United States Infantry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of James F. Adams, late of Company H, One hundred and sixty-first Regiment Indiana Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month in lieu of that he is now receiving.

The name of Tennessee A. Blackburn, widow of Gideon H. Blackburn, late of Company K, Third Regiment Tennessee Volunteers, War with Mexico, and pay her a pension at the rate of $20 per month in lieu of that she is now receiving.

The name of Patrick McCarthy, late of Company H, First Regiment New Hampshire Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of Walter J. Frink, late of the United States Marine Corps, United States Army, War with Spain, and pay him a pension at the rate of $12 per month.

The name of Tina Quinn, widow of John Quinn, late of Troop G, Eighth Regiment United States Cavalry, Regular Establishment, and pay her a pension at the rate of $12 per month, and $2 additional per month on account of each of the two minor children of the said John Quinn until they reach the age of 16 years.

The name of Mary Jane Ragan, widow of David C. Ragan, late of Company A, Fourth Regiment Tennessee Volunteer Infantry, War with Mexico, and pay her a pension at the rate of $20 per month in lieu of that she is now receiving.

The name of Lucy W. Powell, widow of Owen C. Powell, late of Company A, First Regiment Texas Mounted Volunteers, War with Mexico, and pay her a pension at the rate of $20 per month in lieu of that she is now receiving.

The name of Margaret English, widow of John E. English, late of Capt. Handley's company, First Regiment, Texas Mounted Volunteers, War with Mexico and pay her a pension at the rate of $20 per month in lieu of that she is now receiving.

The name of Edward S. Banister, late of Company L, Second Regiment Arkansas Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month in lieu of that he is now receiving.

The name of Margaret E. Canty, widow of Florence J. Canty, late of the U. S. S. *Wabash*, United States Navy, Regular Establishment, and pay her a pension at the rate of $12 per month.

The name of Oscar G. Rottman, late of Troop D, Twelfth Regiment United States Cavalry, Regular Establishment, and pay him a pension at the rate of $12 per month.

The name of Morris E. Miller, late of Company H, Fifteenth Regiment Minnesota Volunteer Infantry, War with Spain, and pay him a pension at the rate of $17 per month in lieu of that he is now receiving.

The name of William C. Wittfelt, late of Company K, Fourteenth Regiment United States Infantry, Regular Establishment, and pay him a pension at the rate of $12 per month.

The name of Frank Klingler, late of Troop L, Second Regiment United States Cavalry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of August Gruenwald, late of Company F, Forty-fourth Regiment United States Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of Alexander A. Leishman, late of Company E, Thirty-second Regiment Michigan Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of Clark E. Semark, late of Company C, Thirty-first Regiment Michigan Volunteer Infantry, War with Spain, and pay him a pension at the rate of $17 per month in lieu of that he is now receiving.

The name of William W. Merriss, late of Troop L, Nineteenth Regiment Kansas Volunteer Cavalry, Regular Establishment, and pay him a pension at the rate of $12 per month.

The name of Frank A. Perry, late of Company G, Thirteenth Regiment United States Infantry, War with Spain, and pay him a pension at the rate of $24 per month in lieu of that he is now receiving.

The name of Howard G. Cleaveland, late of Company G, First Regiment Nebraska Volunteer Infantry, War with Spain, and pay him a pension at the rate of $17 per month in lieu of that he is now receiving.

The name of William C. Johnson, late of Company D, Fourth Regiment Ohio Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of Willard L. Anthony, late of Company M, Fourth Regiment United States Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of John Blueford, late of Troop B, Ninth Regiment United States Cavalry, Regular Establishment, and pay him a pension at the rate of $17 per month in lieu of that he is now receiving.

The name of Floyd T. Patterson, late of Batteries H and M, Sixth Regiment United States Artillery, War with Spain, and pay him a pension at the rate of $12 per month.

The name of Mary McAlister, dependent mother of Francis J. McAlister, late of Company D, First Regiment California Volunteer Infantry, War with Spain, and pay her a pension at the rate of $12 per month.

The name of John W. Lattimore, late of Company C, Ninth Regiment United States Infantry, War with Spain, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

The name of John W. Bruce, late of Company K, Second Regiment United States Infantry, War with Spain, and pay him a pension at the rate of $12 per month in lieu of that he is now receiving.

The name of Henry Ostman, late of Company B, Fifth Regiment United States Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of Daniel M. Moser, late of Company L, Sixteenth Regiment Pennsylvania Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of Mary P. Byram, widow of Quincy Adams Byram, late of Capt. Keener's company, Alabama Volunteers, Indian wars, and pay her a pension at the rate of $20 per month in lieu of that she is now receiving.

The name of William McClaskey, late of U. S. S. *Dixie*, United States Navy, War with Spain, and pay him a pension at the rate of $12 per month.

The name of John J. Harrington, dependent father of Lawrence J. Harrington, late of Company H, Forty-sixth Regiment United States Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of Minnie F. Zimmerman, widow of Henry Zimmerman, late of Company A, Fifteenth Regiment Pennsylvania Volunteer Infantry, War with Spain, and pay her a pension at the rate of $12 per month, and $2 per month additional on account of each of the four minor children of said Henry Zimmerman until they reach the age of 16 years.

The name of Clarence E. Gleason, late of Company F, Sixth Regiment Ohio Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of George L. Hollis, late of Troop F, Seventh Regiment United States Cavalry, Regular Establishment, and pay him a pension at the rate of $12 per month.

The name of Darling L. Peeples, late major and surgeon of the Second Texas Volunteer Infantry, War with Spain, and pay him a pension of $30 per month in lieu of that he is now receiving.

The name of Joseph Daley, late of Company L, Twenty-seventh Regiment United States Volunteer Infantry, War with Spain, and pay him a pension at the rate of $17 per month.

The name of Robert McLemore, late of Company H, Second Regiment Virginia Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of Andrew Conley, late of U. S. S. *Baltimore*, United States Navy, Regular Establishment, and pay him a pension at the rate of $12 per month.

The name of Jacob Amberg, late of Troop D, United States Cavalry, Regular Establishment, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

The name of Joseph W. Hill, late of Company M, Third Regiment Georgia Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of William C. Winslow, late of Company I, Second United States Volunteer Engineers, War with Spain, and pay him a pension at the rate of $12 per month.

The name of James F. Cornman, late of Company D, First Regiment Missouri Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of Adolphus J. Wacaster, late of the Hospital Corps, United States Army, War with Spain, and pay him a pension at the rate of $12 per month.

The name of Carl W. Trott, late of Company L, Fiftieth Regiment Iowa Volunteer Infantry, War with Spain, and pay him a pension at the rate of $17 per month.

The name of Joshua Marland, late of Company I, First Regiment Rhode Island Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of Patrick A. Galvin, late of Company C, First Regiment Maine Volunteer Infantry, War with Spain, and pay him a pension at the rate of $17 per month.

The name of John Shannon, late of Troop B, Eighth Regiment United States Cavalry, Regular Establishment, and pay him a pension at the rate of $12 per month.

The name of Gus Born, late of Company H, First Regiment Georgia Volunteer Infantry, War with Spain, and pay him a pension at the rate of $17 per month.

The name of James G. Dunn, late of Company G, Fourth Regiment United States Artillery, Regular Establishment, and pay him a pension at the rate of $12 per month.

The name of Thomas H. Ivers, late of Company B, Sixty-ninth Regiment, New York Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month in lieu of that he is now receiving.

The name of William Alden, late of Company A, Ninth Regiment Illinois Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of Joseph L. Hall, late of Battery M, Third Regiment United States Artillery, Regular Establishment, and pay him a pension at the rate of $30 per month in lieu of that he is now receiving.

The name of David W. Graves, late of the United States Marine Corps, United States Navy, Regular Establishment, and pay him a pension at the rate of $12 per month.

The name of Wilfred Murray, late of Company L, Thirty-fourth Regiment Michigan Volunteer Infantry, War with Spain, and pay him a pension at the rate of $12 per month.

The name of Fred Opperman, late of Company K, Sixth Regiment United States Infantry, War with Spain, and pay him a pension at the rate of $12 per month in lieu of that he is now receiving.

The name of Robert Trexler, late of Company K, Third Regiment Ohio Volunteer Infantry, War with Spain, and pay him a pension at the rate of $17 per month.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. KEY of Ohio, a motion to reconsider the vote whereby the bill was passed was laid on the table.

ADJOURNMENT.

Mr. KEY of Ohio. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 22 minutes p. m.) the House adjourned until to-morrow, Saturday, May 27, 1916, at 11 o'clock a. m.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. BURKE, from the Committee on the Merchant Marine and Fisheries, to which was referred the bill (H. R. 15617) to

establish fish-hatching and fish-cultural stations in the States of Alabama, Louisiana, Florida, Georgia, South Carolina or North Carolina, Maryland or Virginia, Oregon or Washington, Texas, Oklahoma, Illinois, Washington, Arizona, New Mexico, Michigan, Idaho, Missouri, Pennsylvania, Delaware or New Jersey, and Minnesota, reported the same without amendment, accompanied by a report (No. 767), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. STERLING, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 15950) to amend an act entitled "An act to promote the safety of employees and travelers upon railroads by compelling common carriers engaged in interstate commerce to equip their locomotives with safe and suitable boilers and appurtenances thereto," approved February 17, 1911, reported the same without amendment, accompanied by a report (No. 768), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. MURRAY, from the Committee on Indian Affairs, to which was referred the bill (H. R. 10230) conferring jurisdiction on the Court of Claims to hear, determine, and render judgment in claims of the Iowa Tribe of Indians against the United States, reported the same without amendment, accompanied by a report (No. 769), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. CANDLER of Mississippi, from the Committee on Agriculture, to which was referred the bill (H. R. 12885) to authorize the Secretary of Agriculture to permit the prospecting, development, and utilization of the mineral resources of certain national forests, reported the same without amendment, accompanied by a report (No. 772), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, private bills were severally reported from committees, delivered to the Clerk, and referred to the Committee of the Whole House, as follows:

Mr. MURRAY, from the Committee on Indian Affairs, to which was referred the bill (H. R. 11685) for the relief of Ivy L. Merrill, reported the same with amendment, accompanied by a report (No. 770), which said bill and report were referred to the Private Calendar.

Mr. SIMS, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 15949) to prevent the nullification of State antigambling laws by international or interstate transmission of race-gambling bets or of racing odds, reported the same without amendment, accompanied by a report (No. 773), which said bill and report were referred to the House Calendar.

ADVERSE REPORTS.

Under clause 2 of Rule XIII,

By Mr. STEPHENS of Mississippi, from the Committee on Claims, to which was referred the bill (H. R. 13786) for the relief of Jennie Davidson, reported the same adversely, accompanied by a report (No. 771), which said bill and report were laid on the table.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 6002) granting an increase of pension to Ernest J. Patton; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 14916) granting an increase of pension to Benjamin R. Hubbell; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills and a resolution were introduced and severally referred as follows:

By Mr. RAKER: A bill (H. R. 16016) allowing entries by former homesteaders within national forests; to the Committee on the Public Lands.

By Mr. SMITH of Idaho: A bill (H. R. 16017) to provide for the purchase of an addition to the site, and for the extension and enlargement of the Federal Building at Boise, Idaho; to the Committee on Appropriations.

By Mr. CHURCH: A bill (H. R. 16018) granting consent to the county of Madera, Cal., and its successors and assigns, the right to construct a dam across the San Joaquin, Fresno, and Chowchilla Rivers; to the Committee on Interstate and Foreign Commerce.

By Mr. HOWARD: A bill (H. R. 16019) to authorize the Commissioners of the District of Columbia to collect an annual rental for vault privileges granted in public space; to the Committee on the District of Columbia.

By Mr. MADDEN: Joint resolution (H. J. Res. 229) to create a commission to investigate the standardization of time in the United States and its territorial possessions; to the Committee on Appropriations.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills were introduced and severally referred as follows:

By Mr. ASHBROOK: A bill (H. R. 16020) granting an increase of pension to De Witt C. Carpenter; to the Committee on Invalid Pensions.

By Mr. BAILEY: A bill (H. R. 16021) granting an increase of pension to Samuel Shoup; to the Committee on Invalid Pensions.

Y.; the New York State Probation Commission and the city court, of Buffalo, N. Y., favoring the Owen-Hayden bill, Senate bill 1092 and House bill 42, to establish a probation system in the United States courts; to the Committee on the Judiciary.

Also, memorial of National Automobile Chamber of Commerce, of New York, favoring extending the usefulness of the Bureau of Mines; to the Committee on Mines and Mining.

Also, memorial of the Board of Supervisors of Madera County, Cal., in re legislation affecting an irrigation project in California; to the Committee on Military Affairs.

Also, petitions of sundry citizens and organizations favoring the adoption of the Susan B. Anthony amendment; to the Committee on the Judiciary.

Also, memorial of the board of directors of the Washington Chamber of Commerce, opposing repeal of the fiscal provision of the organic act of June 11, 1878; to the Committee on the District of Columbia.

By Mr. EAGAN: Memorial of board of directors of the Washington Chamber of Commerce, in re half-and-half plan; to the Committee on the District of Columbia.

Also, memorial of National Automobile Chamber of Commerce of New York, in re petroleum products; to the Committee on Mines and Mining.

By Mr. FLYNN: Memorial of National Automobile Chamber of Commerce of New York, in re petroleum; to the Committee on Mines and Mining.

By Mr. HASTINGS: Petition of Methodist Sunday School of Hanna, Okla., favoring national prohibition; to the Committee on the Judiciary.

By Mr. KELLEY: Petition of 30 citizens of Walled Lake, Mich., in favor of national prohibition; to the Committee on the Judiciary.

By Mr. KENNEDY of Rhode Island: Memorial of Amalgamated Lace Operatives of America, opposing House bill 14666; to the Committee on Patents.

Also, memorial of Rhode Island Antituberculosis Association, opposing Senate joint resolution 120; to the Committee on Agriculture.

Also, petition of citizens of Providence and vicinity, favoring national prohibition; to the Committee on the Judiciary.

Also, memoral of Woonsocket Lodge, No. 850, Benevolent and Protective Order of Elks, against embroiling the United States with friendly European powers; to the Committee on Foreign Affairs.

By Mr. LINTHICUM: Memorial of National Association of Letter Carriers of the United States of America, Oriole Branch, No. 176, of Baltimore, Md., indorsing House bill 8665 and the Nolan bill; to the Committee on Reform in the Civil Service.

Also, petition of John A. F. Medcalf, of Baltimore, Md., indorsing House bill 6915 and Senate bill 3081; to the Committee on Reform in the Civil Service.

By Mr. MOORE of Pennsylvania: Memorial of the Philadelphia (Pa.) Board of Trade, opposing a Government-owned armor-plate plant; to the Committee on Military Affairs.

By Mr. MORGAN of Oklahoma: Memorial of the First Methodist Episcopal Church of Laverne, Okla., on the 20th of April, 1916, in favor of the Webb-Smith national prohibition resolution; to the Committee on the Judiciary.

By Mr. NOLAN: Resolutions of the County Clare Association of California, petitioning the Congress and the President of the United States that a demand be made on England to halt the inhuman murder of Irish patriots, and that England be required to accord the Irish soldiers the same privileges as the soldiers of Germany or other warring nations; to the Committee on Foreign Affairs.

Also, telegram from the Iroquois Club, composed of 400 men and women voters of San Francisco, Cal., unanimously indorsing the Nolan minimum-wage bill; to the Committee on Labor.

By Mr. NORTH: Memorial of mass meeting of citizens of Saltsburg, Pa., favoring the adoption of a constitutional amendment forbidding the practice of polygamy; to the Committee on the Judiciary.

By Mr. O'SHAUNESSY: Petition of Arthur B. Emmons, of Newport, R. I., favoring the Kern-McGillicuddy workmen's compensation bill; to the Committee on Labor.

Also, petition of Edgar J. Hadley, of Providence, R. I., favoring House bill 9216; to the Committee on Interstate and Foreign Commerce.

By Mr. SANFORD: Papers to accompany House bill 15604, for the relief of Peter T. Coons; to the Committee on Military Affairs.

By Mr. SWEET: Petitions of citizens of Dubuque, Iowa, in re migratory-bird law; to the Committee on Agriculture.

By Mr. WALSH: Petition of George W. Stetson and 64 other citizens of Middleborough, Mass., asking for speedy passage of Webb-Smith national prohibition resolutions (H. J. Res. 84 and 85); to the Committee on the Judiciary.

SENATE.

SATURDAY, *May 27, 1916.*

(Legislative day of Thursday, May 18, 1916.)

The Senate reassembled at 11 o'clock a. m., on the expiration of the recess.

Mr. SMOOT. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Hollis	Pittman	Sutherland
Bankhead	Husting	Poindexter	Taggart
Brady	James	Ransdell	Thomas
Brandegee	Jones	Saulsbury	Thompson
Catron	Kenyon	Shafroth	Tillman
Chamberlain	La Follette	Sheppard	Townsend
Clark, Wyo.	Lane	Simmons	Underwood
Clarke, Ark.	Lodge	Smith, Ariz.	Vardaman
Culberson	Martine, N. J.	Smith, Ga.	Wadsworth
Dillingham	Myers	Smith, Mich.	Walsh
Fletcher	Newlands	Smoot	Weeks
Gallinger	Norris	Sterling	Williams
Hardwick	Overman	Stone	

Mr. JAMES. I desire to announce that my colleague [Mr. BECKHAM] is absent on important business. He is paired with the senior Senator from Delaware [Mr. DU PONT]. This announcement may stand for the day.

The VICE PRESIDENT. Fifty-one Senators have answered to the roll call. There is a quorum present. The Senate resumes the consideration of the river and harbor bill, and the

pending question is on the amendment of the Senator from Colorado [Mr. SHAFROTH].

Mr. MYERS. I ask leave to present several reports from the Committee on Public Lands.

The VICE PRESIDENT. Without objection, the reports will be received.

REPORTS OF COMMITTEE ON PUBLIC LANDS.

Mr. MYERS, from the Committee on Public Lands, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

S. 1740. A bill to repeal an act entitled "An act granting to the city of Twin Falls, Idaho, certain lands for reservoir purposes," approved June 7, 1912, and to revoke the grant made thereby (Rept. No. 486); and

S. 5496. A bill to amend section 5 of an act entitled "An act to authorize the drainage of certain lands in the State of Minnesota," approved May 20, 1908 (Rept. No. 485).

He also, from the same committee, to which were referred the following bills, reported them each with an amendment and submitted reports thereon:

S. 1061. A bill to allow additional entries under the enlarged homestead act (Rept. No. 487); and

S. 2383. A bill to amend an act entitled "An act to amend sections 2291 and 2297 of the Revised Statutes of the United States, relating to homesteads" (Rept. No. 488).

REGULATION OF IMMIGRATION.

Mr. HARDWICK. For the junior Senator from South Carolina [Mr. SMITH], who is detained from the Senate, I ask for a reprint of the report (No. 352) to accompany the bill (H. R. 10384) to regulate the immigration of aliens to, and the residence of aliens in, the United States.

The VICE PRESIDENT. Without objection, it is so ordered.

OIL AND GAS LANDS.

Mr. PITTMAN. From the Committee on Public Lands I report additional amendments to the bill (H. R. 406) to authorize exploration for and disposition of coal, phosphate, oil, gas, potassium, or sodium, and I ask that the bill be reprinted showing the amendments I have just reported.

The VICE PRESIDENT. Without objection, it is so ordered.

CONCENTRATION AND MANEUVER CAMP IN WASHINGTON.

Mr. JONES. I should like to ask just what is the status of the resolution (S. Res. 203) which I had passed yesterday?

The VICE PRESIDENT. It went over under the rule. The Chair will state that yesterday is still to-day.

Mr. JONES. But I do not find in the RECORD a reconsideration of the action of the Senate in passing the resolution.

The VICE PRESIDENT. No; the Senator from Washington said he would not object to its going over.

Mr. JONES. I did not object to what was done at the time; that is, as to what was then before the Senate. There was not any question of a reconsideration before the Senate.

The VICE PRESIDENT. All that was done by the Chair was improperly done yesterday, but the Chair will ask the Senator from Washington to speak to the Senator from New Hampshire [Mr. HOLLIS] on the subject.

Mr. JONES. I do not think the Chair did anything improper. I think the Chair acted correctly.

COMMITTEE OF CIVIL SERVICE AND RETRENCHMENT.

Mr. POMERENE. I ask unanimous consent to call up Senate resolution 199, authorizing the Committee on Civil Service and Retrenchment to employ a stenographer. At the time the report was presented from the Committee to Audit and Control the Contingent Expenses of the Senate the Senator from Michigan [Mr. SMITH] interposed an objection. He has advised me since that he has no objection to the consideration of the resolution, and as we have already taken a part of the testimony, and expect to take more, I hope the Senate will consent to the adoption of the resolution.

Mr. CLARK of Wyoming. A parliamentary inquiry, Mr. President.

The VICE PRESIDENT. The Senator will state it.

Mr. CLARK of Wyoming. If this is taken up, does it displace the pending business?

Mr. CLARKE of Arkansas. That shall not be done.

Mr. POMERENE. I certainly ask that it shall not be done.

Mr. CLARKE of Arkansas. I hope the request of the Senator from Ohio will be granted, in view of the fact that the investigation in which the stenographer is to be used is partially completed and the committee can proceed no further without this aid. I think thereby it is a case where we should render the assistance and that we can make the exception.

The VICE PRESIDENT. Is there objection to the consideration of the resolution?

The Senate, by unanimous consent, proceeded to consider the resolution, which had been reported from the Committee to Audit and Control the Contingent Expenses of the Senate with an amendment, in line 3, after the word "Congress," to strike out the words "to send for persons, books, and papers," so as to make the resolution read:

Resolved, That the Committee on Civil Service and Retrenchment, or any subcommittee thereof, be, and hereby is, authorized during the Sixty-fourth Congress, to administer oaths and to employ a stenographer, at a cost not exceeding $1 per printed page, to report such hearings as may be had in connection with any subject which may be pending before said committee, the expenses thereof to be paid out of the contingent fund of the Senate, and that the committee, or any subcommittee thereof, may sit during the sessions or recess of the Senate.

The amendment was agreed to.

The resolution as amended was agreed to.

RIVER AND HARBOR BILL.

Mr. CLARKE of Arkansas. Regular order!

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 12193) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes, the pending question being on the amendment of Mr. SHAFROTH to insert the following as an additional section:

SEC. —. That each of the appropriations herein made shall become available only in the event States, counties, cities, or individuals shall pay into the Treasury as part of the same 20 per cent of the amount thereof: *Provided, however*, That the provisions of this section shall not apply to those items requiring contributions from other sources.

Mr. SMITH of Michigan. Mr. President, the suggestion of the Senator from Colorado [Mr. SHAFROTH] yesterday that the National Waterways Commission practically approved the proposition he now advocates prompts me to say that, as a member of that commission, I joined in the report and I believed in it thoroughly. I am in perfect accord with the report to which he has alluded now. It says:

In passing from this subject the commission would recommend:

1. That in the improvement of rivers and harbors similarly situated, where equitable division is possible, uniform rules be observed for a proper division of cost between the Federal Government and minor political divisions.

That there is a lack of uniformity, of course everybody admits, but a large part of the appropriations carried in this bill are old projects adopted at least 10 years ago, and to which the Government is committed. They are partially completed, and this spasm of virtue that seems to rise so high at this particular time should have been asserted here years ago when, under the leadership of the distinguished gentleman from Ohio, Mr. Burton, these projects were authorized.

Now, who is to say that they were improperly conceived, that they were not meritorious? They bear the approval of the Army Engineer Board, and we created in 1902 an intermediate board to which we might appeal for review in the event the district engineer failed to meet public expectations.

I do not mean to say that the Senator from Iowa [Mr. KENYON] is not animated by a high purpose, because I know he is; but those who were instrumental in starting the projects years ago, when they bore the stamp of public approval, can not say, as a matter of justice and fairness, that they should be stopped and the work arrested just because there is a lack of funds in the Treasury unless extraordinary taxation is imposed. That is due to a change in the political policy of the Government, not to the fact that these rivers are now running upstream where they formerly ran down.

The former Senator from Ohio, Mr. Burton, gave his approval to most of the projects in this bill when he was chairman of the House committee, and he is an honest man, an able man, and a conscientious man; and because there happened to be here and there in the bill a few items that did not meet with his approval is no reason why they should all be abandoned.

Mr. SIMMONS. Mr. President——

Mr. SMITH of Michigan. I simply want to say to the Senator from Colorado what the Senator from Arkansas has said, that he is on the right track, but unfortunately you can not apportion the expense of these projects equitably on cities or villages which will profit by them, regardless of the fact that they were in a sense local when begun and might have been assessed for a fair proportion of the cost at that time. The Government has initiated the work; in many instances it is nearly complete and can not now be abandoned without serious loss to the Government and to the territory to be benefited.

Mr. SUTHERLAND. Mr. President, may I ask the Senator from Michigan—

Mr. SMITH of Michigan. The Senator from North Carolina just made a request, and if the Senator will permit me I will yield to him.

Mr. SIMMONS. I wish to call the attention of the Senator to the fact that as the bill came to us from the House every item in it except one item had been appropriated for heretofore.

Mr. SMITH of Michigan. Yes; I know that is true.

Mr. SIMMONS. When I say heretofore, I mean before the beginning of the present administration, because there has been no general river and harbor bill passed since the present administration came into power.

I wish to call the attention of the Senator further to the fact that in referring to the last river and harbor bill enacted while the ex-Senator from Ohio, Mr. Burton, was chairman of the House committee, in 1907, I think, the Senator made a slight mistake. There are 280 projects asked in this bill, and 210 of those projects were in the 1907 bill, carrying $75,000,000, which Senator Burton declared in the Senate on more than one occasion was the most perfect bill that had ever been enacted.

Mr. SMITH of Michigan. I voted for it under his persuasive influence.

Mr. SIMMONS. If the Senator will permit me, I wish to read——

Mr. SMITH of Michigan. So did the Senator from Utah and most of the other Senators.

Mr. SIMMONS. If the Senator will permit me, I wish to read briefly what former Senator Burton said about this bill—at least, I assume he was speaking about this bill—in an address delivered to the National Rivers and Harbors Congress in 1909. That was two years after the 1907 river and harbor bill was enacted, which carried 210 of the 280 projects in this bill.

Mr. SMITH of Michigan. I heard that speech, and I thought it was a very masterful review of the work of Congress.

Mr. SIMMONS. It is a very illuminating speech in view of the criticisms that are now being made with respect to the 210 items in the pending bill——

Mr. SMITH of Michigan. I should like to hear that speech read.

Mr. SIMMONS. Items which are in this bill, but which were also in the bill to which Senator Burton was addressing himself.

Mr. SMITH of Michigan. I hope the Senator from North Carolina may have the undivided attention of the Senate while he reads this encomium.

Mr. SIMMONS. I read from the address of Senator Theodore E. Burton——

Mr. SMITH of Michigan. The Senator can not be heard.

Mr. SIMMONS. I will speak a little louder when I get to the address.

Mr. GALLINGER. Mr. President, this seems to be a mutual admiration society.

Mr. SIMMONS. I have known the Senator from New Hampshire to indulge in many of these admiration societies in this Chamber.

Mr. SMITH of Michigan. Oh, the Senator must be mistaken.

Mr. SIMMONS. This is an address delivered to the National Rivers and Harbors Congress, which was in session December 8, 9, and 10, in 1909. I do not know on what date Senator Burton spoke. He said in part:

> We have made large and liberal provisions for the harbor of Boston—

That is not the part of the speech which I desired to read. [A pause.]

Mr. SMITH of Michigan. While the Senator is finding the speech of Mr. Burton which I desire read——

Mr. SIMMONS. I want to find the right speech.

Mr. SUTHERLAND. Mr. President——

Mr. SMITH of Michigan. I will yield to the Senator from Utah for a moment.

Mr. SIMMONS. I shall find what I desire to read in a moment.

Mr. SMITH of Michigan. I will yield to the Senator from Utah until the Senator from North Carolina finds it. I think we shall make more progress in that way.

Mr. SIMMONS. I have it now, Mr. President.

Mr. SUTHERLAND. The Senator from North Carolina is having as much trouble in finding the speech which he desires to read as he will have in finding justification for some of the items in this bill.

Mr. SIMMONS. Mr. President, I have a speech here which was delivered by ex-President William Howard Taft, also marked, and I was about to read first from that. I will, however, now read from Mr. Burton's speech.

Mr. SMITH of Michigan. The Senator from Utah can learn something from that.

Mr. SIMMONS. Mr. President, former Senator Burton spoke as follows:

> I have found many observant and intelligent men who have an idea that a very large share of our appropriations go for insignificant creeks and streams. Now, perhaps I might point out the benefit of improving many of these minor streams, a benefit which proportionately is often greater than even in the case of large rivers; but I think there has never been a bill in which the amount appropriated for these objects aggregated one-sixtieth part of the whole.
>
> You have had to meet the idea that there is "pork barrel" somewhere.

I call the attention of the Senator from Iowa [Mr. KENYON] especially to this.

Mr. KENYON. Is the Senator from North Carolina reading from the three-day speech which Senator Burton delivered in the Senate?

Mr. SIMMONS. No; I am reading from a speech made some time during those three days when this congress was in session.

Mr. SMITH of Michigan. Will the Senator from North Carolina read that last sentence again?

Mr. SIMMONS. It is as follows:

> You have had to meet the idea that there is a "pork barrel" somewhere. Whenever there is a man of superficial information on this subject, or one who has had some project that has been turned down, and turned down hard because it had to be turned down, that man begins to talk about the "pork barrel." [Applause.]

Mr. SMOOT. Can the Senator tell us of any project that was ever turned down?

Mr. SIMMONS. Yes; I think I could if I were to stop and consume as much time on this bill as the Senator from Utah has consumed. I think in that case I might point out a great many.

Mr. SMOOT. I never heard of one.

Mr. SIMMONS. Particularly I want to call attention to this part of Senator Burton's speech:

> There has been no line of appropriations made by this Government more carefully guarded than appropriations for rivers and harbors. In the first place, before anything is undertaken, there is a preliminary examination which is ordered by legislation; there must be a preliminary examination. Then, if that is favorable, a more detailed examination. Before the project is presented to Congress it must pass before a so-called board of review. By the time it gets to Congress it has had to pass through a pretty long gantlet. Then, when it reaches the Rivers and Harbors Committee, it has a still more severe experience—perhaps some of you think so, anyhow. Thus when it passes in Congress it has been thoroughly and carefully considered. There may be a little bit of logrolling, but I challenge anyone to cite an instance where that bill—

Referring to the river and harbor bill—

> has ever been made up to gratify certain localities or to advance the interests of some Member of Congress in the House or Senate.

Mr. SMITH of Michigan. I hope the Senator will mark that page.

Mr. SIMMONS. I am going to turn that page down, so that I shall not lose it the next time I speak on the subject.

Mr. LA FOLLETTE. Will the Senator from North Carolina give us the date of that speech, though I think perhaps he previously stated it?

Mr. SIMMONS. I stated that the speech was delivered to the National Rivers and Harbors Congress, which held its sessions in Washington City on December 8, 9, and 10.

Mr. LA FOLLETTE. In what year?

Mr. SIMMONS. Nineteen hundred and nine. That was two years after the passage of the 1907 river and harbor bill, which carried an appropriation of $85,000,000, made up largely in the other House, and which Senator Burton had characterized as the best river and harbor bill that had ever been passed in this country.

Mr. LA FOLLETTE. And it was two years before Senator Burton on the floor of the Senate ever denounced the whole scheme of appropriations for rivers and harbors.

Mr. SIMMONS. Exactly.

Mr. SMITH of Michigan. It was two years before.

Mr. SIMMONS. I do not know that it is quite correct to say that Senator Burton denounced the whole system of river and harbor appropriations; but he did denounce many of the items.

Mr. SMITH of Michigan. I now yield to the Senator from Utah.

Mr. SUTHERLAND. Mr. President, this mutual and desperate attempt on the part of the Senator from North Carolina [Mr. SIMMONS] and the Senator from Michigan [Mr. SMITH] to find some justification for many of the items in the pending bill which are without justification has led us some distance from the point at which I desired to interrupt the Senator from Michigan and to interrogate him. I understood the Senator to say just before he was interrupted that there were many items in this bill that were distinctly local in character, and as to those items the Senator thought that the locality should contribute. Now, I ask the Senator from Michigan upon what theory he can justify a contribution of a single dollar on the part of the Federal Government for a project which is distinctly local in character?

Mr. SMITH of Michigan. On only one theory, and that is the horribly demoralized condition of the Federal Treasury.

Mr. SUTHERLAND. Of course, then, the Senator ought to agree with me that those items in the bill which are distinctly local in character, and which the Senator from Michigan admits to be so, should be stricken from the bill entirely.

Mr. SMITH of Michigan. Mr. President, those projects are in a partial stage of completion.

Mr. SUTHERLAND. Well, let the Senator from Michigan join with us and we will make the attempt.

Mr. SMITH of Michigan. If we join in that, we simply waste all that has been previously expended by the Government, which is about seven-tenths of this bill; we arrest projects of absolute merit while we impugn the character of the Engineer Boards who recommended these improvements. I am not going to set my judgment up against a court of final review such as the Engineer Corps of the Army, who have no motive but the public good.

Mr. SUTHERLAND. The Senator from Michigan speaks about the action of the Engineer Board. The Senator from Michigan certainly does not contend that it is within the competency of the Engineer Board to determine that Congress has power to appropriate money for these local projects, does he?

Mr. SMITH of Michigan. Oh, no; I will say that I have no quarrel with the view of the Senator from Utah regarding the duty and obligation of the Government itself to make these improvements, without any regard whatever to the local community, if it is to exercise the jurisdiction over these highways which the Constitution has conferred upon it.

Mr. SUTHERLAND. But my position about it is, if the Senator will bear with me for a moment, that the Federal Government ought to pay the entire expense——

Mr. SMITH of Michigan. I understand the Senator.

Mr. SUTHERLAND. So far as these projects are national in character; but to the extent that they are only local in character the Federal Government ought not to pay a cent.

Mr. SMITH of Michigan. Very well——

Mr. SUTHERLAND. And to my mind, if the Senator will permit me further, the fact, if it be a fact, that we have already expended some money upon a purely local project, and thereby departed from the power which is vested in us by the Constitution, is no excuse for continuing that unlawful appropriation.

Mr. SMITH of Michigan. Well, let us test the Senator's suggestion.

Mr. NELSON. Mr. President, will the Senator from Michigan allow me to interrupt him?

Mr. SMITH of Michigan. Certainly.

Mr. NELSON. I think there is a misapprehension as to the application of the term "local improvement." Take an improvement like that of the Mississippi River. It relates to the whole reaches of the river on both sides; it is a general improvement, and affects different localities. We use the term "local improvement" in the river and harbor bill as applied to a single harbor on the seacoast or the lakes. We call that a local improvement, because it is an improvement that pertains to just that one harbor, while the improvement of a river affects the whole country along the river.

In reference to the improvement of what I term a "local harbor," the circumstance sometimes arises that in dredging out a harbor either on the lakes or on the seacoast it is oftentimes desirable to dredge it far enough to reach some steamboat landing or some dock, a little beyond where the Government improvement has extended. Where such extension is needed in the harbor to reach a railroad dock or a steamboat dock and it will be of some advantage to the railroad company or to the steamboat company or to the city, in such peculiar cases—and we have some in the pending bill—we think it proper that local interests should contribute; but that only refers to isolated cases. We can not lay down any hard and fixed rule to govern the matter.

Mr. SUTHERLAND. Mr. President, will the Senator from Michigan permit me further?

Mr. SMITH of Michigan. Certainly.

Mr. SUTHERLAND. That is not what I mean by "local improvement." Of course, an improvement upon the Mississippi River, which is a great interstate stream, is not a local improvement; it is the improvement of a national highway, which permits boats to ply between and among several States. That is an interstate matter; that is a regulation of interstate commerce; but I am speaking of some of the creeks which in one season of the year are filled with water and in another season of the year are filled with dust; where the benefit is confined to localities within a State, if there be any benefit at all. Those are the things that I am complaining about. I do not complain about the improvement of one of the great harbors, because incidentally it operates to give a benefit to the locality where the harbor is situated or to the improvement of the great rivers. Those are not the things that I am speaking of as wrong.

Mr. SMITH of Michigan. Let me test out the Senator's view. Take the little harbor of Arcadia, which has been, I hope, indelibly impressed upon this bill. That is a little harbor on the east shore of Lake Michigan, which serves a country community. The products of that community are taken across the lake to Milwaukee and to Chicago. Is that a purely local affair, or does that harbor so relate itself to interstate commerce that it becomes an object of governmental solicitude?

Mr. SUTHERLAND. Mr. President, as the Senator from Michigan describes it, I would say that that is not a purely local matter.

Mr. SMITH of Michigan. No; I do not think it is; and yet there are people who say that it is. The community there has spent $80,000 in building that little harbor, while the Government has only spent $60,000; yet that is one of the things that is criticized in this bill, vital as it is to the farmers of that vicinity.

Mr. SUTHERLAND. Mr. President, if the Senator will permit me further—if it be true that the harbor at Arcadia is calculated to promote the transportation facilities between Michigan and Illinois or between Michigan and any other State, then it legitimately comes within the power of Congress to deal with it. That is aside from the question as to whether or not it is wise to make the appropriation for that purpose. I am speaking now simply of the power of Congress to deal with it.

Mr. SMITH of Michigan. We had in mind when we made this report to Congress that we would put this Government in the same relation to navigable waters of the country as are the navigable waters of the Old World related to their Governments. They have in most countries a system of contribution. Take the barge canal in New York, a tremendous enterprise, second only to the Panama Canal. The State of New York originally authorized an expenditure of $101,000,000 on it.

Mr. POINDEXTER. It has spent much more than that.

Mr. SMITH of Michigan. They were authorized by the State of New York, in the first instance, to spend $101,000,000.

Mr. POINDEXTER. That was for the enlargement of the canal. In addition to that, they spent the cost of the original construction.

Mr. SMITH of Michigan. I think they have; and if that work had been going on at any other time than in the year when the Panama Canal was being completed, it would have been regarded as a tremendous engineering achievement.

Illinois has voted $20,000,000 for a waterway from the Lakes to the Gulf. In the initiation of great enterprises of that character the expense might appropriately be distributed. I think the language of our report was very carefully chosen:

> That in the improvement of rivers and harbors similarly situated, where equitable division is possible, uniform rules be observed for a proper division of cost between the Federal Government and minor political divisions. There is at present a lack of uniformity. One illustration of this is in the improvement of interior channels and harbors. In some cases the expense is borne exclusively by the Federal Government, and in other cases by the municipalities interested.

Then, on the question of terminal facilities, wharves, and so forth, I think the commission were essentially and in fact wholly right, and I have not changed my view. Neither do I find especial fault with the purpose of the Senator from Colorado. But these projects now partially completed, numbering more than three-quarters of the projects in the bill, can not be based upon the proposition urged by the Senator from Colorado in equity or fairness or justice. Then, there are such projects as the one I illustrated the other day—the St. Clair River—which is related to the tremendous commerce that goes from the Northwest to the Atlantic seaboard and passes through this little river—the St. Clair River. Eight hundred and eighty-seven million dollars worth of commerce last year passed down that one little channel, which runs along the Canadian side, and which is wholly inadequate; and if there should be an accident to any of the great ships that navigate that river and the Lakes while in the river, much of the whole commerce of the Lakes would be tied up and unable to adjust itself until the damage was repaired.

Take the St. Marys River, with those locks and dams at the Soo. Certainly the Senator from Colorado has no thought of apportioning that expense, national in character, upon the abutting landowner or upon those ships that use the locks. That is a national affair; and the Government, in the interest of all the people who are benefited by it, must bear the cost of that improvement.

If the Senator's proposition were to the effect that hereafter in the authorization of improvements the Congress would set its face sternly against a local improvement until the locality should pay at least one-fifth of the cost, I would not have the slightest hesitation in voting for it. In fact, I think it would be a wholesome rule in the future in dealing with new projects.

Mr. SHAFROTH. Mr. President, is the appropriation in regard to the locks in this bill?

Mr. SMITH of Michigan. At the Soo?

Mr. SHAFROTH. Yes.

Mr. SMITH of Michigan. Yes; Lock No. 4 has $800,000 in this bill; other contracts will be provided for in the sundry civil bill.

Mr. SHAFROTH. And the appropriations for that purpose are here?

Mr. SMITH of Michigan. Yes; the one referred to.

Mr. SHAFROTH. It is in this bill?

Mr. SMITH of Michigan. Yes; and the St. Clair River is in this bill.

Mr. SHAFROTH. Yes; to the extent of $83,000.

Mr. SMITH of Michigan. And the East River is in this bill.

Mr. SHAFROTH. There is $83,000 in this bill for the St. Clair River; and all that you would have to put up would be $17,000.

Mr. SMITH of Michigan. But who would pay it?

Mr. SHAFROTH. Why, the Senator said the other day that $85,000,000 tons went through that canal. Is it possible that people who have such enormous interests can not raise $17,000, when they are delayed by reason of not having the improvement and they lose twenty times as much as that unless they do put up that amount?

Mr. SMITH of Michigan. Now, wait just a moment. All of that tonnage is as distinctly related to the consumer as it is to the producer. Are you going to put your $17,000 on the producer and the consumer? Are you going to put it upon the wheat fields of the West or are you going to put it upon the consumers at the seaboard? The truth is that you can not apportion that cost. You can not make it a charge against the city of Port Huron, and you certainly can not make it a charge against the Dominion of Canada; and yet both Canada and the United States use this waterway very freely.

Mr. SHAFROTH. Why, certainly you can not do it unless the persons are interested and want to have the improvement so badly that they will put it up, and then they will do it. This is a mere bagatelle that would not delay the matter 10 days, because they are great big ship companies and great big interests.

Mr. SMITH of Michigan. I am sorry that the Senator from Colorado persists in the idea that because he has a very sensible and fair proposition in the abstract he must make unwise and inexpedient and impracticable the application of his plan.

Mr. REED. Mr. President——

Mr. SMITH of Michigan. I yield to the Senator from Missouri.

Mr. REED. I agree with a good deal that the Senator has said. I disagree with some things he has said. The Senator speaks of local improvements. I want to ask the Senator if he thinks we have a right to take 80 per cent of the cost of what is a local improvement out of the Government Treasury at all?

Mr. SMITH of Michigan. No; I do not. I think it has been done.

Mr. REED. I find myself, therefore, in complete agreement with the Senator. It therefore follows that no local improvement should ever be made by the Government.

Mr. SMITH of Michigan. All right. I agree with that.

Mr. REED. Now, there may be cases—there are isolated cases—where the improvement is in aid of interstate commerce, and is therefore a perfectly proper point at which to expend the Government money; but there may also be a special and peculiar local benefit. In that case, treated by itself, the equities may be very justly taken into consideration, and that which is equitable and fair may be arrived at. But every case must be decided by itself and upon its merits.

Mr. SMITH of Michigan. Certainly. Let me say to the Senator that he is in perfect accord with our report, and the Senator from Colorado is out of accord with the second provision of our report:

> That participation in improvements by local communities be encouraged, always with due care to avoiding the adoption of projects which are unworthy of recognition by the Federal Government.

The plan proposed by the Senator from Colorado would encourage every project by a 20 per cent contribution. That would be the test of its virtue. But the Senator is upon good, substantial foundation in his desire to curtail the number of improvements, to which the Government shall commit itself. I think the Government has undertaken too much; there should be fewer projects and they should be completed, and I think we can appropriately circumscribe the work to be undertaken, but it is unfair to leave meritorious projects in a demoralized and uncompleted state.

Mr. REED. Mr. President, if the Senator will pardon a further interruption, because it is upon this particular theme, I think I can illustrate the whole question by two pointed instances.

Let us take the improvement of the Missouri River in general. The river is 3,000 miles long. At one time it carried commerce as far as Fort Benton. The railroads came along and put the boats out of business, and did it by cutting rates. It is now undertaken to restore that river, so that transportation can be had upon it on the stretch from Kansas City to St. Louis, which is approximately 400 miles by river. If that is carried out, the commerce from Kansas City will not only go to St. Louis, but, if the Mississippi River improvements are carried on, it will go to the Gulf, to New Orleans. Now, that is interstate commerce. That improvement is for the benefit of that entire stretch of country. Moreover, as that commerce increases, and as docking facilities are furnished, there is not a doubt in the minds of experts who have examined the question but that the commerce will become a vast and a mighty commerce.

The general improvement of the Missouri River, therefore, is a matter national in its importance, and should be paid for by the Government, and can be paid for in no other way, because there is nobody to assess. But come now to an improvement that is in this bill at St. Joseph, Mo. Here is the situation: The river is threatening to cut a short channel which will, if it is cut, destroy a large amount of valuable property. The engineers report that they do not think it will take the short channel, that it is unlikely, and yet there is a danger; but that if it does take the short channel it does not necessarily follow that there will be a tremendous injury to the stream from the standpoint of navigation. The Army Engineers said in that case that if the local people would contribute approximately two-fifths—they originally said one-half—of the cost, the Government could afford to put in the necessary revetment at St. Joseph and stop the river from making that cut-off, and that it would be equitable for the Government to pay half of that expense and equitable for the people to pay one-half.

There was a special and peculiar benefit. There was a reason for doing the work, because it would benefit property and at the same time benefit navigation; and there was the additional idea that if the Government did not enter upon this work navigation would not be injured more than at least one-half of this expense. Accordingly, that assessment was made. I do not think the Government engineers were right in their conclusion that if the river went through it would not greatly injure the river—that is, if the river made the cut-off. Nevertheless, that was their opinion, and the people accepted it. In cases of that kind, segregated and taken out by themselves, it is perfectly proper to require a local contribution.

Mr. SMITH of Michigan. I think so.

Mr. REED. But I affirm that no river should ever be improved for a purely local reason; no creek should ever be improved for a purely local reason; no harbor should ever be improved for a purely local reason; that always it must relate to interstate commerce; and that the only place where contribution ought to be applied is where there is a peculiar and special local benefit, separate and distinct from the general benefit; and that every one of those cases must be settled, not by a general rule but by the equities of the particular case.

If the Senator's amendment were to the effect that where there were special and distinct local benefits the amount of the benefits should be fairly ascertained and the contribution required, I would have no quarrel with it. Indeed, that is already the policy of the department. But since the Senator has been so kind, let me offer one further observation, and I beg his pardon for taking his time.

If this bill is passed in the present form, it means that not a single dollar can be expended on any of these improvements until the local interests have raised one-fifth of the cost. That means that every one of these improvements will stop right where it is, and some of them will not ever be resumed, and some of them will not be resumed for many years. I call the attention of the Senator from Colorado to the fact that in that half-completed condition, if the improvements are stopped, or not carried on from year to year, the work already done will be, to a very large extent, washed out and destroyed. There could scarcely be a greater disaster conceivable than to pass this amendment, halt this work, let all this revetment that is in and is only half protected at the present time be swept away, let all these

dikes that are in and that have not yet been properly protected be swept away, and the internal improvements of this country brought to a standstill, and worse than a standstill—brought to a position of definite and certain loss. Whatever there is of virtue in this idea ought to be worked out in a proper way.

Mr. SHAFROTH. Certainly; it ought to be made upon every improvement. If an improvement is large, its benefit must be large, and consequently the benefit to commerce must be large. Those people are not going to wait when they can get the improvement by the payment of one-fifth. The only improvements that will suffer, in my judgment, will be those improvements that are unworthy and that have been pointed out by the distinguished Senator from Iowa [Mr. KENYON]. Those are the ones, it seems to me, which will fail by reason of this provision. In the others the money will be put up by those who are specially interested in them, not necessarily the locality but the great interests that use them.

Mr. REED. It is easy enough for the Senator to say that in his opinion there will be no work destroyed except unworthy work. That is a mere assertion. What is his opinion based on? I can say to the Senator that there are millions of dollars' worth of work on these rivers that have been put in, and well put in, but in order to protect it it must be completed. Now, who is going to assess it?

Mr. SHAFROTH. We are going to assess nobody.

Mr. REED. Where are you going to get the money?

Mr. SHAFROTH. The people interested will come to the front.

Mr. REED. Who is interested? Every man, woman, and child in the United States is interested in interstate commerce. On these great rivers nobody has any special or particular interest. It is idle talk. Whom would you assess, for instance, on the Missouri River? Would you assess the farmers along the banks and collect this money from them? Would you get it from the city of St. Louis or from Kansas City? The business men of Kansas City have already raised a million and a quarter dollars to put boats on the river. After the Government had approved a permanent plan and had agreed as far as the Government can agree that it would carry out that plan, the citizens subscribed a million and a quarter dollars to put boats on the river. They taxed themselves to the utmost, to the last dollar, to have boats there, and they have more building, and the work is only one-half or one-third completed on the river; it is standing there in an exposed condition. Who is to put up the money? The Senator from Colorado might be justly asked to contribute, because the rates to Kansas City affects the rates to Denver.

Mr. SHAFROTH. Any organization or any set of people who are benefited are going to take advantage of the Government putting up 80 per cent, they putting up only one-fifth.

Mr. REED. That is mere assertion again. The Senator says any organization will do it. I say there is no organization in my State that will do it. I put my assertion, having some knowledge of the facts, against the assertion of the Senator who has no knowledge of the facts in that locality.

Mr. SHAFROTH. That assertion is just as good as the assertion saying all these things will stop.

Mr. REED. They must stop.

Mr. SHAFROTH. My judgment is that they will not stop. What is this Missouri River improvement? Two hundred thousand dollars. Forty thousand dollars will be all they will have to put up. If one company alone has put up $1,250,000, they will never stop their enterprise when they can get four-fifths more work done by the payment of $40,000.

Mr. REED. Let me correct the Senator. He is just as accurate in that statement as he has been in all of them. It is $2,000,000 instead of $200,000.

Mr. SHAFROTH. The amount that is carried here is $200,000.

Mr. REED. Two million dollars.

Mr. SHAFROTH. On the Missouri River.

Mr. REED. A million and a half dollars this year.

Mr. SHAFROTH. Then it is that much larger and they are getting that much more benefit.

Mr. President, I want to say, if the Senator from Michigan will pardon me, with relation to the Missouri River, I have lived along the Missouri; I was born there, and I know something of the conditions there. After the enterprise has started there of a permanent nature there are, I believe, hundreds of people willing to dig down into their own pockets and to put up substantially the amount which is imposed on them, and, so far as I am concerned, I am willing that they should have it under those circumstances.

Mr. REED. Does not the Senator think raising a million and a quarter dollars in Kansas City is some evidence of the good faith of those people?

Mr. SHAFROTH. Yes; but it is good faith in the boats which they make use of. If the navigation did not exist there they could put them somewhere else.

Mr. REED. They could not put them anywhere else. That would be an absolute impossibility.

Mr. SHAFROTH. They could put them on the Mississippi if they could not be used on the Missouri.

Mr. REED. They have to make special boats. They sent men clear to Germany to find out what kind of boats to use in shoally water. They experimented and they spent hundreds of thousands of dollars, and they finally developed boats which are admitted by Government experts to-day to be the best possible boats to employ on rivers where there are rapid currents and frequent shallows.

Mr. SHAFROTH. That is not the only river in the United States where they have shallows.

Mr. REED. It is for the benefit of the commerce of the whole country.

Mr. TAGGART. May I ask the Senator a question?

Mr. SHAFROTH. The Senator has referred to the Missouri River.

Mr. SMITH of Michigan. Mr. President——

Mr. SHAFROTH. Very well.

Mr. SMITH of Michigan. Now, I am going to yield to the Senator, if I may under the rule.

Mr. TAGGART. I simply wish to ask a question.

Mr. SMITH of Michigan. I am going to yield to the Senator, because I want to hear his last speech on this amendment.

Mr. SHAFROTH. I will reserve making any further statement.

Mr. TAGGART. I wish to ask the Senator in regard to the 20 per cent assessment, How it is to be assessed? Against abutting property?

Mr. SHAFROTH. No; anybody who wants to contribute, any person who is interested, will come in just like in these other projects. There are eight projects included in this bill where they are required to put up—not 20 per cent, but a good deal more than that—and if those people can do it, other people can.

Mr. TAGGART. If no individual will benefit, what provision is made for raising the money?

Mr. SHAFROTH. But there are individual benefits; otherwise the projects would not be in this bill at all. The steamship companies and the railroad companies are to be benefited. The people are generally benefited in lowering the rates. All those who are interested would come to the front and pay one-fifth in order to get the 80 per cent that the Government puts into the enterprise.

Mr. WORKS. Mr. President, the only doubt in my mind about the wisdom and justice of this sort of a provision is as to whether a fixed and determined amount should be named that shall be paid in all these improvements. There may be cases where it is entirely proper that even a larger sum than 20 per cent should be charged. In fact, out in our part of the country they usually compel us to pay one-half. It has been so in almost every instance. Also there are other cases where it would be unjust to charge even as much as 20 per cent.

So far as these improvements made by the Government are concerned, where they affect navigation it is the duty of Congress to make them; it rests in the Government, not upon private individuals. There has always been a question in my mind whether it is proper to compel private individuals or cities to contribute toward what the Government should provide, but that rule has been established in the department and it is generally required.

I think it is very doubtful, however, whether any fixed sum should be named in the statute.

Mr. SMITH of Michigan. Mr. President, I hope that the debate has finally been exhausted on this amendment, and with that idea I do not want to delay the Senate any longer.

The VICE PRESIDENT. The question is on the amendment of the Senator from Colorado [Mr. SHAFROTH].

Mr. SHAFROTH. Mr. President, I want the yeas and nays on the amendment, and I wish to say just one word in answer to the Senator from Michigan with relation to these continuing projects. I want to say that those very provisions are in this bill, most of them requiring contributions for continuing appropriations on projects that have been existing. If it is wise to do it there, it seems to me it ought to be wise to do it in other instances. Is it possible because an enterprise had the benefit of the entire contribution from the Government for 10 years that therefore it should be exempted in the future? The fact that they have gotten the benefit for 10 years ought to make them that much more willing to contribute, and consequently it would be that much more of an equitable requirement in the bill.

I ask that my amendment may be read.

The VICE PRESIDENT. The amendment will be read.

The SECRETARY. It is proposed to insert as a new section the following:

SEC. —. That each of the appropriations herein made shall become available only in the event States, counties, cities, or individuals shall pay into the Treasury as part of the same 20 per cent of the amount thereof: *Provided, however,* That the provisions of this section shall not apply to those items requiring contributions from other sources.

Mr. SHAFROTH. I ask for the yeas and nays on agreeing to the amendment.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. SAULSBURY (when his name was called). I transfer my pair with the junior Senator from Rhode Island [Mr. COLT] to the Senator from Illinois [Mr. LEWIS] and vote "nay."

Mr. THOMAS (when his name was called). I have a general pair with the senior Senator from North Dakota [Mr. MCCUMBER], which I transfer to the junior Senator from California [Mr. PHELAN] and vote "yea."

Mr. THOMPSON (when his name was called). I have a pair with the Senator from Illinois [Mr. SHERMAN], and in his absence I withhold my vote.

Mr. TILLMAN (when his name was called). I have a general pair with the Senator from West Virginia [Mr. GOFF]. In his absence I withhold my vote.

Mr. UNDERWOOD (when his name was called). I transfer my pair with the junior Senator from Ohio [Mr. HARDING] to the senior Senator from Indiana [Mr. KERN] and vote "nay."

Mr. WADSWORTH (when his name was called). Has the junior Senator from New Hampshire [Mr. HOLLIS] voted?

The VICE PRESIDENT. He has not.

Mr. WADSWORTH. I withhold my vote, having a pair with that Senator.

Mr. WALSH (when his name was called). I inquire if the Senator from Rhode Island [Mr. LIPPITT] has voted?

The VICE PRESIDENT. He has not.

Mr. WALSH. I am paired with that Senator and withhold my vote.

Mr. WILLIAMS (when his name was called). Repeating the announcement I made concerning my pair and vote upon yesterday and asking that it stand for the balance of the day, I vote "nay."

The roll call was concluded.

Mr. TAGGART. I wish to announce that the senior Senator from Indiana [Mr. KERN] is unavoidably absent and that if present he would vote "nay."

Mr. MYERS. I transfer my pair with the Senator from Connecticut [Mr. MCLEAN] to the Senator from South Carolina [Mr. SMITH] and vote "yea."

Mr. CHILTON. Has the Senator from New Mexico [Mr. FALL] voted?

The VICE PRESIDENT. He has not.

Mr. CHILTON. I have a pair with that Senator. I transfer my pair with the Senator from New Mexico [Mr. FALL] to the Senator from New Jersey [Mr. HUGHES] and vote "nay."

Mr. CATRON. Has the Senator from Oklahoma [Mr. OWEN] voted?

The VICE PRESIDENT. He has not.

Mr. CATRON. I transfer my pair with the Senator from Oklahoma [Mr. OWEN] to the Senator from Idaho [Mr. BRADY] and vote "nay."

Mr. LODGE. I have a pair with the senior Senator from Georgia [Mr. SMITH]. I understand that he would vote as I intend to vote on this question, and therefore I will vote. I vote "nay."

Mr. DILLINGHAM (after having voted in the negative). I observe the senior Senator from Maryland [Mr. SMITH], with whom I have a pair, is absent from the Chamber. I will therefore transfer my pair to my colleague [Mr. PAGE] and allow my vote to stand.

Mr. TOWNSEND. I am paired with the junior Senator from Florida [Mr. BRYAN], but I feel at liberty to vote on this question. I vote "nay."

Mr. OVERMAN (after having voted in the negative). I have a general pair with the junior Senator from Wyoming [Mr. WARREN]. I transfer that pair to the junior Senator from Maryland [Mr. LEE] and let my vote stand.

Mr. CHILTON. I wish to announce for the day the unavoidable absence of my colleague [Mr. GOFF].

Mr. CURTIS. I have been requested to announce the following pairs:

The Senator from Maine [Mr. BURLEIGH] with the Senator from Arkansas [Mr. ROBINSON];

The Senator from West Virginia [Mr. GOFF] with the Senator from South Carolina [Mr. TILLMAN];

The Senator from North Dakota [Mr. GRONNA] with the Senator from Maine [Mr. JOHNSON]; and

The Senator from Delaware [Mr. DU PONT] with the Senator from Kentucky [Mr. BECKHAM].

The result was announced—yeas 11, nays 50, as follows:

YEAS—11.

Ashurst	Johnson, S. Dak.	Myers	Shafroth
Gore	Kenyon	Newlands	Thomas
Hitchcock	Martine, N. J.	Norris	

NAYS—50.

Bankhead	Fletcher	Overman	Sterling
Borah	Gallinger	Pittman	Stone
Broussard	Hardwick	Poindexter	Sutherland
Catron	Husting	Pomerene	Swanson
Chamberlain	James	Ransdell	Taggart
Chilton	Jones	Reed	Townsend
Clapp	La Follette	Saulsbury	Underwood
Clark, Wyo.	Lane	Sheppard	Vardaman
Clarke, Ark.	Lea, Tenn.	Shields	Weeks
Culberson	Lodge	Simmons	Williams
Cummins	Martin, Va.	Smith, Ariz.	Works
Curtis	Nelson	Smith, Mich.	
Dillingham	Oliver	Smoot	

NOT VOTING—35.

Beckham	Gronna	McCumber	Smith, Ga.
Brady	Harding	McLean	Smith, Md.
Brandegee	Hollis	O'Gorman	Smith, S. C.
Bryan	Hughes	Owen	Thompson
Burleigh	Johnson, Me.	Page	Tillman
Colt	Kern	Penrose	Wadsworth
du Pont	Lee, Md.	Phelan	Walsh
Fall	Lewis	Robinson	Warren
Goff	Lippitt	Sherman	

So Mr. SHAFROTH's amendment was rejected.

Mr. HUSTING, Mr. SHAFROTH, and Mr. NEWLANDS addressed the Chair.

The VICE PRESIDENT. The Senator from Wisconsin.

Mr. SHAFROTH. Mr. President, I desire to offer an amendment striking out the words "twenty per cent" and inserting the words "ten per cent." On that I ask for the yeas and nays.

The VICE PRESIDENT. But the Chair has recognized the Senator from Wisconsin.

Mr. HUSTING. Mr. President——

Mr. NEWLANDS. Mr. President, will the Senator from Wisconsin yield to me for a moment?

Mr. HUSTING. I shall do so if I do not thereby lose the floor.

The VICE PRESIDENT. The Chair makes no guarantee as to that.

Mr. NEWLANDS. I wish to offer the same amendment that was offered and put into the river and harbor bill some three years ago, regarding the creation of a river-regulation commission, with powers of coordination and cooperation.

Mr. HUSTING. Mr. President——

Mr. NEWLANDS. Mr. President, I wish to say to the Senator from Wisconsin that the chairman of the committee is willing that this amendment shall go into the bill; and I judge from its history, as it has already been acted upon by the President, that there will be no debate upon it. I should like this amendment to go into the bill now before the Senator from Wisconsin makes his motion to recommit.

Mr. HUSTING. Mr. President, I shall be very glad to accommodate the Senator from Nevada if I can do so without losing the floor.

Mr. CLARKE of Arkansas. Mr. President, let me make a suggestion to the Senator from Wisconsin. Of course, I would not want to deprive the Senator of the floor; but I trust he will permit the Senator from Nevada [Mr. NEWLANDS] to offer his amendment, and I trust that the Senate will permit the amendment to be adopted without comment. It relates to a subject that will be considered in conference, and its adoption by the Senate does not indicate with any degree of certainty that it will receive one treatment or the other; but it relates to a very important subject that will come up before the conference committee. I trust the Senator from Wisconsin will permit the consideration of the amendment at this time. I do not think it will provoke any debate.

Mr. LODGE. Mr. President, the amendment must be read, of course.

The VICE PRESIDENT. The Senator from Wisconsin has been recognized.

Mr. HUSTING. If the amendment will cause no discussion, I am willing to yield for the present.

The VICE PRESIDENT. Unfortunately, the Chair is not in position to give guaranties to Senators as to what will or what will not come about. Does the Senator from Wisconsin yield, or does he not?

Mr. NEWLANDS. If the amendment arouses debate, I shall withdraw it; I will leave it pending.

Mr. LODGE. Leave it pending now. The amendment must be read if it is going to be acted upon.

Mr. NEWLANDS. I ask that the amendment may be read.

The VICE PRESIDENT. The Chair understands that the Senator from Wisconsin has yielded the floor, and the Senator from Nevada offers an amendment, which will now be read.

Mr. HUSTING. I wish to qualify the statement of the Chair by saying that I should like to have the Senator from Nevada withdraw the amendment in case it provokes discussion. I shall ask the floor after the Senator concludes.

Mr. NEWLANDS. Mr. President, I ask to have the amendment read.

The VICE PRESIDENT. The amendment submitted by the Senator from Nevada will be read.

The SECRETARY. It is proposed to add the following to the bill:

SEC. —. That a commission, to be known as the River Regulation Commission, consisting of the Secretary of War, the Secretary of the Interior, the Secretary of Agriculture, the Secretary of Commerce, the chairman of the Commerce Committee of the Senate, the chairman of the Interstate Commerce Committee of the Senate, the chairman of the Rivers and Harbors Committee of the House of Representatives, and the chairman of the Committee on Interstate and Foreign Commerce of the House of Representatives, is hereby created and authorized to bring into coordination and cooperation the Corps of Engineers of the Army and other scientific or constructive services of the United States that relate to the study, development, and control of waterways and water resources and subjects related thereto and to the development and regulation of interstate and foreign commerce, with a view to uniting such services through a board or boards in investigating questions relating to the development, improvement, regulation, and control of navigation as a part of interstate and foreign commerce, including therein the related questions of irrigation, forestry, swamp-land reclamation, clarification of streams, regulation of flow, control of floods, utilization of water power, prevention of soil waste, cooperation of railways and waterways, and promotion of transfer facilities and sites, and in forming comprehensive plans for the development of the waterways and water resources of the country for every useful purpose by cooperation between the United States and the several States, municipalities, communities, corporations, and individuals within the jurisdiction, powers, and rights of each, respectively, and with a view to assigning to the United States such portion of such development, promotion, regulation, and control as can be properly undertaken by the United States by virtue of its power to regulate interstate and foreign commerce, and by reason of its proprietary interest in the public domain, and to the States, municipalities, communities, corporations, and individuals such portion as properly belongs to their jurisdiction, rights, and interests, and with a view to properly apportioning costs and benefits, and with a view to so uniting the plans and works of the United States within its jurisdiction and of the States and municipalities, respectively, within their jurisdictions, and of corporations, communities, and individuals within their respective powers and rights, as to secure the highest development and utilization of the waterways and resources of the United States; and such river regulation commission is authorized to appoint as members of such board or boards such engineers, transportation experts, experts in water development and utilization, and constructors of eminence as it may deem advisable to employ in connection with such plans. And for the expenses of such organization, investigation, and plans the sum of $500,000 is hereby appropriated.

Mr. GALLINGER. Mr. President, I make the point of order against the amendment that it is general legislation on an appropriation bill.

Mr. NEWLANDS. Well, Mr. President, as I presume that will bring about discussion I withdraw the amendment.

The VICE PRESIDENT. The amendment is withdrawn. The Senator from Wisconsin is recognized.

Mr. HUSTING. Mr. President, I want to say just a word about my reasons for having voted against the amendment of the Senator from Colorado [Mr. SHAFROTH]. I think there is a very good idea contained in the amendment, but under the broad terms of the amendment it would have prevented the United States in the case of the East River, to take one instance, doing something that is an absolute matter of naval necessity, as I understand. Furthermore, it assumes that this bill is going to pass with the consent of the Senator from Colorado in case those directly concerned pay one-fifth of the cost of a proposed improvement. I am against the bill with or without that amendment, and consequently I voted against the amendment.

Before I resume my seat I am going to move for a recommitment of this bill to the committee.

Mr. STERLING. Mr. President——

The VICE PRESIDENT. Does the Senator from Wisconsin yield to the Senator from South Dakota?

Mr. HUSTING. Yes.

Mr. STERLING. Will not the Senator from Wisconsin withhold his motion to recommit until other amendments are offered? I wish to offer an amendment, and I think it was the understanding yesterday that the motion to recommit would come after other amendments to the bill had been submitted.

Mr. HUSTING. I should like to accommodate the Senator, but I feel as though I ought to offer this motion at this time and let the Senate dispose of it as it may see fit to do. I must decline to defer the motion any longer.

Mr. STERLING. I will simply say to the Senator from Wisconsin that I was acting upon the assumption that while the motion would be made it would be withheld for other amendments. I think that was the statement made on yesterday.

Mr. HUSTING. I will state, for the Senator's information, that yesterday when I proposed this motion I said I would defer it until the amendment of the Senator from Colorado [Mr. SHAFROTH] and the amendment of the Senator from Connecticut [Mr. BRANDEGEE] were disposed of, and that I should then renew the motion. I repeat, I should like to accommodate the Senator from South Dakota, but I do not feel at this time that I can do as he suggests. So I shall, before resuming my seat, offer the motion that the pending bill be recommitted to the Committee on Commerce with instructions to report a substitute therefor, appropriating an amount not in excess of $20,000,000 for the maintenance of river and harbor projects adopted by Congress and now under improvement, and for the further prosecution of work on rivers and harbors heretofore adopted by Congress, provided that the amount of said maintenance and prosecution shall be apportioned by the Chief of Engineers under the direction of the Secretary of War.

I have modified my motion by adding the last proviso. I did not expect to again speak upon this bill or upon this motion, as I addressed the Senate at length a few days ago, but some things have been said here in connection with this debate which, in justice to myself and to the Senate, I feel make it necessary for me to submit a few additional observations.

The Senator from Missouri [Mr. REED] was kind enough to honor me with his attention during the remarks I made two days ago, and to acquit me of any intent to deceive. He was gracious enough only to accuse me of gross ignorance of the subject which I was discussing. I feel complimented that he did not ascribe my position to any other motive than ignorance. I should dislike very much to have been accused of a willful attempt to deceive the Senate or of being dishonest in my remarks, and consequently I say that I am under obligations to the Senator for charging me only with honest ignorance.

I want to say that I have never felt that it was profitable to discuss questions of importance by ignoring the real issues and indulging in personalities. I have always felt that the strength of an argument ought to depend on the argument itself. I do know that there are people who think otherwise. I know, for instance, there are some men who believe that an argument may be based upon facts fixated from the atmosphere and supported by statements of an atmospheric nature. Such arguments are sometimes accompanied with a good deal of thunder and a considerable agitation of the atmosphere, sometimes approaching, although not quite reaching, the violence of a tornado, resulting sometimes in taking a few shingles off the roof, blowing down a few trees, and disturbing the scenery to a certain extent, but in nowise impairing or destroying the permanent or substantial structure. I say that that is one way to debate a question.

Another way to debate a question—and that is the way I feel questions ought to be debated—is to turn to the facts in the case, then to draw inferences from those facts, and then rest your case upon them. Sometimes one may be ignorant of some things and yet perfectly accurate as to others. So, as I have said, I am grateful to the Senator from Missouri, for, after all, I really feel as though the facts in this matter ought to be debated, and let them stand for themselves and be taken for what they are worth. That is the way that I propose to proceed, if the Senate will permit me, for a little while, and see whether or not the facts as presented by me in connection with this matter are in accordance with the facts as proven. It will not do to apply epithets or to make assertions and expect to convince anybody unless the argument rests upon premises that are taken from the facts, as I have said, and not from the atmosphere.

The Senator from Missouri stated here before the Senate that a certain report which discredited this Missouri River project signed by Col. Deakyne was so grossly inaccurate and so manifestly unfair that the Senator felt the utmost sympathy for the degradation and humiliation of the colonel when he appeared before the board, and that the report of Col. Deakyne was utterly discredited. Inasmuch as the argument that I made rests for its foundation upon this report, it is important to determine in the consideration of this proposition whether or not the facts as adduced by Col. Deakyne are correct.

What was Col. Deakyne's report? Col. Deakyne's report was in a general sense to the effect that something like $6,250,000 had been expended, or, in order to be absolutely sure that I do not in any way misstate or color his report, that $20,000,000 was to be expended on the project. This project, in his judgment, was impracticable and profitless because only a certain

number of tons per year of actual commerce had been carried upon this river and that there were no prospects of greatly increased river traffic; and, according to his computations, the saving to the people on actual transportation charges was $10,000 a year. He said that, figuring the interest on the investment and figuring the charges of maintenance, it would cost the United States $1,100,000 a year in order to save somebody $10,000. I say—and I approve of what Col. Deakyne has said—that if that is true, and if that is all that appears to have been accomplished in the way of commerce on the Missouri River after the expenditure of about $6,000,000, and it has resulted in only a saving to the people of $10,000 a year, while it will cost the Government $1,100,000 a year to maintain it, including interest charges, that it is impracticable and should be abandoned, or at least not carried forward any further. It was that statement that brought from the Senator from Missouri the remark that Col. Deakyne's report was absolutely discredited.

I do not mention these matters because I think they will interest the Senate as bearing upon the personal opinion or judgment of Senators, but as the facts in the case. The Senator from Missouri denied these facts, or in effect denied them, but did not put the proof in the RECORD of the other reports to which he referred, notwithstanding his claim that the Kingman report and the Black report discredited the Deakyne report.

I am going to ask to have printed at this point in my remarks the following in full: The letter signed by Dan C. Kingman, Chief of Engineers, United States Army, dated Washington, December 17, 1915; also the report of the Board of Engineers for Rivers and Harbors, signed by W. M. Black, colonel Corps of Engineers, dated December 8, 1915; and in connection with that, in order to make it easy for purposes of comparison, I want to add the reexamination of the Missouri River from Kansas City, Mo., to the mouth by Lieut. Col. Deakyne, dated April 22, 1915, and the report of Col. C. McD. Townsend, colonel, Corps of Engineers, St. Louis, Mo., May 22, 1915.

The VICE PRESIDENT. In the absence of objection the matter referred to by the Senator from Wisconsin will be printed in the RECORD.

The matter referred to is as follows:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, December 17, 1915.

From: The Chief of Engineers, United States Army.
To: The Secretary of War.
Subject: Reexamination of the Missouri River, Kansas City to mouth.

1. There is submitted herewith for transmission to Congress report dated April 22, 1915, by Lieut. Col. Herbert Deakyne, Corps of Engineers, on reexamination of the project for improvement of Missouri River, Mo., mouth to Kansas City, directed by the river and harbor act approved March 4, 1915.

2. The existing project was formally adopted by the act of July 25, 1912, although the first appropriation was made by the act of June 25, 1910. The project provides for securing a permanent channel 6 feet deep between Kansas City and the mouth, at an estimated cost of $20,000,000, to be completed, except for maintenance, in 10 years. The work includes the removal of snags and the regulation and contraction of the channel by means of bank revetment and dikes. The estimated cost of maintenance of the completed project is $500,000 per year. There has been appropriated or allotted for this work a total of $6,250,000 in six years, or at the rate of a little more than $1,000,000 a year, while the project calls for $2,000,000 a year. The district officer analyzes the project on the basis of cost and benefits, and expresses the opinion that present and reasonably prospective commerce is not sufficient to warrant its continuance. He recommends that the present project be modified so as to provide for snagging alone, at an estimated cost of $40,000 per year, and that all other work be stopped. The division engineer concurs with the district officer as to the discontinuance of the present project for permanent work, but believes that the work already done should not be completely abandoned, and he recommends an annual appropriation of $150,000 for snagging and maintenance of existing work.

3. This report has been referred, as required by law, to the Board of Engineers for Rivers and Harbors, and attention is invited to its report herewith, dated December 8, 1915. On account of the importance of the subject, the board made a personal inspection of the river and held a public hearing at Kansas City on October 19 and 20, 1915. The board finds that the general method of improvement is well adapted to this stream and if systematically applied under adequate appropriations, will result in a permanent channel depth of 6 feet or more. The board suggests the temporary use of dredging at a few of the most obstructive crossings to facilitate low-water navigation while the permanent work is under construction. The board believes that if any improvement is undertaken aside from snagging it should be under the plan of complete improvement contemplated by the existing project.

4. At the time the adoption of the present project was under consideration, and with the understanding that improvement of the river would follow the establishment of actual navigation of a substantial character, a number of shippers and other business men of Kansas City organized a company for the purpose of operating a line of boats especially designed to meet the requirements of navigation on this river. The company has adopted the towboat and barge method of navigation and has taken steps to remedy certain conditions that have contributed largely to the decline of transportation on our western rivers. It uses terminal facilities at Kansas City and East St. Louis, having mechanical devices for transfer of freight, and these terminals have direct rail connections, thereby facilitating the transfer of freight from rail to boat or vice versa. It is handling commerce on through bills of lading under joint traffic arrangements with connecting rail and water carriers. It receives and delivers goods in cars on shippers' sidings, paying switching charges within certain limits, transferring to and from the boat, assuming carriers' risk in lieu of marine insurance and transporting between terminals, all at a rate of 80 per cent of the corresponding rail rate. It has been building up a traffic and operating at some loss upon a river that is largely unimproved, but it claims that the results already attained show that the traffic would be eminently successful upon an improved river.

5. Another change in commercial traditions since the adoption of this project, upon which considerable stress is laid, is found in the readjustment of transcontinental rail rates, resulting from traffic through the Panama Canal. It is claimed that this handicaps the manufacturers in the interior of the country and that they need the compensating advantage of cheap water routes to the sea.

6. The board states that a review of the entire situation indicates that the present grounds for continuance of this project are stronger than those which led to its adoption, and it therefore concludes that it is advisable for the United States to continue the improvement of the Missouri River between Kansas City and the mouth in accordance with the existing project.

7. After due consideration of the above-mentioned reports, I concur in the views of the Board of Engineers for Rivers and Harbors, and therefore report that it is not deemed advisable to abandon the existing project for improvement of Missouri River, Mo., mouth to Kansas City. The occasional use of dredging as suggested by the board is considered advisable, and it is therefore recommended that such work be authorized in connection with this project.

DAN C. KINGMAN,
Chief of Engineers, United States Army.

REPORT OF THE BOARD OF ENGINEERS FOR RIVERS AND HARBORS.

[Third indorsement.]

BOARD OF ENGINEERS FOR RIVERS AND HARBORS,
December 8, 1915.

To the CHIEF OF ENGINEERS, UNITED STATES ARMY:

1. The following is the review of the district officer's report submitted under authority of section 14 of the river and harbor act of March 4, 1915, on reexamination of "Missouri River, mouth to Kansas City," with a view to determining whether the project shall be modified or the improvement abandoned.

2. The existing project was formally adopted by the act of July 25, 1912, although the first appropriation was made by the act of June 25, 1910, as explained by the district officer. The project provides for securing a permanent channel 6 feet deep between Kansas City and the mouth, at an estimated cost of $20,000,000, to be completed, except for maintenance, in 10 years. The work includes the removal of snags and the regulation and contraction of the channel by means of bank revetment and dikes. The estimated cost of the maintenance of the completed project is $500,000 per year.

3. There has been appropriated or allotted for this work a total of $6,250,000 in 6 years, or at the rate of a little more than $1,000,000 a year, while the project calls for $2,000,000 a year. The expenditures to March 4, 1915, were $2,577,290.85, of which sum $291,208.26 were applied to maintenance and about $597,000 were used in procuring suitable plant. Experience leads the district officer to believe that the project can be completed at the estimated cost, if appropriations are made at the rate of $2,000,000 a year for construction with sufficient amounts for maintenance, but that at the present rate it will require over 20 years to finish the work.

4. The commerce for 1913 is reported as amounting to 347,235 tons, of which 309,684 tons consisted of sand, gravel, and logs, reported as not being benefited by improvement, leaving 37,537 tons of waterborne commerce affected by the project.

5. The district officer analyzes the project on the basis of cost and benefit, and expresses the opinion that present and reasonably prospective commerce is not sufficient to warrant its continuance. He repeats what has been stated in former reports, that any attempt at partial improvement will be futile, and if the river is improved at all, the work should be complete as to the protection of banks and control of channel. He believes that snagging should be continued, and recommends that the present project be modified so as to provide for snagging alone, at an estimated cost of $40,000 per year, and that all other work be stopped.

6. The division engineer is in accord with the district officer as to the discontinuance of the present project for permanent work, but believes that the work already done should not be completely abandoned. He recommends an annual appropriation of $150,000 for snagging and the maintenance of existing works.

7. Interested parties were informed of the district officer's unfavorable report and were given an opportunity of submitting their views to the board. A number of communications were received, and request was made for a hearing, which was given by the board at Kansas City, on October 19 and 20, after personal examination of the river from Kansas City to Washington, a distance of about 320 miles. This hearing was attended by a large number of deeply interested persons, including representatives from Nebraska, Kansas, Missouri, Minnesota, Illinois, and Louisiana. A record of the hearing is appended hereto.

8. The method of improvement under the present project is the result of many years of experimental work at considerable cost. The simplest and most inexpensive structures were first tried and gradually through experience these were modified and strengthened, resulting finally in a standard form that with slight changes has been followed in recent years with a reasonable measure of success. It is believed that the systematic application, under adequate appropriations, of the general principles and methods followed under the existing project, with such modifications of detail as further experience may develop, will result in a continuous and permanent channel 6 feet or more in depth. It may be desirable from time to time not only to modify details of construction, but also possibly to supplement the permanent work while under construction by the temporary use of a shallow-draft dredge to cut through a few of the most obstructive crossing in order to facilitate low-water navigation. It is understood that the existing project is sufficiently elastic to permit such minor modifications with the approval of the Chief of Engineers. It has often been reported, and the board desires to repeat here, that any project of less scope would be inadequate to secure a permanent 6-foot channel, and if any improvement is undertaken, aside from snagging, it should be under the present plan of complete improvement, at a probable total cost of not less than $20,000,000.

9. A matter considered of great importance in connection with the present investigation is the existence of the recently organized Kansas City (Mo.) River Navigation Co. This company was incorporated in 1909 with a capital stock of $1,202,000, of which more than a million has been collected in cash. It is claimed by those interested that the incorporation and operations of this navigation company were

undertaken as the result of an understanding with the River and Harbor Committee of the House of Representatives that the project for the improvement of the Missouri River from Kansas City to the mouth would be adopted and vigorously prosecuted under adequate appropriations, provided the locality first show its faith in the importance and necessity for the improvement by the expenditure of its own funds in the actual establishment of commerce on the river. Navigation was commenced in 1911, with certain plant secured by purchase, and at the same time it was decided to investigate the types of boats best suited to successful and economical use on the Missouri River. The services of experts were secured and careful study of navigation on shallow-draft rivers was made, resulting in the adoption of the towboat and barge method of navigation with improved steel vessels of fireproof construction and suitable size, draft, and motive power for the Missouri River. These investigations have been carried on at considerable expense and have far more than local value, as they contribute very substantially to the solution of the important problems of economical transportation on this and other inland waters of the United States. The company is satisfied with the progress made, and it proposes to continue the investigations and study, with its increasing activities, and to utilize the results in the construction of additional plant from time to time. The results of these investigations are furnished without charge to other cities contemplating the establishment of transportation lines.

10. The company has taken steps to remedy certain conditions that have contributed largely to the decline of river transportation. It has secured the establishment of terminal facilities at Kansas City and at East St. Louis, having rail connection at both places and mechanical devices for the transfer of freight. It has entered into joint traffic arrangements for the interchange of freight with connecting carriers, both rail and water, and is now handling commerce on through bills of lading. It receives and delivers goods in cars on shippers' sidings, paying switching charges within certain limits, transferring to and from the boat, assuming carriers' risk in lieu of marine insurance, and transporting between terminals, all at a rate of 80 per cent of the corresponding rail rate. The present floating plant consists of 1 steel packet boat, 2 steel towboats, and 12 steel barges. These barges are of varying sizes, the larger ones, provided with steel fireproof, weatherproof, and locked deckhouses, being used for through commerce, and the smaller for either through or local business, in the latter case the barges being left at way landings for loading, and being picked up by the next boat up or down, depending upon the destination of the cargo. So far the traffic receipts of the company have not fully covered operating costs, but the company has been operating on an unimproved river and building up a traffic in face of considerable difficulties. It claims to have demonstrated that the traffic will be eminently successful on an improved river. This year, 1915, up to October 1, freights collected would have more than covered operating costs had not a barge been accidentally sunk at its East St. Louis wharf.

11. This company is making the most thorough attempt within the knowledge of the board to revive a river traffic that had disappeared under railway competition. It appears to be sparing no expense or effort that will contribute to the solution of this problem, and it claims as a result of its experience that success is attainable if a permanent 6-foot channel is provided. A continuance of the experiment under as favorable river conditions as can be secured is worth much to the United States, and should go far toward showing what are the real possibilities in this important field of the transportation problem in this country.

12. The commerce handled by this company is still comparatively small, but has been increasing rapidly since its organization. During the current year, up to October 1, it amounted to 27,306 tons, and it is expected that by the end of the navigation season it will be somewhat in excess of 33,000 tons, or about two and one-half times the amount in 1914. This does not include the traffic carried by local boat lines operating at different points along the river, independently of the Kansas City (Mo.) River Navigation Co., which amounted to about 27,000 tons in 1913.

13. It is difficult to determine what may be the future waterborne commerce of this river, and neither the past nor the present volume should in fairness be used as a measure of what to expect in the future. The improvement so far effected in the channel is sufficient to show what can be done by the engineering methods adopted, but, excepting in the removal of snags, it has not progressed far enough to afford a very material betterment of channel depths, excepting in disconnected improved sections. The boats can not be loaded to their full capacity, and even light find difficulty at many shoal crossings. Schedule time can not be made, and delays in delivery have tended to discourage shippers. Notwithstanding this, there is apparent an enthusiastic determination on the part of the navigation company and of the shippers to push their present endeavors to a successful conclusion, provided the United States continue the work of improvement under the existing project. Many individual shippers at Kansas City have given evidence that they intend to patronize the boat line as far as practicable, and that the extent of water-borne traffic will be in proportion to the amount of work done by the United States in the betterment of channel facilities. It is claimed that benefit has already been felt from the work done, and that each bend revetted adds to the safety and reliability of navigation. A number of individual shippers appearing at the hearing stated the amount of commerce that they would offer the boat line under improved river and transportation conditions. These were selected as representing different industries and lines of business, in which there are many other prospective shippers. Several of these shippers emphasized the fact that high-grade freight has been carried by the navigation company with less damage in transportation and handling and less loss from pilfering than they have experienced with rail shipments. The navigation company attributes these conditions to its fireproof and locked freight houses on the barges. It is claimed that with the improved methods of interchange of freight between rail and water, commerce originating west of Kansas City and destined for St. Louis or points still farther east, as well as that originating east of St. Louis and destined for Kansas City or points beyond, can be handled advantageously by the navigation company. Some business of this character has already been done, and the evidence points to its increase. The amount that may be handled in this way is purely conjectural, as the method is as yet experimental and in its infancy, but it is known that the total tonnage moving through this territory is very large.

14. There have been presented to the board statistics of production and consumption of the territory tributary to the commercial center formed by Kansas City to show that the existing means of rail transportation are already fully utilized and that in the near future they will be unable to meet traffic requirements, if such be not the case to-day. It is claimed that soon additional highways of commerce will be a necessity. The report submitted in Appendix A (see p. 147) shows that the cost of construction and maintenance of one additional single-track road is quite comparable with the estimated amount required to complete the present project and to maintain the improved channel, while manifestly the carrying capacity of the improved waterway is vastly greater.

15. It has been estimated that, with the channel held by revetted banks, there would be available for agricultural purposes in the bottom land along the river between Kansas City and St. Louis 500,000 acres, the greater part of which would be less than a mile distant from the river, and a considerable portion of which is now necessarily nonproducing. It is claimed that this area would contribute very substantially to the river traffic.

16. Interested parties invite attention to the readjustment of transcontinental railway rates that is being made as a result of traffic through the Panama Canal. The effect of these changes is to give pronounced advantage to Eastern seaboard industries for the Pacific coast trade, and thus to handicap the interior manufacturers, and it is claimed that their only hope of retaining a competitive position is in having the benefit of cheap water routes to the sea. An improved channel in the Missouri would connect with the effective channel already provided in the Mississippi and give such a route from Kansas City to the Gulf of Mexico.

17. Among the indirect benefits to be anticipated from the improvement of the Missouri River are: (1) The revetment of the caving banks will give security to adjacent lands, which can then be protected from overflow by the construction of levees, thus adding materially to the value of land and to the area of production, with a corresponding increase of commerce. Already in some of the protected territory local levee districts have been organized and are in successful operation. It has been stated that the general formation of levee districts is awaiting only the assurance that the improvement of the river will be continued. There is now a decided feeling of unrest and anxiety as a result of the present investigation. (2) The confinement of the river to a fixed channel as contemplated by the project results in the reclamation and upbuilding of new lands that within a few years will become available for agricultural purposes. This will further increase the amount and value of property adjacent to the river as well as the amount of prospective commerce. (3) It is well known that the Missouri River carries large quantities of silt into the Mississippi River, resulting in injury to the navigation of that stream. The silt comes largely from the caving banks. The revetment of these banks and the fixation of the channel will reduce the amount of this material.

18. The board agrees with the district officer that up to this time experience in the United States on some other improved rivers, and particularly on the Mississippi, has not been such as to encourage the expectation that a river traffic will develop commensurate with the large cost of improvement. It would be difficult indeed to find economic justification of the cost of the improvement of the Missouri River from past experience on other waterways in this country having similar conditions. There is now, however, a renewed interest in river transportation, and steps are being taken at a number of places on the Mississippi and its tributaries to provide terminal facilities and establish boat lines. The Government itself has undertaken an extensive program of improvement on the Ohio and Mississippi and on this section of the Missouri to develop the possibilities of such inland water transportation. The board believes that the commercial interests at stake and the benefits to be secured are sufficient to warrant the continuance of such work on those main streams as will afford a thorough opportunity to test their usefulness as transportation routes.

19. The United States embraces within its limits widely varying conditions of soil and climate, with farm, mine, and forest products of all kinds. Each section has some special advantage in the production of at least one of the articles required in civilized life. To attain the maximum benefit from these conditions it is essential that the means of intercommunication and distribution shall be fully developed, so that producers and consumers may be served at a minimum of cost. Both railways and waterways are needed. Each class of transportation has a sphere of its own. Destructive competition between them is uneconomical and wrong. In the more thickly settled parts of the country both now flourish even on parallel lines. It is uncertain whether this condition is as yet possible in the Missouri Valley. Its inhabitants claim that it is. This waterway lies in a direct path of traffic, and a well-organized freight-carrying line operates on it. When equally efficacious and up-to-date water transportation lines shall have been established on the Mississippi River it seems beyond reasonable doubt that the commercial possibilities of these streams will be utilized to advantage. The testimony given to the board and appearing in the record of the public hearing shows potent causes for the decline of river traffic entirely apart from the true relative costs of transportation by rail and water. Changes of law have eliminated some of these causes, and it is claimed that the operations of the Kansas City-Missouri River Transportation Co. give promise that the remainder will disappear and that through such agencies the much-to-be-desired problem of minimum cost of transportation by water and rail will receive a definite solution.

20. A review of the entire situation indicates that the present grounds for continuance of this project are stronger than those which led to its adoption. The board therefore concludes that it is advisable for the United States to continue the improvement of the Missouri River between Kansas City and the mouth in accordance with the existing project.

For the board.

W. M. BLACK,
Colonel Corps of Engineers,
Senior Member of the Board.

REEXAMINATION OF MISSOURI RIVER FROM KANSAS CITY, MO., TO THE MOUTH.

WAR DEPARTMENT,
UNITED STATES ENGINEER OFFICE,
Kansas City, Mo., April 22, 1915.

From: The District Engineer Officer.
To: The Chief of Engineers, United States Army
(Through the Division Engineer).
Subject: Reexamination of project, Missouri River, Kansas City to mouth.

1. In compliance with instructions contained in department letter dated March 18, 1915, I submit the following report, giving my general views on the question of the modification or abandonment of the project for the improvement of the Missouri River from Kansas City to

the mouth. This report is called for by section 14 of the river and harbor act approved March 4, 1915.

2. The project for this improvement was adopted by Congress July 25, 1912, in the following language:

"Improving Missouri River, with a view to securing a permanent 6-foot channel between Kansas City and the mouth of the river, in accordance with the report submitted in House Document No. 1287, Sixty-first Congress, third session, and with a view to the completion of such improvement within a period of 10 years, $800,000: *Provided*, That cooperation from the localities benefited may be required in the prosecution of the said project in case any comprehensive plan is hereafter adopted by Congress for an apportionment of expense generally applicable to river and other projects in which any improvement now or hereafter adopted confers special or exceptional benefit upon the localities affected: *Provided further*, That nothing herein contained shall postpone the expenditure of the amount hereby appropriated or any further appropriation for said project without action by Congress."

However, the first appropriation for the work was made June 25, 1910, in the following language:

"Improving Missouri River, with a view to securing a permanent 6-foot channel between Kansas City and the mouth of the river, $1,000,000: *Provided*, That the Secretary of War shall appoint a board of three officers to further consider and report upon the most economical and desirable plan of securing such channel, in which report consideration will be given to the subject of cooperation on the part of local interests in the work of said improvement: *Provided further*, That the report hereby authorized shall be submitted to Congress on or before the opening of its next regular session."

3. The appropriations and allotments made for this project are as follows:

June 25, 1910	$1,000,000
February 27, 1911, authorized Aug. 24, 1912, appropriated	600,000
July 25, 1912	800,000
Mar. 4, 1913	2,000,000
Oct. 2, 1914	850,000
Mar. 4, 1915	1,000,000
Total of six appropriations	6,250,000

It will be noted that the appropriations have been made at about half the rate mentioned in the act adopting the project.

4. The expenditures to March 4, 1915, were $3,577,290.85, consisting of $3,286,082.59 for improvement and $291,208.26 for maintenance. It is estimated that the project is about 9 per cent completed. There have been large expenditures for plant since the inception of the project, and for that reason and on account of the lack of appropriations at the proper rate, the amount expended and the percentage completed appear out of proportion. But it has been demonstrated that the work can be done within the estimated unit cost, and it is my opinion that with appropriations at the rate of $2,000,000 per year for improvement and sufficient funds for maintenance the project could be completed within the total estimated cost.

5. The cost of maintenance after completion of the project is estimated at $500,000 per year. The maintenance work, including snagging, is now costing about $100,000 per year. It will gradually increase as the work progresses. If appropriations are continued at the rate of about $1,000,000 per year, and the maintenance increases from $100,000 to $500,000 per year, averaging $300,000 per year during the execution of the work, it is plain that over 20 years from this time will be required to complete the project.

6. I consider that the question of modifying or abandoning the project is one to be decided by a comparison of the cost involved with the benefits derived. Assuming the money of the Government to be worth 3 per cent interest, the total estimated cost of the project represents $600,000 per year interest. Adding the maintenance cost of $500,000 per year gives $1,100,000 per year as the permanent charge to the Government resulting from the execution and maintenance of this project.

7. The benefits derived are represented by the increased facilities for navigation. There are other incidental benefits, such as the protection of lands from erosion and the amelioration of flood conditions, but these have not been recognized as proper objects of Government expenditure on the Missouri River and are therefore not considered in the analysis.

8. The commerce to be considered is present and prospective, and the advantages that commerce will obtain from the improvement are the actual saving in freight charges by the use of the river and the effect on railroad freight rates produced by the possibility of water transportation.

9. The commerce for the calendar year 1914 is not yet fully tabulated. For 1913 it was as follows:

Articles.	Amount. Customary units.	Amount. Short tons.	Valuation.	Average haul.	Rate per ton mile.
				Miles.	
Grain	253,940 bushels	6,701	$195,303.38	123	$0.0091
Hay		114	2,049.66	106	.0156
Feed and flour		334	9,538.88	8	.0670
Oil	46 barrels	12	345.00	8	.0483
Manufactured iron and steel		1,655	897,790.50	291	.0089
Live stock	4,800 head	945	137,039.20	31	.0403
Salt	148 barrels	22	259.00	9	.0510
Sand and gravel	1,735 cubic yards.	2,513	1,646.00	9	.0557
Brick	4,800	16	56.90	9	.0349
Cement	534 barrels	107	1,152.90	26	.0346
Lumber	75,360 feet b. m	183	2,976.60	13	.0333
Other building material		15	1,088.00	10	.0415
Railroad ties	128,908	16,312	62,697.50	14	.0085
Produce		196	22,370.40	125	.0114
Wood	591 cords	847	2,135.60	9	.1002
Miscellaneous		13,579	2,520,734.80	237	.0093
Logs and lumber rafted	43,000 feet b. m	107	473.00	150	(1)
Sand and gravel barged	238,136 cubic yards.	309,577	71,555.00	1	(1)
Total		347,235	3,929,212.32		

[1] Owner.

10. The items that are not benefited by improvement of the river are the sand and gravel barged and the logs and lumber rafted. They amount to 309,684 tons. Ferry traffic is not counted in reporting the commerce on the Missouri River.

11. Eliminating the logs and the sand and gravel barged, the remaining traffic is 37,551 tons, divided into classes which are carried over average distances of from 8 to 291 miles. The total freight charge on this traffic was about $41,000. The Kansas City-Missouri River Navigattion Co., the only through line on the river, operating between Kansas City and St. Louis, charges 80 per cent of the railroad freight rates. Assuming this to be the relation between the rail and water rates for the entire traffic, the saving to shippers by the use of the river in 1913 was about $10,000. It is evident that this saving is entirely inadequate to warrant the serious consideration of an expenditure by the Government of $1,100,000 per year in interest and maintenance.

12. The reduction in rail rates resulting from the possibility of water transportation is not a simple subject. There is no question that towns having water transportation are for that reason favored with lower rates than other places having no water transportation and requiring equal rail haul. It is my understanding that this condition is recognized by the Interstate Commerce Commission. It is frequently argued that if the improvement of a river gives lower rail rates such improvement is justified even if the river never carries a ton of freight. This might be true if there were no other method of controlling rail rates, but in these days, when the railroads claim that they are being regulated too much, there appears to be no lack of governmental machinery for controlling them, and it does not seem necessary to spend $20,000,000 to bring about a proper rail rate between Kansas City and St. Louis.

13. In some cases the improvement of a stream is justified, even at high expense, where the absence of rail transportation leaves the territory along the stream entirely dependent on water transportation. This is not the case with the Missouri River between Kansas City and the mouth. Over a great part of the distance the river is paralleled with railroads on both banks, and there are few localities that have no railroad within easy reach.

14. There remains to be considered the question of prospective commerce, and in my opinion the improvement must stand or fall by this criterion. In the survey report upon which the present project is based, the prospective commerce was given by the president of the Missouri Valley River Improvement Association as 1,000,000 tons. (See H. Doc. No. 1120, 60th Cong., 2d sess., p. 45.) That estimate was based upon a 10-foot channel, with six or seven boats especially adapted to the navigation of the Missouri River, handling cargoes of 2,000 tons each, and making one round trip per week during a navigation season of 10 months. The fact is that anyone can make almost any estimate he sees fit as to the prospective commerce. I think a better way to approach the subject is by inquiry concerning a river that has been improved. An example is the Mississippi between the mouth of the Ohio and the mouth of the Missouri. In the annual reports of the Chief of Engineers this stretch of river is reported as having a navigable depth of 6 feet or more during the entire navigation season of recent years. The commerce for the calendar year 1913 was 258,709 short tons, not including sand and gravel or ferry traffic. It should be noted that this stretch of river is so situated as to draw commerce from the improved stretches of the Mississippi above and below it as well as from the Ohio and the Missouri. If the Mississippi under these conditions and with a 6-foot channel carries 258,000 tons, it seems to me doubtful whether the Missouri with the same depth will carry any more. The Missouri River traffic would have to increase sevenfold to equal that on the above section of the Mississippi, and would have to increase a hundredfold to reach a figure commensurate with the cost of the work.

15. From the foregoing considerations I am of the opinion that the present and reasonably prospective commerce on the Missouri River between Kansas City and the mouth is not sufficient to warrant the continuance of the present project. I think the snagging should be continued, so that commerce may have the advantage of the natural depth of the river and the river shall not be allowed to become entirely obstructed. Any attempt at partial improvement seems futile, because the draft of boats, and therefore their cargoes, will be determined by the least existing depth. If the river is improved at all, the work should be complete as to protection of banks and control of channel. For the same reason it seems to me injudicious to spend any money in keeping up the works already built. If in another generation the improvement of the river becomes advisable, the present works will be of little value, and in the meantime the channel depth in the portions that have been improved are not likely to be less than in the portions wholly unimproved.

16. It is to be noted that these views agree in many respects with the previous attitude of the Engineer Department, as expressed by the Board of Engineers for Rivers and Harbors June 8, 1908, and by the Chief of Engineers December 2, 1908, in action on survey report published in House Document No. 1120, Sixtieth Congress, second session. The views of the board as to the futility of partial improvement and the wastefulness of inadequate and irregular appropriations are of particular interest. The Missouri River Commission in its final report also expressed the opinion that there was no middle course between mere snagging and thorough systematic improvement.

17. I recommend that the present project be modified so as to provide for snagging alone at an estimated cost of $40,000 per year, and that all other work be stopped.

HERBERT DEAKYNE,
Lieutenant Colonel, Corps of Engineers.

[First indorsement.]

OFFICE DIVISION ENGINEER, WESTERN DIVISION,
St. Louis, Mo., May 22, 1915.

To the CHIEF OF ENGINEERS, UNITED STATES ARMY:

1. Forwarded, concurring in the opinion of the district officer that the existing river commerce is not sufficient to justify the permanent improvement of the Missouri River from Kansas City to its mouth, but not approving the recommendation that the work should be entirely abandoned.

2. It is believed that there is still opportunity for the revival of western river commerce, but that it should first be sought not in the tributaries but in the main river. There is neither the density of population nor of material seeking shipment on the tributaries of the Mississippi, with the exception of the Ohio, to cause such a revival which will be in the nature of a revolution of the existing methods of transportation and will naturally originate at large centers of population, such as Chicago, Pittsburgh, St. Louis, and New Orleans, where large amounts of manufactured products are seeking shipment.

The agricultural products originating on a river bank are not sufficient to justify a large expenditure for the improvement of the river channel. With a revival of commerce on the main stream its extension to the tributaries will gradually follow.

3. The fact, however, that there has been a failure to properly utilize the improved channel that has been maintained during the past 10 years from St. Louis to New Orleans should cause Congress to hesitate before continuing the large appropriations it is making for the western rivers.

4. In the opinion of the division engineer, the problem of developing our western rivers should be treated as a single one. Instead of scattering appropriations over the entire western territory a channel of 8 or 9 feet depth should first be provided from Chicago to New Orleans and the offer of assistance in the construction of a canal along the Des Plaines River from the State of Illinois accepted. An opportunity should then be afforded the American people to determine whether they want waterways not by rhetorical efforts in river conventions, but by a practical utilization of the channel thus afforded. Until such revival occurs appropriations on the tributaries should be confined to maintaining the existing status. The existing works should not be allowed to deteriorate. At present an annual appropriation of $150,000 for snagging and the maintenance of existing works is therefore recommended.

C. McD. TOWNSEND,
Colonel, Corps of Engineers.

Mr. HUSTING. I want to read and comment on these reports as I go along. I want to show, and I think I can, from these reports, from the admitted facts, that the statements made by Col. Deakyne are substantially correct and his conclusions and recommendations sound. I further want to show that in all respects incident to this controversy the reports of Gens. Black and Deakyne are in accord. They only differ as regards the conclusions drawn and recommendations made, and in this respect I believe all fair men will agree that the report of Col. Deakyne is correct and convincing and in accord with sound public policy. I want to submit his reasons and the reasons of the other colonels and generals in the premises, so that the Senate may decide which of the two findings is the sounder and more in consonance with the facts.

In order to know whom we are dealing with here, I have received the information from the War Department, in substance, as follows:

Lieut. Col. Deakyne spent three and a half years in charge of the work on the Missouri River. He went to Kansas City in the summer of 1912. His term of four years would have expired in the summer of 1916. March 15, 1915, he applied for a place in the War College. This was granted in April, 1915; and after he had taken a preparatory course it was expected that he would return to the Missouri River. In the meantime he made his adverse report on the Missouri River project, and then another man was sent who came home from the Philippines. This man, Col. Mackindoo, was put in his place upon the Missouri River project.

Col. Townsend, who indorsed Col. Deakyne's report, is the chief engineer in charge of the entire western division, which includes the Mississippi and all of its western tributaries. Col. Townsend first reported as chief engineer at St. Louis on October 1, 1912. He has been in charge of all of the works carried on on the rivers in the western division since that time, and he is still in charge. He has been in charge nearly four years.

Now come the two officers who had no experience on the Missouri River:

Gen. Kingman never worked on the Missouri River. His work on western rivers consisted of four or five years spent on the extreme lower Mississippi away back in the eighties. At that time he was stationed at New Orleans.

Gen. Black never worked on either the Mississippi or the Missouri River. All he ever had to do with this system was an instruction tour which he took down the Ohio River in 1881 immediately after his graduation. This was a tour principally to be instructed in engineering conditions given young engineers after completion of their college course. Gen. Black has done most of his work in the East, and his headquarters most of the time have been on the Atlantic seaboard.

So we find that the only two officers who have been upon the ground and know this river are Col. Deakyne and Col. Townsend, and Col. Townsend is still there, in charge of that division. Col. Deakyne has been removed from the scene of his activity, notwithstanding his three and a half years' experience on the Missouri River, and has given way to a man who came from the Philippines.

Gen. Kingman, who was Chief of Engineers before Gen. Black, has never worked on any of these rivers in that part of the country except on the Mississippi away back in the eighties, 30 years ago, and Gen. Black has never worked either on the Mississippi or on the Missouri. So, as to the condition of the river, I do not think anyone will dispute for a moment that Col. Deakyne and Col. Townsend know that project better than these other gentlemen who presume to overrule them.

It is true they did have a hearing. It is contained in this book, House Document No. 463, Sixty-fourth Congress, first session; but the hearing they had there was principally the hearing of members of societies, business men, and in particular the hearing of a certain transportation company that seems to be quite interested in this project. I guess there was some examination of the river made, but it must have been a purely superficial one, because there is no pretense that I know of that they spent any number of months or years in making this investigation which resulted in the turning down of Col. Deakyne's report.

What do these reports show? I will take up the principal one. That is the one signed by W. M. Black. That was approved by Dan C. Kingman, Chief of Engineers. Gen. Black was the man at the head of the Engineer Corps at this time. It is all printed. I may not read all of it, but I wish to read all that has any particular bearing on this proposition.

After stating that this was with a view to modifying or improving the project or abandoning it, the report goes on:

The existing project was formally adopted by the act of July 25, 1912, although the first appropriation was made by the act of June 25, 1910, as explained by the district officer. The project provides for securing a permanent channel 6 feet deep between Kansas City and the mouth, at an estimated cost of $20,000,000, to be completed, except for maintenance, in 10 years. The work includes the removal of snags and the regulation and contraction of the channel by means of bank revetment and dikes. The estimated cost of the maintenance of the completed project is $500,000 per year.

Five hundred thousand dollars at 3 per cent would be $5,000 more than the amount of saving on the commerce, as found by Col. Deakyne, and this is only for the cost of maintenance. This does not take into consideration the 3 per cent on the $20,000,000 that is going into this project.

I continue reading:

There has been appropriated or allotted for this work a total of $6,250,000 in six years, or at the rate of a little more than $1,000,000 a year, while the project calls for $2,000,000 a year. The expenditures to March 4, 1915, were $2,577,290.85, of which sum $291,208.26 were applied to maintenance and about $597,000 were used in procuring suitable plant. Experience leads the district officer to believe that the project can be completed at the estimated cost, if appropriations are made at the rate of $2,000,000 a year for construction with sufficient amounts for maintenance, but that at the present rate it will require over 20 years to finish the work.

Now, here come some facts, found in this report, which are the foundation of the report of Col. Deakyne; and I am going to read them to show that they are absolutely identical, although there is a mistake here in subtraction of a fraction of a thousand tons. This is what is said by Gen. Black, who was eulogized here by the Senator from Missouri [Mr. REED]:

The commerce for 1913 is reported as amounting to 347,235 tons, of which 309,684 tons consisted of sand, gravel, and logs, reported as not being benefited by improvement, leaving 37,537 tons of water-borne commerce affected by the project.

In this connection Lieut. Col. Deakyne said:

The items that are not benefited by the improvement of the river are the sand and gravel barged and the logs and lumber rafted. They amount to 309,684 tons. * * * Eliminating the logs and the sand and gravel barged, the remaining traffic is 37,551 tons.

Where is the discrepancy between those two reports on the facts? There is not only no discrepancy, but they both agree on the amount that should be deducted, and both agree that the balance is 37,537 tons of water-borne commerce affected by the project—exactly the figures arrived at by the much-abused Col. Deakyne and Col. Townsend—except that Col. Deakyne put it 14 tons more, so that instead of overstating it he understated it. That is to say, he gives them credit for more tons of commercial tonnage, by 14 tons, than Gen. Black did; but his figures are correct, because a mistake in subtraction was made by Gen Black, or at least that appears from the report.

Now we have that established. We have established that in 1913 there were only 37,551 tons of water-borne commerce affected by the project. We have the statement by Gen. Black that it is going to cost $20,000,000 to finally complete that project. We have the statement by Gen. Black that it is going to cost $500,000 a year to maintain it. Take 3 per cent interest on $20,000,000, and you have $600,000, to which you add the $500,000 which is the estimated annual cost of maintenance, and you have a project that is going to cost the United States $1,100,000 a year to save somebody $10,000 a year. That is all I asserted that the Deakyne report said or claimed; and here it is absolutely verified and substantiated by the Black report.

The district officer analyzes the project on the basis of cost and benefit, and expresses the opinion that present and reasonably prospective commerce is not sufficient to warrant its continuance. He repeats what has been stated in former reports, that any attempt at partial improvement will be futile, and if the river is improved at all, the work should be complete as to the protection of banks and control of channel. He believes that snagging should be continued, and recommends that the present project be modified so as to provide for snagging alone, at an estimated cost of $40,000 per year, and that all other work be stopped.

Gen. Black continues and says:

The division engineer—

That is, Col. Townsend—

is in accord with the district officer as to the discontinuance of the present project for permanent work, but believes that the work already done should not be completely abandoned. He recommends an annual appropriation of $150,000 for snagging and the maintenance of existing works.

After stating that a number of communications were received, requests for hearings made, and a personal examination made from Kansas City to Washington, a distance of about 320 miles, and after stating that the hearing was attended by a large number of deeply interested persons, and that a record of the hearing is appended to the report, he goes on to say:

The method of improvement under the present project is the result of many years of experimental work at considerable cost. The simplest and most inexpensive structures were first tried and gradually, through experience, these were modified and strengthened, resulting finally in a standard form that with slight changes has been followed in recent years with a reasonable measure of success.

He states there that they started in wrong, and that they have finally gotten into something now which promises some success.

It is believed that the systematic application, under adequate appropriations, of the general principles and methods followed under the existing project, with such modifications of detail as further experience may develop will result in a continuous and permanent channel 6 feet or more in depth.

Well, Col. Deakyne never denied that they could dig that channel 6 feet deep all the way up. Of course, it can be done if they want to expend the money. Why not?

The report then goes on to say how a shallow-draft dredge may be used and that the existing project is sufficiently elastic to permit such minor modifications with the approval of the Chief of Engineers.

It has often been reported—and the board desires to repeat here—that any project of less scope would be inadequate to secure a permanent 6-foot channel, and if any improvement is undertaken, aside from snagging, it should be under the present plan of complete improvement, at a probable total cost of not less than $20,000,000.

Here it seems that they are not sure that that is all that it is going to cost. The report says that it will be completed at a cost of not less than twenty million. Where is the limit? That is only the minimum cost. For all that appears in this report the deep blue sky may be the limit in the game of improving this river.

Now, going on further, paragraph 9 says:

A matter considered of great importance in connection with the present investigation is the existence of the recently organized Kansas City (Mo.) River Navigation Co.

The representatives of this navigation company, as was perfectly natural, appeared before the Board of Engineers and were quite active in producing the facts as they saw them to the Board of Engineers. Now, I want to call the attention of the Senate to one peculiarity of this report, and that is that in stating the facts I do not believe you will find anywhere a statement of the facts on the part of the makers of these reports. Where they make any statements as to facts they quote somebody else or say "it is claimed" or "it is said." In reading this report I want to call attention to this proposition, to show that the Board of Engineers are not responsible even for some of the facts which they lend some color to by saying "it is claimed" or "it was said."

Here we start in:

It is claimed by those interested that the incorporation and operations of this navigation company were undertaken as the result of an understanding with the Rivers and Harbors Committee of the House of Representatives, that the project for the improvement of the Missouri River from Kansas City to the mouth would be adopted and vigorously prosecuted under adequate appropriations, provided the locality first show its faith in the importance and necessity for the improvement by the expenditure of its own funds in the actual establishment of commerce on the river. Navigation was commenced in 1911, with certain plant secured by purchase, and at the same time it was decided to investigate the types of boats best suited to successful and economical use on the Missouri River. The services of experts were secured and careful study of navigation on shallow-draft rivers was made, resulting in the adoption of the towboat and barge method of navigation with improved steel vessels of fireproof construction and suitable size, draft, and motive power for the Missouri River. These investigations have been carried on at considerable expense and have far more than local value, as they contribute very substantially to the solution of the important problems of economical transportation on this and other inland waters of the United States. The company is satisfied with the progress made, and it proposes to continue the investigations and study, with its increasing activities, and to utilize the results in the construcion of additional plant from time to time. The results of these investigations are furnished without charge to other cities contemplating the establishment of transportation lines.

The company has taken steps to remedy certain conditions that have contributed largely to the decline of river transportation. It has secured the establishment of terminal facilities at Kansas City and at East St. Louis, having rail connection at both places and mechanical devices for the transfer of freight. It has entered into joint traffic arrangements for the interchange of freight with connecting carriers, both rail and water, and is now handling commerce on through bills of lading. It receives and delivers goods in cars on shippers sidings, paying switching charges within certain limits, transferring to and from the boat, assuming carriers' risk in lieu of marine insurance, and transporting between terminals, all at a rate of 80 per cent of the corresponding rail rate.

It is a saving, as was shown by the Deakyne report, of 20 per cent.

The present floating plant consists of 1 steel packet boat, 2 steel towboats, and 12 steel barges. These barges are of varying sizes, the larger ones, provided with steel fireproof, weatherproof, and locked deckhouses, being used for through commerce, and the smaller for either through or local business, in the latter case the barges being left at way landings for loading, and being picked up by the next boat up or down, depending upon the destination of the cargo. So far the traffic receipts of the company have not fully covered operating costs, but the company has been operating on an unimproved river and building up a traffic in face of considerable difficulties. It claims to have demonstrated that the traffic will be eminently successful on an improved river.

I think that is pretty nearly all the evidence there is in this case showing that we are going to have improved commerce—that this transportation company claims to have demonstrated that the traffic will be eminently successful.

Gen. Black does not say, as was subsequently said, that it was shown to this board that commerce would be increased. He only claimed it to have been demonstrated, not to the satisfaction of a committee, but to the satisfaction of the transportation company itself, that the traffic is going to increase.

This year, 1915, up to October 1, freights collected would have more than covered operating costs had not a barge been accidently sunk at its East St. Louis wharf.

They would have done a successful business if they had not lost a barge. Certainly the profits of a great transportation company would not depend upon the loss of one barge. We do not know how big it was, we do not know how much it cost, but one barge went down, and they came out financially on the wrong side of the ledger because one of the barges went down.

This company is making the most thorough attempt within the knowledge of the board to revive a river traffic that had disappeared under railway competition. It appears to be sparing no expense or effort that will contribute to the solution of this problem, and it claims as a result of its experience that success is attainable if a permanent 6-foot channel is provided. A continuance of the experiment under as favorable river conditions as can be secured is worth much to the United States, and should go far toward showing what are the real possibilities in this important field of the transportation problem in this country.

Now listen to the commerce this great transportation company has done at the end, I think, of its third year's experience:

The commerce handled by this company is still comparatively small, but has been increasing rapidly since its organization. During the current year, up to October 1, it amounted to 27,306 tons, and it is expected that by the end of the navigation season it will be somewhat in excess of 33,000 tons, or about two and one-half times the amount in 1914.

If 33,000 tons is two and a half times the amount it was in 1915, then the amount in 1913 must have been about 12,000 tons—hardly enough to run a respectable train a week.

This does not include the traffic carried by local boat lines operating at different points along the river, independently of the Kansas City (Mo.) River Navigation Co., which amounted to about 27,000 tons in 1913.

I do not know what is the carrying capacity of a full train. I should say on a rough estimate, with the capacity per car at 40 tons, an average trainload is about 3,000 tons. So, for the whole traffic on the Missouri River, even with the aid and assistance of the Kansas City (Mo.) Transportation Co., the traffic would not, under their own figures, keep one train a day running for seven days in the year. In other words, it would not keep a railroad busy half a day to transport the entire commerce they have had down the river in an entire year.

Now, what effect can that have on railroad transportation when they can not consume a day on any railroad of respectable importance in the way of carrying their load? Now, it goes on:

It is difficult to determine what may be the future water-borne commerce of this river, and neither the past nor the present volume should in fairness be used as a measure of what to expect in the future. The improvement so far effected in the channel is sufficient to show what can be done by the engineering methods adopted, but, excepting in the removal of snags, it has not progressed far enough to afford a very material betterment of channel depths, excepting in disconnected improved sections.

We spent, I do not know how much—the Senator from Missouri said something like $6,000,000—and here they say, at the expense of some millions of money, it has only gone far enough to remove snags, and snags, I understand, are logs or something that projects above the waterline of the channel that may interfere with the passage of a boat.

But, excepting in the removal of snags, it has not progressed far enough to afford a very material betterment of channel depths, excepting in disconnected improved sections. The boats can not be loaded to their full capacity, and even light find difficulty at many shoal crossings. Schedule time can not be made and delays in delivery have tended to discourage shippers. Notwithstanding this, there is apparent an enthusiastic determination on the part of the navigation company and

of the shippers to push their present endeavors to a successful conclusion, provided the United States continue the work of improvement under the existing project. Many individual shippers at Kansas City have given evidence that they intend to patronize the boat line as far as practicable and that the extent of water-borne traffic will be in proportion to the amount of work done by the United States in the betterment of channel facilities.

What great assurance is that when they state that individual shippers say that they intend to patronize a boat line as far as practicable? That is what they are doing now; they are patronizing it as far as practicable now, and they promise to do no more and no less. In other words, if it can be shown to them later that they can move their material over that river better than they can on the railroads it is then practicable for them to give them some tonnage, but if not they will continue to use the railroads.

It is claimed that benefit has already been felt from the work done, and that each bend revetted adds to the safety and reliability of navigation.

A little while ago the report said that there was not enough done to show any substantial benefit. Here it is claimed that benefit has already accrued.

I was just calling attention to the words "it is claimed," because this Board of Engineers was assigned the duty of gathering facts, not words; not claims, but facts. Why do they come here and say it is claimed without assuming any responsibility for the truth of the statement?

A number of individual shippers appearing at the hearing stated the amount of commerce that they would offer the boat line under improved river and transportation conditions. These were selected as representing different industries and lines of business, in which there are many other prospective shippers. Several of these shippers emphasized the fact that high-grade freight has been carried by the navigation company with less damage in transportation and handling and less loss from pilfering than they have experienced with rail shipments. The navigation company attributes these conditions to its fireproof and locked freight houses on the barges. It is claimed that with the improved methods of interchange of freight between rail and water, commerce originating west of Kansas City and destined for St. Louis or points still farther east, as well as that originating east of St. Louis and destined for Kansas City or points beyond, can be handled advantageously by the navigation company. Some business of this character has already been done, and the evidence points to its increase. The amount that may be handled in this way is purely conjectural, as the method is as yet experimental and in its infancy.

After expending the sum of seven hundred and fifty or eight hundred million dollars in this country for river and harbor improvements the engineer says this "method is as yet experimental and in its infancy."

He says of the freight traffic between Kansas City and St. Louis:

But it is known that the total tonnage moving through this territory is very large.

I believe somewhere there appears in the record the amount of tonnage that passes between Kansas City and St. Louis on railroads that could not have cost anywhere near for that distance what has been already expended on and about the Mississippi and Missouri to help the river business along.

There have been presented to the board statistics of production and consumption of the territory tributary to the commercial center formed by Kansas City to show that the existing means of rail transportation are already fully utilized and that in the near future they will be unable to meet traffic requirements, if such be not the case to-day. It is claimed that soon additional highways of commerce will be a necessity. The report submitted * * * shows that the cost of construction and maintenance of one additional single-track road is quite comparable with the estimated amount required to complete the present project and to maintain the improved channel, while manifestly the carrying capacity of the improved waterway is vastly greater.

Now, let us consider this statement of Gen. Black. That report shows that a single track, as I understand it, from Kansas City and the maintenance of it will not cost any more than the improvement of the Missouri River. Their only argument is that they can carry more on the water than they can on this one track. It is not shown that they can carry it as cheap; they do not show that they can afford to do business as cheaply as the railroads.

Here is something that it seems to me is entirely aside from the main question:

It has been estimated that, with the channel held by revetted banks, there would be available for agricultural purposes in the bottom land along the river between Kansas City and St. Louis, 500,000 acres, the greater part of which would be less than a mile distant from the river, and a considerable portion of which is now necessarily nonproducing. It is claimed that this area would contribute very substantially to the river traffic.

Now, here is the milk in the coconut. About all that Gen. Black can see in this improvement that is going to cost us this $20,000,000 is that it is going to reclaim 500,000 acres of land. Here is the theory. There are 500,000 acres of land that are not producing. In fact some of the reports a little later on show that the river washes the ground away and destroys the land. There are 500,000 acres lying on the banks of the river not fit for anything. We have a river that we need for navigation.

In order to do that we are going to spend most of this money in revetting. It is to build revetment work along the bank to hold this land from washing away. Then, when we get the revetting done, we have confined the land so as to prevent it from floating away. It is going to turn it into farm lands, it is going to raise crops, and that is the material that is going to be shipped down the river. That is the reason why you want to spend $20,000,000. Of course incidentally the project will reclaim rich land—500,000 acres—for some thrifty souls living along the shores, for some persons interested in these lands financially.

Mr. President, this proposition has not any place in a river and harbor bill. This is not a reclamation bill. It is supposed to be a river bill for the benefit of navigation, not for the benefit of land, not for the purpose of increasing the value of land. That is another story and another proposition.

Interested parties invite attention to the readjustment of transcontinental railway rates that is being made as a result of traffic through the Panama Canal.

Is that to put us on our guard? Is it to show that the Board of Engineers had no faith in their statements that they did not adopt it as their own? They say:

Interested parties invite attention to the readjustment of transcontinental railway rates that is being made as a result of traffic through the Panama Canal. The effect of these changes is to give pronounced advantage to eastern seaboard industries for the Pacific coast trade, and thus to handicap the interior manufacturers, and it is claimed that their only hope of retaining a competitive position is in having the benefit of cheap water routes to the sea. An improved channel in the Missouri would connect with the effective channel already provided in the Mississippi and give such a route from Kansas City to the Gulf of Mexico.

That involves a fallacy, as I understand it. The Interstate Commerce Commission has not adopted the theory that railroads can charge as much for a longer haul as for a shorter haul just because it is going to compete with water transportation. We have an Interstate Commerce Commission that exists for the purpose of fixing rates. Here are people living in the Mississippi Valley who want to ship goods to the western seaboard. I do not think, if this Interstate Commerce Commission is the commission that it purports to be, that it is going to permit a carload to be shipped from New York City or Philadelphia or Boston or any of those places to San Francisco, and where the material goes through Kansas City and St. Louis, and permit a charge less per ton for that haul than it provides for the people of St. Louis and Kansas City, through whose cities the tonnage goes. I should think that they have an advantage over the eastern shipper when they are half way across the continent, or a third of the distance, at any rate, and they have the chance to ship their goods to the seaboard cheaper, if the Interstate Commerce Commission does its duty, than the men in the East.

Now we come to the supposed benefits stated by Gen Black:

Among the indirect benefits to be anticipated from the improvement of the Missouri River are: (1)—

Now, what do they place first as the first benefit?

The revetment of the caving banks will give security to adjacent lands, which can then be protected from overflow by the construction of levees, thus adding materially to the value of land and to the area of production with a corresponding increase of commerce.

The first benefit that we are going to get from this is the reclamation of some land, by revetting the banks and preventing them from washing away. Why do we want to save this land? Why do we want to reclaim this land? Why, to furnish commerce for the boats that are going to run on there after the land is saved; and for this revetment we are to expend $20,000,000. The first benefit we are getting is the reclamation of the land. Why is that the first, when we are talking about navigation?

So it appears from this report that this is a reclamation scheme, not a river and harbor bill. It appears that the first material benefit is to save these 500,000 acres of land.

Now, going further:

Already in some of the protected territory local levee districts have been organized and are in successful operation. It has been stated that the general formation of levee districts is awaiting only the assurance that the improvement of the river will be continued. There is now a decided feeling of unrest and anxiety as a result of the present investigation.

The people are growing restless there because they are afraid their lands are not to be reclaimed. He says:

Already in some of the protected territory local levee districts have been organized and are in successful operation.

Levee districts for what? Levee districts for the reclamation of lands. And the people are getting restless and uneasy because they are afraid that the appropriation is going to be cut off. They are not restless or anxious because they are afraid the navigation is going to be halted. They are not anxious and restless because they are afraid that they can not ship their

goods down the stream. No; they are anxious and restless because they are afraid their swamp lands are not going to be reclaimed and that their lands will not increase in price, lands the owners of which, if they are reclaimed, will go to some railroad station two miles from the banks of the river and ship their goods by railroad instead of shipping down the stream.

Have any bonds been given whereby the owners of these 500,000 acres of land are going to take their products down the stream after they get their lands improved? That is the first benefit to be derived, says Gen. Black.

Now, what is the next?

(2) The confinement of the river to a fixed channel as contemplated by the project results in the reclamation and upbuilding of new lands that, within a few years, will become available for agricultural purposes. This will further increase the amount and value of property adjacent to the river, as well as the amount of prospective commerce.

They first want to save the land. That is the first consideration. Now, the second consideration, having saved the land, is to make it produce, and the additional tonnage they get from the producing land is a mere incident to the second consideration. So the first consideration is the land proposition. The second consideration is an agricultural proposition. Now, what is the third and last?

(3) It is well known that the Missouri River carries large quantities of silt—

The Missouri does not appear to be famous for anything else except carrying silt down the stream; silt that pays no tonnage, silt that is not commerce in the real sense. That is what the Missouri River is noted for, the carrying of silt. Where? Down—

into the Mississippi River, resulting in injury to the navigation of that stream. The silt comes largely from the caving banks.

The banks of this river cave in all the time. Why has it not become an ocean or a lake?

Coming back to revetment again, now—

The revetment of these banks and the fixation of the channel will reduce the amount of this material.

Why is it that in spring or in times of great freshets with the silt coming down there 600 miles above Kansas City, Mo., in the same inevitable movement that is going on all the time, that silt will not wash into the Mississippi? By constructing a project up to Kansas City they are going to cut off even the carrying of the silt and they are going to harness the banks on the western shore so that the State does not float away.

Now, let us go a little further and come to the close of this report:

The board agrees with the district officer that up to this time experience in the United States on some other improved rivers, and particularly on the Mississippi, has not been such as to encourage the expectation that a river traffic will develop commensurate with the large cost of improvement.

Col. Deakyne said that just in those words, and yet Mr. Deakyne is the man who stood embarrassed and humiliated and discredited before this august board that overruled him and turned him down and moved even the Senator from Missouri to sympathy in thinking of the pitiable sight of Col. Deakyne standing before this Board of River and Harbor Engineers. This board says what? It says:

The board agrees with the district officer that up to this time experience in the United States on some other improved rivers, and particularly on the Mississippi, has not been such as to encourage the expectation that a river traffic will develop commensurate with the large cost of improvement—

Now just note—

as to encourage the expectation that a river traffic will develop commensurate with the large cost of improvement.

They said here a little while ago, in the report as I read it, that the experience on the Missouri River did not warrant any expectation in development, or, in other words, that experience had not shown any increase in water traffic on that river. Now, let us go on a little further. This same Col. Black says:

It would be difficult, indeed, to find economic justification of the cost of the improvement of the Missouri River from past experience on other waterways in this country having similar conditions.

Then, in Heaven's name, how will we justify it if there is no economic justification for it? Is it for the health of anybody living in that section of the country? Is it for the health of the owners of those 500,000 acres? Is it for the health of the transportation company? Those words are plain. Gen. Black says—and his is the opinion of the board—that it would be difficult, indeed, to find an economic justification of the cost of the improvement of the Missouri River from past experience on other waterways in this country having similar conditions.

In other words, we have had other rivers in this country having similar conditions as the Missouri and we have improved them; we know what they have cost, and from the experience that we have had this work is not justified. Now, this is not guessing; this is not just riding up into the empyreal blue and talking about the blessings of liberty, and everything of that kind, but, judging from our experience on other rivers of a similar class as the Missouri, there is nothing found to warrant or justify us in believing that the money we are expending on the Missouri River, or will expend, is justified.

The words I have quoted are not the words of Col. Deakyne, but they are the words of Gen. Black, and they are indorsed by the men who are supposed to have humiliated Col. Deakyne and showed his ignorance on this subject; and here they are taking not only the word but the spirit of his report.

It is perhaps possible that Gen. Black and others wanted to make it as plain as it could be done, reading between the lines, that they thought Col. Deakyne's report ought to be adopted, but they lacked the courage of the Colonel to come out and say so. Of course it is hard to be brave at times. It is hard to be brave in the presence sometimes of men who have the faculty of scaring people, bulldozing them, driving them into a position that they do not think they ought to take. I do not know whether that is the case here; but how can this matter be explained—that this very Board of River and Harbor Engineers that indorses this project makes two statements that our experience on other rivers has not been such as to encourage the expectations that a river traffic will develop commensurate with the large cost of the improvement? In other words, there is no reason to expect that we are going to have increased commerce; second, we can not justify on economic grounds the proposition to expend $14,100,000 more, judging by our experience on other rivers of a similar nature.

Are we to spend $20,000,000 when those who tell us we ought to spend it accompany their recommendation with the statement that they do not believe the expenditure would be justified on economic grounds? I do not know why they did not stop right there. Rather they went right ahead and at least tried to get away from the obvious facts.

These are the reasons why they claim that notwithstanding the fact that we can not expect an increase of commerce to justify the expenditure, that notwithstanding that we are not encouraged to believe from the experience we have had on other rivers of the same kind that there is any economic justification for this expenditure, that we should proceed with this adventure. They go on to say this—and it is the gist of their report, in so far as it differs from Col. Deakyne's.

The reasons that they are giving from now on—and they are very short—are the only things that could have humiliated and abashed Col. Deakyne. I want to leave it to the Senate and to the people of the country whether they think that Col. Deakyne had the right idea and made the right recommendation or whether they find that this board, at the head of which Gen. Black was sitting, was correct. Here is the statement of Gen. Black explaining his reasons for recommending the continuation of the project:

There is now, however, a renewed interest in river transportation, and steps are being taken at a number of places on the Mississippi and its tributaries to provide terminal facilities and establish boat lines. The Government itself—

This refers to us, the country at large—

has undertaken an expensive program of improvement on the Ohio and Mississippi and on this section of the Missouri to develop the possibilities of such inland water transportation. The board believes that the commercial interests at stake and the benefits to be secured are sufficient to warrant the continuance of such work on those main streams as will afford a thorough opportunity to test their usefulness as transportation routes.

What does this mean? I can not make anything out of it except that it means that we are spending money on the Ohio and Mississippi anyway; that we are going to spend $100,000,000, all told, on the Ohio; that we are going to spend on the Mississippi many hundreds of millions; and that we should spend $20,000,000 more or less to test the usefulness of transportation routes as an experiment. That is what we are told—to invest this money on an experiment, pure and simple. If this test were going to cost several thousand dollars or perhaps several hundred thousand dollars as an experiment, we might be justified; but here this board is asking the country and Congress to experiment by putting another $14,000,000 into the Missouri River because they are also putting money into the Ohio and the Mississippi Rivers.

Why do they not wait and see whether some of this money which they have already expended—several hundred millions or so—is going to bring results commensurate with the cost? But they say this about the test in the face of what they have just stated in the same paragraph; and that is, that it would be difficult to justify this expenditure upon economic grounds. Then, upon what grounds can they justify it, even as a test, as an experiment, when they themselves say that nothing in the past, neither money expended nor work done upon other streams

of like nature, indicates or gives out the expectation or even hope of being useful or good to us. They go and overturn Col. Deakyne's report, and say you ought to experiment on the Missouri River.

But there is another string to that. It was not within Gen. Black's province, as I understand, nor within the jurisdiction of the War Department, to say whether experiments ought to be made; that is a matter, it seems to me, for the judgment of the Senate and of the House of Representatives. If we want to vote money for experiments we do not need any suggestions from Gen. Black, I take it. When he tells us over his own signature that our experience has been such as not to encourage the expectation that river traffic will develop commensurate with the expense, and that it will be difficult and impossible to justify the cost upon economic grounds, I should like to know why does he then suggest an experiment? Why suggest or intimate to the Congress of the United States, "We know it is not going to work out; we know it is not any good; but we will just expend about $21,000,000 as an experiment"? If we had money only for experimental purposes on a new project that we knew nothing about, that would be one thing.

Here, however, is the conclusion:

The United States embraces within its limits widely varying conditions of soil and climate, with farm, mine, and forest products of all kinds. Each section has some special advantage in the production of at least one of the articles required in civilized life. To attain the maximum benefit from these conditions it is essential that the means of intercommunication and distribution shall be fully developed, so that producers and consumers may be served at a minimum of cost. Both railways and waterways are needed. Each class of transportation has a sphere of its own. Destructive competition between them is uneconomical and wrong. In the more thickly settled parts of the country both now flourish even on parallel lines. It is uncertain whether this condition is as yet possible in the Missouri Valley. Its inhabitants claim that it is. This waterway lies in a direct path of traffic, and a well-organized freight carrying line operates on it. When equally efficacious and up to date water transportation lines shall have been established on the Mississippi River, it seems beyond reasonable doubt that the commercial possibilities of these streams will be utilized to advantage.

Taking this all into consideration, as we have it here, the report does not sound like the report of a practical man sent out to ascertain the facts; it sounds more like a lecture of a professor on political economy, or like the utterance of an advocate or of an attorney, who is trying to win a bad case for a client. One that holds the opinions as expressed in the preceding paragraph, that he is unable to justify the expense and then tries to furnish some sort of a bridge, no matter how frail it is, for him to walk over and claim that the expenditure of $14,100,000 more on the Missouri would be wise. Such a man is not a man whose opinion, I think at least on that phase of the proposition, is very well worth considering. I think that Congress can very well consider the advisability of matters of policy. That is not in the province of the Board of Engineers, as I understand. Their duty is to find out whether a system is practicable and feasible. They should give us the facts concerning it, and let us draw the proper conclusions and inferences from those facts, instead of trying to direct Congress by an argument, not by facts and not by a report such as we have a right to expect, I take it, from a man in an engineering position. This report continues:

The testimony given to the board and appearing in the record of the public hearing shows potent causes for the decline of river traffic entirely apart from the true relative costs of transportation by rail and water. Changes of law have eliminated some of these causes, and it is claimed that the operations of the Kansas City-Missouri River Transportation Co. give promise—

Now, listen to this—

it is claimed that the operations of the Kansas City-Missouri River Transportation Co. give promise that the remainder will disappear, and that through such agencies the much-to-be-desired problem of minimum cost of transporation by water and rail will receive a definite solution.

That means that it is claimed by the Kansas City Co. that the operations of this company "give promise that the remainder will disappear, and that through such agencies, the much-desired problem of minimum cost of transporation by water and rail will receive a definite solution." So we tie our whole case on this proposition; and that gets us right down to the conclusion that it is claimed that "the Kansas City-Missouri River Transportation Co. gives promise that the remainder will disappear."

What remainder? The remainder of the causes for the decline of river traffic, as I understand; at least, something is going to disappear and solve this proposition. So we are going to hang a fourteen-million-dollar appropriation on a claim of a promise by the Kansas City-Missouri River Transportation Co., the party in interest on that stream. And on that promise it seems that Gen. Black affixed his signature and made this report, notwithstanding he had said "We can not find any economic justification for the expenditure," and the further statement that he did not believe that transportation could increase enough and in such quantity as would be commensurate with the amount expended. So the transportation company says, "We think this is going to happen," but we know and you know that it has not happened, and we do not believe that we can reasonably look forward to any increase in commerce that is going to make this expenditure justifiable. We know that we can not justify it on economic grounds; but with a transportation company telling us "we think, if you do this, we are going to have business enough, so that, even if one of our barges goes down, we are going to have a profit on our side of the ledger."

That is the report of Gen. Black. I have read it almost in full. It was approved by Gen. Kingman, humiliating or overturning, as the Senator from Missouri says, the report of Col. Deakyne.

I am willing to rest this whole argument on the Missouri River problem on those two statements—on the admission and declarations and statements made by these men themselves. I do not want to be considered a factor in the determination of it. They speak for themselves.

Col. Deakyne was the man there on the job for three and a half years; he had devoted his time and must have been interested in the improvement of the Missouri. He must have had a pride in obtaining success, must have wished that the enterprise would be successful. There was no reason in the world why he should cut from under his own feet a project which he was directing unless he thought as a patriotic officer it was his duty to do so. Can anybody figure it out on any other theory? He was there three and a half years; he was on the job; he was doing the work; he knew what it was costing; he knew about those floating bogs and these banks that were being cut off; he knew about the carriage of silt; he knew about the carriage of commerce. The officer who backed him up, Col. Townsend, is on the job to-day, and has been there about four years in active charge of that district.

Neither Gen. Kingman nor Gen. Black has ever been on the Missouri River doing any work. All of the records show that all Gen. Black ever saw of the Missouri River was on a trip of 300 miles on the Missouri River, when his Board of Engineers made this report—a trip up the river. He never did any work on the Missouri River; he never was near the Missouri River in his official capacity at any other time. Kingman, I believe, was on the Mississippi in the eighties, with headquarters at New Orleans, and the other officer, Gen. Black, has been in the East all his life, so far as this sort of activity is concerned.

I say that Col. Deakyne and Col. Townsend were both on the ground; both of them must have been interested in the work and would have been only too glad to help that project along, for of course their own handiwork was involved in it; and yet, notwithstanding their experience and the fact that they were on the ground and their honesty and integrity were unquestioned, the Board of Engineers turned down their reports. Gen. Black and Gen. Kingman, without any personal knowledge of the subject at all, and on the grounds that they have stated in their report, to which I have referred, admitting, as they have admitted, that the expenditure was without economic justification and without any reasonable expectation or hope of expectation of increased commerce warranting the outlay, reversed the findings made by the other officers.

Now, I wish to state what Col. Deakyne says, contrary to what was said against his findings and against the inferences drawn, and the recommendations made by these two generals, and see which is sound and which is unsound. I am going to read from paragraph 14 of Col. Deakyne's report:

There remains to be considered the question of prospective commerce, and in my opinion the improvement must stand or fall by this criterion. In the survey report upon which the present project is based the prospective commerce was given by the president of the Missouri Valley River Improvement Association as 1,000,000 tons. See page 45 of House Document No. 1120, Sixtieth Congress, second session. That estimate was based upon a 10-foot channel, with six or seven boats especially adapted to the navigation of the Missouri River, handling cargoes of 2,000 tons each and making one round trip per week during a navigation season of 10 months.

That was on a 10-foot depth and based upon a hypothetical case. Col. Deakyne continues:

The fact is that anyone can make almost any estimate he sees fit as to the prospective commerce.

Mr. KENYON. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from Iowa?

Mr. HUSTING. Certainly.

Mr. KENYON. I should like to ask the Senator what became of Col. Deakyne after he reported against this project?

Mr. HUSTING. Col. Deakyne asked to be sent temporarily to the War College for a few weeks' course, expecting to return and resume his work, but in the meantime his report had been filed, another engineer was appointed in his place, and Col. Deakyne never got back. I think he is at the War College yet, but I am not sure. I do not say that he was not sent back because of the report which he had filed, but the facts are there, and anybody can draw whatever inference he pleases from them. It is the same as where Col. Deakyne says:

> Anyone can make almost any estimate he sees fit as to the prospective commerce.

That is a trite statement, and yet a very true one. It is a fact. Any Senator can get up on this floor and make any kind of a guess he wants to. I remember when this debate was going on there was something said about a young lady going out to swim, and I find in a speech made by the Senator from Missouri at Kansas City before Gen. Black's engineering board that he used the same illustration. Probably that helped to overcome the opposition of the other officers; but the Senator from Missouri used it to illustrate in this way, saying that we were basing our ideas on present conditions, whereas he was advocating that we do something, and then conditions would be vastly different. That is only a guess; it is worse than a guess, because it is an opinion given that is not based upon the facts; it is an opinion based upon everything except the facts. The facts are that this project does not pay, and can not pay, and that we have no reason to believe that it is going to pay. Therefore, when they tell us in advance, even men who, it is claimed, are favorable now to the project and men who reversed Col. Deakyne's report, that it can not be made to pay, then you have nothing left to base an opinion on. Your opinion, then, is a mere guess; it is a mere conjecture.

Should we spend money on a mere promise of that kind, a mere guess of a transportation company, that when this improvement is made they will increase their commerce and they will do a large amount of business and they will get us returns for a $20,000,000 investment? Is there any man in the Senate or in Congress or in any official capacity which brings him in a thousand dollars or more a year who would invest $20,000.000 on that kind of a layout? Would any man want to invest $20,000,000 to pull somebody's chestnuts out of the fire and take that company's word for what they think is going to happen? They only claim it is going to happen; they do not come here with contracts and say, "If you will dig us a 6-foot channel, we have got the contracts to show that certain manufacturers will ship their goods down the river." They do not come with bonds to show that they are going to do that; they do not even claim that they are sure it is going to be done. The shippers do not even claim that they are going to ship their material down the river. I ask is there any man in the world who would spend $20,000,000 on such a showing as that? I do not think so. At least I would not, and I do not claim to be very much of a business man either; but I do not believe that I would want to go into a $20,000,000 project and invest $20,000,000 hard, cold cash on a miserable showing of this kind. In fact, if I ever had an idea, if I ever approached the verge of lunacy even in considering such a proposition, after reading the affirmative report overturning the report of Col. Deakyne, I would change my mind and quit, and would not go into it. I challenge the Senator from Missouri to say that he would invest $20,000,000 in a proposition of that kind. I think he would be at least as prudent and as wise as the Senator whom he charged with such crass and gross ignorance on this proposition.

I have merely made this statement to show the facts. I did not start here originally to attack the Missouri River proposition. I have said here that I think the Missouri and the Ohio and the Mississippi are the streams in the United States where we would be justified in putting money, if we put it anywhere under the present system. I included the Missouri in that. What I have said is not aimed at the Missouri River or the Mississippi River or the Ohio or any other river in particular.

I only started to make an argument on the premises that if we select the best three river propositions which we can find and take the amount of money that we have already expended upon those rivers and figure out how much the people have saved by reason of the improvement—in other words, try to arrive to some extent at the value of the benefits in the way of returns that the people are getting out of these expenditures—it will be clearly apparent that even the three best propositions are unsound from an economic point of view, as Gen. Black says, from a business point of view, or from any other point of view. Then, I thought we had better not go any further with this kind of scheme, with this kind of a system, because if the best are not good enough, the Lord help us with the worst.

There is nobody making anything out of the improvement, not even the transportation company. If it could be shown that they were making something like a million dollars or so out of this improvement, one could find some reason for it, at least; but even the transportation companies are not making anything, because they are losing ground all the time. Such being the case, I think this bill ought to be recommitted. I think when we find out and come face to face with a situation that shows that we are going in the wrong direction, we at least ought to halt and come to the conclusion that we will not follow such a system any further than we have already gone, but will take the opportunity to look about and find out where we are and whether we are justified in putting any more millions of dollars or hundreds of millions of dollars into a proposition of this kind.

It seems to me that when this matter confronts us in this way, when there can not be any two sides to the proposition, when economically we have been shown that we have wasted our money, it ought not to require any great amount of argument to convince us that we had better get a new way of doing this kind of business.

There must be a good way to do this business which will bring us returns. Some way could be figured out not based upon the demands or clamors of a particular section or a particular river or a particular harbor, but based upon the needs of the country at large—an intelligent system, a system that means something, a system that we can respect, and that will make the people respect it and make them willing to put money into it. I do not believe there is a question in the mind of anybody but that the people look upon this whole proposition as but a division of the spoils.

It has been stated in jest—and perhaps there is some truth in the jest—that a man's usefulness in Congress depends upon his ability to get the biggest chunks of "pork." I have not used the word "pork" or "hog barrel" or anything of that kind in this debate, but it has been used by the Senator from Missouri and by those on the other side. I say that that is what many a man has been sent to Congress for—to get his share of the "pork." We like our "pork" in Wisconsin just as well as anybody else, I have found, providing we do not have to take it away from somebody else who is entitled to it. We do not want in Wisconsin anything to which we are not justly entitled; but if we are going to trade, if that is the game, I do not want to trade, and I would not feel justified in trading, under the conditions put down in this or any other river and harbor bill which has been placed on the statute books of the United States.

The water shipments in Wisconsin, including the Superior-Duluth Harbor and other Wisconsin ports on the Great Lakes, are the second largest of all the States in the United States. Upon some of the creeks, the ports of which do not appear upon the records or maps anywhere, millions of dollars are spent, when harbors, the finest in the world, are either being neglected or an insufficient amount of money is appropriated for them.

If there are any ports that ought to be developed in this broad land, they are the Lake ports. This great arm of the sea, which reaches a thousand miles into the interior and makes us on neighborly terms with the ocean itself, would give a possibility of ocean-going traffic with the expenditure of an amount, which would not be very much, that would connect us with all the ports of the world. Those are the kind of things that lead to the development of this country; and every dollar that goes into a port of Wisconsin on the Great Lakes is materially reflecting its benefits upon every community in the West and Northwest, and, for that matter, the entire country. But I would not come here and ask for any appropriation unless I was able to defend it, unless I was able to defend it without trading it and reflecting upon others who might differ from me in their opinion. I would not consider it a personal matter if somebody thought different than I thought as to something immediately affecting my State, because I admit that I could not be impartial in that matter. Claims for appropriations for harbors, in my opinion at least, ought to be based not upon what I want or upon what some other representative of Wisconsin wants, but upon what showing can be made for it. The correct principle should be: "You have got to show us before we appropriate any money for your State." Such appropriations ought to be on the basis of the good of the country at large, and it seems to me that, as a matter of enlightened self-interest, those who happen to live in States having meritorious projects, or, I should say, having rivers and harbors that are of vital necessity to the country, should recognize and act upon the fact that they would long ago have been improved and developed to their extremity if the surplus funds, or the funds

needed for these vital improvements, had not been dissipated and thrown away on a hundred or more unworthy schemes.

I did not get up here to attack the project of anybody in particular. I say again that it was my object, in selecting what I consider the best three of the projects, to show that the system was an unworthy one, and should be abolished, because if the best are not worthy then the worst certainly are still less worthy.

Therefore, when all is said and done, I feel that this matter ought to be referred back to the committee with instructions to report out a substitute for $20,000,000. I should like to have the Secretary read the substitute.

The PRESIDING OFFICER (Mr. MARTINE of New Jersey in the chair). The Senator from Wisconsin offers a motion, which will be read by the Secretary.

The Secretary read as follows:

That the pending bill, H. R. 12193, be recommitted to the Committee on Commerce with instructions to report a substitute therefor appropriating an amount not in excess of $20,000,000 for the maintenance of the river and harbor projects adopted by Congress and now under improvement, and for the further prosecution of work on rivers and harbors heretofore adopted by Congress: *Provided*, That the amounts for such maintenance and prosecution shall be apportioned by the Chief of Engineers, under the direction of the Secretary of War.

Mr. POMERENE. Mr. President, I am not going to detain the Senate very long.

I am very much impressed with the merit of the motion offered by the Senator from Wisconsin [Mr. HUSTING]. I realize the dissatisfaction which exists throughout the country, as well as in the Senate Chamber, with this river and harbor bill. I am not here to contend that it is as bad as has been claimed by certain Senators, nor am I willing to admit, on the other hand, that it is as good as some Senators would have us believe.

I have been very much impressed, during my term in the Senate, with speeches which have been made against this and similar bills. My former distinguished colleague, Senator Burton, perhaps gave as much attention to this subject as any other Member of this body, and I think it is fair to him to say that his views on river improvements during his term in the Senate and his several terms in the House underwent a very radical change. Many of the projects at one time favored by him later met his disfavor.

The junior Senator from Iowa [Mr. KENYON], the senior Senator from Utah [Mr. SMOOT], and the junior Senator from Wisconsin [Mr. HUSTING] have each given very special attention to a number of items in this bill. If I had not been almost persuaded by the force of their logic and their statement of the facts as to the demerits of many of the provisions of this bill, I certainly would be convinced that there were many things in it which were not meritorious by the occasional admissions which have been made by those who represent the majority of this committee.

Let us see what this situation is. I am advised that the general policy of providing for the improvement of rivers and harbors by the National Government was first adopted in the year 1883. It is true, I think, that prior to that time there was legislation with respect to one project here and another project there; but the general policy of using national funds for the promotion of enterprises of this kind had its inception in 1883. Since that time the National Government has expended more than $850,000,000; and for what?

I realize that our harbors on our coasts, as well as upon the Great Lakes, have been vastly improved. I realize that many valuable improvements have been made on some of the great rivers, the internal waterways, and I think they were commendable. I am not willing now to say that the National Government can not appropriately take up this subject and deal with it. I think it should. But let us bear in mind the fact that under the policies which have prevailed heretofore we have expended $850,000,000, and then let us remember that Senators who have given to this subject very great study—and none of them, I dare say, greater or more intelligent study than the distinguished chairman of this committee—are not altogether in favor of a continuation of the present methods. The Senator from Arkansas, with that frankness of utterance which always characterizes him on the floor of the Senate, in substance says that he is not at all satisfied with the plans which have been adopted heretofore in legislation of this character. For fear I may perhaps not properly state his position—although I do not think it can be misunderstood—I recall that when the amendment which was offered by the Senator from Washington [Mr. POINDEXTER] was before the Senate, providing for the employment of a civil engineer as an inspector who was to report upon the character, the efficiency, and the general policy of the work, the distinguished Senator from Arkansas said that he was not willing to allow this matter to pass by without an observation, and this is what he said:

This debate for the past three weeks has brought out the fact that the public opinion of Congress is somewhat dissatisfied with the present methods of making river and harbor appropriations; that there ought to be additional scrutiny provided—

And so forth.

Again, when the amendment which was offered by the distinguished Senator from Colorado [Mr. SHAFROTH] was occupying the attention of the Senate, the distinguished chairman observed, with regard to that proposition—which, in substance, provided that 20 per cent of the fund to be expended upon any of the projects provided for in the bill should be raised by the local authorities or those more immediately interested in it:

It is one that has commended itself to me heretofore. It has much of force in it abstractly. The difficulty is in making a practical application of it.

And I agree with the Senator.

Now, what is the situation? With this vast sum expended, with the chairman of the committee himself impressed with the thought that the methods which we have heretofore adopted have not met with the approval either of himself or of the country at large, what is the duty of Congress? Are we to continue to appropriate in this bill, as we do, in round numbers, nearly $43,000,000 to continue a method of operation which does not appeal to his good judgment?

Mr. President, I realize, when I speak as I do, that there are perhaps many worthy projects in this bill. Those that I esteem the most worthy are perhaps first that with reference to the East River, because it is of peculiarly national importance; second in point of importance, in my judgment, is the harbor work along the Great Lakes; third, the Mississippi River, because it is the Father of Waters; and fourth, perhaps, the great Ohio River, which affects directly the industries of six great States, and indirectly the people of many other States. The Missouri River, I think, has much of merit in it, but with that project I am not so familiar.

Now, let us see what the situation is as applied to the Ohio River.

The report of the committee which was presented by the able chairman shows that the improvement of the Ohio River at public expense began in 1827. The plan then adopted was what is known as open-channel work. Up to date there has been expended in this open-channel work $7,919,117.20, for new work and for maintenance; but the plan which was adopted in 1827 was changed, and I think for the better, in 1910. Then the engineers devised a plan of constructing dams along the river—54 in number—at an estimated cost of $63,731,488. Later the number of dams was reduced to 53. The expense of maintenance is estimated at $810,000. Up to date, according to this report, there has been expended on the improvements provided for in the plans which were formed under the act of June 25, 1910, $17,220,690.88—a little less, perhaps, than one-third of the total estimated cost.

Under the plan adopted it was not contemplated that these improvements should be completed for a period of 12 years; so that if there should be an equal amount appropriated each year, it would require probably six or seven years yet before this improvement would be completed.

Mr. President, I am intensely interested in this proposition. I have repeatedly said that I hoped the day would soon be here when that project would be completed as originally contemplated, for two reasons: First, because many of the prominent men engaged in business along the Ohio River are very much interested from a personal standpoint; secondly, because if the plan of improving our rivers is to be continued in the future as it has been in the past, we will be able to demonstrate on the Ohio River whether or not this method of transportation is to be a success and to what extent.

Mr. President, we have expended upon this project something over $17,000,000. Congress has made its record with regard to river and harbor bills in the last two years. In 1914, when the river and harbor bill was before the Senate, after it had been most thoroughly discussed, the Senate adopted a motion in language almost identical with that of the motion which is presented now by the Senator from Wisconsin, and that motion was made by the senior Senator from Alabama [Mr. BANKHEAD]. The motion carried at that time; and the Congress of the United States, instead of enacting into law the bill which had been presented by the Commerce Committee, placed a limit upon the appropriations for that year amounting to $20,000,000.

A little over a year ago, in the second session of the last Congress, when there was before the Senate another river and harbor bill of the same kind, from the same committee, providing

for an expenditure of probably forty or fifty million dollars, again there was a compromise. After there had been a long, tedious debate, and after Senators had satisfied themselves that the original bill ought not to become a law, they reduced the appropriations to $25,000,000. Under the action of two years ago, with the appropriations limited to $20,000,000, the Board of Engineers, with the approval of the Secretary of War, applied toward the Ohio River project $19,000 for maintenance and $1,750,000 for the improvements under the plans made under the legislation of 1910. Last year, when the appropriations were limited to $25,000,000, again there was applied to this great improvement $310,000 for open-channel work and $3,605,000 for locks and dams.

Mr. President, I assume that if the Senate should sustain the motion made by the Senator from Wisconsin, and it should become the law as passed by Congress, there would be approximately two millions or perhaps three millions of this sum applied to this work in this great river. I understand that under the bill as it has already been approved by the Senate $509,000 are appropriated for the purpose of maintenance of this river and $5,000,000 for constructive work. If the motion of the Senator from Wisconsin prevails, it is going to cut down this appropriation for the Ohio River; but I want to submit this thought to the good judgment of the Senate:

No man, no matter what his importance may be to any community, has the right, in asking for legislation, to demand that the Congress of the United States shall look at the matter from his standpoint alone. We are here not to legislate for one locality in preference to another, but to do what is going to be for the common good of the whole people. Now, when there is so much dissatisfaction with the plans which are now adopted in doing this work, are we still to continue to throw away millions and millions of money on plans which do not have the approval of the Congress of the United States?

Mr. President, there is another thought which I wish to present to the Senate. Two years ago the river and harbor bill was taken up and finally disposed of just after the outbreak of the European war. It was, I believe, in September of that year; and one of the reasons which appealed much to Senators was that because of this great world conflict the industrial and commercial relations between the great countries of the world had been for the time being disturbed. None of us thought at that time that this war was going to last for nearly two years. We thought it would spend its force in a few months. We have been sadly disappointed. The revenues from customs duties fell off probably from eight to ten million dollars a month in 1914, and because our revenues then were being interfered with the Senate of the United States thought that it was but a matter of common sense that we should cut our garment according to the cloth; and instead of increasing expenditures, to be met by increased revenues, we decided to cut down the river and harbor appropriation to $20,000,000. Last year, while the war was still in progress, with no prospect of an end, with customs revenues continuing to drop off because of this world condition, Congress, in its wisdom, saw fit to reduce the appropriations for rivers and harbors to $25,000,000.

Now, Senators, if we were right in having regard to our revenues in 1914, when providing for expenditures, if we were right in having regard for our revenues in 1915 when providing for expenditures, we certainly ought not to be wrong now in attempting to limit expenditures wherever we can in view of the condition of the Treasury. If these reasons in 1914 and 1915 appealed to the Senate of the United States, they ought to appeal now in the year of our Lord 1916, because the same world-wide conditions prevail now that affected the commercial and industrial nations of the globe.

Mr. President, I have spoken of the world-wide conditions as affecting our revenues. There is another thought that we ought to bear in mind. Senators and Members of the House no doubt have varied views as to the extent to which we should go in so-called national preparedness. I have no quarrel with any man who may differ from me upon that subject; but I think even at this period in our congressional deliberations we all agree that when the end of the session appears there will be increased expenditures both for the Army and for the Navy. I hope so. I believe there is national necessity for it; and I am willing to strain a point so that we may become reasonably prepared, having a due regard to prevailing conditions. I believe that while we are considering the bill before us we can take it as an accepted fact that the appropriations for this year, due to the program of preparedness, will be in excess of what they were last year or the year before. But revenues are not going to increase materially, except as we have additional legislation along that line. In what position are Senators going to be before the country when we provide for these increased expenditures and yet continue what I believe to be extravagance along the line of the river and harbor bill?

If Senators were agreed, if the Congress generally were agreed, if the engineers were agreed, as to what were suitable projects to be the subjects of national expenditure, we might be able to take a different position. But now, with all the dissatisfaction which prevails almost everywhere, in almost every community, in every State, with the present plans, shall we continue to pour out our money at the same rate of expenditure as heretofore?

Mr. President, imagine, for the sake of argument, that we have a property owner, an architect, and a contractor who were putting up some vast structure of some kind, and a large sum had been expended upon it, covering a period of years, and finally the owner, the architect, and contractor decide that the plan which had theretofore been adopted was not the right kind of a plan; that the method of work should be changed; that perhaps different materials should be provided; what would they do under the circumstances? Would they say, "Oh, no; we will go on for another year or two. We will continue this proposition until our new plans are entirely materialized"? Or would they stop and change their plans, be sure of what they wanted to do, and then proceed with the increased expenditure?

Senators, the illustration I have used is not very far afield from the proposition which is now occupying the attention of the Senate. If we are not satisfied with present methods, now is the time to change them before we go on headlong with these great appropriations.

Mr. President, I am not unmindful of the fact that there is, and always will be, a necessity for great expenditures of money in our harbor improvements and our river improvements; and I believe national aid is here to stay in those projects. But with the vastness of the subject before us I feel that we are going just as far as Congress is justified in going if we expend this year $20,000,000 on the projects which are already provided for. This does not mean stopping of improvements. It only means that we shall have proper regard for our revenues and make our appropriations accordingly. I hope the motion of the Senator from Wisconsin will prevail.

Mr. THOMAS. Mr. President, I took occasion last Wednesday to interrupt the Senator from Texas [Mr. SHEPPARD] for the purpose of asking a question, and while stating the substance of my inquiry I overheard a side remark to the effect that I was one of the filibusterers against this measure. I want to assure the Senate that upon the assumption that the remark had any justification beyond the fact that I had spoken once before upon the bill, I am not to blame, because the opportunity exists for carrying on that method against any measure that may come before the Senate.

During the short time that I have been a Member of this body I have had occasion to express myself upon the nature and the defects of the Senate rules of procedure under which unlimited discussion or debate—if the latter be a more desirable term—can be had upon any and every subject whether important or unimportant in its nature.

I have taken the position, Mr. President, after some consideration of the subject, that this is the only deliberative assembly in the world, with the possible exception of the House of Commons of the Dominion of Canada, which is unable to reach a vote except by unanimous consent; that fact tends to encourage and prolong discussion, covering all fields of human knowledge, and that as the activities of Congress are multiplying with every session through the extension of Federal jurisdiction over matters which hitherto have been deemed entirely beyond and outside of it, we should change our rules by adopting some method of modified cloture.

My opinions upon that subject are not the opinions, however, of a majority of this body, although I indulge the hope that as time passes, and consequently becomes more valuable with the increasing pressure of public affairs upon the Senate, the common sense of the situation will prevail and some method of limiting debate will be adopted.

Hence, upon the assumption that the opinion entertained by the Senator making the remark that my purpose in speaking upon this bill was merely one of obstruction, the opportunity for continuing debate or discussion along obstructive lines is one for which I am not at all responsible and to correct which I would yield the floor on any occasion, however important, were the Senate to intimate such a purpose, to take up and change its rules with regard to debate.

But, Mr. President, I entertained then and entertain now no thought or intention of entering into a needless discussion of this measure. It may be that because this is not the first time I have availed myself to consider the measure, and that because the opposition to the bill has not yet resulted in any material ad-

vantage to those opposing it, further discussion is idle, and therefore useless.

But, Mr. President, I am so thoroughly convinced of the wisdom and utility of the motion of the junior Senator from Wisconsin, I am so thoroughly of opinion that the majority party in this body owes it to the organization which it represents, to its declared platform obligation, and to the financial condition of the country to minimize appropriations as much as possible that I feel entirely justified in giving as concisely and briefly as possible my reasons for supporting it.

I stated some days ago that I had no desire to institute invidious comparisons between some items of this bill and other items, nor to make any specific charge of their inutility, their needlessness, or their questionable character, if such there be.

But I think, Mr. President, in view of the fact that nothing which during the debate has been urged concerning a large number of the items by the Senator from Iowa [Mr. KENYON], who has given so much thought and so much investigation to them, and that nothing which he has read from the records has been seriously challenged, I am entirely justified in assuming their correctness. Upon that assumption I do not hesitate to affirm that there are millions involved in this aggregate appropriation of $43,000,000 the need for which, to put it mildly, is not exigent at this hour.

I might go further and say that they were unnecessary, either now or at any other time; but I content myself for the present by affirming that they are not demanded by that iron rule of necessity at this critical period in the history of the Nation when the drains upon the Treasury are becoming more excessive than ever before. Therefore, they should go out of the bill entirely.

Mr. President, let me refer for a moment to the principle involved in the amendment which my colleague [Mr. SHAFROTH] offered yesterday and which the Senate rejected this morning. That principle assumes, and I was delighted to hear its cordial acceptance by the chairman of the committee, that the test of the need, or the benefit, or both, of any given project should be the willingness of those locally and directly benefited to contribute to the expense of that project.

No test so far as my experience goes is so accurate with regard to the merits of any given proposition as the assumption of its financial responsibility by individuals, corporations, or communities, and if in these questionable schemes—and I use the expression in a perfectly legitimate and respectful sense—that test were invariably resorted to the Government would be justified by its result either in proceeding or in refusing to proceed with the enterprise.

I was struck this morning in running over the committee report with the confirmation given to that idea by a recital upon page 365 of the improvement of St. Joseph Harbor, Mo. I will read it, as it is very short:

ST. JOSEPH HARBOR, MO.

[Eng. Rept., 1915, pp. 1062–1069.]

The river and harbor act of June 25, 1910, adopted a project providing for the expenditure of $75,000 by the United States and an equal amount by the city of St. Joseph or other agency in the construction of 16,000 linear feet of standard revetment near Lake Contrary. As the parties concerned did not cooperate, the amount was transferred to other work in accordance with the act of March 4, 1915.

Who doubts, Mr. President, but that the failure of the people interested in that project to make the required contribution supplied an accurate and infallible test of its usefulness, its value, its desirability, or all these things? No doubt but without that condition not only would the sum of $75,000 appropriated in that particular bill for that particular purpose have been expended, but in all probability every successive bill would have contained appropriations for equal or similar amounts, the aggregate of which would perhaps be by this time four or five times the original appropriation.

I do not believe in the application of that principle to improvements of harbors, whether upon the coast or upon the Lakes, or with regard to those rivers whose navigability and whose commerce combined justify continued improvements; but when the harbor appropriations and appropriations for great streams like the Mississippi and Columbia Rivers are taken from this bill there remain many other items of appropriation for different parts of the country, not one-third of which would have ever found a place in this or in any other river and harbor bill had this been made the test of their efficacy.

Some days ago I learned that the State of Oregon recently enacted a law authorizing the residents along the Pacific coast whose water facilities justified the view that they could be improved and made valuable harbors, under which harbor districts, as they are called, were created, and upon the strength of the valuations of the district a proportionate amount of bonds could be issued, the proceeds to be devoted to the improvement of their respective localities.

Upon investigation I learned that under this law half a dozen, I think that was the number, districts had been formed, their bonds had been issued and sold, and the proceeds had been devoted to the development and improvement of their respective localities followed by an increase in business and in population.

There, Mr. President, was an actual practical test of the value of the project, finding proper and adequate response, and, in my judgment, justifying future national legislation under which the maintenance of these harbors shall at some time be taken over by the General Government.

There is a case of the people helping themselves, and if the States of the Union receiving the benefits of appropriations like this will follow the example of Oregon, as they have in other valuable particulars, the general benefit to their people as well as to the Federal Treasury would not only soon be apparent but the practice itself would be sanctioned by the benefits flowing from its operation.

Mr. JONES. Mr. President——

The VICE PRESIDENT. Does the Senator from Colorado yield to the Senator from Washington.

Mr. THOMAS. I yield.

Mr. JONES. I merely wish to suggest in connection with what the Senator has just said that in our State we have formed quite a number of districts. They are called port commissions and they contribute money raised by taxation for carrying on these projects.

Mr. THOMAS. I presume the Washington statutes upon the subject are similar to those of the neighboring States.

Mr. JONES. I think very similar.

Mr. THOMAS. Mr. President, such regulation as that is a welcome evidence of the continued existence in the great Northwest of that spirit of indomitable energy and self-resource which a few years ago characterized the people everywhere in this country, but which, I am sorry to say, in some sections is giving away to a continually enlarging dependence upon the local and upon the National Government to rectify all their ills, to repair all their misfortunes, and to undertake all their enterprises.

Mr. President, I want to say here that the one thing in the so-called Trinity River project which commends itself to my approbation is the contribution made to it by the great city of Dallas. The city has demonstrated its faith in the scheme. It may be of a speculative nature, it may be because of its benefits, it may simply be based upon the hope that springs eternal in the human breast, but the fact remains that so far as that project is concerned Dallas has demonstrated her faith by her works.

My objection to the scheme is, among others, that the demonstrated inutility of the project justifies for the present the suspension of appropriations, either private or national, for its completion until our financial affairs are in a different condition and the great burden of expenditures with which we are now confronted shall have been borne and methods of raising revenue to enable us to do so shall have been determined and disposed of.

Mr. President, I now come to some of the reasons which are sincerely believed in and relied upon by some of the advocates of this measure and are the controlling reasons why our so-called system—because it is not a system in anything but the name—of harbor and watercourse development should for the time being at least be suspended.

The junior Senator from Texas in his very eloquent and persuasive defense of the Brazos and Trinity River projects has given us statistics regarding the vast expanse of territory drained by and therefore somewhat dependent upon these waterways, to the enormous and rapidly increasing and enterprising population in those sections of that mighty Commonwealth, and to the consequent need from the viewpoint of the development of these waterways, of the benefit to these populations, and a benefit not limited to them entirely but spreading in ever-decreasing proportions, like waves from a common center, all over the country. One not entirely familiar with the subject would conclude from the argument of the Senator from Texas that this mighty population and growth were due to previous expenditures under previous river and harbor bills; that they must either stagnate or decrease if the largess of the Government should for a single year be withdrawn.

If that were so, Mr. President, I would gladly vote for this measure, because the welfare of a great population so dependent, such as cluster in the valley of the Trinity and the valley of the Brazos, is far above and beyond any money valuation and is entitled under our scheme of government, independent of natural conditions, to the sustaining hand of Federal protection.

But, Mr. President, this unfortunately is not a case of cause and effect. I believe that the State of Texas is just as great

to-day from every standpoint as it would have been had there never been such a thing as river and harbor improvements by contributions from the national revenue. I believe that it would be as great to-day were these rivers blotted out of existence or transformed into mere waterways for the draining of the surface of the country, because the indomitable spirit of that mighty people, the resources of the soil, the splendor of the climate, and the beckoning call of nature from every quarter in that favored country are there as they are elsewhere, although not perhaps in so great a proportion, the prime and only causes of the industrial, commercial, and political development of that country and of its enormous and rapidly growing population.

In referring to these subjects, Mr. President, I pass by the discussion concerning artesian wells, because, after all, the existence of such methods or the resort to such methods of securing water for navigation, while amusing and at times humorous, might be suggested as aids to many others of these projects with as much as, if not more, propriety than this particular one.

But, Mr. President, the question with me, in view of the very large amount of money hitherto devoted to such projects, which are far from completion, in view of the fact that the amounts of money which this bill calls for for these projects are confessedly insufficient for their completion, in view of the fact that we are facing the mightiest appropriations ever demanded by a National Congress, in view of the fact that every dollar appropriated must be supplied by taxation, in view of the fact that legislation regarding supplies coupled with added taxation will necessarily be resisted and resented, in view of the added fact that the party in power must be responsible for such legislation and bear the burden of whatever public censure may be visited upon the Congress, is it wise, is it proper, is it desirable, at this juncture that we should continue, as we have in the past, to make these appropriations any larger than those of recent years, instead of cutting them off altogether, until a more appropriate time when, with more money in the Treasury, with no exigency, political or otherwise, confronting our immediate future, we can give due consideration to them and make the required expenditures accordingly. Under this bill, Mr. President, if my calculation is correct, the State of Texas will receive $2,763,000 of this money, much of it desirable I concede; much of it unnecessary at this time.

Mr. President, I would, if it were not for circumstances to which I will advert later, be justified in expressing some surprise that the junior Senator from Texas [Mr. SHEPPARD], of all men in this body, should advocate and announce his intention to vote for this bill and, of course, to vote against the pending motion. On the 11th day of January, 1916, at a time when the Senate was burdened with the forbidding prospect of increasing appropriations, when the whole country was apparently clamoring for preparation upon an enormous scale, and when our sources of revenue were not returning that constant and increasing stream of money necessary to run this Government; being at that time impressed with the spirit of genuine economy, the Senator from Texas introduced a bill in the Senate containing some preambles which have been already referred to, and which, at the risk of tedium, I will repeat:

> Whereas the war in Europe has caused a serious decrease in importations and a serious decline in the revenue ordinarily derived from importations; and
> Whereas these conditions are imposing an enormous strain on the Federal Treasury and have made it necessary to levy additional taxes on the people; and
> Whereas the present emergency calls for every legitimate measure tending—

I will read that again—

> Whereas the present emergency calls for every legitimate measure tending to relieve the Treasury and the people as far as possible: Therefore
> *Be it enacted*—

That certain percentages be deducted from salaries paid by the Government to all persons, I think, in excess of $1,200. So impressed was the Senator with the necessity of economy at that time that he provided by section 3 of the bill:

> That the reduction herein provided shall be effective for a term of one year from November 1, 1914.

In other words, the Senator proposed to go back to the commencement of the European war and to make this item of economy effective ex post facto. The next morning, doubtless after spending an anxious and troubled and sleepless night, the Senator offered an amendment to his bill—that is, to section 3—providing:

> That the reduction herein provided shall be effective for a term of two years from June 30, 1916, and the Secretary of the Treasury is hereby authorized and directed to make the deductions herein provided in making the payments of salaries for the period of one year from date hereof.

Mr. President, I do not know what amount of saving would be or could be effected by that bill if it should become a law. I do know that any man who is attempting to support a family upon $1,200 a year anywhere in this country, and particularly in the city of Washington, must be having a terrible hard time to make both ends meet in this era of high prices. I do know that things seem to be so formed here, either intuitively, fortuitously, or purposely, in the District of Columbia, that no man who receives salary from Uncle Sam's Treasury is allowed to get out of the District with any of it in his pocket. Consequently, while economy is essential, I, for one, have not felt that it should begin by such a system of cheeseparing, although, of course, I recognize and appreciate the motive which prompted the introduction of the measure.

Now, however, Mr. President, the Senator, the author of this economic scheme, proposes to vote for a bill taking $43,000,000 out of the Treasury, a very great proportion of which is to be devoted to projects not essential to improvement at this time, and a very large amount of which is to be expended in the State which he in part so ably represents in this body. Why? No man who knows the Senator will dispute the assertion that he is one of the most conscientious, faithful, capable, industrious, and valuable Members of this body. The answer is plain. He is yielding to local pressure; his people demand it.

That brings me, only for a brief moment, to a subject which I discussed the other day. It is that the population of every district and of every State in the Union are becoming more and more prone to rely upon the National Treasury either for subsistence, for support, or for benefit. While they are all in favor of economy, they want to "try it on the other dog," and they consequently insist that their Senators and their Representatives shall, in so far as the needs of the people they represent are concerned, exempt those needs from the general scheme of reduction and enforce rigidly every principle of frugality in other directions in the administration of public affairs; and since the Treasury is the common aim from every direction, and since this sentiment is identical as to the local needs, these omnibus bills were born and "pork" has become an epithet, coined and adopted by the people, as applicable to them, meaning, of course, that the Treasury is being utilized for schemes of local, and sometimes, it is insinuated, of personal benefit, contrary to law and good morals.

So the Senator from Texas, straining at the gnat of smaller salaries, will swallow the camel of larger rivers and harbors appropriations. This is pathetic but true. Indeed, the Senator's position reminds me very much of a story I heard some time ago, of a graduate from Harvard who had had a pretty hard time in the world. He finally landed in Chicago. Passing a window, the curtain of which was up, in the residence part of the town, when cold and tired and hungry, he saw in the room an old classmate, evidently wealthy and enjoying the luxury of a good fire and a comfortable dwelling. So he rang the bell and was admitted. At first he was welcomed. Thereupon he made an appeal for aid. He described his hardships and his misfortune; his loss of position here and his loss of position there; his failing health, his illness, the impossibility of keeping up in any direction, and, finally, his necessary relapse into the army of tramps. About this time the owner of the house, with his eyes filled with tears, rang the bell, and when the butler appeared he said, with a sob, "Kick this man out; he is breaking my heart." [Laughter.]

Mr. President, I asked the Senator from Texas for an instance of traffic growth as the result of appropriations for river improvement, and he referred me to the Great Lakes—a reference which I have noticed to be constant as an answer to that question when propounded to different advocates of this bill. I then said, Mr. President—and it is true, I think—that that is the only instance, the only conspicuous instance, at least, where water traffic increases in proportion to appropriations for improvements, the reasons for which are so obvious that a discussion of them seems to be almost unnecessary. One of them was given by Gen. Bixby, and can be found on page 27 of the pamphlet which was laid upon our desks the other morning. Gen. Bixby says:

> Not in any part of the United States, nor in any part of the world, can water transportation be made profitable unless it is possible to have at one end of the route natural products which can be bought cheaply, and at the other end of the route markets for their consumption where goods can be sold at a high enough rate to pay for the cost of transportation between the two terminals.
>
> It is mainly due to this latter condition, rather than to the depth of the waterway, that we have seen such an enormous development of commerce of the Great Lakes. On the borders of Lake Superior are enormous volumes of iron ore which are needed in the East; and around Ohio and Pennsylvania are enormous beds of coal which are needed in the West, so that boats plying between these two places can carry full loads each way during the entire length of the navigation season.

I do not agree, Mr. President, that that is the main reason, although it is unquestionably one of the principal reasons for the growth of traffic upon the Great Lakes. Other reasons equally apparent occur to any thoughtful man. Those Lakes are great inland seas. They lie in one of the most fruitful and productive regions in the world; they serve an enormous, teeming, wealthy, and growing population. The city of Duluth is or will soon become the head of ocean navigation and ocean steamship traffic. Enormous cities have grown up on the borders of those Lakes and on the navigable rivers to which they are tributary. They are an arm of the sea in every respect, except in the character of the waters which they contain. They are a part of the great scheme of international commerce; they contribute enormously to that commerce. More traffic passes through the Sault Ste. Marie Canal at any given period, except when closed by ice, than passes through the Suez Canal and the Panama Canal combined. And it is remarkable, Mr. President, that gentlemen do not see that this exception proves the rule, and that they are forced to refer to that system of Lakes and the commerce upon them as the only instance when these millions upon millions of expenditures have brought any kind of return to the Government or to the people.

The other day, I think it was the Senator from Texas [Mr. SHEPPARD] or perhaps the Senator from Louisiana [Mr. RANSDELL], read an article showing the amount of commerce upon the Trinity River forty-odd years ago, and it was very considerable. I asked what had become of that commerce. His reply—and it was a truthful one—was that it had been swept from the river by the competition of the railways; it had gone, but by expending millions upon the river, by canalizing it and securing a certain average depth of water at all times, the commerce would return. I wish it were so, Mr. President, but I am unable to perceive how, if the cause of the disappearance of the early commerce is not removed, it can possible be revived.

Such is the history of those mighty streams of this Nation about whose navigation there can be no question and upon whose bosoms at one time the great bulk of our inland commerce was carried. It has gone. There is not a river in the country, with the single exception, perhaps, of the Hudson and some shorter routes upon the large New England and eastern rivers, not one, to my recollection, that has not suffered similarly. "Ichabod" is written over them all. We may take all of the money raised by taxation every year, and, without deducting a cent for any purpose, dump it into these watercourses and projects and make every one available for craft of all sizes, and they will do no more business than they do to-day; they will not be permitted to do it, because the transportation of the country everywhere, naturally contributary to a water-carriage system, will be withheld from it by the combined power, with the millions upon millions of capital of the country behind them, represented in our system of land transportation.

Mr. President, the Senator from Louisiana [Mr. RANSDELL], in a speech made on the 23d of the present month, gave a series of statistics concerning freight rates, the object of which, I presume, was to demonstrate the benefit to the country of river and harbor improvements by forcing freight reductions. Every item which he mentioned only served, in my judgment, to demonstrate the value and confirm the argument of the opposition to this bill. I turn to the RECORD, at page 9621, so that I will not misquote the Senator, and read in part what he then said:

> There was much said here yesterday about the freight charges on the river as compared with those by rail. I hold in my hand a compilation made by me some months ago giving the actual rates on sugar in carload lots by rail between New Orleans and certain points. For instance, from New Orleans to Bayou Sara, La., on the river, the freight on the Yazoo & Mississippi Valley Railroad is 7½ cents on sugar in carload lots for 125 miles.

That is between river points—

> To Lindsay, La., on the same railroad, for 113 miles, the rate is 17 cents. Now, this is a very striking case, as the distance to Lindsay is 12 miles less than to Bayou Sara, La., although the rate per hundred pounds in carload lots is two and two-tenths times greater than to Bayou Sara.
>
> To Memphis, Tenn., the distance is 455 miles, and the rate in carload lots is 12½ cents, while to Darling, Miss., a distance of 400 miles the rate is 34 cents. Memphis, of course, is on the river, but Darling is in the interior. Twelve and one-half cents to go 455 miles to a river point, 34 cents to go 400 miles to an interior point!

In the next column the Senator says:

> Let me call your attention to one of the most striking of these discriminations. Situated on the Illinois Central Railroad, Ponchatoula, La., is 48 miles from the city of New Orleans, and the rate on sugar in carload lots is 17 cents. That same railroad, the Illinois Central Railroad, which had spies checking up Mr. Bernhard's freight when he was putting it on the boats at St. Louis—

A most significant statement—"spies checking up" the river traffic. For what purpose, if not to acquire information essential to crush it out of existence?—

> charges exactly 17 cents to carry sugar 554 miles to the city of Cairo, Ill. Think of that, Senators! The Illinois Central Railroad charges 17 cents to Ponchatoula, 48 miles, for 100 pounds of sugar, in carload lots, and 17 cents to Cairo, 554 miles, for 100 pounds of sugar in carload lots! Where does the distinction come in? What is the difference? Why, Ponchatoula is in the interior, where there is no possible water competition, and Cairo is on the river, both on the Ohio and on the Mississippi, where there is some actual and unlimited potential competition.

Mr. President, the Senator might have duplicated that statement wherever any contrast was sought to be drawn between railway competition and water competition on river points and inland points.

I concede that there is some benefit, as I did the other day, to points upon the rivers, potential water competition thus being possible, which forces railway rates between those points down to a very small percentage and keeps them there until the competition, if actual, disappears or, if potential, is discredited; but how is it compensated for? The Senator shows upon his own statement that the railroads compensate themselves for these diminutions of rates on river points by robbing his own constituents only 20 or 30 miles from the line of the river. They do it everywhere.

The junior Senator from Missouri [Mr. REED] said the other day that these river and harbor improvements benefited the entire country, their effect in lowering rates reaching out as far as the Rocky Mountains and benefiting, among others, the city in which I reside. I want to say, Mr. President, that no man in this body, in my judgment, outside of some common points where there are no rivers, can cite a single instance in which the railroad rate for local traffic has been benefited by river or lake competition, either actual or potential. On the contrary, it is used—and the Interstate Commerce Commission of the country has permitted the railroads to use those circumstances and conditions—as a justification for actually raising their rates where this competition does not exist. There is not a little crossroads community in the Union, whether within 5 miles of the Mississippi River or 500 miles from it, where the railroad does not, because of that so-called competition, increase its rates to an extortionate degree, and the people of these crossroads communities are made to pay, not the difference, but quadruple that difference, making it all that the traffic will bear.

When the Senator talks about the improvement in rates to my section of the country because of these appropriations, it becomes apparent that he has not familiarized himself with our conditions. The freight rates from New York to San Francisco are very much less than the rates upon the same goods from New York to the city of Denver or to the city of Salt Lake; and the reason why this outrage is permitted is the ability of the railroads to show that potential ocean competition makes these favored rates necessary.

The Senator from Mississippi [Mr. WILLIAMS] a few days ago declared that the abolition of the long and short haul clause would cure the difficulty. I hope he is right. My impression, Mr. President, is that it is merely one step toward its rectification. There is, in my judgment, but one cure for it, and that is the absolute control, to the extent of ownership if necessary, of every mile of railroad in the United States.

Mr. STONE. Including the water power?

Mr. THOMAS. Yes; include the water power, if you please, if the water power is to be developed on the theory that the Government owns the water because it controls navigation. I am discussing a subject which I think involves public franchises and public utilities, of which water power and hydroelectric power are undoubtedly parts; and if the Senator heard the first speech I had the honor to make upon the floor of the Senate, in the Connecticut River dam case, he will recall that the solution which I suggested then, and suggest now, for the water-power difficulty is the turning over of all the water-power sites and water powers to the States, with the understanding and condition that they shall make them public utilities and develop them at the public expense for the public needs.

If the railroads could be turned over to the States and thus solve this difficulty, I would not make the assertion I did with regard to national public control, but the difficulty is that no railroads that I know of—certainly no railroads of any consequence—are entirely confined to the boundaries of a single Commonwealth, and, of course, a vastly disproportionate percentage of their business is interstate.

There is another reason, Mr. President, why these things are so, why the grip of the railroads, yielding only at this point or that point to actual or potential water competition, becomes the more fixed upon the throats of shippers everywhere else. It is that, foreseeing these attempts at competition they have either purchased or they control an enormous disproportionate percentage of the wharves and the river fronts and shore fronts

of the harbors, bottling up river and harbor transportation to the extent of such ownership and control.

I read some time ago that the great State of Washington, I think in the late nineties, in obedience to the seductive and insidious influences of the Northern Pacific Railway, conveyed to that great corporation the State's title to the land below tide-water mark at Seattle and other important points, thus surrendering not only an ownership that was fiduciary in its character but enabling a great monopoly to tighten its grip of monopoly forever upon the throats of the people.

There is, and I think always will be, Mr. President, potential competition by sea which will affect transcontinental rates, and I am glad of it. But actual competition has been a pretense very largely. I referred the other day to the fact that the Pacific Mail Steamship Co., after the interest in them of the old Central and Southern Pacific Cos. became considerable, accepted a contract whereby, in consideration of their carrying no freight at all to the Isthmus, they were to receive more money from the railway than they possibly could make if their ships carried full cargoes each way. But of course there is a possibility of the creation of other companies, and that possibility tends to affect those rates.

What I object to is the assumption, if you please, that the expenditure of money on little watercourses and creeks throughout the country, of some possible local benefit, affects transportation everywhere and reduces rates in those sections which have not the benefit of this condition, while the truth is that it has not only a directly contrary effect, but an aggravating contrary effect.

It was said, and I have no doubt it is true, that the establishment of a line of boats between Kansas City and St. Louis had the effect of an 80 per cent reduction upon freights between those two points. Yes, between points where the boats touch; but I will wager the assertion that there is no town 15 miles from the line of that river upon the railroads whose rates are not entirely disproportionate, and very much higher than those which prevail on the river.

Mr. RANSDELL. Good roads and automobiles will settle that.

Mr. THOMAS. The Senator from Louisiana suggests that good roads and automobiles will settle that. If that is the case, then why improve the rivers at all, because good roads and automobiles reach the rivers as well as these other sections of country.

That may be the solution. I hope it is. We have just voted $75,000,000 of the people's money for that purpose. I earnestly pray that it may produce some such result. I am afraid not, however. I am very much afraid that by the time the roads become a system of inland transportation of freight, the same insidious influences now controlling our transportation will be found extremely effective in the establishment of huge overland concerns to transport freight at a rate which will make competition practically impossible when the scheme will be abandoned, and then we will go back to the good old way.

I spoke just now of the control of terminals and river fronts. I was very much struck by a recital in the report of the committee regarding this Kansas City and St. Louis route, in that the eastern terminal of the route is in East St. Louis, Ill., and not on the Missouri shore at all, where that great city lies. Now, that may be merely a coincidence; it may be a matter of convenience; but it is a singular fact that after the freight destined for the city of St. Louis reaches its point of termination, the wharf to receive it is across the river, from which it must still be transported either on boats or across bridges controlled by the railway companies centering at that place. So much for this wholly imaginary general benefit.

Now, Mr. President, let me refer for a moment to the speech of my friend the Senator from Mississippi [Mr. VARDAMAN] in support of this bill a few days ago, and read an extract from page 9717 of the RECORD. I think the eloquence of the Senator, which no man can hear unmoved, found apt expression in clothing with his usual ornate phrase a very stubborn fact that seems to me to be the chief if not the fundamental objection to this bill. He said, as I read from page 9717:

> Now, let us see how this bill was created, the multiplicity of interests it is intended to serve, and the various sections of our common country where these interests are located. From the East to the West, the North to the South, contributions are made to this proposed piece of legislation. It is intended to take care of the waterways of New England, down our eastern coast to Florida, from Florida around the continent to San Francisco, and from San Francisco to Alaska, and from Alaska back to the Northeast. It also serves the Middle and Western States and the Northern, Southern, and Eastern States. There is scarcely a place an inch square on a map of America of ordinary size that does not mark the location of some interest treated by the bill. It was constructed by Representatives in Congress of the American people from every section of the Republic—men who are here for the purpose not of promoting personal interests, but rather of serving the interests of all the men and women who pay the taxes and bear the burdens of government. The bill is altruistic in its purposes, boldly patriotic in its design, and intended solely for the public good.

Such a tribute, Mr. President, to such a method of legislation deserves at least our commendation for its elegant English and its ornateness of style. But, Mr. President, that is just the great crowning and obvious fault of the bill. That is the reason why the bill is here. That is the reason why other bills of equally questionable merit with regard to some of their items are here. I need only refer to the public-buildings bill, one of which was enacted since my entry into this body. It is constructed in just that way, and the general purpose of it is to get votes whereby the bill will become a law. John Smith will vote for John Jones's amendment to this bill, although he does not at all approve of the purpose of the appropriation, because he has one of his own that is equally bad in the opinion of John Jones. It is a combination and community of interest which necessarily results to the injury of the people, sooner or later, since it becomes a precedent for schemes of legislation that standing alone can not bear the light of day.

I do not mean to assert this of the bill before the Senate or of the men who are behind it; but I do say that the people of the United States are justified in the prevalent opinion of legislation of this character because of the many things which it may conceal and because such methods of legislation are inherently vicious and indefensible.

The Senator also denounced the Newlands scheme as visionary. I think it is, Mr. President, in some respects; but I do not know of a great measure of legislation having for its purpose general benefit through the adoption of a wise, extensive, and systematic policy that in its beginnings is not visionary. I do not know of a great step forward in the progress of this Republic—and certainly no great step through the processes of legislation—which has not appeared, dimly, perhaps, at first, then more consciously and more definitely, in the vision of men who live not for themselves, but for the people whom they serve, in the dreams of statesmen quickened by the sense of a great need and inspired by the necessity of obtaining it. I am in some degree appalled by the magnitude of this vision of the Nevada Senator; but it comprehends the entire subject of water conservation, beginning where it should commence, away up at the headwaters of these mighty streams, where they are easily controlled, and following down their stupendous courses, taking advantage of every natural reservoir site which nature may afford for the purpose, storing the waters at flood time for use in dry seasons, combining water conservation with navigation and flood prevention, thus relieving the devoted people of the lower part of the Mississippi Valley from those mighty and terrible inundations which, regardless of our enormous expenditures, are occurring with greater and more alarming frequency.

Yes, it is visionary, and the Senator may not live to see even its faint beginning; but in the time to come, when a wise statesmanship shall consider this as a national problem, one which requires science and experience and wisdom both for its conception and for its execution, the Senator from Nevada, perhaps in the spirit world—if there be one—will be comforted by the knowledge that the vision which he clearly outlined and which seemed unreal and preposterous to some of his contemporaries has crystallized into an accomplished scheme of national development the magnitude of whose blessings and whose benefits no man, however vivid his imagination, can fully conceive.

I am not for it at the present time, Mr. President, for the identical reasons which prompt me to support this amendment. We have too much to do in the shape of other needed appropriations now to consider matters of this sort except in the most tentative way. The commission which the Senator has suggested is a good beginning. And let me say, Mr. President, that if the Senator's scheme is visionary, it certainly is no more visionary than our rivers and harbors scheme. That, however, is a vision which has a very practical side in the shape of huge local expenditures. But if demonstrated impossibilities are the test of practical things in this world, then I am here to say that our methods of river protection and of river and harbor development are the most fantastically visionary schemes of legislation that we have placed upon the statute books during the last 25 years. We have to renew our expenditures practically every year, and they increase as the seasons succeed each other.

Mr. President, just a word now in regard to the river traffic—that traffic which is to come back to us and bless mankind with its benefactions when it shall be reestablished by these improvements. It is the unfortunate fact that our river traffic decreases, and has decreased, in inverse proportion to our expenditures. The more money we spend to build up commerce upon the watercourses, the less commerce there is for them; and I have no

doubt that if we should double the amount of this appropriation and pour it into these various improvements, the result would be that we would have no river traffic left at all. That is not surprising, because, as we attempt to re-create it, the efforts of the system opposed to it are doubled for its prevention. As we attempt to establish certain depths of water—as we inaugurate this, that, and the other local scheme of river traffic, the purchasing of boats, their launching upon the waters, and their reception of cargo—the land system of transportation, with spies everywhere, as the Senator stated in a little town in his State, is alert to overcome, and you may be sure it has the means to overcome, the faintest vestige of competition. That the Great Lakes of the country have not succumbed to this mighty influence is due to natural conditions which not even a railroad monopoly in a country as large as this can control. That they would have controlled it, and do control it very largely through their ownership of the lake marine, is painfully apparent.

Mr. President, laudations of the German system of watercourse improvement and of the commerce upon those watercourses have been made upon this floor in connection with this bill, and they are well founded. There can be no question that every dollar which Germany has spent in the improvement of her water highways and of her ports and of her canals; there can be no question that the millions poured out by France in the building of canals and river improvements are bearing a rich and abundant harvest to those peoples. But, Mr. President, we must not be so dazzled by the results in those countries that we overlook the manner in which that traffic has been builded, the method by which traffic has been forced upon these streams and in these canals—a method which we must to some degree adopt, no matter what improvements we make, or how vivid the prospect, if we are to have any traffic whatever beyond nominal amounts here and there upon our rivers after they are improved.

Why, Mr. President, it is known to everyone—and Germany is taken as the examplar, so I will refer to it—that the Empire has developed along all lines for a common purpose, chiefly a military purpose; that one of the first great undertakings of Bismarck after the consolidation of the Empire consequent upon the victory over France was the nationalization of the system of railways. The Government seized possession of these lines of land transportation, made due compensation for them, and then operated them as a part of the general scheme of development. Lines were builded sometimes for purposes of commerce, sometimes for military purposes, but in each and every instance they were so builded that they could cooperate with the lines of water running throughout the land and interconnected with perhaps the greatest system of canals in the world.

Not only so, but Germany, by a system of traffic charges formulated by the German legislature, fixed rates that prohibited the transportation by rail of those bulky products whose delivery does not require any great amount of haste or speed, and which naturally seek cheaper lines of travel. By forcing the coarser articles of commerce upon the waters and by denying to the railroads permission, because of these prohibitory rates, to compete at all, that tremendous commerce has been created. And I am here to say that, in my judgment, if the strong hand of the empire were lifted from its transportation system, if private corporations were permitted again to control it, this mighty traffic upon the Rhine and other German rivers would disappear within a twelvemonth. It would be subject to the same sinister influences that here prevail and the great work which to-day is the admiration of every supporter of this bill would disappear entirely. If, therefore, we expect to acquire and to accomplish what Germany has acquired and accomplished, we must make the railroads correlate with our system of water transportation instead of operating as a competitive system.

Why, Mr. President, when I think of the manner in which these railroad rates have been heaped upon the people of my State, when I consider that to compensate themselves for these forced water-competition reductions they have practically driven the jobbers from the city in which I reside; that our system of manufactures has been reduced to insignificant dimensions, and that, notwithstanding we are the center of a mighty range of country extending for thousands of miles in every direction, peopled by hundreds of thousands of American citizens, they are forced to trade with Missouri River points instead of at home; and when I consider that these are, in part, the consequence of these tremendous expenditures for the unquestionably sincere purpose of increasing the traffic upon the rivers, I confess that I want to see the day of Government ownership come, and come quickly.

I am not an advocate of it, Mr. President, except as the last resort of a suffering people. We have to pay more upon freight downhill from Denver to Galveston than we pay upon freight uphill from Galveston to Denver. We are so situated that freight comes from San Francisco to Denver for less than we can ship freight from Denver to San Francisco, another downgrade route. Why, Mr. President, the rate upon California products to New York and other seacoast towns is the same as the rate to common points in my section of the country. That is bad enough; but when in addition to it there is added to the necessities of life, as a transportation tariff, the difference between the rates of freight from West to East and from East to West, which the consumer has to pay, what wonder that we who represent these people should be opposed to this sort of legislation!

The Senator from Utah [Mr. SMOOT] was questioned yesterday with regard to his attitude upon previous river and harbor bills. I think he said that he supported them. I shall not reproach him. For my part, Mr. President, I am content to know that the Senator is now doing what he can to rectify this situation. I am surely rejoiced that in this instance, at least, he is participating with some of us toward making the economy plank of our Baltimore platform a realization and not a dream. But let me say, Mr. President, that no man and no party—and with that I conclude—is responsible for this sort of legislation. No Senator, no Representative, is responsible for it. It is the outgrowth of inevitable conditions, forming through a series of years and crystallizing in omnibus bills, which, like charity, cover a multitude of sins.

One of the most remarkable books in modern times, Mr. President, is Lecky's "Democracy and Liberty." I do not agree with all his conclusions, but he calls attention to some things and to some evils in republican government which we must all recognize. He says, on page 333:

> There is, in the first place, what may be called the argument of momentum, which Herbert Spencer has elaborated with consummate skill and force. It is absolutely certain that, when this system is largely adopted, it will not remain within the limits which those who adopted it intended. It will advance with an accelerated rapidity; every concession becomes a precedent or basis for another step, till the habit is fully formed of looking on all occasions for State assistance or restriction, and till a weight of taxation and debt has been accumulated from which the first advocates of the movement would have shrunk with horror. There is the weakening of private enterprise and philanthropy; a lowered sense of individual responsibility; diminished love of freedom; the creation of an increasing army of officials, regulating in all its departments the affairs of life; the formation of a state of society in which vast multitudes depend for their subsistence on the bounty of the State. All this can not take place without impairing the springs of self-reliance, independence, and resolution, without gradually enfeebling both the judgment and the character. It produces also a weight of taxation which, as the past experience of the world abundantly shows, may easily reach a point that means national ruin. An undue proportion of the means of the individual is forcibly taken from him by the State, and much of it is taken from the most industrious and saving, for the benefit of those who have been idle or improvident. Capital and industry leave a country where they are extravagantly burdened and have ceased to be profitable, and even the land itself has often been thrown out of cultivation on account of the weight of an excessive taxation.

We have been gradually multiplying—with increasing frequency, however—the activities of the National Government; and each new extension into outlying fields not only decreases and diminishes the rights and powers of the States, but adds to the swelling appropriations from the National Treasury. These things grow by what they feed upon, until we have reached the point where—due very largely and originally, if you please, to the pressure of communities upon their Representatives—millions are voted away by methods of this character, which in our heart of hearts we can not fully approve.

I believe the people stand for economy. I do not think they make their views and their convictions effective because of the pressure upon them in their individual communities and because of the desire for money from the Federal Treasury. This spirit has transformed Members in both branches of the Congress into a congregation of agents for districts and Commonwealths. We represent in some degree conflicting interests; and long ago it was said—and it is true now, as it was true then—that no man can serve two masters. We can not well do our duty as Senators of the United States if at the same time we attempt to serve the necessarily conflicting interests of the States themselves. One or the other must predominate, and since it is the States which send us here and to which we look for return and to which we must make our reports, it is the interests of the States which predominate over those of the Nation, until we are becoming, indeed, what a Senator was once fond of saying in this Chamber—the ambassadors of the Commonwealths, here to get what we can, and conscious of the fact that we will be rewarded at home in proportion to the amount which we may obtain. This makes entirely old-fashioned and quaint the boast of Senator Robert Toombs, who, shortly before his death, declared that he had never asked for nor received a cent from the

Treasury of the United States for the State of Georgia during his term of public service.

Mr. President, I hope this motion will prevail. This is no time to expend this vast sum of money upon these various measures. We must call a halt somewhere in our expenditures. In God's name, when will it be? We must do it upon some bill. Why not this? Let us make the commencement; and, once begun, our future course of frugality in public expenditure, I feel sure, will be found far more easy of accomplishment.

Mr. SMOOT. Mr. President, it is quite evident that at so late an hour Saturday afternoon it would be impossible to secure a quorum to vote upon the pending motion. Therefore I ask unanimous consent that at the convening of the Senate on Monday, May 29, 1916, the Senate will proceed to vote without further debate upon the pending motion of the Senator from Wisconsin [Mr. HUSTING] to recommit the bill with instructions.

Mr. CLARKE of Arkansas. There is no objection to that on this side of the Chamber.

The VICE PRESIDENT. Is there objection?

Mr. STONE. Could we not extend it so as to vote on the bill during the day?

Mr. SMOOT. We can not do that.

Mr. CLARKE of Arkansas. We had better deal with one proposition at a time.

Mr. POINDEXTER. Mr. President, I may want to occupy about five minutes on the motion.

Mr. SMOOT. Would the Senator like to speak now?

Mr. CLARKE of Arkansas. Under the unanimous consent the Senator can proceed now.

Mr. POINDEXTER. If the Senator will withdraw the request I can say all I want to say in five minutes.

Mr. CLARKE of Arkansas. We can enter into the agreement now and then the Senator from Washington can proceed. I shall not make a motion for a recess until after the Senator gets through.

Mr. POINDEXTER. With that understanding I have no objection.

Mr. CLARKE of Arkansas. Let the Chair put the request.

The VICE PRESIDENT. Is there objection to the request of the Senator from Utah?

Mr. STONE. Mr. President, I am not going to object, but I should like to make a single observation. We have been a long time on this bill. There are a great many other matters awaiting the conclusion of the bill. I think on Monday when we have disposed of this motion, unless we can come to some understanding as to when the bill is to be concluded, we ought to take more drastic means to bring it to a conclusion.

Mr. SMOOT. I wish to say to the Senator that there has been very little disposition on the part of any Senator it seems to me to prolong the debate.

Mr. STONE. But it has been prolonged for weeks.

Mr. SMOOT. There has been no evidence of a filibuster in any way.

Mr. STONE. As to that I do not know. That is a useless discussion. I simply mean to say if this sort of thing goes along from day to day we ought to come here and sit the thing through until it is completed. That is all I care to say.

Mr. SMOOT. I felt that the bill would be passed to-day, and I believe it would have been passed if there had not been speeches of considerable length made.

Mr. CLARKE of Arkansas. The consideration of the bill has been progressing about as well, under all the circumstances, as it could be proceeded with. There has been an unnecessary consumption of time, principally on this side of the Chamber, with commonplace harangues on threadbare subjects connected with transportation, and some of it by members of the Committee on Commerce. I do not think anybody is to be blamed about what has happened without sharing it pretty generally on both sides of the Chamber, but the preponderance has been on this side.

I hope the suggestion of the Senator from Utah will be adopted for the present, and let Monday take care of itself.

The VICE PRESIDENT. Is there objection to the unanimous-consent agreement?

Mr. LANE. Before it is agreed to I should like to have an opportunity this afternoon to speak about five minutes.

Mr. CLARKE of Arkansas. There will be an opportunity now.

Mr. SMOOT. Then I will withdraw the proposed agreement.

Mr. CLARKE of Arkansas. No; the order can be made and we will stay here.

Mr. LANE. Very well.

Mr. POINDEXTER. I think the Senator from Utah had better withdraw it for the present.

Mr. CLARKE of Arkansas. The Senator can address the Senate after the agreement is entered into. I will promise him not to move a recess as long as there is a Senator here who desires to be heard.

Mr. SMOOT. That is right.

Mr. LA FOLLETTE. That is fair.

Mr. POINDEXTER. That is satisfactory, if that is the understanding.

The VICE PRESIDENT. Is there objection to the agreement. The Chair hears none, and it is adopted.

Mr. POINDEXTER. Mr. President, in answer to the suggestion made by the Senator from Colorado [Mr. THOMAS] that the benefits of water transportation are confined to communities located immediately on the waterways, I wish to read into the RECORD a statement which, it seems to me, is exceedingly significant and entitled to a great deal of consideration. It is a statement made by Mr. Alfred P. Thom, the general counsel of the great Southern Railway system, at the hearing before a committee of this body which was appointed to investigate the question of the rates of transportation on coal from the Allegheny regions, where the the coal mines are located, to tidewater at various points which the Southern Railway reaches, the contention being that there was a discrimination against the southern ports in favor of the terminals of the northern roads.

I read a brief extract from the hearings entitled "Transportation of Coal," held in 1914 by a subcommittee of the Senate Committee on Naval Affairs appointed to investigate the natural and strategic advantages of Charleston, S. C., as compared with Norfolk and other Chesapeake Bay ports, as a permanent point for coal distribution, and so forth, On page 851 Mr. Thom, counsel for the Southern Railroad Co., said:

> I am coming to the question of rates now. It is easy to make an impression superficially in regard to rates. I do not suppose that any man when he starts in knows anything about it, and I doubt that any man when he comes out knows much about it; so it is very easy to make an erroneous impression. There are some scientific facts that bear upon the question of rates which are quite interesting, and I wish to refer to some of them.
>
> Of course, one of the fundamental ideas underlying rates is that they are largely controlled by the quantity of traffic. The more traffic there is the less you can carry it for. Another thing that bears upon the establishment of rates in the United States is that the yardstick by which all rates are measured is the rate from Chicago to New York on the trunk lines. That goes through a part of the country where the densest traffic is. It goes through the largest cities. It goes through the most productive country. It goes on the best and most economically handled railroads. The rates on those lines are controlled by water rates from Chicago to New York through the Erie Canal. Now, when we get down into the roads running east and west in Virginia we find the influence of the rates that I have just mentioned reflected there, because, coming from a common point in the West to the seaboard, they can not be higher than the rate from Chicago to New York plus the water rate to the Virginia ports. The result of that is that the rates through the Great Lakes and the Erie Canal control all the rates down to the northern North Carolina line, east and west. There has been no fact that has created more difficulty for the carriers in the South than that one, because when you get south of the Virginia line the influence of that condition to which I have alluded is no longer reflected, and the people can not understand the difference, and they make great controversies over it.

It is not necessary to comment on the significance of that statement. Whatever authority and credit the witness has attached to his assertion that this one waterway, the Erie Canal—which, by the way, had no water in it before this improvement was made—and so it may be said of almost any one of the great canals of the world—controls rates in all the great region described.

All the great canals might have been subject to the criticism which has been so often made by those who are opposed to certain items of this bill—that there was no water in them. The purpose of the improvement was to put water in the Erie Canal, that the tens of millions of people between the Canadian line and the North Carolina boundary and between the great West and the Atlantic coast might receive reduced freight rates because of a little waterway—as this was until the very recent enlargement of it—up through the Mohawk Valley, connecting the upper waters of the Hudson River with the Great Lake system.

In addition to that, Mr. President—and this is all I desire to say—I send to the desk and ask the Secretary to read a statement—an item of news of undoubted reliability—indicating the value which one of the most intelligent nations of the world attaches to waterways and the sacrifices which it is willing to make to secure them.

The VICE PRESIDENT. The Secretary will read as requested.

The Secretary read as follows:

GREAT CANAL IN FRANCE IS OPEN—MOUNTAIN BARRIER BETWEEN MARSEILLE AND RIVER RHONE PIERCED.

MARSEILLE, *May 7.*

The canal under the mountain between Marseille and the river Rhone, constituting one of the most notable engineering achievements of modern times, was officially opened to-day in the presence of a dis-

tinguished gathering, including Marcel Sembat, minister of public works; Etienne Clementel, minister of commerce, and Joseph Thierry, under secretary of war.

GIVES WATER CONNECTION.

Hitherto Marseille, although a great port of entry for the Mediterranean, has been walled in from central France by a mountainous ridge that sweeps entirely around the northern side of the city. The canal pierces this mountainous barrier, the waterway running for 5 miles in a tunnel under a mountain. It thus has the effect of linking Marseille with inland cities and will give Marseille a direct water connection with Havre and the North Sea.

That an engineering work of such magnitude should have been carried to completion when France is in the throes of war is considered a tribute to her perseverance and the stability of her public enterprises.

The canal and its tunnel have been under discussion for nearly 100 years, but the actual work on them was not begun until 1904. The total length of the canal is 60 miles, and the 5-mile section under the mountain is 75 feet wide and 70 feet high, constituting what is declared to be the largest tunnel interior in the world.

COST $20,000,000.

Vessels up to 600 tons can navigate the tunnel and the canal, which it is believed will have strategic value in permitting the movement of small warcraft between the Mediterranean and the North Sea. The cost has been about 100,000,000 francs.

Mr. FLETCHER. What is the date of that, I will ask the Senator?

Mr. POINDEXTER. It bears date the 7th of May of the present year. I think the newspaper clipping has not the year on it, but it is 1916.

Mr. LANE. Mr. President, I wish merely to remark that there are no doubt in the bill many items which deserve condemnation and I have no fault to find with such treatment of them. I would be willing to go as far as anyone to help clear the bill of such projects. Without full information concerning the facts, however, I do not feel that we are justified in condemning the entire bill. There are many good projects which are involved, and I think, as a matter of justice to the Senate at this time before we vote on the bill, some plan should be devised whereby Congress should have full information concerning all items in future bills.

It is unfair to condemn the whole bill for the reason that some projects in it are unwise. It is not fair to Congress, to the Senate, or to the people, whose interests are involved in the worthy items.

I do not concur in the sweeping denunciations which have been made against the bill as a whole, and while I do not question the motives of those who indulge in them I do know the people in the section from which I come in many cases are putting up dollar for dollar with the Government in order to get the improvements and in order that they may get an outlet to market for their products. They should not be swept aside, because there are other items in the bill which are unfair and unjust.

In the future consideration of this bill a committee ought to be appointed to prepare some plan by which Congress could get rid of the deadwood which attaches to this measure. I want more particularly to say that perhaps not half of this bill is bad, it may be not a third of it, but we are all under condemnation all over the country from the press to an extent that a man's honor is questioned if he votes for any item in it or for the measure as a whole. It is not just to the Senate itself to allow such a condition to continue to exist.

I notice that some of the Members from States that have no seaports or water, not enough to drink in some portions of their State, are the most indignant and virtuous in their protest against the passage of the bill. Others who represent States which are willing to put up dollar for dollar with the Government for projects naturally do not feel hostility to the measure as a whole.

That the entire measure should meet year after year with the continued denunciation because some items are wrong is not entirely fair.

Without any care whatever, so far as I am personally concerned, I would vote to kill the bill, if by killing it we could remedy conditions in the future. It would be of benefit to us in my State for thereby we would secure our appropriations without question or reflection upon our honor.

The people of our part of the country have been willing to pay their proportionate share of the cost of improvements, and for years they have been doing so. They have been bonding their little homes, their farms, their property, everything they have in the world to help carry on such improvements, and do not deserve condemnation.

As I said before, I think there has been a bit of unfairness, too much sweeping denunciation of this measure for the reason that I believe there are many projects in the bill that are worthy of the aid of the Government.

Mr. CLARKE of Arkansas. I ask that the river and harbor bill be informally laid aside until the assembling of the Senate on Monday next, so that Senators being present who have any current business to dispose of may have that opportunity.

Mr. LA FOLLETTE. And we are to agree to a recess.

Mr. CLARKE of Arkansas. We are to take a recess until 11 o'clock on Monday.

The PRESIDING OFFICER [Mr. ASHURST in the Chair]. The Senator from Arkansas asks unanimous consent that the river and harbor bill be temporarily laid aside, the consideration of it to be resumed when the Senate assembles on Monday next. Is there objection? The Chair hears none.

Mr. CLARKE of Arkansas. There may be Senators here who have current matters they would like to dispose of, and I desire to afford them an opportunity of doing it.

OIL AND GAS LANDS.

Mr. PITTMAN. Mr. President, on behalf of the Senator from California [Mr. PHELAN], who is unavoidably absent, I desire to give a notice so that it may appear on the calendar.

The Senator from California gives notice that immediately upon the disposition of the pending river and harbor bill and the Philippine bill, which follows the river and harbor bill, he will call up the bill (H. R. 406) to authorize exploration for and disposition of coal, phosphate, oil, gas, potassium, or sodium.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had passed a bill (H. R. 15957) granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy, and certain soldiers and sailors of wars other than the Civil War, and to widows of such soldiers and sailors, in which it requested the concurrence of the Senate.

The message also announced that the House had agreed to the concurrent resolution of the Senate No. 23, authorizing the Secretary of the Senate, in the enrollment of the bill (S. 4856) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors, to make certain changes.

The message further returned to the Senate, in compliance with its request, the bill (S. 4797) to amend an act entitled "An act concerning foreign-built dredges," approved May 28, 1906.

The message also announced that the House disagrees to the amendments of the Senate to the bill (H. R. 7617) to provide that in order to promote agriculture, afford better facilities for rural transportation and marketing farm products, and encourage the development of a general system of improved highways, the Secretary of Agriculture, on behalf of the United States, shall in certain cases aid the States in the construction, improvement, and maintenance of roads which may be used in the transportation of interstate commerce, military supplies, or postal matter, asks a conference with the Senate on the disagreeing votes of the two Houses thereon, and had appointed Mr. SHACKLEFORD, Mr. SAUNDERS, and Mr. DUNN managers at the conference on the part of the House.

PETITIONS AND MEMORIALS.

Mr. MYERS. I present resolutions of the Enid Local, of the American Society of Equity, of Enid, Mont., favoring the enactment of legislation for the relief of homesteaders on the Fort Peck Indian Reservation of Montana. I ask that the resolutions, together with the signatures, be printed in the RECORD.

There being no objection, the resolutions were ordered to lie on the table and to be printed in the RECORD, as follows:

ENID, MONT., *May 15, 1916.*

Hon. HENRY L. MYERS,
United States Senate, Washington, D. C.

DEAR SIR: The following resolutions were adopted by Enid Local:

"Whereas the cooperative farmers of Montana, known as the American Society of Equity realize that our country now stands in the midst of difficulties, deem if necessary that all farmers should be induced to raise all food possible; and

"Whereas we find a vast area of fertile land on the Fort Peck Reservation practically uninhabited on account of the present law requiring all homesteaders to pay from $2.50 to $7 per acre for said land, one-fifth to be paid at time of entry, the other four-fifths to be made in five annual payments, that said law is keeping actual settlers from this land: Therefore be it

"*Resolved*, That we ask our Senators and Congressmen to introduce a law asking a reduction of one-half of the appraised value of said land and that 10 years extension of time be granted on all payments after the first one has been made, that being one-fifth down at time of entry.

"We also ask that said law be made to cover all payments that have been made, with the exception of commutements, so that the actual settler who is on the land at the present time may receive the same benefits from time of their entry as those who are yet to homestead.

"Whereas we consider this one of the first steps toward preparedness, we ask our Senators and Congressmen to act as soon as possible, as the planting time is near at hand, and through this law not only our State but our Government would be greatly benefited as this is one of our greatest wheat belts."

JAMES R. O'CONNELL, *President*,
[SEAL.] GUS F. KAUN, *Secretary*,
Enid Local, American Society of Equity.

Mr. MYERS. I present a petition of the Black Coulie Local, American Society of Equity, of Rudyard, Mont., in favor of the enactment of certain legislation for the benefit of homesteaders on the Fort Peck Indian Reservation, Mont. I ask that the petition may be printed in the RECORD together with the signatures.

There being no objection, the petition was ordered to lie on the table and to be printed in the RECORD, as follows:

Whereas the cooperative farmers of Montana, known as the American Society of Equity, realize that our country now stands in the midst of difficulties, deem it necessary that all farmers should be induced to raise all food possible; and

Whereas we find a vast area of fertile land on the Fort Peck Reservation practically uninhabited on account of the present law requiring all homesteaders to pay from $2.50 to $7 per acre for said land, one-fifth to be paid at time of entry, the other four-fifths to be made in five annual payments, that said law is keeping actual settlers from said land: Therefore be it

Resolved, That we ask our Senators and Congressmen to introduce a law asking a reduction of one-half of the appraised value of said land and that 10 years extension of time be granted on all payments after the first one has been made, that being one-fifth down at time of entry.

We also ask that said law be made to cover all payments that have been made, with the exception of commutements, so that actual settlers who are on the land at the present time may receive the same benefits from time of their entry as those who are yet to homestead.

Whereas we consider this one of the first steps toward preparedness, we ask our Senators and Congressmen to act as soon as possible as the planting time is near at hand, and through this law not only our State but our Government would be greatly benefited, as this is one of our greatest wheat belts.

LOUIS HANSON, *President*,
C. E. KLEMETSON, *Secretary*,
Black Coulie Local, American Society of Equity.

RUDYARD, MONT., *May 16, 1916.*

Mr. PITTMAN. I present a resolution adopted by the State convention of Nevada Women's Civic League, held at Reno, in that State, favoring the passage of the Susan B. Anthony amendment regarding woman suffrage. The resolution is very short, and I ask that it be printed in the RECORD.

There being no objection, the resolution was ordered to lie on the table and to be printed in the RECORD, as follows:

Resolutions adopted by State convention of Nevada Women's Civic League at Reno, Nev., April 27, 1916.

Whereas we women voters of Nevada and members of the Nevada Women's Civic League firmly believe in the principle of woman suffrage and are working for its establishment for the women of the Nation by means of an amendment to the United States Constitution; and

Whereas the women of the country have been unfairly dealt with by the Judiciary Committee of the House of Representatives in the treatment accorded the Susan B. Anthony amendment: Therefore be it

Resolved, That we, in convention assembled, protest as enfranchised women against the action of the Judiciary Committee in indefinitely postponing a report of the suffrage measure, and thus depriving the representatives of the people of the opportunity of voting upon this question of vital importance to the Nation; and be it further

Resolved, That we call upon the committee for an immediate and favorable report, that the House may pass the measure at the present session of Congress, and that we earnestly urge the Senate to take immediate favorable action upon the Anthony amendment, which is now upon the Senate calendar; be it also

Resolved, That a copy of this resolution be sent to President Wilson, Majority Leader KERN of the Senate, Minority Leader GALLINGER, Speaker CHAMP CLARK, Majority Leader KITCHIN, Minority Leader MANN of the House, all the members of the Judiciary Committee, and the congressional delegation from Nevada.

ANNE H. MARTIN,
President.
Mrs. S. W. BELFORD,
Recording Secretary.

Mr. SMITH of Arizona presented a petition of sundry citizens of Tucson, Ariz., praying for the adoption of an amendment to the Constitution granting the right of suffrage to women, which was ordered to lie on the table.

Mr. WILLIAMS presented a petition of the Columbus (Miss.) Chapter of the Southern Association of College Women, praying for the enactment of legislation to prohibit interstate commerce in the products of child labor, which was ordered to lie on the table.

He also presented a memorial of sundry citizens of Los Angeles, Cal., remonstrating against the enactment of legislation to provide for the leasing of oil lands, etc., which was ordered to lie on the table.

Mr. JOHNSON of South Dakota. I present a petition signed by certain residents of Sioux Falls and Flandreau, S. Dak.; of Helena, Mont.; and Meadville, Pa., favoring a scientific experiment in creative economics by the Government, together with a statement of Rev. W. H. Talmage, of Flandreau, S. Dak., in support of the proposition. I ask that the petition and accompanying statement be referred to the Committee on Education and Labor.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. ASHURST. I have received a telegram from the governor of my State, which I ask may be printed in the RECORD.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

PHOENIX, ARIZ., *May 26, 1916.*

Hon. HENRY F. ASHURST,
United States Senate, Washington, D. C.:

Answering your wire of May 24, I am at a loss to account for the absurd reports relative to Arizona's National Guard which have recently found their way into press dispatches. The adjutant general received an order to call the guardsmen into Federal service about 10 o'clock on the morning of May 9, and at 10 o'clock on the morning of May 12 the train left Phoenix for Douglas, with all the militia property, including wagon train. Col. Tuthill, commanding National Guard, reported 46 officers and 613 men on his arrival at the camp. At time when regiment was ordered out one company had been refused recognition by division militia affairs and another company was being reorganized. The peace strength for 10 companies and sanitary corps was 50 officers and 685 men. Many of the guardsmen at the time of the call were long distances from their home stations but have since been reporting daily. This State now has in camp her full quota of 816 men, this being the size of the guard at peace strength. Taking 400,000 as the total strength of the National Guard in this country, Arizona's quota in proportion to population would be 890 men. Many additional recruits are being received daily at recruiting stations established in several different parts of the State. It should be remembered that the guardsmen and many of the recruits are leaving families without adequate means of support, and are giving up positions yielding from $3 to $6 per day in wages. Almost without exception they appear eager to serve their country if actually needed for defense, but some of them naturally do not look with favor upon being incorporated in the Regular Army in time of peace. In my judgment, Arizona has made a showing in the recent emergency which will compare favorably with that which would be made by any of the other States if they were subject to a similar call.

GEO. Q. P. HUNT, *Governor.*

REPORTS OF COMMITTEES.

Mr. FLETCHER, from the Committee on Military Affairs, to which was referred the bill (H. R. 1024) for the relief of Allen M. Hiller, reported it without amendment and submitted a report (No. 492) thereon.

Mr. SHEPPARD, from the Committee on Military Affairs, to which was referred the bill (S. 1579) to correct the military record of Jacob Nice, reported it with an amendment and submitted a report (No. 490) thereon.

Mr. SMITH of Arizona, from the Committee on Irrigation and Reclamation of Arid Lands, to which was referred the bill (H. R. 11156) to authorize the Secretary of the Interior to cause to be appraised and to sell the Boise & Arrowrock Railroad, and for other purposes, reported it without amendment and submitted a report (No. 489) thereon.

Mr. ASHURST, from the Committee on Indian Affairs, to which was referred the bill (S. 6116) providing for the taxation of the lands of the Winnebago Indians and the Omaha Indians in the State of Nebraska, reported it without amendment and submitted a report (No. 491) thereon.

Mr. CHAMBERLAIN, from the Committee on Military Affairs, to which was referred the bill (S. 1161) authorizing the promotion of an officer on the retired list of the Army who served in the Civil War, reported it without amendment and submitted a report (No. 493) thereon.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. SMITH of Arizona:

A bill (S. 6207) granting an increase of pension to Mary Jane Bowman; to the Committee on Pensions.

By Mr. MARTINE of New Jersey:

A bill (S. 6208) for the retirement of certain employees of the Postal Service; to the Committee on Post Offices and Post Roads.

By Mr. STERLING:

A bill (S. 6209) granting an increase of pension to Ann M. Green (with accompanying papers);

A bill (S. 6210) granting an increase of pension to Ludvig N. Anderson (with accompanying papers); and

A bill (S. 6211) granting an increase of pension to George W. Bolster (with accompanying papers); to the Committee on Pensions.

AMENDMENT TO SUNDRY CIVIL BILL.

Mr. JONES submitted an amendment proposing to appropriate $20,000 for botanical exploration of Central and South America, etc., intended to be proposed by him to the sundry civil appropriation bill (H. R. 15836), which was referred to the Committee on Appropriations and ordered to be printed.

INDIAN PATENTS.

Mr. CURTIS submitted an amendment intended to be proposed by him to the bill (H. R. 8092) confirming patents heretofore issued to certain Indians in the State of Washington, which was ordered to lie on the table and be printed.

PREPAREDNESS FOR WAR (S. DOC. NO. 448).

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed as a public document a paper prepared by William Hoynes, dean of the law faculty of Notre Dame University, South Bend, Ind., on the subject of preparedness.

William Hoynes was the youngest member of the Twentieth Wisconsin Volunteer Infantry, in which he enlisted in Company A in 1862. He was severely wounded in the Battle of Prairie Grove in December of that year, but continued in the active Infantry service until late in the year 1863. He was then discharged from the service on account of his wounds, but reenlisted and joined Company D, Second Wisconsin Cavalry, continuing until the close of the war. He graduated from the University of Michigan in 1872, and from that time, with the exception of brief intervals when he engaged in editorial work during his young manhood, he has engaged in the practice of law in Chicago. He has been dean of the law faculty of the University of Notre Dame since 1883. He was a Republican candidate for Congress in his district in 1888. I ask that the paper be printed as a public document.

The VICE PRESIDENT. Without objection, it is so ordered.

GOOD ROADS.

The VICE PRESIDENT laid before the Senate the action of the House of Representatives disagreeing to the amendments of the Senate to the bill (H. R. 7617) to provide that in order to promote agriculture, afford better facilities for rural transportation and marketing farm products, and encourage the development of a general system of improved highways, the Secretary of Agriculture, on behalf of the United States, shall in certain cases aid the States in the construction, improvement, and maintenance of roads which may be used in the transportation of interstate commerce, military supplies, or postal matter, and requesting a conference with the Senate on the disagreeing votes of the two Houses thereon.

Mr. BANKHEAD. I move that the Senate insist upon its amendments, agree to the conference asked for by the House, the conferees on the part of the Senate to be appointed by the Chair.

The motion was agreed to, and the Vice President appointed Mr. BANKHEAD, Mr. SWANSON, and Mr. TOWNSEND conferees on the part of the Senate.

HOUSE BILL REFERRED.

H. R. 15957. An act granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy, and certain soldiers and sailors of wars other than the Civil War, and to widows of such soldiers and sailors, was read twice by its title and referred to the Committee on Pensions.

RECESS.

Mr. CLARKE of Arkansas. I move that the Senate take a recess until Monday next at 11 o'clock a. m.

The motion was agreed to; and (at 4 o'clock and 20 minutes p. m., Saturday, May 27, 1916) the Senate took a recess until Monday, May 29, 1916, at 11 o'clock a. m.

HOUSE OF REPRESENTATIVES.

SATURDAY, *May 27, 1916.*

The House met at 11 o'clock a. m.

Rev. John W. Beard, of Hoquiam, Wash., offered the following prayer:

Almighty God, our heavenly Father, supreme Lawgiver to men and Ruler over the nations, we this day invoke Thy presence with and Thy blessing upon this body assembled. Let Thy power direct and Thy spirit lead the deliberations of these Representatives, who so largely hold the destiny of this great people in their hands. May everything here planned and all things here accomplished be to Thy glory, the honor of the Nation, and the advancement of truth and justice everywhere.

And O our Father, may the way of this our loved land be as the dawning light which shineth more and more unto the perfect day. And adown that path as a giant in strength prepared, yet robed in glorious light, with the breastplate of utter righteousness, the sword of exact justice, and sandals of lovely peace, may it move serenely, majestically on to usher in the thousand years of peace.

All these things we ask, with forgiveness of national sins, in the name of our Lord and Savior Jesus Christ. Amen.

The Journal of the proceedings of yesterday was read and approved.

W. H. CLEERE.

Mr. FOSTER. Mr. Speaker, I ask unanimous consent to withdraw the adverse report on the bill (H. R. 12433) for the relief of W. H. Cleere.

The SPEAKER. The gentleman from Illinois asks unanimous consent to withdraw an adverse report on the bill (H. R. 12433) for the relief of W. H. Cleere. Is there objection.

There was no objection.

PENSIONS.

Mr. SHERWOOD. Mr. Speaker, I ask unanimous consent to take from the Speaker's table Senate concurrent resolution 23, and agree to the same.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. The Clerk will report the resolution.

The Clerk read as follows:

Senate concurrent resolution 23.

Resolved by the Senate (the House of Representatives concurring), That the Secretary of the Senate be authorized in the enrollment of the bill (S. 4856) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors, to change the word "Hentry" to "Henry," where it occurs in line 21, page 7, and to change the word "him" to "her," where it occurs in line 1, page 18.

The SPEAKER. The question is on agreeing to the concurrent resolution.

The concurrent resolution was agreed to.

FOREIGN-BUILT DREDGES.

The SPEAKER laid before the House the following resolution:

IN THE SENATE OF THE UNITED STATES,
May 18 (calendar day May 25), 1916.

Resolved, That the Secretary be directed to request the House of Representatives to return to the Senate the bill (S. 4797) entitled "An act to amend an act entitled 'An act concerning foreign-built dredges,' approved May 28, 1906."

Attest:

JAMES M. BAKER, *Secretary.*

The SPEAKER. The question is on agreeing to the resolution.

The resolution was agreed to.

EXTENSION OF REMARKS.

Mr. BLACK. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD upon the river and harbor appropriation bill.

The SPEAKER. The gentleman from Texas asks unanimous consent to extend his remarks in the RECORD on the river and harbor appropriation bill. Is there objection?

There was no objection.

NAVAL APPROPRIATION BILL.

Mr. PADGETT rose.

Mr. MANN. Mr. Speaker, I make the point of order that there is no quorum present.

Mr. GARNER. Mr. Speaker, I wish the gentleman would withdraw his point of order for the present.

Mr. MANN. I will withdraw the point of order.

Mr. PADGETT. Mr. Speaker, before the House goes into the Committee of the Whole House on the state of the Union for the consideration of the naval appropriation bill, I desire to ask unanimous consent that all persons who speak upon the naval appropriation bill shall have the privilege of extending their remarks in the RECORD. At the suggestion of Members about me I will make that that all Members of the House have that privilege.

The SPEAKER. The gentleman from Tennessee asks unanimous consent that all Members who speak on the naval appropriation bill——

Mr. PADGETT. All Members of the House, Mr. Speaker.

Mr. MANN. Mr. Speaker, I shall object for the present in any event.

Mr. GARNER. Mr. Speaker, will the gentleman yield for a suggestion?

Mr. PADGETT. Certainly.

Mr. GARNER. It has been suggested by some gentlemen that if there could be some kind of an agreement at this time, when the amendment for the armor-plate plant would be offered in the Committee of the Whole, and when it would be voted upon, it would facilitate matters and give Members an opportunity to be all here when the vote was taken. If the chairman of the committee or some gentleman who expects to offer that amendment could indicate about when the vote will be taken I think it would accommodate a great many Members.

Mr. FOSTER. They ought to be here at all times.

Mr. PADGETT. I can not say definitely now, but I should think about Tuesday morning.

Mr. WINGO. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. WINGO. Am I correct in the understanding of the rule that there will not be any amendments offered until after 1 o'clock on Monday?

Mr. MANN. There will not be any amendments offered until the bill is read through, and that will take until about 3 or 4 o'clock on Monday afternoon.

Mr. WINGO. We are supposed to complete the general debate by 1 o'clock Monday afternoon?

Mr. MANN. One thirty; and the bill has then to be read through after that, so that it will probably be 3 o'clock before there will be any action taken on any amendment.

Mr. PADGETT. Something about that time.

Mr. MANN. Mr. Speaker, will the gentleman yield?

Mr. PADGETT. Yes.

Mr. MANN. Following out the suggestion made by the gentleman from Texas [Mr. GARNER], of course the chairman of the committee will have the privilege of offering the armor-plate amendment at any time. Could we have some understanding as to whether a vote in the committee would come on Monday afternoon or Tuesday morning—for the convenience of Members?

Mr. PADGETT. I shall not offer it before Tuesday morning.

Mr. MANN. Will the gentleman offer it at that time?

Mr. PADGETT. I shall, if the way is open. I expect to offer it that morning when opportunity affords.

Mr. GARNER. And that would enable the committee very likely to vote, say, about 2 o'clock.

Mr. STAFFORD. Oh, we want to have liberal debate on that proposition.

Mr. GARNER. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. GARNER. Under the rule that has been adopted there will be nothing but general debate to-day?

The SPEAKER. That is correct.

Mr. GARNER. Then the only point to be gained in making a point of no quorum would be to get people here to listen to Members talk in general debate?

The SPEAKER. No one has made the point of no quorum. The gentleman from Illinois [Mr. MANN] withdrew the point. Under the rule the House will automatically resolve itself into the Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 15947, naval appropriation bill, and the gentleman from New York [Mr. FITZGERALD] will take the chair.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the consideration of the bill (H. R. 15947) making appropriations for the naval service for the fiscal year ending June 30, 1917, and for other purposes, with Mr. FITZGERALD in the chair.

Mr. PADGETT. Mr. Chairman and gentlemen, there are four views that present themselves with reference to the naval appropriation bill. There is one element in the country so opposed to any increase of the Navy that it occurs to me that in order to carry out their views they unduly magnify the Navy that we have. There are others who are so intense in their desire for a very large increase in the Navy that they belittle and unduly minimize the Navy that we have. Another element, unhampered by the exactions of information and unrestrained by the limitations of knowledge upon the subject, have a wide play for the fluency of their imaginations and the eloquence of their tongues, and they speak without restraint concerning the Navy. [Applause.] Still another class, I think, are illustrated very well by an incident that is said to have happened on the Mississippi River. A steamboat blew up opposite the city of Memphis, and the passengers were struggling in the water. A man came running down the hill very much agitated and excited, hallooing at the top of his voice, "Save that red-headed man, save that red-headed man!" A bystander said to him, "Is that your father?" "No, sir; save that red-headed man!" "Is he your brother?" "No, sir." "What kin is he?" "He is not any kin, but he owes me $2." [Laughter.]

Now, all four of those views have to be taken into consideration when we come to make up a just and well-proportioned naval appropriation bill.

I think I can say to the House this morning that the bill which the committee has submitted for consideration contains more helpful, more needed, and more beneficial legislation than was ever contained in an appropriation bill heretofore submitted. The bill is not only larger in its appropriations than any bill heretofore submitted to the Congress but I believe that upon a careful analysis and understanding of the provisions of the bill you will find that the recommendations of the committee are well considered and are supported by the best interests of the Navy, the welfare of the country, and that they rest upon wise considerations. [Applause.]

Upon the greater number of the provisions of the bill there was a unanimous opinion among the members of the committee. The minority members of the committee have submitted a minority report antagonistic to certain provisions of the bill. If time permitted I would be glad to take up the many provisions of legislation in the bill and other matters, but I shall not attempt to do so, because I do not wish personally to consume too much of the time, and I wish to reserve for other Members of the House an opportunity for debate upon the bill.

The bill last year appropriated in round numbers $149,000,000. This bill carries $241,500,000—an increase of more than $91,000,000 in appropriations. The building program submitted this year involves a cost to the Government of more than $160,000,000, as against, if I remember the bill of last year, less than $60,000,000. In other words, there is an increased authorization of about $100,000,000 of the new building program. The committee this year did not see proper to authorize the construction of battleships—dreadnaughts—but in lieu thereof we have recommended the building of five battle cruisers.

The estimated cost of a battleship is about $17,250,000. The estimated cost of a battle cruiser is about $20,423,000, if I remember correctly; so that the cost of a battle cruiser is a little more than $3,000,000 more than the cost of a battleship.

The minority have seen fit to criticize the action of the majority of the committee in refusing or declining to report an authorization for battleships at this session of Congress. I wish to say at the outset that the action of the committee was not intended and is not to be construed or understood as in any way reflecting upon or discrediting or minimizing the importance or the value of battleships.

Mr. MADDEN. Will the gentleman yield?

Mr. PADGETT. No; I must ask to be allowed to proceed until I reach a certain point, and then I will yield to questions.

Mr. MADDEN. I thought this would be a good point to ask the gentleman a question.

Mr. PADGETT. I prefer not to be interrupted now. I think if the gentleman will allow me to proceed I will give the information that the question would call for.

In my opinion, and in the opinion of every naval officer who appeared before the committee, without exception, the battleship always has been, is now, and ever shall be the principal fighting ship of the Navy. It is the ship that is fitted to give and take hard blows in a fight; but the conditions of our Navy are such as in the opinion of the committee justify, yea, demand, that at this time the policy heretofore emphasized by Congress of putting forward the construction of battleships to the exclusion of cruisers should be reversed, and that at this time we should pursue the policy of building battle cruisers instead of battleships.

The minority have filed a report in which they use this language, and I am willing to accept the challenge of the minority and to meet the statements in their report:

> The building program submitted by the committee for the increase of the Navy is inadequate for the defense of the country. It is not the product, in any degree, of expert naval opinion and disregards every plan suggested by naval authorities for the development of the Navy.

I want you to notice this language:

> It ignores the recommendations of the Secretary of the Navy and sets aside expert opinion, as expressed by the General Board of the Navy, the Chief of Operations of the Navy, the admirals in command of the fleets, and every other naval officer appearing before the Committee on Naval Affairs. Apparently the only explanation that can be given for the program suggested is that it is a compromise between those who wanted nothing in the way of additional naval protection and those who wanted but little.

[Applause on the Republican side.]

Now, gentlemen, I ask your careful attention to the matter. First, I want to submit to this House the proposition that $160,000,000 for the increase of the Navy at one session of Congress is a sufficient amount in the aggregate to be devoted to the building up of the Navy at one session. Two hundred and forty-one million dollars, nearly a quarter of a billion, is enough to be carried in the naval appropriation bill at one session of Congress.

The question arises as to the proper distribution and apportionment of that expenditure. You will notice that this minority report says that we ignored the recommendations of the commanders in chief of the fleets and of all the naval officers who appeared before the committee. Now, let us see. Admiral Fletcher is the commander in chief of the Atlantic Fleet. I

have here the printed testimony, and let us see what he says. On page 2291, Admiral Fletcher says:

The CHAIRMAN. Taking into consideration our fleet, with our pre-dreadnaughts and dreadnaughts, the number of battleships, and the absence of any battle cruisers, and the conditions in other fleets having battle cruisers, as a matter of illustration, in order to get the benefit of your opinion, if the committee should recommend four capital ships would you advise that two of them be dreadnaughts and two of them battle cruisers, or that all four of them should be battle cruisers? I am asking for your personal opinion. We have had the opinions of others, and I want to get the benefit of your personal opinion on that phase of the question.

Admiral FLETCHER. I have not given that particular question much study, such as is given to questions of that kind by the General Board, and I would be inclined, therefore, to be guided by the result of the General Board's studies; but without having given it serious thought I would say that I prefer to have four battle cruisers.

Mr. STEPHENS. Admiral Fletcher, if Congress authorizes four or six battle cruisers in this bill, would you build them all alike, from one set of plans, or would you change the plans and specifications for each of the battle cruisers?

Admiral FLETCHER. I would build them all alike.

Mr. BRITTEN. Will the gentleman permit a question?

Mr. PADGETT. No; not at this point. And then on page 2385 he says:

Mr. CALLAWAY. If I understand you aright now, you recommend that we build cruisers, and as between battleships and battle cruisers your preference is a certain number of battle cruisers?

Admiral FLETCHER. I should add battle cruisers at this time and also scout cruisers, in order to reenforce the battleships and in order to enable them to utilize their greater power effectively.

Mr. CALLAWAY. If I understand your recommendation at this time it is that if we were going to build two capital ships that we build battle cruisers and if we were going to build four capital ships that we build battle cruisers, and if we were going to build more capital ships than that that we add some dreadnaughts. Am I right about that?

Admiral FLETCHER. Yes, sir; that would be my conception, but I stated that I had not given this particular subject any study such as is given to it by the General Board, and I would prefer to accept their conclusions.

That is the personal opinion of Admiral Fletcher, who is the commander in chief of the Atlantic Fleet.

Mr. KELLEY. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. I decline to yield now, but I will yield a little later. Now, take the testimony of Admiral Winslow, who is commander in chief of the Pacific Fleet. On page 1423 of the hearings he says:

Mr. BROWNING. How many battle cruisers would you build this coming year?

Admiral WINSLOW. I would build all the country can build.

Page 1424 Mr. BROWNING further asked him:

What I want to know is what is your opinion; whether we should do both, or whether, if we are going to build four, we should build two of each?

Admiral WINSLOW. I think you will find that there is opinion that we should build battleships; that there is other opinion that we should build battle cruisers; but I think that you will find the majority of opinion is that we should build both.

Mr. BROWNING. Both?

Admiral WINSLOW. Both battle cruisers and battleships. I think you will find that that would be the majority of opinion. I myself am very strongly in favor of battle cruisers. We have no battle cruisers.

That is his personal opinion. Now, I call your attention to the testimony of Admiral Knight, the president of the Naval War College. On page 2013 he says:

I asked him a question about his opinion and this is his answer:

As regards the battle cruiser, I will say that I never agreed with that statement as to battle cruisers and I do not agree with it now. You will understand, of course, that there are differences of opinion in the General Board, just as there are difference of opinion elsewhere, and I thought on the 9th day of November, and I think now, that the battle cruiser has shown itself to be very much more important than it was believed to be in the beginning of the war.

The CHAIRMAN. Your recommendation with reference to postponing the construction of battleships at the present time and emphasizing the importance of the immediate construction of battle cruisers, is made in view of our particular situation, having the number of battleships we have and having no battle cruisers?

Admiral KNIGHT. That is one part of my reason, and there is another part, which I tried to bring out when I made my statement. It is that I believe the design of battleships to be now in a condition of flux. I believe that within the next year changes will be made, not in the essential nature of the battleship, but in its detailed nature, which will enable us a year from this time to design a battleship which will meet measurably some of the dangers which have developed during this war.

And then on page 2014:

The CHAIRMAN. With those limitations?

Admiral KNIGHT. Yes. But I think I ought, before closing, to bring in this point which I have not made fully; that is to say, that the experience of the War College, repeated day after day and month after month and year after year, emphasizes the absolutely vital necessity for scouts and battle cruisers. Of course, if we could make them all battle cruisers, as was said in that report, that would be fine, because then the moment contact is made with the enemy, the battle cruiser breaks through their scouting line and finds out what is behind it. When he comes closer to the enemy, he finds the enemy's main fleet, surrounded by what we will call a defensive screen, and he is able to make touch with that, and perhaps to break through it and find out what lies beyond it. In other words, he has all the powers of the scout and a great many more, as stated in the General Board's report; but if we can not have every one of our scouts a battle cruiser—and it seems a little too much to ask—then we should have our line of scouts backed up by battle cruisers, so that when the scout sees something that looks a little dangerous, he calls for the battle cruisers to deal with the situation.

This is the experience of every officer who comes to the War College. Officers come there not very friendly to the battle cruiser; they do not know just what it really is. But I venture to say there is not one of them there now, and there are 36 there, who to-day would not say, "Give us battle cruisers first of all." Before I left there to come down here, a number of officers urged me to speak out strongly for this type.

And then, on page 2066, Admiral Knight says:

In other words, I wish you to accept what I say about the needs of battle cruisers and scouts as coming not from me individually, as Rear Admiral Knight, but as coming from the president of the War College and from the War College; and I really think that that entitles me to ask you to attach more importance to it than you attach on that one point, about types of ships, to the statement of almost any other officer who can come before you. We try these things out there week after week and month after month and year after year, and we have been driven irresistibly to the conclusion that a considerable number of battle cruisers and a large number of scouts are an absolute necessity. So that I say I claim to speak on that subject with an authority quite different from that of officers who have only the general experience of service behind them.

About the number of battle cruisers: During the course of my remarks yesterday I think I made it clear—I hope I made it clear—that the number for which I was standing was the largest number that could be built, and it was represented yesterday that more than I had suggested could be built. I have made some inquiries since, and have satisfied myself that more could be built and I should therefore like to be understood as standing not for six but nine battle cruisers. I think that was implied all through my testimony yesterday, but I did not make it as definite as I wish to make it now.

Mr. KELLEY. You changed your recommendation there from six ships to nine?

Admiral KNIGHT. Yes.

Here is the testimony of Capt. Sims, a very distinguished officer and a very able one. He appeared before the committee, and, on page 2688 of the hearings, he says:

Mr. OLIVER. My idea was to develop what you thought would be necessary at this time to add to the fleet we now have, to make that fleet fairly efficient?

Capt. SIMS. I would like to see eight or nine battle cruisers built at the earliest possible date. That would enable us to put up a good stand against anybody who might come on us.

Then, on page 2745, Admiral Sims has a very interesting statement, as follows:

Mr. CALLAWAY. We have authorized—and you know the condition of our fleet—two dreadnaughts, the keels of which have not yet been laid, one to be built in the New York Navy Yard and the other to be built at Mare Island.

Capt. SIMS. *Nos.* 43 and 44?

Mr. CALLAWAY. If battle cruisers are as necessary to our fleet as you say they are, ought those two dreadnaughts to be changed to battle cruisers?

Capt. SIMS. I should say so, if it could be done, if the plans have not gone too far and there would not be too much delay in changing them. Whether our plans are completed for the battle cruisers or not, I do not know. I do not know whether the plans are completed for the new battle cruisers or not. It takes a long time to make the full plans of a ship of a new type, but if the battle cruiser plans are ready without delay I think they ought to be laid down as battle cruisers.

Mr. CALLAWAY. Battle cruisers?

Capt. SIMS. And I would prefer to see them built as battle cruisers.

Mr. CALLAWAY. So far as you can see under our present conditions, there would be no comparison or argument? You would be absolutely in favor of changing those battleships for battle cruisers, considering our whole equipment and necessity?

Capt. SIMS. Our great necessity now is for the battle cruisers, and if I remember, Admiral Knight said in his statement that we ought to build them as fast as the resources of this country will permit; so that if battleships *Nos.* 43 and 44 have not been laid down and there would not be undue delay in changing them to battle cruisers, I would say change them to battle cruisers.

Mr. CALLAWAY. The department asks for two battle cruisers and two battleships this Congress—this session. In your judgment there is no question at all, if we build four, that they ought all four to be battle cruisers?

Capt. SIMS. Absolutely; there is no question at all.

Mr. CALLAWAY. As I understand you, there is no question in your judgment that the two battleships which have been authorized, and the keels of which have not been laid, should also be changed to battle cruisers?

Capt. SIMS. Absolutely.

Mr. CALLAWAY. Considering the condition of our fleet at the present time, and our necessities?

Capt. SIMS. That is my opinion.

Mr. COOPER of Wisconsin. What is the exact difference between a battleship and a battle cruiser?

Mr. PADGETT. A battleship is a ship that carries heavy armor and big guns and has a speed of from 20 to 21 or 22 knots. A battle cruiser is lighter armored, but has a much higher speed and also carries big guns. The battle cruiser has a speed provided by this bill of 35 knots as against 21 knots for our battleships, but they both carry large guns.

Now, then, pursuing the question that these gentlemen said we were ignoring——

Mr. ROBERTS of Massachusetts. Will the gentleman yield for a question?

Mr. PADGETT. I will yield later.

Mr. ROBERTS of Massachusetts. But the gentleman desires to have his statement accurate?

Mr. PADGETT. Yes.

Mr. ROBERTS of Massachusetts. The gentleman says this bill provides for a 35-knot speed for the battle cruisers.

Mr. PADGETT. No; I said the battle cruisers provided for are to have a speed of 35 knots.

Mr. ROBERTS of Massachusetts. The gentleman said the bill provided for a speed of 35 knots and that is what I wanted to call attention to.

Mr. PADGETT. The plans for these we authorized are for 35 knots or more.

Mr. ROBERTS of Massachusetts. Contemplate 35 knots?

Mr. PADGETT. Actually provide for that.

Mr. ROBERTS of Massachusetts. They do not provide for that speed, that is the difference.

Mr. PADGETT. The bill does not designate the speed.

Mr. ROBERTS of Massachusetts. That is what I say.

Mr. PADGETT. The plans provide for and the testimony shows that is what is contemplated. To show the difference, the battleships we have been building with a speed of 20 to 21 knots have an engine power of 29,000 horsepower. The battle cruisers contemplated by this bill have 180,000 horsepower engines.

Mr. HUMPHREY of Washington. Will the gentleman yield?

Mr. PADGETT. I can not at this time.

Mr. HUMPHREY of Washington. I would like to ask the gentleman——

Mr. PADGETT. I can not yield at this time; I will yield later. Now, Admiral Grant appeared before the committee and on page 1603 this occurred:

The CHAIRMAN. What is the ship that will command the sea and must be used for the most effective offense and defense in war on the sea?

Admiral GRANT. I should say briefly that the most effective vessel is the one of which we have not any in our service—the battle cruiser.

Then on page 1604 Admiral Grant continues:

Mr. BRITTEN (interposing). I asked if you would send a division of battle cruisers out to fight a division of dreadnaughts, and you said that you would not?

Admiral GRANT. I repeat no.

Mr. BRITTEN. Then I asked you upon what you based your conclusion that the battle cruiser was the most efficient fighting ship?

Admiral GRANT. Because the battle cruiser is a vessel that we have none of yet, and it is the one we must depend on to bring us information and to destroy the scouts and torpedo flotilla of the enemy operating against us.

Mr. BRITTEN. What about destroying the big ships of the enemy?

Admiral GRANT. I would take the battleship.

Mr. BRITTEN. You would not do that with the battle cruisers?

Admiral GRANT. I would attack him in some way.

Mr. BRITTEN. With your lighter armament?

Admiral GRANT. I would not attack him, probably, with that alone.

Mr. BRITTEN. If we were going to authorize one or two divisions of big ships, first-line ships, this year, which would you prefer authorizing—battle cruisers or dreadnaughts?

Admiral GRANT. Battle cruisers.

Mr. BRITTEN. Was that based on four ships?

Mr. PADGETT. Yes; he said he would ask four or more if he could get them.

Mr. SLAYDEN. They would ask 40.

Mr. PADGETT. He would ask any he could get. He was speaking of the type that was needed. Now, I will take the statement of Capt. McKean, who is the aid for matériel, a very distinguished and learned officer. On page 1752 the question was asked him:

Captain, I want you to write clearly into the record your views as to the importance of adding to our fleet fast battle cruisers. Do I understand you to give it as your opinion that the most urgent and impending need of our fleet at present is the addition of at least four fast battle cruisers?

Capt. McKEAN. At least four, sir.

Mr. OLIVER. Do you think that this number of fast battle cruisers is now needed in order to give us a well-balanced and efficient fleet?

Capt. McKEAN. We need them as a part of the fleet now on the sea.

Mr. OLIVER. And in order to properly balance this fleet, as you expressed it?

Capt. McKEAN. Yes, sir; the fleet already built.

Mr. OLIVER. Already built?

Capt. McKEAN. Yes; as judged from the problems that we have solved.

Mr. ROBERTS. You consider 4 fast battle cruisers are necessary where you have as many as 12 dreadnaughts?

Capt. McKEAN. That is about the proportion that I would consider a fleet to be well balanced in—12 dreadnaughts to 4 battle cruisers.

We have 19 dreadnaughts, counting the *South Carolina* and *Michigan*, and not one battle cruiser.

Mr. BUTLER. Excuse me, but did the gentleman count the two ships the keels of which will not be laid for a year?

Mr. PADGETT. Yes.

Mr. BUTLER. Does the gentleman call them ships?

Mr. PADGETT. Yes, sir; I call them ships as far as Congress is called upon to act. We have authorized them and they are gathering the materials and assembling them and getting ready to construct them.

Mr. BUTLER. Does the gentleman prefer not to be interrupted?

Mr. PADGETT. Yes, sir.

Mr. BUTLER. I have a few questions I would like to ask the gentleman.

Mr. PADGETT. On page 1754 Capt. McKean again says:

Mr. OLIVER. Are your conclusions as to the urgent need of this type based, in part, upon a careful study and observation of the present war?

Capt. McKEAN. In part on the game-board studies at the War College, in part on active fleet maneuvers at sea with our own fleet, and this conclusion confirmed by the operations of the present war.

Now, then, I have the testimony here of Admiral Taylor, the Chief Constructor of the Navy, on page 855, where he says:

Mr. BUTLER. I heard what you said about the battle cruisers. Have you always entertained that opinion of battle cruisers?

Admiral TAYLOR. I have been quite consistent in that opinion, thinking at first we needed battleships most, and now that we have a reasonable number of battleships completed I think it is time to have some battle cruisers.

On page 857 he continues:

Mr. CALLAWAY. You said that, in your judgment, the battle cruiser is of more importance at this time to our Navy than the battleship?

Admiral TAYLOR. I stated that if you had to make a choice at the present moment I believe I would build two battle cruisers this year instead of two battleships.

Now, then, I have one other authority, and in view of what has been said by some Members who signed the minority report I believe it will be considered good authority, and it will be accepted as good authority whether we signed the minority report or did not sign it, because I say he is good authority. I ask your attention to the testimony of Rear Admiral Bradley A. Fiske, on page 2962:

Mr. CALLAWAY. The war, according to our reasonable expectations, will not last more than a year longer, and whatever developments come out of that will come probably before we will lay the keel of another battleship. Don't you think it would be well for us to put whatever money we have into cruisers and await the development of the battleship situation, rather than to go ahead and build this thing that, according to the testimony before this committee, looks a good deal like junk to me?

Admiral FISKE. That question is a little bit vague and a little hard to answer. That is the reason why I like the game board, because it is helpful in determining just such questions. Before I can answer your question I have first to make up my mind exactly what you mean. Of course no people use words exactly the same. I will have to answer your question again very much the way the other officers have, or most of them, that if you are going to appropriate for a comparatively limited number of ships, I would prefer battle cruisers; but if you are going to vote 20 capital ships, I would not have them all battle cruisers.

Mr. CALLAWAY. I am not going to vote for that many.

Admiral FISKE. If you are going to vote only four, then I think, and most of us think, they should be battle cruisers.

Mr. BROWNING. But suppose we were going to vote six, what would you say?

Admiral FISKE. I would say battle cruisers.

Mr. BROWNING. All of them.

Admiral FISKE. Yes, sir.

[Applause.]

Mr. BRITTEN. Why did not the committee advise six battle cruisers?

Mr. PADGETT. Because the committee decided that they would cost more than they wanted to authorize in one session of Congress. We have nothing to conceal or nothing to hide. We have tried to deal with this question in an intelligent, sane, and safe way and in a legitimate and proper manner to reach a proper solution of this question.

Mr. BRITTEN. Is it not a fact, Mr. Chairman, that the logrolling that occurred in the committee caused the reduction in numbers—the logrolling between the pacifists and near pacifists?

Mr. PADGETT. I have nothing to say about that, except that there was a lot of logrolling going on among those who signed the minority report before that meeting to which you refer.

Mr. BRITTEN. We were educated by your committee.

Mr. PADGETT. Well, I simply want to illustrate that by a little incident that occurs to me at the present time. Down in our country there was an old darky named Uncle Ephraim. Uncle Ephraim started across an old field one day, and there was a bad ram in there that had the habit of attacking people. The ram spied old Uncle Ephraim, and humped himself and started for him. Uncle Ephraim saw an old stump out in the field and he started for it. They got to chasing each other around the stump and Uncle Ephraim gained on the ram and closed on him and reached down between his legs and caught the ram by the tail and began to pull, squeeze, and twist, and then the ram rolled his head back and walled his eyes back at

him and cried, "Baa, baa." Uncle Ephraim said, "You baa and be damned. Who fotched on this difficulty?" [Laughter.]

Mr. BRITTEN. Do you mean to say that that was an old ram?

Mr. MADDEN. Did not the gentleman get the story a little balled up? [Laughter.]

Mr. PADGETT. I wish to call your attention to what Admiral Fiske said as reported on page 2956 of the hearings, as follows:

Admiral FISKE. I testified on Friday, in answer to a question here, that I would follow the recommendations of the General Board of July 30, which would mean if you are going to build eight capital ships, you should build four and four.

The CHAIRMAN. How would you get away from the six?

Admiral FISKE. There you are again. If you are only going to build six, I would make them all battle cruisers.

Mr. CALLAWAY. You had better answer according to your own judgment rather than to take the judgment of the board.

Mr. BROWNING. If you are going to build eight ships, what would you do?

Admiral FISKE. In that case, four battleships and four battle cruisers.

Mr. BROWNING. You would?

Admiral FISKE. Yes, sir; if you are going to build eight capital ships.

The CHAIRMAN. If you are going to build six ships, you would build six battle cruisers, and not four battle cruisers and two battleships?

Now then, gentlemen, I submit to the membership of this House in all seriousness if the statement of the minority in their report that we ignored all naval authority is borne out by the facts? There were two other officers who appeared before the committee and spoke on the subject. Admiral Benson, who is the Chief of Naval Operations, said that he would follow the program mapped out for the five years and build two and two—stood for both. And then Admiral Badger stood for both. And I have read the testimony of these others. And I submit to you as frank, candid men, that with our conditions, having 19 battleships and no battle cruisers, that the proper thing for the committee to do was to pursue the policy we have pursued and start upon the supplying of the needs of the Navy along this line and meet this urgent necessity as we have heretofore done by emphasizing the building of battleships to the exclusion of battle cruisers. [Applause.]

Now, then, gentlemen, there is another question that I want to talk about. That is the question of personnel, and I am not going to take so much time on that. They find fault with the action of the committee in recommending an increase of 13,500 men. We recommend 13,850 men, because of adding 350 enlisted men under the provision for the flying corps. Now, then, the department recommended 10,000. We have recommended 13,850. But these gentlemen complain of that. Now, let me say we have here the recommendation of the General Board of the Navy, of date July 30, 1915, as follows:

Personnel: Eleven thousand men. This number will provide for the needs of the present ships of the Navy, including those nearing completion, but it must be borne in mind that the personnel—commission, warrant, and enlisted—will have to be further increased as the new construction progresses.

Now, that was on the 10th day of last July. The General Board of the Navy carefully, deliberately, and considerately recommended 11,000 men increase. But we have recommended 13,850. But they said that would care for all the present ships of the Navy, including those nearing completion.

Mr. ROBERTS of Massachusetts. Will the gentleman yield right at that point? The number of men that you recommended was 13,850?

Mr. PADGETT. Thirteen thousand five hundred, and three hundred and fifty under the provision of the flying corps.

Mr. ROBERTS of Massachusetts. I supposed that you were referring to the men for the Navy proper.

Mr. PADGETT. They are in the Navy, because if they did not come in under that provision they have got to be supplied from the other provision. So that the aggregate is 13,850.

Now, I want to call your attention to the fact that the General Board in November, 1915, submitted another report to the Secretary of the Navy recommending with reference to an increase in personnel, and they say that the Navy is the first line of defense of the country. They said for the fiscal year 1917 the General Board regarded as inadequate any smaller force than 67,000 men in the regular Navy. Now, then, we have at the present time 54,000 enlisted men. We are authorizing 13,850. So that we are authorizing in this bill 850 more men than the General Board in its report in November, 1915, said were required for the Navy in the next year, 1917, on a peace basis. But not only that, Admiral Badger was before the committee and testified. He is a member of the General Board. He is chairman of the executive committee of that board.

He is chairman of the executive committee of the general board. He has retired from the position of commander in chief of the Atlantic Fleet. We had before him the question of the number of men required for the Navy in time of peace, and he stated the number at 67,865. In other words, he said 67,865, and our recommendation makes 67,850. So it has got down with the minority report to a 15-cent proposition. [Applause.]

Now, then, there is one other matter, and I will not take much time on it. They criticize us on the question of aviation. Last year the Congress appropriated $1,000,000 for aviation. In this bill we are appropriating $2,000,000. It must be borne in mind that the sphere of operations of aviation in the Navy is limited to the operations of our ships. It is not for land aviation, but it is for the purposes that are consistent with and in keeping with the ships. Our development in aviation with reference to motors has not reached a satisfactory condition. While we are making motors, and all the motor manufacturers in this country, all of the factories that are engaged in the manufacture of automobiles, are experimenting with and working and trying to develop a motor—and there never was such energy and effort being put forth as there is at the present time to develop a satisfactory motor, yet we have not thus far secured a motor that is entirely satisfactory. Now, then, the committee take the position, and it is supported by the testimony of Admiral Benson, Chief of Naval Operations, that $2,000,000 will answer all the purposes of the department this year in the development of aviation.

Now, there are other things I would like to mention, but I see I have taken up more time than I intended. I will yield to the gentleman from Connecticut [Mr. HILL] for a question.

Mr. HILL. I desire to ask the gentleman a question for information. The gentleman has quoted very extensively, and to me very satisfactorily, from the reports of these officers of the Navy. I want to ask him now whether these are the same men under whose advice the present Navy has come to its present unbalanced condition, or is it the fault of Congress that the condition which now obtains exists? Where is the blame, if there is blame, to be located? Upon these men whom the gentleman has now quoted, or upon the refusal of Congress to follow their advice in the past?

Mr. PADGETT. I will say to the gentleman that the naval officers heretofore and the General Board heretofore have emphasized the importance and the necessity of the building of battleships above every other ship in the Navy. The General Board has never, except in one year, heretofore recommended the building of battle cruisers. That was in 1912, and at that time they did recommend the building of two; but the Navy Department did not submit any estimate through the Treasury to include those two battle cruisers.

Mr. HILL. Then, do I understand that the present recommendations are to correct past mistakes?

Mr. PADGETT. Yes, sir.

Mr. FESS. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. Yes.

Mr. FESS. What rank will our Navy have when this program is completed? What rank will the American Navy take when this program is completed, assuming that the other countries will continue their building programs?

Mr. PADGETT. That is a proposition where I hardly know what to assume. We have no information that is reliable and definite as to what the other naval powers have done since the outbreak of the war in Europe. I was talking only yesterday and the day before with Capt. Oliver, the head of the Naval Intelligence Office, and he says that they have no information that is reliable and definite. They have gotten fragmentary evidence, they have gotten reports here and there as to what has been done and what has not been done. And that reminds me to say here that last September we received from a source which is confidential, which I can not disclose, but which is supposed to be the most reliable that we have, to the effect that England and Germany both were building battle cruisers instead of battleships.

Mr. SMITH of Michigan. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. Not now. And only in the last few days that same report has been confirmed from a similar source.

Mr. FESS. Now where are we as to rank?

Mr. PADGETT. As to rank, there are so many elements that enter into it that it is hard to say; but I will give you the facts. Our Navy, prior to the time of the dreadnaught—that marked a dividing line in the navies of the world—our Navy, prior to the development of the dreadnaught class, was far superior to the German Navy, which is supposed to be the second power.

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. Not yet. Now, the German Navy in the dreadnaught is superior to ours. That is, we have 19 dreadnaughts, and she has 20 that we know of and one that it is sup-

posed she took over at the beginning of this war that was building in her yards for another nation; and then we have reports that she has built two others. The General Board sent down to us a statement that there were two others that were built, but the Naval Intelligence Office people say they will not state that as a fact. All they can say is that they have fragmentary reports and fragmentary evidence; that is probably true, but they do not state it as a fact.

Now, Germany had at the beginning of the war eight battle cruisers. We have none. The five that we are authorizing in this bill, we believe, are superior to her eight. I may add that one of those eight, the *Goeben*, was sold ostensibly to Turkey. We are informed she is still officered by German officers and manned by a German crew. Whether that is true or not I do not know, but that is the report that we receive. But these cruisers that we are authorizing are of such superior quality and superior character that they would more than offset the eight of the German cruisers that were built of an inferior character. But, according to that same evidence that I was telling you about a while ago, we are informed that the Germans have laid down three battle cruisers since the beginning of the war. Whether that is true or not I do not know. The Naval Intelligence Office say that they can not state whether it is true or not, but that they have fragmentary reports and evidence concerning it.

Now, I will yield to gentlemen.

Mr. SMITH of Michigan. I am interested in knowing what determines the status of a nation in relation to its navy; whether it is the number of battle cruisers, the number of dreadnaughts, the number of battleships, the number of men employed in the navy, the size of the guns, or the displacement of the ships.

Mr. PADGETT. All those things enter into it.

Mr. COOPER of Wisconsin. What is the earliest date at which the program provided in this bill can be completed?

Mr. PADGETT. It has been taking about 34 months to build battleships. The department think that they can build a battle cruiser in about the same time.

Mr. COOPER of Wisconsin. If this bill should pass within the next six weeks or two months, when does the gentleman think the five battle cruisers will be completed?

Mr. PADGETT. About 1919.

Mr. COOPER of Wisconsin. In about three years?

Mr. PADGETT. In from 30 to 36 months; I could not say exactly.

Mr. BRITTEN. Referring to the personnel of the Navy, the gentleman gave the House the recommendation of the Navy General Board of last July and also of last November. Does the gentleman care to advise the House that in December, more than a year ago, the Navy General Board advised 19,600 men additional for the enlisted service?

Mr. PADGETT. I do not remember about that definitely, but if more than a year ago they did that they have revised their figures twice since then, and when Admiral Badger appeared before the committee and was asked to give us a careful estimate and a detailed statement he submitted 67,865 as the number of men required for the fiscal year 1917, in time of peace, and we have given it.

Mr. BRITTEN. Is it not a fact that the report the gentleman refers to was based on specific conditions?

Mr. PADGETT. On peace conditions.

Mr. BRITTEN. Is it not a fact that it was based on skeleton crews for the majority of the ships of the Navy?

Mr. PADGETT. No. Admiral Badger based it on a 50 per cent skeleton for the reserve ships. And I may state to the gentleman that Secretary Meyer established the reserve ships on a 30 per cent basis, and the present Secretary put it at 40 per cent, and the General Board has recommended 50 per cent, and the figures of Admiral Badger are upon the basis of 50 per cent crews for the reserve ships in time of peace, which it occurs to me are ample.

Mr. ROBERTS of Massachusetts. I understood the chairman of the committee to say a moment ago that the strength of the Navy to-day is substantially 54,000 men.

Mr. PADGETT. Yes.

Mr. ROBERTS of Massachusetts. Will the gentleman kindly inform me how he arrives at those figures?

Mr. PADGETT. The Secretary states that number, and in your minority report you accept those figures.

Mr. ROBERTS of Massachusetts. Not men.

Mr. PADGETT. The gentleman wants to make a distinction——

Mr. ROBERTS of Massachusetts. Between a boy under instruction and a man. How many of the 54,000 are boys under instruction?

Mr. PADGETT. There are 3,500 of them that are apprenticed seamen.

Mr. ROBERTS of Massachusetts. Of the 54,000?

Mr. PADGETT. Yes.

Mr. ROBERTS of Massachusetts. That is what I wanted to know.

Mr. PADGETT. That is correct, and those 3,500 apprenticed seamen are young men between the ages of 18 and 21, and they are just as good material, and I sometimes think a little better, than some who are older. [Applause.]

Mr. BUTLER. Those boys are not put on battleships?

Mr. PADGETT. Oh, yes; they sprinkle them around.

Mr. BUTLER. They are put on the smaller ships?

Mr. PADGETT. You take a boy 18 years old and up to 21, a vigorous, well-trained young fellow who goes through the schools down here in our training stations, and he is fit, he is good. [Applause.]

Mr. BUTLER. The chairman of the committee does not pretend to be a military man?

Mr. PADGETT. No.

Mr. BUTLER. He would not place a boy where a military man would not place him, would he?

Mr. PADGETT. No.

Mr. BUTLER. Military men do not place these boys on battleships.

Mr. PADGETT. They do distribute them around to the ships with the others.

Mr. BUTLER. They can stand around, of course.

Mr. FARR. I desire to ask the chairman of the Committee on Naval Affairs if any naval authority has placed our Navy in a better position than fourth?

Mr. PADGETT. Yes; a number of men who testified before the committee. Admiral Fletcher gave it as his opinion that we were third, and some of the others said third.

Mr. FARR. Did not the President in his recent speech say we were fourth? Was not that the statement of the President in his address to the country, that we were not better than fourth, and that he wanted us to be first?

Mr. PADGETT. He said he wanted us to be first, and I believe he stated that we were fourth; but I thought the President was mistaken in his opinion as to our Navy. We have got a far better Navy than that, and I want to make it still better. [Applause].

Mr. FARR. The gentleman stated that we did not possess a well-balanced fleet.

Mr. PADGETT. I said that.

Mr. FARR. And that in order to strengthen our fleet we ought to have battle cruisers?

Mr. PADGETT. Yes.

Mr. FARR. I agree with him; but will these five battle cruisers add 1 pound of fighting strength to our Navy, other than to utilize the power that our dreadnaughts now have?

Mr. PADGETT. Oh, yes. A ship with ten 14-inch guns does not depend on the other ship altogether. [Laughter and applause.]

Mr. FARR. Our fleet is inefficient and we want the battle cruisers to bring it up.

Mr. PADGETT. We need them to help the dreadnaughts.

Mr. LINTHICUM. Will the gentleman yield?

Mr. PADGETT. Yes.

Mr. LINTHICUM. The gentleman from Connecticut asked the gentleman from Tennessee whether these officers had not made a mistake in the past, and whether they were not now trying to correct the mistake by building cruisers.

Mr. PADGETT. I did not say it was a mistake. I said that they emphasized the importance of the ships that then appeared to be paramount, and now they are emphasizing the other one to coordinate and supplement and balance the fleet that we have.

Mr. LINTHICUM. What I want to suggest is that perhaps their views may have been modified by the results of the European war.

Mr. PADGETT. They said that the present war has brought out the supreme importance of battle cruisers.

Mr. HOWARD. Will the gentleman yield?

Mr. PADGETT. I will yield to the gentleman.

Mr. HOWARD. The program as reported by the committee somewhat modifies what the country was expecting; that is to say, the extremists for preparedness. I want to ask whether this bill as reported by the Committee on Naval Affairs has the stamp of approval upon it of the Navy Department, the Secretary of the Navy, and the administration?

Mr. PADGETT. I can not say, for I have not talked with them. I have heard that the Navy was tickled to death and laughing all over. [Laughter and applause.]

Mr. BUTLER. Will the gentleman yield?

Mr. PADGETT. Yes.

Mr. BUTLER. Who is the tickler?

Mr. PADGETT. The bill that we reported. [Laughter.]

Mr. BUTLER. Has it tickled the Secretary of the Navy or the President?

Mr. PADGETT. I said I had not talked with them. I received a note from the Secretary of the Navy in which he congratulated me on the magnificent work we have done. [Applause.] I have the note in my office and I can show it to the gentleman.

Mr. BUTLER. I would be delighted to see it. I would like to know how many times the Secretary and the President can change their minds.

Mr. PADGETT. I think we can show that some of the men that signed the minority report have changed their minds. [Laughter and applause.]

Mr. BUTLER. I have not changed mine. Did the chairman of the committee ever know me to vote for only one battleship?

Mr. PADGETT. Not that I know of.

Mr. BUTLER. And yet the chairman has done that.

Mr. PADGETT. Yes. I have spoken for one battleship and I have spoken for two battleships. And now I am speaking for five battle cruisers, and to try to adapt myself and my speeches to the needs of the country, the wise thing to do. [Applause.]

Mr. BUTLER. I do not question the gentleman's sincerity, but he has changed his views. Mr. Chairman, how much time did the chairman of the committee use?

The CHAIRMAN. One hour and 16 minutes.

Mr. BUTLER. Mr. Chairman, I yield 30 minutes to the gentleman from Michigan [Mr. KELLEY].

Mr. KELLEY. Mr. Chairman, I think the House and the country approach the question of making appropriations for the Navy in a little different frame of mind than for a good many years past. As the appropriation bills have been before the House in former years there have always been objections of various kinds to their passage. Generally somebody has insisted that we had Navy enough already and did not need any more. I noticed in going back through the CONGRESSIONAL RECORD to find out something of what had been said in days past that away back in 1892 Mr. Bryan said that he was in favor of a sufficient Navy, but he thought we had a sufficient Navy at that time. As I recollect it, we had two battleships in commission.

Discussions in the past have shown that a great many men have thought in relation to building up the Navy that the time was about ripe for the nations of the world to get together and establish some sort of a tribunal to which the disputes of the world might be taken and settled in somewhat the same manner as individuals take their differences to courts of law. Many expressed the fear that if we added to the Navy such action might in some way impede the progress of arbitration in the world, and they stated in their speeches that they wanted our country to be in a position when that happy time came to take the initiative in leading the nations of the world from the battle fields into paths of peace. And so men holding these views opposed additions to the Navy.

Others thought that we did not have any enemies anywhere in the world and there was no danger of being attacked by anybody. They said that as long as we were fair and just in our dealings with the world the world, on the other hand, would be fair and equitable in its dealings with us. And so they opposed the building up of the Navy.

But we come into a different time now; and men who thought that wars were over and that the great Christian nations of the world would never be engaged in war any more now come face to face with the fact that we are in the midst of the greatest war in all the history of the world. And whereas they believed that so long as we were fair and just in our treatment of other nations of the world we had no reason to expect that other nations would encroach upon our rights, we now face a situation where our great commercial interests on the seas are invaded from almost every direction, and where innocent American lives have been taken on the high seas where they had a perfect right to be. And so we come to the consideration of this bill in a somewhat different frame of mind, because we know we are living in a period of great danger and much uncertainty.

The President said in his speeches to the country—and he said it sincerely, I think—that these are dangerous days; and he advised, as he went from city to city, that we should prepare to meet this possible danger. We take up the question of the Navy to-day with the situation in the world as it is, and not as we have often approached it in other years, from an abstract or theoretical point of view. Considering our geographical situation, whatever defense we need is very largely a matter of naval defense. If we were located as some of the countries of Europe, with only a line on the map between us and powerful enemies, it would be necessary, perhaps, to do as they have done, and build up powerful standing armies to protect ourselves. But when the Lord gave us this choice spot in the world he placed us 3,000 miles away from powerful neighbors on the one hand and 5,000 miles away from powerful neighbors on the other. So the Navy is the natural and normal and logical protection of the people of this country to whatever extent we may think we need protection.

What of the Navy? Just a word leading up to it. We did not have any Navy to speak of when the Civil War commenced, but when the war was over our Navy was comparable to that of Great Britain. But the necessity soon passed and the ships fell into decline. Our wooden ships passed out of use, and in 1883 we started to build then what we called the steel navy, practically the first steel ships, under the administration of President Arthur. We went along under the administrations of President Cleveland and President Harrison and built a few battleships. I think the *Oregon*, the *Massachusetts*, and the *Indiana* were built or at least authorized under the administration of President Harrison. Then we came on down to the Spanish-American War and we had that little nucleus of a navy. It was sufficient, however, for the needs of that particular time. Dewey, away over there 10,000 miles away from home, without coal enough to bring him a quarter of the way back, destroyed what there was of the Spanish fleet in Manila and placed his name in a single morning alongside of the names of Jones and Farragut and Nelson in the history of the world. [Applause.] Then a little later down here off Santiago we destroyed what there was left of the Spanish fleet. Two Spanish fleets were destroyed without the loss of a single ship or a single American seaman. If we ever have another war in our history, I hope that we will get into just such a fight as that at Manila and Santiago. A good many thoughtful people, however, immediately upon the close of the Spanish-American War began to consider what our situation would have been had we been engaged in a war with some first-class power. And so, following the war, under President McKinley's administration, we started in to build up the American Navy.

Under President McKinley we authorized in the two Congresses of his first term the *Maine*, the *Missouri*, the *Ohio*, the *Georgia*, the *Nebraska*, the *Virginia*, the *New Jersey*, and the *Rhode Island*, a total of eight ships in three years, or an average of nearly three battleships a year. Then, under the McKinley-Roosevelt administration, Mr. Roosevelt succeeding to the Presidency upon the assassination of President McKinley, in the Fifty-second Congress we added the *Connecticut* and the *Louisiana* in the first session. In the second session we authorized the *Idaho*, the *Kansas*, the *Minnesota*, the *Mississippi*, and the *Vermont*. In the Fifty-eighth Congress we authorized the *New Jersey*, the *Michigan*, and the *South Carolina*, or a total of 10 battleships in four years, under President Roosevelt's first administration. During the four years of President Roosevelt's second term we authorized the *Delaware*, the *South Dakota*, the *Florida*, the *Utah*, the *Arkansas*, and the *Wyoming*, a total of 6 ships. During the first two years of President Taft's administration—the Sixty-first Congress—we authorized the *New York*, the *Texas*, the *Nevada*, and the *Oklahoma*. This made a total of 28 battleships in 14 years under McKinley, Roosevelt, and Taft, or an average of 2 a year. In the Sixty-second Congress the House was Democratic, and that Congress authorized but 2 battleships instead of 4. Where were we heading in those days? What building policy controlled our addition of battleships? Why were we authorizing just two battleships a year? A consistent program of this kind, carried forward for 14 years, could not well be a matter of chance. From the close of the Spanish-American War until 1912 the Navy Department and the naval committees of the House and Senate were working upon a well-defined policy. I think Mr. Foss, the gentleman from Illinois, who was chairman of the House Committee on Naval Affairs during most of that time, will bear me out in this statement. President McKinley, President Roosevelt, President Taft, and those charged with naval matters generally were committed to the policy that the United States ought to maintain a navy second only to the navy of Great Britain. Why should such a policy be followed? Why should we be at least the second naval power in the world? Because there is no other country in the world, save Great Britain alone, so situated as to need more naval protection than the United States.

Great Britain is so situated that her empire is dependent upon the navy, scattered as it is all over the world. Not only that, but she is a manufacturing nation at home, with little or no

raw material. This she must get from the outside world. Then, too, she is dependent for her food supply upon the outside world. She must keep open the avenues of commerce in order to get her raw material, in order to keep in touch with her possessions, and in order to feed her people. Not only the empire, but also the very life of the people of England itself is dependent upon her navy. Her naval necessities are probably greater than ours; but there is no nation in the world with so much coast line, so many great cities, and so much property located within gunfire from the sea as the United States. There is no other nation in the world that has more international obligations to perform requiring the need of a navy than the United States. So, back there under McKinley and followed out under Roosevelt and Taft we had in the United States a navy second only to the navy of Great Britain. When you have a policy founded on sense you know what you are doing. You do not simply add a ship here and a ship there, but you can tell definitely how many ships of a particular type to add each year when you have a fixed policy. It is for Congress to lay down the policy, and then, so far as I am concerned, as to the particular type of ship, I am content to leave it to the experts of the Navy, whom we have educated at such great cost.

Mr. McKELLAR. Mr. Chairman, will the gentleman yield?

Mr. KELLEY. Yes.

Mr. McKELLAR. Does the gentleman think that battle cruisers are a necessary part of our Navy?

Mr. KELLEY. I am going to show you exactly how necessary they are and how many are necessary.

Mr. McKELLAR. Then if you had the program under the Republican administrations of which the gentleman speaks, why did you not include battle cruisers?

Mr. KELLEY. That is very fine, indeed, and I am glad the gentleman mentioned it. It is because in those days there were no battle cruisers. [Laughter.] I suppose that would be a simple answer enough, but there were ships which took the place of battle cruisers. There were armored cruisers in those days, and we in making a program provided for the armored cruisers. In the Fifty-fifth Congress, third session, we put in the *Santiago*, the *Pittsburgh*, and the *West Virginia*.

In the Fifty-sixth Congress, first session, we added the *Colorado*, the *Maryland*, the *South Dakota*, the *Milwaukee*, the *St. Louis*, and the *Charleston*.

Mr. COOPER of Wisconsin. In whose administration?

Mr. KELLEY. Those were the administrations of Presidents McKinley and Roosevelt. In the Fifty-seventh Congress we added the *Tennessee*, the *Washington*, the *Montana*, and the *North Carolina*. These are armored cruisers.

Mr. OLIVER rose.

Mr. KELLEY. Let me finish with this gentleman here. These armored cruisers were as large as the battleships of that day and they cost practically the same amount of money as the battleships of that day, and in the 14 years that we were in power in this country we put in 28 battleships and 10 armored cruisers—a total of 38. [Applause on the Republican side.] So we did not neglect this very useful and necessary adjunct to the Navy, the armored cruiser. I now yield to the gentleman from Alabama.

Mr. OLIVER. Is the gentleman aware that in 1906 Great Britain laid down a battle cruiser and in 1908 Germany laid down a battle cruiser, and that during those years and the years following these countries were building battle cruisers; is not that true? [Applause on the Democratic side.]

Mr. KELLEY. I do not remember exactly when England——

Mr. BUTLER. Our armored cruiser—we always had an eye on that.

Mr. KELLEY. Just a moment; let me answer the gentleman. I know that 1910 was the first year that Germany added a battle cruiser to her navy.

Mr. OLIVER. That was during a Republican administration.

Mr. KELLEY. Yes; but the battle cruiser was not a demonstrated quantity when they built the first one. Sensible, reasonable, and rational, we did not go off halfcocked, following after a foreign Government, simply because it built one of these great big ships. We waited a little——

Mr. OLIVER. Will the gentleman yield for one question?

Mr. TALBOTT. Do not blame this administration.

Mr. KELLEY. Oh, I will get to that, and I will put the blame where it belongs.

Mr. OLIVER. Does the gentleman mean to assert to this House that in the number of battle cruisers now possessed by Germany and by Great Britain he is only including the battle cruisers built since 1910? Is it not a fact that in the authenticated lists showing the number of battle cruisers now owned by England and Germany are included battle cruisers laid down by Great Britain as early as 1906 and by Germany as early as 1908?

Mr. KELLEY. That is not true. Germany did not put any battle cruisers in her navy until 1910.

Mr. OLIVER. Did she not lay them down earlier?

Mr. KELLEY. Just one moment. Now, in the Sixty-second Congress——

Mr. COOPER of Wisconsin. Will the gentleman permit just one interruption?

Mr. MILLER of Pennsylvania. The gentleman has only got seven minutes. Why do not you let him alone? [Laughter.]

The CHAIRMAN. Gentlemen must not interrupt without the permission of the speaker, and gentlemen must not inject remarks from their seats.

Mr. BUTLER. Will the gentleman yield to me for a minute?

Mr. KELLEY. I will.

Mr. BUTLER. The rule gives me the disposition of the time, and I will assure the gentleman he will have as much time as he pleases. [Applause.]

Mr. COOPER of Wisconsin. Will the gentleman yield for one question?

Mr. KELLEY. I will.

Mr. COOPER of Wisconsin. The gentleman from Alabama [Mr. OLIVER] said that England laid down a battle cruiser in 1906 or 1908 and Germany in some other year. They might lay them down, but it would take two or three years to complete them, would it not?

Mr. KELLEY. I do not remember the year——

Mr. COOPER of Wisconsin. But he said "laid down." If they were laid down in those years, when would they be completed? May I ask the chairman how long it would take England or Germany to build a battle cruiser laid down in 1906 or 1908?

Mr. KELLEY. Well, I do not know—probably three years.

Mr. OLIVER. Will the gentleman permit an interruption just for information?

Mr. KELLEY. Not just now.

The CHAIRMAN. The gentleman declines to yield.

Mr. KELLEY. Now, Mr. Chairman, so much for the matter of armored cruisers, which was the predecessor of the battle cruiser. I want to say further to the gentleman from Alabama that the first time that the General Board of the Navy recommended battle cruisers was in the Sixty-second Congress, 1912, and it recommended two at that time, and two battleships, and the Sixty-second Congress, as far as the House was concerned, built neither. [Applause on the Republican side.] I just want to call attention to the situation in the Sixty-second Congress, first session. The Democratic caucus, as the records show, passed a resolution against the authorization of battleships [applause on the Republican side] absolutely. The House committee then brought in a bill without any battleships in it at all, and an appropriation for a building program of a little more than $5,000,000 was included in that bill. The other end of the Capitol had not gone Democratic at that time——

Mr. LOUD. Would not stand for it.

Mr. KELLEY. And they put in two battleships, and in the course of the conference, juggling back and forth, finally one was authorized. In the second session of the Sixty-second Congress the Committee on Naval Affairs of the House brought in two battleships and the Democratic House voted for one only; the Senate put in two and finally accepted one, thereupon the Navy of the United States receded from its position of second place which it had enjoyed for four years previous thereto. [Applause on the Republican side.] Now, just a minute.

Mr. DECKER. Will the gentleman yield?

Mr. KELLEY. What does the gentleman want to know?

Mr. DECKER. I would like to know if the failure to build that one battleship is what put us from second place to fourth in the navies of the world?

Mr. KELLEY. I am going to explain——

Mr. DECKER. I would like to have that question answered. We have built two every year since.

Mr. KELLEY. There have not been very many years since.

Mr. DECKER. I would like the gentleman to answer that question.

Mr. KELLEY. I generally speak so that people can understand me. We dropped behind two battleships by this action in the Sixty-second Congress.

Now, then, it has been stated somewhere that the position which we were maintaining all those years prior to 1912 did not require a two-battleship program, and that President Roosevelt in a message to Congress, I think about 1905, said that he thought one battleship was enough. That is true. He did say that. And why? Because in 1898 Germany, which was

the second naval power, adopted a certain naval program. In 1900 they changed it somewhat. In 1906 they changed it again. But particularly in 1908 their program was changed in an important particular. Compared with the German program in force in 1905 we were easily in second place when President Roosevelt sent that message to Congress. But in 1908 Germany changed its program providing for the same number of ships for 1917—32—but put a limit of 20 years instead of 25 upon the age, and also provided that ships over 20 years of age would be replaced. And during the next two or three years that change in the German law added four or five—I have forgotten which—battleships to the German Navy.

In 1912 Germany changed its building program again, and at that time provided for 41 battleships under 20 years old by 1917. Now, we did not take cognizance of that fact, but went on with the one battleship idea during the Sixty-second Congress. The question of restoring our Navy to second place and establishing again a definite policy is before the House. If we want a definite, positive program, if we desire a certain place among the nations of the world, not because of any fear that we may become involved in war with any particular nation, but because our necessities as a Nation on both oceans are so great. Now is the time to so provide for it.

Mr. BUCHANAN of Illinois. Will the gentleman yield?

Mr. KELLEY. I decline to yield.

The CHAIRMAN. The gentleman declines to yield.

Mr. KELLEY. The report of the General Board shows that Germany, the second power, has 20 dreadnaughts built and two under construction. We have 17 dreadnaughts. Counting the *Michigan* and *South Carolina*, which I think should be counted, we have 19. So there is a discrepancy, in building and authorized, between the two countries to-day, of three dreadnaughts. We have recommended in this bill that the two which should have been built in 1912 be built now.

Now, as to the battle cruisers, the chairman has gone on to say that most of the naval officers have recommended battle cruisers. Absolutely true. Nobody has recommended five battle cruisers and the discontinuance of battleships.

Mr. CALLAWAY. You said that the discrepancy between us and Germany to-day was three battle cruisers.

Mr. KELLEY. I said battleships.

Mr. CALLAWAY. There is no danger of Germany losing any of her battleships in this war, is there?

Mr. KELLEY. Of course, I can not tell what they may lose.

Mr. CALLAWAY. There is nothing that would indicate that Germany would lose any of her battleships in this war?

Mr. KELLEY. I know nothing about it.

Mr. CALLAWAY. Is there any probability that she will lose any?

Mr. KELLEY. How do I know? I can not look into the future. I would be glad if the gentleman from Texas could look into the future a little bit, because if he could guarantee——

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. BUTLER. Mr. Chairman, I yield to the gentleman another half hour.

Mr. KELLEY. I desire only five minutes more.

Mr. BUTLER. Then I yield five minutes more to the gentleman.

Mr. LONGWORTH. Will the gentleman yield? Will the gentleman please state the difference between battle cruisers and armored cruisers? Some of the gentlemen do not seem to understand.

Mr. KELLEY. The armored cruiser bears exactly the same relation to the old battleship type as the battle cruiser now bears to the dreadnaught. In the old days the armored cruiser was the ship that went out ahead, scoured the seas, and located the enemy, and then got back under the protection of the heavily armored ships—the battleships. And that is exactly the use of a battle cruiser in its relation to the dreadnaught to-day.

Mr. LONGWORTH. And the battle cruisers carry as heavy guns as the big ships?

Mr. KELLEY. Yes.

Mr. BENNET of New York. What were those vessels such as the *Lion* and the *Blücher* of both the English and German fleets that were sunk in the south seas?

Mr. KELLEY. The *Blücher* was an armored cruiser. We have 10 like her, and the *Lion* is one of the latest and most powerful battle cruisers of the English Government.

Mr. FESS. Can the gentleman permit one interruption? The gentleman knows I agree with him in his position. I am wondering whether we get the wrong idea when we speak of our becoming equal to Germany and not necessarily being equal to Great Britain. It is on no assumption that we shall never have any trouble with Great Britain, but simply that Great Britain can never concentrate all her fighting force at one place?

Mr. KELLEY. That is quite likely. Now, just a word as to the number of battle cruisers. Germany has six battle cruisers built. One of them, the *Goeben*, is at the present time flying the flag of Turkey, but she has German officers and German men on board of her, and probably when the war is over she will be found back in the German Navy if she is still afloat. Now, there are six battle cruisers in the German Navy, and we recommend six battle cruisers in this bill. Five battle cruisers, or four, or three, will help, of course; but if we are going to restore the second-place policy we had better, in my judgment, authorize in this Congress the ships that will actually put us in second place. My father used to say that it was a pretty poor proposition to invest in a race horse that was just a little bit slower than the winner. [Applause.]

Now, then, I sincerely hope that none of these ships will ever have to be used for war purposes at all. But we are in troublous times, and if we are going to have them at all we ought to have them within a reasonable time. The minority insists that an amendment should be put on the bill which would limit the time within which these ships must be constructed, so that the American people may get the benefit of the protection provided. [Applause on the Republican side.]

Our experience in getting ships for the last four or five years is not such as to encourage Congress in the belief that ships provided in this bill will be constructed more quickly. I wish to say, by way of conclusion, that I trust that these great warships that may be authorized in this bill will never be called to fire a shot except in target practice or as a salute, but in times like these, when the world is inflamed, when the passions of men are aroused, and when prejudices are being engendered in the hearts of men which will flow through the channels of the world's life for years to come, we should not be content with any halfway measures of defense, but we ought to make adequate provisions at this time to fully protect the American people. [Prolonged applause on the Republican side.]

The CHAIRMAN. The gentleman from Pennsylvania [Mr. BUTLER] is recognized.

Mr. BUTLER. Mr. Chairman, can the chairman of the committee accommodate us with a very short speech on this side? I wish to yield to the gentleman from Illinois [Mr. FOSS].

Mr. PADGETT. Mr. Chairman, I will yield to the gentleman from Missouri [Mr. HENSLEY] and such others as he may designate an hour and twenty minutes out of my time, and he will use part of his time now.

The CHAIRMAN. The gentleman from Missouri will be recognized for an hour and twenty minutes.

Mr. HENSLEY. Mr. Chairman, I yield 15 minutes to the gentleman from Kansas [Mr. CONNELLY].

The CHAIRMAN. The gentleman from Kansas [Mr. CONNELLY] is recognized for 15 minutes.

Mr. CONNELLY. Mr. Chairman, I want to say in the beginning of the few remarks that I shall make on this bill that, as a new member of the Committee on Naval Affairs, I shall not assume that in the one session of Congress I have become a naval expert or that I have learned any great amount concerning the needs of that great organization. I think I should say that I have found members of that committee very agreeable gentlemen, who have worked faithfully during this session. I am sure that Chairman PADGETT deserves great credit for his untiring courtesy, patience, and gentlemanly forbearance. I do not agree with the conclusions of some of these members, but in this I have no advantage of them, for they are just as much out of agreement with me as I am with them.

I will not assume that the man who has attended the meetings of the committee quite faithfully and given attention to the work of that committee has come to definite and absolute conclusions, because I find that there are very few rules that anyone applies to their reasonings that can be followed with any safety. When men who have spent many, many years—practically all of their lives—in the Navy and who at the end of a long time of close study of its needs find that they can not agree with other men with the same ability, the same application, and the same experience, I do not take it that it is any crime for one who confesses to have but a superficial knowledge at best to have opinions that do not coincide with either of them.

Let me say, in passing, Mr. Chairman, that I am not much impressed with the arguments of any man who bases his reasoning upon the theory that all men who enjoy the blessings of liberty in a great Republic like this are not patriots and are not

seeking to find the best solution of these great questions that are and should be primarily patriotic questions. I have no sympathy or patience with the egotist who persuades himself that because he would build a dozen battleships each year he has a superior grade of patriotism to the fellow who is satisfied that the needs of the country would be very well served with the building of a very much smaller number. I have learned to look with an eye of suspicion upon the fellow who assumes that he has cornered the supply of patriotism of the country and who explains the droop in his shoulders by saying that he has been lugging around such a load of love for his country. This country has in every time of need found patriots in sufficient number who were willing to enlist under her colors and fight and march and die for their country, and if the time ever comes when that sacrifice is called for again, there will be no dearth of volunteers, there will be no failing to meet the test. But when we are trying to rationally and sensibly meet the requirements for the proper defense of the country every man should be allowed to form and express such an opinion as may be honestly formed without having some demagogue question his motives or his patriotism.

Now, I say to you that the only way that the average layman has to secure information along the line of defense of the country is to go to the fellow who knows; that is, to the men who have made a life study of the Army and Navy and the country's defenses. If they can not tell him what should be done, he is in a bad plight so far as getting information that is of any value. But here he is not without some trouble and some misgivings. He finds the average naval officer an agreeable, courtly, and polished gentleman. He is just as unselfish as other people would be when placed in his position, but he has not had the experience nor the training to show him but one side of the matter of national defense, and he can not be blamed for not knowing the things that he has no right to know. The average naval officer has usually gone into the Naval Academy at an early age; he has never learned the real value of a dollar; and the fellow who has not learned that it requires some effort to get money to pay taxes is not fully qualified to see both sides of the question of national defense. In fact, there are a few things that the average fellow raised up in the marts of trade and in the business and commercial lines of the Nation knows just as well as any Navy and Army officer can know, and the knowledge that he has of these things does not reassure him when he sees what these naval officers do in the lines that the average layman is qualified to judge. In the Book of Estimates placed before the members of the committee, on page 34, is an inventory of some wagons, buggies, and sleighs that are used in the various navy yards of the country. I find that, while my training and qualifications in my past life would not justify me in expressing an opinion as to the relative value of much of the fighting equipment, I have had such experience as would qualify me in placing a very fair estimate on the cost of wagons and buggies and sleighs. Here is the list, or a part of it, that we have published in that Book of Estimates:

One light wagon, navy yard, Mare Island	$2,000
One depot wagon, Portsmouth Navy Yard	1,600
One sleigh, Portsmouth Navy Yard	1,200

Now, when I see this evidence of extravagance in the things that I do know about, I am not easily persuaded that the system all through, from beginning to end, is not one of waste and extravagance; that if the people of the country who pay the taxes could once fully understand they would require more than the vociferous proclaims of patriotism in the way of explanation.

Mr. Chairman, I hear a great deal about efficiency in the Navy. I presume there is a good deal of efficiency, but I do not think that that efficiency is any matter to excite wonder and admiration. The Congress last session found it necessary to provide for a naval reserve, made up of men who had served in the Navy and who had had experience. They found that the Navy had for years failed even to keep a card index of those who had come in and served and gone out of the Navy. Such methods in any ordinary business, where it might be necessary to keep in touch with customers, would not be tolerated. Even ordinary caution would have suggested to them the necessity of keeping in touch with men who might be needed and men who had had experience and would be very valuable in emergency. The effort this Congress will make and the effort made in the last Congress to secure a reserve could have been largely obviated with the application of some very well-established business principles in the Navy.

I have been interested in the viewpoint of many of the naval officers of the country as to the obligation the country is under to them. Some of the officers who have been retired through the agency of the retirement board have complained bitterly to the committee, and I doubt not that they feel that they have been very much abused. I will take one of these officers as an example, not because his case is exceptional, but rather because it is not and is to a great extent representative of the class. This officer went into the Naval Academy when but a little more than 15 years of age; he was educated by the Government at an expense variously estimated at from fifteen to twenty thousand dollars; he was placed on the pay rolls of the Government at a good salary from the time that he was graduated and has spent his life at what would appear to most men as a very good wage; and when he was "plucked" or retired at the age of fifty-two or three he was retired on a pay of some $3,700 per year for the remainder of his life. He wants to be reinstated in the Navy so that, instead of retiring at the rate of $3,700 per year, he will in a few years be retired at the rate of $8,000 per year.

It is estimated that it requires more than $3,000,000 per annum to pay the salaries of these retired Army and naval officers who have been educated at the expense of the Government and who have received a handsome salary all of their lives from the time they were mere boys. I am not complaining; I am only saying that the fellow who goes out in the morning of life and labors in the mines and mills, the fields and the factories, through all the months and years of a life devoted to the civil and productive avocations, and who in the finality pays the taxes to support the Government, is the one that should complain, if complaints there must be.

However, Mr. Chairman, I am well aware that the mistakes of the past are not of avail to us for the present or for the future. I am not citing these things particularly to find fault; I am only referring to them to show how difficult it is to take advice from naval officers on certain matters of which they are, and of right should be, well informed, and not take it upon those matters in which they are more deficient than is the average business man. It is the common mistake that the fellow who knows a good deal about one thing is often thought to be informed about other things, when he may be of all men the most ignorant. I will not tire you with a recital of the various examples of extravagance that was brought out in the hearings this year for fear I will be accused of seeing only the little things that were developed and have missed the real issue.

I take it that no man in this country worthy of the citizenship of this great and good Republic would want this country unprepared for any emergency that is reasonable to expect shall confront it. I am willing to concede patriotic motives in each Member of this House, and I hope the same charity will be exercised by those who feel that they would go to the extreme of military preparedness as to the position of those of my colleagues who have seen their duty to stand for a more moderate program.

The question that comes up to the average fellow out in the precincts, those men and women who are intensely interested in the matter of national preparedness, is, How well is this Nation prepared now to meet and cope with the situation that may come up at any time in these troublous times in the lives of nations? I want to say that, in all of the four months of hearings this committee held this session, covering nearly 4,000 pages in the printed book, there was little developed that could be used as a basis for estimating the real strength or the comparative strength of the Navy of the United States. Just along toward the last of the hearings a question from my colleague, Mr. CALLAWAY, of Texas, who, all will agree I hope, devoted an honest effort to the cause of securing information and with that shrewdness, born of a mind fully trained as a lawyer, even he was enabled to develop but little that could be used as a basis for an honest computation of relative strength; but just the last few days, after wandering in the wilderness of many words and little information, he asked the Secretary of the Navy to place a table in the hearings giving the relative strength of the various fighting ships of our Navy, and that table you will find on pages 3789 and 3790 of the hearings; that tells the story to all who want to know of the real strength and also of the wonderful increases in the fighting force of the Navy in the last few years. From that table there is one thing that appears to be very conclusively proven: That whether we have a Navy as strong as other navies of the world or not we have a wonderful fighting machine, and we have spent money enough on it to make it a great machine.

In that table furnished by the experts, and therefore I think it can be counted as a reasonably accurate estimate, I find some figures that are to me very interesting, and I hope they will be to an extent illuminating.

In 1908 Mr. Roosevelt, who was then the President of the United States, sent the fleet of 16 battleships around the world. He did it not for the reason that he wanted to show the other nations of the world our utter unpreparedness to take care of

ourselves, but rather that he wanted to show that the Navy could make the trip and that it would be a silent reminder that this country was a very considerable factor among the navies of the world. In this table you will find that the department has taken the battleship *Delaware* as a basis for estimating and places that at 100 per cent. With that as a basis, here is what the table shows: First, that all the ships of that fleet that went around the world has a little less than 600 per cent. It shows that the total fighting strength of the Navy as it floats in the water to-day is practically six times what it was eight years ago. It shows that, if this building program that this House is now considering and which has been reported by this committee becomes a law, when these ships are finished, as they will be, perhaps, in 1919, our fleet has then in little more than 10 years increased in fighting force practically tenfold. In other words, we have averaged practically an increase each year for 10 years equal to the original 16 ships that went around the Horn in 1908.

If there has been no depreciation because of age of ships, we will have in 1919 or 1920 a fleet equal to at least nine fleets like we sent around the world in 1908, and the fleet then was a matter of no little pride, and went around the world in order to show that we were by no means a small nation among the fighting nations of the world. If that fleet was a very satisfactory fleet at that time, I submit to you that a fleet at least six times as strong in fighting strength now and ten times as great in 1919 or 1920 is by no means a small fleet, and it is not notice to the world that we are a big, lazy nation, not making any proper provisions for our national defense. This administration that will be accused by our Republican friends as being careless of the question of national defense will have authorized during the four years that it has been in power the building of units to add to our fleet that equal to at least three times the strength of the fleet that President Roosevelt sent around the world in 1908. The jingoes will be found on every stump during the coming campaign proclaiming that this administration has not gone far enough and that it has been careless of the country's defenses. Those of us who have refused to be swept off our feet by the frenzied and furious proclaims of those who feel that the time is propitious for a concerted raid on the Treasury will not permit the statement to go forth unchallenged that this country is a helpless country in the way of national defenses.

Mr. Chairman, I believe that a great majority of the Members who will vote for this bill will do so with the sincere belief that it is providing for more building program than is necessary. I personally believe that there is need for some strengthening of the Navy, and I can not vote for any unless I vote for what this bill provides. I would rather have too much and never have need for it than to have too little under any circumstances. The past two years there have been few newspapers published that have not filled their columns day after day with the sickening details of the war in Europe. The people in many sections of the country are nervous. I have, since the war began, found over 30 columns of war news in one issue of a newspaper published in this city, and I think it safe to say that 30 columns were for many months an average daily output for many of the daily papers of the United States. People have read about war, thought about war, talked about war, until the psychological time has come to strike for a big raid on the National Treasury that we may prepare, some say for war and some say to avoid war, but the fellows who will profit by the big appropriations are willing for you to differ on the details as to what the preparation is for, so long as the raid is made and the money spent. If the mistake of providing a five-year building program can be obviated, the people will be able to get out from under this scare before another year rolls around, and then they can halt the mad frenzy if they want to, and, on the other hand, if there appears to be need for further preparations, they can provide for it.

With this program every shipbuilding yard in the country will be taxed to its limit for the next year, and if we provided for 20 battleships they could not be built before Congress convenes again. If the nations of the earth that are bleeding at every pore and are now prostrated by the conflict that is devastating all of Europe learn that this country has started to build the greatest Navy in the world, they will take that as a challenge, and the interests that profit in war materials over there will be using newspaper space to scare those poor people, already laboring under a load that will stagger them for a generation or more, as they are using space here to put and keep our people into a state of frenzy. I want this Congress to go on record as being against war. I want them at this session and in this bill to take the initial steps to establish an international court for the settling of international differences. I want this country, great and rich and powerful, standing a giant among the nations of the earth, to say that it has the wealth and the men and the loyalty and the patriotism to sacrifice all that need be to keep the country right and free, but that it stands ready to enter an agreement for the limitation of armaments and for establishing a court for arbitration of disputed questions that have heretofore been settled with the sword. [Applause.]

I hear the idea of international arbitration spoken of in certain quarters as visionary and with a degree of contempt. I do not believe it is visionary, and I shall not believe that this Nation has lived up to the highest ideals of its national life until it takes the initial step to lead all the nations of the earth to submit practically all questions to a court of arbitration.

What does it mean to be prepared? One answers one thing, another answers another, and each is sure that he is right. The country has had some very indefinite information given to it through the agencies of the scare associations that have cornered the supply of patriotism and are clamoring hard for the center of the platform. I read the other day a newspaper article that proposed to tell the people that we could not at this time arm and equip a hundred thousand soldiers and that if we could find the arms for them there was no ammunition, and then it figuratively struck a pose and asked what is the use of guns and cruisers and battleships when we have no ammunition? The answer to the question was supposed to be incorporated in the great wisdom required to ask it.

Now, what are the ammunition conditions? These fellows who make these assertions do so with the full knowledge that the Government is not giving out as public information some of the data that it would require to prove their assertions wrong, but it is known by every nation in the world that the country has the immediate potentiality of manufacturing in a few months enough powder to supply 5,000,000 soldiers, and there will be enough to keep any army in the field that will be called there, and the truth is that this can be learned by men of ordinary intelligence, which makes it almost border on the criminal to attempt to mislead the country on such matters.

Then, again, they say that we are short of war equipments; we have no howitzers, and who could expect to win a war without howitzers? That would be a joke; no matter how many guns that you have that are equal to howitzers, no matter if they are just as effective, you are lost unless "Howitzer" is printed right on the gun barrel. That is the stuff that the preparedness advocates are putting before the country in the thousands of newspapers that are helping them at so much per help to spread the great tidings of preparedness gospel. Let us see what one of the great business men of the country said while giving real information before the Naval Affairs Committee. Mr. Grace, who is at the head of the Bethlehem Steel Co., which, if not the biggest concern of its kind in the country is big enough to make its managers and superintendents of enough importance to command some respect, in response to a question put to him by Mr. BUTLER, the ranking Republican Member on the Naval Affairs Committee, as to his ability to produce war equipment, gave the following reply, which is significant.

Mr. GRACE. Mr. BUTLER, do not worry about being able to get war equipments in this country if the Government will treat the manufacturing industries right. The thing you want to worry about is manning these equipments. I presume that we can turn out at the Bethlehem to-day in one month more field equipment than the United States has in its entire equipment. Just cooperate with the invested capital of the country and it will be up to you people to get men and get them trained and that is all.

What does that tell you? It says to you that if any nation would start to bring an army to this country over an expanse of 3,000 miles of water, and we would scuttle every fighting ship we have and go out and help them land, this company could manufacture more equipment than we now have in the way of field equipment before these soldiers from the other country could land.

Mr. Barba, who is at the head of the Midvale Steel Co., another great industrial organization, was before the committee, and what does he say regarding the ability of his company to furnish war materials in case they were needed? He says that he is now turning out rifles at a rate that is prodigious and that his institution is capable of indefinite expansion. That is, he can expand to meet almost any emergency in a very short time. From the evidence that was brought before that committee by men who are to be given credit for knowing what they are talking about, I am convinced that this country to-day is equipped to make modern rifles at such a rate that it could arm five armies the size that Jackson led to victory at New Orleans with modern rifles each day in the year, and in a very short time it could double its capacity to produce this output of death-dealing instruments. I want to know if any Member of this House has seen a statement in any of these great preparedness journals telling the people this very important fact.

The committee did not feel that it should interfere with the estimates of the department as to the number of men required to man the ships of the Navy. They asked for upward of 13,000 additional men, and this bill provides that number. In the matter of the selection of the type of ships to be built, the committee again followed the consensus of opinion of the naval men who came before the committee. The bill carries five battle cruisers and no battleships. It must be understood that the choice of battle cruisers was not made on the ground that it saved money; it was provided for the very good reason that the great majority of the men best qualified to know said they were the kind of ships that would best serve the present needs of the Navy. The battle cruiser is a little more expensive than the battleship or dreadnaught, but if we are to believe these men who have spent their whole life in the Navy we conclude that they are much more effective and meet the modern ideas of what a battleship should be than do the heavier armored slow-speed dreadnaughts such as the Government has been building for some years past. Those who came before the committee who expressed their opinions as to the best type of ships for the Navy to build this year were as follows:

Secretary Daniels recommended that there should be five battle cruisers between now and 1921.

Admiral Fiske recommends that if Congress provided for only four capital ships they shall all be battle cruisers; if the Government builds six capital ships this year they shall all be battle cruisers.

Admiral Winslow recommends the building of all the battle cruisers that the country can afford and favors the battle cruisers to the battleships.

Capt. McKean recommended the building of at least four battle cruisers.

Admiral Grant said that the fleet would be best strengthened by battle cruisers rather than dreadnaughts.

Admiral Knight would build nine battle cruisers and not build battleships until a specific number of cruisers were furnished.

Admiral Fletcher recommended that should Congress authorize four capital ships they should all be battle cruisers.

Capt. Sims recommends the building of eight or nine battle cruisers.

Admiral Badger says that the battle cruiser should have preference over the dreadnaught.

I believe that in the face of these almost unanimous recommendations of the men who are trained men in the Navy the committee was justified in building battle cruisers exclusively as capital ships the coming year.

Finally, Mr. Chairman, I know how easy it is to float with the clamor for great appropriations for preparedness. I know how pleasant it is to be spoken of by the daily papers as a real statesman and a real patriot when you go with the tide and advocate the course that has been mapped out by certain forces that have had and are having to-day much to say about the extent preparedness shall go and the enormous appropriations that must be made. I know that it is sometimes unpleasant to incur the displeasure of these forces and these newspapers that bemean public men with all kinds of false accusations when they refuse to travel the road thus mapped out, but I do not care to succeed at the expense of forsaking the honest convictions that I hold on these questions. I believe that this bill goes far enough to satisfy any reasonable expectation of the country's need. I believe that it goes even further than what that need is, but I shall vote for it if it is not increased by amendments, because I appreciate that where there are many men each holding opinions that are at variance some must go further than they believe necessary and others must place some limit upon the length that they will go. I am convinced that any man who will study the strength of the American Navy will agree that if our Navy is weak, it is not in material, it is not in guns and ships and munitions, it is not because the personnel of the Navy is not efficient; it may be because there is some deficiency in the number of men available to handle the fleet on a war basis; and this committee has provided for several thousand men to remedy this weakness. This bill provides for all the ships, all the guns, all the munitions, and all the men that should be provided for at this time. It should not be increased in any particular; the bill as it stands should be passed. [Applause.]

The CHAIRMAN (Mr. GARNER). The time of the gentleman from Kansas has expired.

Mr. CONNELLY. I ask unanimous consent, Mr. Chairman, to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. BUTLER. Mr. Chairman, I yield 30 minutes to the gentleman from Illinois [Mr. FOSS].

The CHAIRMAN. The gentleman from Illinois [Mr. FOSS] is recognized for 30 minutes.

Mr. FOSS. Mr. Chairman, I am very much interested in the American Navy and in its further upbuilding. When I first entered Congress, in the Fifty-fourth Congress, I was asked by Speaker Reed upon what committee I preferred to become a member. I said my first preference was Foreign Affairs. "Well," he said to me, "there is a very distinguished gentleman from your State"—Mr. Robert R. Hitt, who afterwards became chairman of that committee—"who is upon that committee, and I have tried to make it a rule not to appoint more than one man from a State on the same committee." At that time, of course, the membership of the House was a great deal smaller than it is now. Then the Speaker asked, "What is your second choice?" And I said, "Naval Affairs." He asked me why, and I told him that Naval Affairs was next door to Foreign Affairs; that we must have a Navy to back up our foreign policy. If you will read the history of this country, I think that you will find this to be true, that whenever we have had a strong Navy we have had a strong foreign policy, and when we have had a weak Navy we have had a weak foreign policy. I served upon the Committee on Naval Affairs for a good many years, 18 in all. In the Fifty-sixth Congress I was appointed chairman of the committee by Speaker Henderson and served in that capacity until I was succeeded by the able gentleman from Tennessee [Mr. PADGETT], who this morning has made a very excellent speech upon the bill from his standpoint.

Now, Mr. Chairman, during all the time I served on the Committee on Naval Affairs we tried to keep the Navy out of politics and politics out of the Navy; but a little introduction of politics came along in the Sixty-second Congress, and has been referred to here by the gentleman from Michigan [Mr. KELLEY]. It is proper for us, in looking over the development of the American Navy, to see what has been done and who has done it. The Republican Party was in control in this House from the Fifty-fourth Congress down to the Sixty-second, covering 16 years, and during that time the American Navy increased in tonnage until it became the second navy in the world.

Now, looking over the naval program for those 16 years we find that Congress authorized on an average about two battleships a year and one cruiser; that is, a big cruiser or an armored cruiser. There were 33 battleships authorized in those years. I believe the minority report states that during that period there were something like 13 or 14 cruisers authorized while the Republican Party was in control upon this side of the House. We made our annual program, on the average, three big ships; and, as I said a moment ago, we made our Navy the second navy in the world.

The last report which I had the honor of making to this House as chairman of the Naval Committee was submitted on January 28, 1911. In that report I set out the relative position of our Navy as compared with foreign navies. I speak of tonnage built. The tonnage and personnel of the four leading nations at that time were:

TABLE I.—*Tonnage (completed) and personnel.*

	Tons.	Officers and men.
Great Britain	1,859,168	120,572
United States	717,702	60,160
Germany	666,035	57,885
France	556,303	56,388

In the Sixty-second Congress the Democratic Party came into power on that side of the House. Now, in the first report made by the honorable gentleman from Tennessee [Mr. PADGETT] in the Sixty-second Congress, second session, it is shown that we are still rated as second in tonnage but third in personnel.

TABLE II.—*Tonnage (completed) and personnel.*

	Tons.	Officers and men.
Great Britain	1,869,149	133,965
United States	757,711	60,217
Germany	749,999	60,974
France	630,705	58,755

In the next report made by the gentleman from Tennessee [Mr. PADGETT] in the third session of the Sixty-second Congress, I find that the United States has dropped to third in tonnage and fourth in personnel, as shown by the following table No. 3.

TABLE III.—*Tonnage (completed) and personnel.*

	Tons.	Officers and men.
Great Britain	1,978,212	137,222
Germany	837,982	68,122
United States	773,107	59,567
France	630,769	60,188

Mr. PADGETT. Will the gentleman yield?

Mr. FOSS. I yield to the gentleman from Tennessee.

Mr. PADGETT. In the report which you read just preceding you read the tonnage built, but not building and authorized.

Mr. FOSS. No; it is based on tonnage built.

Mr. PADGETT. If you had read in the former report the tonnage, building and authorized, we would not have held second position.

Mr. FOSS. We would have stood third; but I am talking of navies as they were built at that time. Of course, when we authorize ships we do not know when they will be built.

Mr. MADDEN. If we were called upon to fight we would have to fight with the ships that were built, not the ships that were contracted for.

Mr. FOSS. That is exactly the point.

Mr. MADDEN. So that the strength of the Navy is in its fighting force, is it not?

Mr. FOSS. If our Navy is called into action, of course we can use only the ships that are built and ready for commission. Sometimes we authorize ships, but it takes a long time to get them under process of construction; as we find, for instance, in the bill of over a year ago two battleships were authorized to be built in navy yards, and their keels have not been laid yet, and it is now nearly a year and three months since the bill passed; and it will be six months more, possibly, before their keels can be laid.

Mr. MADDEN. Will my colleague yield to me for a question?

Mr. FOSS. Yes.

Mr. MADDEN. Do I understand my colleague to say that in 1911, when he made his last report as chairman of the Naval Committee, the United States was second in tonnage and second in personnel?

Mr. FOSS. Yes.

Mr. MADDEN. And that when the present chairman of the committee made his report, in the third session of the Sixty-second Congress, we had fallen to third place in tonnage and fourth place in personnel?

Mr. FOSS. Yes; exactly.

Mr. MADDEN. What have we got to now?

Mr. FOSS. Well, we are still falling, I guess. The flag has drooped under Democratic administration.

Now, what was the cause of all this, and when did it begin? Congress a caucus was called in January and the question of building battleships was brought before that caucus. Never before in the history of the building of the American Navy had we ever made the naval program the subject of a party caucus. We have always treated it upon a broad, nonpartisan plane; and when I read in the speech of the President of the United States not long ago that we should treat the subject of national defense upon a nonpartisan basis, I could not help recalling the action of the Democratic Party in January, 1912, when, in party caucus, you passed a resolution that there should be no battleships authorized that year, and in obedience to your caucus action the distinguished chairman of the committee brought into this House the weakest, most insipid, most uninspiring naval program ever brought here that I can recall. Let me read it to you:

After careful consideration—

States the gentleman from Tennessee in his report (p. 14, Rept. 710, 62d Cong., 2d sess.)—

the committee recommends the following program: Two fuel ships, six torpedo-boat destroyers, one tender to destroyers, and four submarines, costing, in all, $12,713,440.

That was brought in here in response to the caucus action of the Democratic Party. What was the result? The bill passed here without any battleships, without any cruisers, without anything upon it except these fuel ships, torpedo boats, and so forth. It went to a Republican Senate, and there two battle ships were added to the bill. Then for a long time the bill was hung up in conference, waiting for another Democratic caucus. Finally, after a long time the caucus was called, and that Democratic caucus passed this resolution:

Resolved, That the former action of the Democratic caucus in regard to battleships be, and is hereby, modified so as to permit any and all Democratic Members who desire to do so to vote in the House for one battleship only, and to permit the Democratic members of the conference committee on the naval appropriation bill to agree to one battleship. No Member is bound by this resolution to vote for one battleship should he not desire to do so.

That was the policy of the Democratic Party in the Sixty-third Congress.

Mr. HENSLEY. Will the gentleman yield?

Mr. FOSS. Yes.

Mr. HENSLEY. Is it not a fact that your colleague from Illinois [Mr. MANN] voted with the Democrats on the proposition of one battleship in the Sixty-second and Sixty-third Congresses and many other Republicans on that side of the House with him?

Mr. FOSS. I have not followed the course of my colleague on the naval programs. But what if he did. I am speaking about the action of the Democratic Party, as a party, on the question of building up the American Navy, and you have always been deficient, you have always been behind, and you have done it by caucus action. [Applause on the Republican side.] You have taken the great question of national defense and subordinated it to party politics and party advantage. [Applause on the Republican side.]

Mr. OLIVER. Will the gentleman yield?

Mr. FOSS. Yes.

Mr. OLIVER. Did not President Roosevelt, in December, 1905, in his message to Congress and also in his message to Congress in 1906, advise the building of only one battleship?

Mr. FOSS. I think he did in one message, but he changed his mind, because in the next Congress he recommended four battleships. He found he had made a mistake.

Now, first, in 1912 one battleship was authorized under Democratic control here. Then in 1913 one more battleship. In 1914 three battleships, but why? Because we were about to sell two of them, the *Idaho* and the *Mississippi*, to Greece, which we did. So that in reality Congress authorized one more battleship that year. Then the last year, after the pressure from the great outside, from the people of this country who were demanding a stronger Navy and a greater national defense, the Democratic Party finally got up to two battleships. So that in four years since the Republican Party was in control we have had authorized five battleships, or one battleship and a quarter each year. And yet there stands the record of the Republican accomplishment of over 16 years when we authorized on the average 2 battleships a year and an armored cruiser or some other kind of a big cruiser—three great big ships.

So long as the gentleman from Alabama has introduced the subject to party politics, I thought it was wise enough to call his attention to what has been done in recent years by the Democratic Party.

In 1912 our General Board of the Navy Department, of which Admiral Dewey is at the head, recommended for the first time the building of the battle cruiser. What that side of the House ought to have done was to have built battle cruisers right along since 1912. [Applause on the Republican side.] If you had kept up with the Republican program you would have built two battleships and one battle cruiser each year. If you had done that, the American Navy would have held its position where the Republican Party put it in 1911. [Applause on the Republican side.]

But you did not do it. Now, you are bringing in this proposition of 5 battle cruisers, and it hardly covers the deficiency of these four years; because if you had followed the policy set by this side of the House you would have built 3 ships a year, which in four years would have made 12 ships. What did you do? You authorized only 5, taking out the 2 that were built in place of the *Idaho* and *Mississippi*, leaving a deficiency of 7. So if you pass this bill with 5 battle cruisers in it you will still be short of the Republican record made in the American Congress. [Applause on the Republican side.]

Now, my friends, this program appeals to me in some respects. I believe in battle cruisers. I believe in scout cruisers and in torpedo boats; and if you would put the battleships at the head of the program, then you would have a well-rounded and complete program. You have recommended here 5 battle cruisers—not a very large program. I can recall that in 1899 we authorized 3 battleships and 3 armored cruisers; and an armored cruiser of that day was equivalent to a battle cruiser in this day and occupied relatively the same position. I can further recall that in 1900 we authorized 5 ships—2 battleships and 3 armored cruisers. In 1903 we authorized a program of 5 battleships. So that in numbers you are not exceeding anything that has been done in the past.

Mr. BRUMBAUGH. Will the gentleman yield?

Mr. FOSS. Yes.

Mr. BRUMBAUGH. I understood the gentleman to say that he believed in battle cruisers.

Mr. FOSS. Yes; I believe in all types of ships.

Mr. BRUMBAUGH. I understand that Germany and Great Britain were building battle cruisers at the time the gentleman was chairman of the committee. Did he believe in battle cruisers then?

Mr. FOSS. As I recall it, Germany and England built battle cruisers in 1908 and 1909, but they were not recommended by our naval experts or by the General Board of the Navy until 1912.

Mr. BRUMBAUGH. The gentleman believed in waiting until the emergency arose.

Mr. FOSS. They were a new experiment and our General Board did not feel justified in recommending them as early as they were built in other countries. But in 1912 the gentleman's party was in control, and in control of the Naval Committee when the General Board first made the recommendation on this subject, they had the matter before them, and they ought to have been building battle cruisers for the last four years.

Mr. OLIVER. Will the gentleman yield?

Mr. FOSS. Yes.

Mr. OLIVER. Did the Republican Senate indorse the recommendation of the General Board or the Secretary of the Navy in building battle cruisers that year?

Mr. FOSS. The Republican Senate added 2 battleships, as I recall it, but no battle cruisers. I believe in all kinds of ships, but the cruiser can not take the place of a battleship or a dreadnaught, as it is now called.

The people to-day are demanding stronger protection and stronger defense upon the seas. It was only a week or so ago that there was a great parade in the city of New York of 142,000 people marching up Fifth Avenue. To-day there is another great preparedness parade in the city of Boston, and, perchance, 100,000 people may march through the streets of that great city, and upon their banners will be these words, "Prepare, prepare, prepare." One week from to-day 150,000 citizens in my home city, the city of Chicago, will be marching up and down Michigan Avenue demanding and calling upon the American Congress to prepare, to prepare, to prepare. [Applause on the Republican side.] If you gentlemen think that the American people are not in earnest on this question, then you better take a vacation and go back home and consult your constituents.

Mr. CALLAWAY. Mr. Chairman, will the gentleman yield?

Mr. FOSS. Not now. When they read this program, this program of scouts, this program of battle cruisers, this program of auxiliaries, because they are all auxiliaries, they are all aids, they are the ministering angels or the ministering devils, as you may choose to term them, to the great ship, the battleship, which is the greatest product of American ingenuity and engineering, the greatest ship in offensive power and the greatest ship in defensive power, the ship that stands out above all other ships as the ship of preparedness and of national defense, when they read this program and find no battleship or dreadnaught there, how will they feel toward you?

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. BUTLER. Mr. Chairman, does the gentleman desire any more time?

Mr. FOSS. Oh, I think the gentleman must have many demands upon his time.

Mr. BUTLER. Mr. Chairman, appreciating the long service upon this committee of the gentleman from Illinois, if he would like to have a little more time I will be glad to yield him 10 minutes.

Mr. FOSS. I thank the gentleman from Pennsylvania. Let us take the question of battle cruisers. I have spoken of the battleship, and that is the ship of all ships. It is the battleship and the battleship fleet that controls to-day in the North Sea, that controls the Seven Seas, so far as England's adversaries are concerned.

Mr. BENNET rose.

The CHAIRMAN. Will the gentleman yield?

Mr. FOSS. I would rather not be interrupted now. This battle cruiser is a big scout for the battleship. It is sent out to acquire information of the enemy. It has the power to break through the protecting screen of the enemy's fleet and obtain information and bring it back to the battleship fleet. That is one of the purposes of the battle cruiser. A battle cruiser can not stand up against a battleship, because its armor is thin. The battle cruiser can never control the sea; the scout cruiser can never control the sea. The submarine or the torpedo-boat destroyer can never control the sea. The battleship will control the sea, and if you are going to build up the American Navy and continue its onward construction, do not leave out the battleship, the greatest bulwark of our fleet. That is the unqualified testimony of every naval officer to-day.

I know that my distinguished friend from Tennessee [Mr. PADGETT] has read the recommendations of the naval officers that were called before the committee; but the report of the Navy General Board, of which Admiral Dewey is the head, what did it recommend? Four dreadnaughts and four battle cruisers. That also was the proportion which the Secretary of the Navy, Mr. Daniels, recommended in his report, which I have here, and also in his testimony before the committee.

Mr. Chairman, this war has not given us any great lessons in the matter of naval tactics or in the matter of the different types of ships. The General Board states that fact in the report which it has made. They say here in section 13 that so far as relates to the battleship and the types of ships "the conclusion to be drawn so far from the history of the great war is that the battleship is still the principal reliance of the Navy, as it has been in the past." There have been comparatively few naval engagements—nothing definite or decisive. We have had no great fleet action. The British fleet has controlled the sea and has bottled up the German fleet, and the German fleet has not seen fit to come out, because they are only one-half in strength of the British fleet. Of course the submarine has also taken some offensive action; but, nevertheless, the General Board said that it has not been sufficient to entitle it to be considered as a ship that would put out of action any of the greater ships. "The submarine," states the General Board, "is a most useful auxiliary, and its importance will no doubt increase, but at present there is no evidence that it will become supreme." And while I recommend that we should go on building up our Navy and building all kinds of ships, yet the naval program that stands for preparedness, or is supposed to stand for it, can not consistently leave out of it the battleship, the greatest ship of all.

Mr. Chairman, national defense is the supreme question before the American Congress. It is above all other issues. Questions of good roads, rivers and harbors, and public buildings pale into insignificance before this greatest of all questions—the national defense of our country. We have great interests upon this hemisphere to protect. We have a great coast line. We have recently completed the building of the great Panama Canal, and under treaty we have guaranteed to protect it. We have also the great Monroe doctrine in which we believe, and that doctrine is not one whit bigger than our ability to maintain it. We have also the protection of our commerce upon the seas, and the protection of the lives of American citizens upon the seas. In the development of the Philippines we necessarily must have a fleet. I remember that Admiral Dewey some years ago said in the Naval Committee room that we could not hold the Philippines six weeks without the Navy; and so, too, in the backing up of our foreign policies, we must have a strong and splendid Navy so that when our President sends a note to the remote quarters of the world it will have in it some force, some energy, some punch, if you please, and if we have a strong Navy to back up our foreign policies and to back up our words, we will find that we will be treated with respect. I believe in giving to our country such a national defense upon the sea that in every hour of international difficulty we may possess that poise which becometh a great nation and a great people—ready to maintain our national honor. [Applause.]

International peace will come only when international justice is recognized, but international justice must be founded upon international public opinion, for which we can all work and strive. [Applause.]

Mr. BUTLER. Mr. Chairman, I yield 20 minutes to the gentleman from Ohio [Mr. FESS].

Mr. FESS. Mr. Chairman, I congratulate myself on the privilege of listening to the former chairman of the Committee on Naval Affairs, who speaks from authority and an accurate mind. His statement should put to rest further question as to responsibility for the present position of our Navy. I wanted the time simply to express my view upon what we ought to do in the way of national defense.

I never have believed in a large military establishment in the form of a regular army. When the military bill was before us I expressed my position on our duty. I always have believed, however, in the provision of a great reserve for the Army; that is, I wished to meet an emergency rather than to build up a great establishment. I voted for every measure to increase the officering of the Army, for in time of trouble there is no doubt there would be a hearty response to the call for the citizen soldiery of the country, citizens though they are, but to call for the soldiery without the officers to discipline and train them would be simply asking men to commit suicide, and for that reason I have felt that we ought not to limit ourselves in our preparation for officers, but ought to provide for a great re-

serve and a reasonable increase in the Regular Establishment. I wanted to see the State organizations placed in condition to become a real arm of the National Government in time of danger.

But when it comes to the first line of defense, which is the Navy, or the second line of defense, which is the coast defense, I will go as far as anyone on this floor to insure a defense that will compel respect for our rights, for if the first line of defense breaks and the second is not equipped to make resistance there is not much that we are to hope for in a struggle with any first-rate power. This is why the first line of defense, aided by the second line, must be our main dependence in time of international crisis. It is also my reason for supporting the recommendations of those who know the possibilities.

I have listened with more than the usual interest in the discussion of the question before us from both sides of the House, and I have not yet convinced myself that although we are striving to be placed in the position of second rank, where we belong, and where we were when the party in power took control of this House, that that means that we never need to fear any trouble with a nation in the first rank. In other words, such a position does not mean our danger is limited to the second-rate naval power. But I agree with my friend from Michigan [Mr. KELLEY] that we need not prepare with the view of meeting the combined force of any country with which we might have a contest, as for example, Great Britain. While Great Britain is on the sea as the undisputed mistress, and while we might have a contest in the future, yet her navy is necessarily so scattered, her possessions are so attenuated, that there is no possibility, it seems to me, of her in any reasonable time concentrating all of her fighting forces against any one country, thereby withdrawing the arm of defense from her distant and valuable colonies, and therefore I do not feel that we are running any risk in not building a Navy as large as the English Navy. Our Navy, less in size and skill, need not necessarily suffer in a possible contest, but I do think that we must not lose sight of the fact that the same elements that have put the Old World in war might put us to a test some time in the future, and with the country which will be able to dictate terms in this contest. I am not one of those who believe that our safety is in our inability to defend ourselves. This debate has touched the extreme poles of difference among men on this subject. I do not rest in the belief that we will always be protected, that some kind, overruling power will exempt us from trouble, but I have some fear that there may arise a dispute to test our ability to defend ourselves. Fellow Members of this House, there is scarcely a right that a neutral power ought to enjoy on the sea that has not been infringed upon since the war has spread the world over. I detailed these facts before the House on the 11th day of last January. There is scarcely a fundamental principle that is recognized in international law that has not been violated, and violated with impunity, and all that we can do or have done would be to protest in the hope that we may lay plans in the future to make a settlement. This settlement will be sought in diplomacy. If that fails, what next? Its failure may depend upon our situation upon the sea.

If we go back into the cause of the war that has put three-fourths of the world's population in arms—for only the nations composing one-fourth of the world's population are now at peace—if we go back and find out what is the cause of the trouble, we will find it not so much in a struggle between militarism on the one hand and navalism on the other hand, but a struggle that has its explanation in a contest of commerce, and every feature in that contest is an element in our own relation with the same countries that are now in contest. No Member of this House will overlook the elements of contest growing out of the rapid strides of Germany in the commerce of the world which pointed to the day when England's supremacy might be questioned.

Fellow Members, this Nation is not going to continue to be insular. It will not confine its activities to domestic matters. This Nation is not only going to be a world power and a power on the seas, but it is bound to dispute in the future the primacy of the seas. This Nation will go beyond the continental borders of the land and domestic industrialism to a world commerce and a world industrialism, and the very moment that we begin to extend the commerce of America on the seas that moment we will run counter to some wishes of the other countries that have controlled the seas, and any Member who feels that we are exempt from any conflict in the future on questions of commerce has failed to look into the history of the past and refuses to be taught by what has gone before. [Applause.] For that reason I can see an element that has put Europe in arms figuring with a good deal of meaning in the future of our own country. Not only that, the commercial side is not the only item of concern to this Nation, but we are in a quarrel at this moment with the two dominant belligerents, and the quarrel is not yet adjusted. With one the difficulty grows out of submarine warfare. It has been a delicate question. The situation involves vast possibilities, and while we hope the end is in sight, yet nobody can be assured that it is.

We have been careful, so far as our own country has been concerned, in our negotiations not to tie our hands in the legal and rightful use of the submarine as generally recognized, but at the same time whichever way this war ends, no matter in whose favor, this Nation of ours will not have many friends in Europe, and that is not necessarily our fault. Germany will feel ugly toward us simply because we have not done certain things we could not do. Germany had hoped that the Nation by an edict of the Government would stop our citizens from supplying any munitions of war. We had not the right to do it. The provision of the seventh article of The Hague is specific, and we helped to write it, that a belligerent in time of war has the right to buy of a neutral country. The moment we would have forbidden it by act of Congress we would have violated a well-recognized principle of international law which has been universally recognized and practiced by all nations, and we could not afford to do it. However, Germany—not the German Government so much as the German people—both in Europe and in a sense here feel bitter against us. Germany says the bullets bear the mark of America, the shells indicate that they are made in the great neutral Republic, and if we are unable to meet the successful end of the war we have to give much credit to the American neutral country. That makes them feel ugly toward us. Whatever may be the individual wish of our citizens, we as a Government can not afford to violate one principle of international practice in order to win favor from any nation now in war. If we at once repudiate any such principles we have surrendered all with all countries.

The war will end with Germany inevitably feeling bitter toward this Nation, and, as I said, it is not our fault. If, on the other hand, it ends favorably to either country or ends as a drawn battle, it will not win the friendship of any belligerent. If it ends in favor of the country which has been able to secure munitions from us, Great Britain will say to us, "We did it, with you lining your pockets on the profits that have been wrought out of the blood-ridden, sanguinary fields of Europe, and it was not because you had any special interest in us, but it was the basis of the profits that you won in so doing." England will add, "We did it in spite of you," and she will not feel very kindly toward us. Mexico——

Mr. BENNET. Will the gentleman yield?

Mr. FESS. I yield to my friend from New York.

Mr. BENNET. Right in line with his thought, does the gentleman think that the very proper and wholly admirable note of Secretary Lansing in this morning's paper will incline Great Britain to feel very friendly toward us?

Mr. FESS. Oh, no. It will drive her way beyond what she is now. She has proceeded upon the basis, it appears, that her struggle is ours. When she learns differently, as she must soon learn, she will be driven further. This note made public to-day, conceding it a strong statement of our rights in the controversy, is not strong enough. Time will prove she will treat it as our former notes have been treated, I fear.

Mr. FOCHT. Will the gentleman state if he knows of any time when England was friendly to the United States?

Mr. FESS. I thought I could say this without offending anybody, because in all of England's contests since the Civil War here in America my sympathies have been on her side. Even in the Boer War, when it appeared that 95 per cent of our people were against England, I felt that England was on the right side of that issue. I am of opinion, from the attitude of the Boers to-day, that I was justified in my beliefs. I say that much, so that you may not think I am prejudiced when I speak frankly upon the present situation.

Now, this is what I want to say in answer to my friend from Pennsylvania, that in a contest with our mother country over items of commercial rights she has never conceded except as she had to. Never! That is our history. I challenge any Member on this floor to show that she has conceded anything except as we have commanded it. The most recent incident was over the Venezuela episode, back in 1887, and again in 1895. And I want to say another thing—that that great country, the mistress of the sea, a naval power both commercial and defensive, the inevitable result of a system growing out of a consistent policy for 150 years, that has reached the most magnificent, majestic proportions as a sea power of any nation in all history, has so conducted the contest in Europe that while she was burdened with but $3,000,000,000 of indebtedness when the war came, but which has reached $13,000,000,000 now, yet she

has so proceeded that it has been, aside from loss of life, a distinct commercial profit on the sea for that great nation. There is no doubt about that. Churchill's leading question as to the whereabouts of the 5,000,000 soldiers was legitimate. The entire course of Britain in this war proves her determination to maintain her position uncrippled. Britain could not be found anywhere on the civilized sea with a great merchant vessel, with her bunkers filled with coal, that that same vessel would not be at its own coaling station before the coal would be exhausted. Her 14 miles of vessels when placed side by side indicate but one feature of this policy of navalism. She controls the cables of the world and can by simple decree put the world into outer darkness in less than a minute. She has coaling stations so numerous and convenient that almost anywhere a vessel may be found it can be supplied. She has an open port in almost if not every part of the world.

I have had wonderful admiration for the country whose white flag of commerce carries with it the English language, the English law, the English system of government, the English institutions and customs of which I have thought so much. But that does not mean that I must blind myself to the possibility of a struggle of my country with that country on the sea in due time. That is the thing I am afraid of. England's present attitude toward our rights is ominous. To our protests, without a single exception but one, reply has come she can not concede. And anybody who thinks that we are exempt from any contest with a country that treats our demands for respect of our rights as a neutral country, as I said a moment ago, refuses to look into what has taken place in the last 100 years. True, England's offense does not go to destruction of life; that is not necessary. But there is scarcely a possibility that this Nation will submit to the high-handed interferences in vogue.

I was about to say, when my friend asked me a question, that Mexico offers an occasion for our most thoughtful contemplation. In unhappy Mexico there is property belonging to German citizens, who were invited to invest; there is French property there; there is English property there. In the past four years general destruction of the property of these citizens has taken place. The time will come when the war in Europe will end and these countries will demand an adjustment in some satisfactory way. Most certainly an indemnity will be demanded on the part of these countries against Mexico for this loss. What will we do? What will be our attitude? When the indemnity is demanded and Mexico finds herself unable to pay, we will face the problem as it is. Doubtless they will demand indemnity. Can she pay it? No; she can not, no matter how small, which it will not be. The situation of Mexico now indicates the condition of her securities at the present time. I had in my possession recently a dollar bill, sent to me by a resident on the border, that circulates for 5 cents. It would be a good thing to show here, but I do not happen to have it with me. It is Carranza money. In other words, inability to pay any indemnity is the most apparent fact that you can face in Mexico to-day. And when these countries will demand indemnity, which she can not pay, a coaling station may be demanded in lieu thereof, or a slice of territory may be demanded. This is inevitable unless thwarted by some power with more command than Mexico. What will we do when that is demanded? Will we say that the Monroe doctrine is a dead letter? The Monroe doctrine, as my good friend, the former chairman of the committee, said, is no stronger than we are willing to make it. This, in my deliberate judgment, is what we will do: We will either get ready to defend the Monroe doctrine or we will surrender it—one or the other. The alternative is clear and the choice is ours to make. [Applause.]

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. BUTLER. Mr. Chairman, I yield five minutes more to the gentleman.

Mr. FESS. I am very much obliged to my friend.

I have just time enough to say this: I have never allowed myself to be caught up with any propaganda that would give a just ground for anyone to say: "You are going into a spirit of hysteria; that you are losing your anchorage. There is a demand for preparedness, and you are losing the usual equilibrium that ought to possess a Member." I have studiously avoided linking myself with any propaganda of whatever sort. I have kept an open mind on the question of our defense, and have refused to be influenced for or against. I am firm in the opinion that no one is losing his anchorage if he decides that he will vote to place this Nation in a condition to meet what may come. Too many complicated conditions are confronting us to be totally demure. The unfortunate race question is on our western border, and it is not of our own choosing. It is a conflict between what some say is our treaty obligations on the one hand and State rights on the other. Many contend that the right of the States to control that which pertains to each State, such as the school system and the title to lands, must not be interfered with by the Nation. There is your problem on the western coast. I have never been one of our people who hold that we are bound to have trouble with Japan. Yet I am not blind to the strong contention of those on the ground. There are Members in this House for whose judgment we all have high regard who say to me that it is written in the future; that it has got to come. I have never felt that. But I do know that in our double sovereignty—the sovereignty of the Nation that makes treaties and the sovereignty of the States that make laws—there is not only room for conflict but there is conflict. It was the source of our fiercest contests in the forum in the past and was the real cause of the Civil War. That question is now on the coast, and while the remedy sought in 1860–1865 will never again be resorted to between the States and the Government, yet it ought to make us see what we may be required to meet in our dispute with a foreign country. It is not likely that we shall ever interpret our treaty-making power to extend to our denial to any State its right to regulate matters of land tenure or title or to the right to exercise plenary power over the education of her citizens. On the other hand, it is scarcely reasonable that a proud nation, claiming under treaty stipulations certain rights denied by States which the nation knows not in law, will willingly submit to such treatment. It is a situation demanding the attention of the House when we contemplate the question of preparedness against war.

This is what I want to say, to sum up: The commercial interests which lie at the very door of this world war in Europe will inevitably make a difference between us and the nation with which we will come in contact in competition on the sea. This situation is all but as prominent with us as with Europe in 1914. That is one item. The Monroe doctrine, which expresses a peculiar Americanism on this continent, is another. As is well known, it has never been looked upon with favor in commercial Europe. The specific reference is to Mexico and promises to be the earliest incident to test us. The question on the Pacific coast is another item which ought to cause us to see the danger. Here are at least three sources of danger, to say nothing of the victor in Europe, to seek a way to recoup the awful burden of debt inevitable from the war.

Fellow Members, I do not know that we are going to have war. Nobody knows it. We hope that we will not have war. But if it does not come it will not be because we were unable to defend ourselves. Our safety does not lie in our defenseless condition. The day before Christmas of this past year the boys' hall of Antioch College burned. Fortunately, it was well insured, and the companies rebuilt it. When we insured it we did not know it was going to burn, but we insured it because we were afraid it might burn. [Applause.]

My folks at home, many of them—and among them the very best people in the world, intelligent and sincere—think that my position on the Navy, in demanding a great equipment on the first line of defense is unnecessary. I say to them, "I am ready, with the situation confronting us as a world power, with the complicated questions which are yet unsolved becoming more complicated, to vote for national insurance." And I will vote for any reasonable increase of the Navy that you may bring in. I will do so in the full belief that if we do not build a strong defense because it costs too much, we will be risking millions to save hundreds. I am not satisfied with the majority report. I want what you propose, but there are items omitted that should be provided. I would like to have a greater flotilla of submarines. Our extensive coast line demands a mobile coast defense. I want an increase of the eyes of the Army in the aviation corps. This arm of the service has proved its vast importance. I want the battle cruisers you have provided in this bill, but I want some dreadnaughts in addition to the fast cruisers. Let us make the first line of defense capable. It is the best national insurance I know anything about. [Prolonged applause.]

Mr. BUTLER. Mr. Chairman, I yield 30 minutes to the gentleman from California [Mr. STEPHENS], a member of the committee. He has given the subject a great deal of attention.

The CHAIRMAN. The gentleman from California [Mr. STEPHENS] is recognized for 30 minutes.

Mr. STEPHENS of California. Mr. Chairman, all good citizens, men and women alike, pray that this, our beloved country, may never again be forced into war. No man with a heart for others, no man with family or friends, wants war. All of us want peace, now and during the years to come. We seek the peace that will make us self-respecting and keep us busy and happy at home. We must have the peace that will make us

respected and honored in all other lands, whether they be to the south of us or beyond either great ocean.

There is at this time no way of guaranteeing peace; there is nothing now possible for us to do that will make peace constant, continuing, and everlasting between nations any more than between individuals. All that we can do is to try to prevent war, to keep it off if we can, and to prepare to defend and care for our own if war should come.

Fire engines and firemen do not prevent fires, though we pay out $50,000,000 annually to men who are prepared to fight fire, and we would laugh at him who would suggest that fires were caused by firemen. In 1914 fire insurance premiums in the United States amounted to $396,549,677. If we spend that much or more annually to guard against possible losses by fire, why should we not spend millions on millions to guard against war's greater material loss and its awful sacrifice of hundreds of thousands of human lives?

Sheriffs, constables, and police do not make crime impossible. They only lessen it and apprehend the wrongdoers. Yet we spend hundreds of millions each year for them. As we seek to protect our cities and towns against crime, why should we hesitate to prepare against war?

The American people in 1914 paid out $745,794,982 in life insurance premiums—not to prevent death, but to protect those left behind. Thousands of millions more would be cheerfully expended if death could be prevented or life prolonged through life insurance. Preparedness is national life insurance of the very highest type and character. It is the only insurance that prolongs life and insures against death, not only of the Nation as a whole, but more particularly of its individual members. It prevents disease and keeps away sickness by teaching and preparing the men of the country to care for themselves. The young men of the Nation will be better fathers and better citizens, too, after physical training, such as is given our Army and Navy boys.

Adequate preparedness makes war less probable—may prevent it—for the weak rarely attack the strong. If I believed that preparedness would hasten war, I could not be for it; but believing as I do that preparedness will delay, perhaps prevent war, I am for it with every word and all the strength I have.

From the cradle to the grave, life is one continual round of preparedness measures. The care we get at home, the education given us by our schools, the drilling in trade or business or profession, are only the preparedness measures of to-day for the life we shall lead to-morrow. Every man and woman has an umbrella ready for the rainy day, and carries it, too, as a preparedness measure. When we buy a home we get a notary to draw the deed because he has prepared himself to do it right. When we are in trouble we hire a lawyer because he is prepared to advise or defend us, and when we are ill the doctor is called, because he is prepared to relieve or cure us. In fact, we employ only those whom we believe best prepared, and we strive to meet every situation in life by being well prepared for it.

In my judgment, the thing most likely to keep this country at peace with all other nations beyond the seas is an adequate Navy. The cost should not be counted, for cost what it may, it can not cost more than a mere bagatelle as compared with the money expense of war.

Mr. Chairman, the United States should be and must be the second naval power among nations. I wish it could be first, but that is so impossible for so many years to come as to make it idle to consider now. Second place, however, we should have; and so undoubtedly second as to make us able to withstand an attack on either the Atlantic or Pacific coast, or on both coasts at the same time should a double attack be made. And to be attacked simultaneously on the east coast and on the west coast is far, far from the impossible within the next decade. When the great war now raging is over there will be thousands, yes, hundreds of thousands of men, veteran soldiers inured to privations and to hardships of every kind, who with home ties loosened, with no work or business or profession to return to, restless and necessarily dissatisfied, will seek new fields of adventure, and their respective governments will be obliged, willingly or unwillingly, to back them up in much they do. Asia and Africa have been apportioned, so where is there a more likely field than in Mexico, Central or South America? If restless nations, fresh from war, seek lands and dominion in either, what will the United States do? Will she sit quietly by and permit the Old World to begin again to absorb the New World? Will the United States permit England or Germany or France or Austria or Italy to take over any part of any country south of us? Will the Monroe doctrine mean nothing?

During the next 10 years the United States will be more severely pressed from without than for 50 years past, and she should have, must have, the voice of confident power and adequate preparedness with which to ask and require that laws of humanity be lived up to, that international obligations be kept, and that this Western Hemisphere remain the new and advancing world.

The Atlantic and Gulf coasts of this great country are not adequately defended. They should be. I favor fortifications and a larger Atlantic Fleet that proper defense may be furnished them. But as compared with the Pacific coast the Atlantic is surfeited with defense. One of our immortals, Gen. John A. Logan, when asked how he felt after defeat for a presidential nomination, said: "I am too big to cry and it hurts too bad to laugh." Paraphrasing that, the Pacific coast is too patriotic to cry and the situation is too serious for laughter. No; I am not unduly concerned. Neither am I understating, nor underestimating, the value of what we have there with which to defend ourselves, when I say that our coast defenses are very limited, our Army very small in numbers, and our Navy there not sufficient to withstand one enemy battleship.

Mr. Chairman, I desire now to submit for the particular attention of the Members of the House certain excerpts from the testimony given to the House Naval Committee since January 1 by some of the foremost authorities in our Navy:

COMMITTEE ON NAVAL AFFAIRS,
HOUSE OF REPRESENTATIVES,
Washington, D. C., Thursday, February 24, 1916.

The committee met at 2 o'clock p. m., Hon. LEMUEL P. PADGETT (chairman) presiding.

At the expiration of the recess the committee resumed its session.

STATEMENT OF REAR ADMIRAL C. M'R. WINSLOW, COMMANDER IN CHIEF OF THE PACIFIC FLEET.

Mr. STEPHENS. Admiral, you are commander in chief of the Pacific Fleet, I believe?

Admiral WINSLOW. Yes.

Mr. STEPHENS. Will you tell the committee, please, how much of the Pacific Ocean your fleet is supposed to cover?

Admiral WINSLOW. I do not know exactly where we run against the Asiatic Fleet, but in latitude I think we go from the North Pole to the South Pole.

Mr. STEPHENS. Then, your fleet is supposed to cover the Pacific coast from and including Alaska to the Panama Canal?

Admiral WINSLOW. Oh, yes; and South America, too.

Mr. STEPHENS. And you go beyond the Hawaiian Islands.

Admiral WINSLOW. Yes.

Mr. STEPHENS. Then, Admiral, the Pacific Fleet covers, or is meant to cover, as much territory, anyway, as the Atlantic Fleet does?

Admiral WINSLOW. As much coast line?

Mr. STEPHENS. As much coast line and as much general surface of the earth?

Admiral WINSLOW. Yes; about the same thing.

Mr. STEPHENS. You are stationed generally at San Diego?

Admiral WINSLOW. No, sir: not necessarily. I have been three months down on the coast of Mexico.

Mr. STEPHENS. You have to look after the Mexican coast and the South American coast?

Admiral WINSLOW. Yes; most of the vessels of my fleet are down there now

Mr. STEPHENS. The *San Diego* is your flagship?

Admiral WINSLOW. Yes.

Mr. STEPHENS. Does she go out to practice at times?

Admiral WINSLOW. Yes.

Mr. STEPHENS. Has she lately been at practice?

Admiral WINSLOW. Yes; she has been firing at a target this last week.

Mr. STEPHENS. How long was she absent from San Diego?

Admiral WINSLOW. This last time she has been out, I suppose, about a week or 10 days. She comes in for a day and goes out again—a day or two.

Mr. STEPHENS. Do you go out with her generally?

Admiral WINSLOW. Generally, yes.

Mr. STEPHENS. Sometimes you do not?

Admiral WINSLOW. Only once I have not been out with her.

Mr. STEPHENS. What did you use as a staff headquarters and flagship while she was out there?

Admiral WINSLOW. The *Iris*.

Mr. STEPHENS. What is the *Iris*?

Admiral WINSLOW. The *Iris* is a tender for destroyers.

Mr. STEPHENS. She is a mother ship to the destroyers?

Admiral WINSLOW. A mother ship to the destroyers.

Mr. STEPHENS. Has she any guns aboard for defensive purposes?

Admiral WINSLOW. She may have; none that I have ever seen; they are of no great military value if she has any.

Mr. STEPHENS. How old a ship is the *Iris*, Admiral?

Admiral WINSLOW. She is old enough to be of little use. I do not know how old she is.

Mr. STEPHENS. I have seen somewhere in a newspaper that the *Iris* was built about a hundred years ago on the Tyne in England. Is that true, do you think, Admiral?

Admiral WINSLOW. I do not know how long ago, but she shows wear and tear.

Mr. STEPHENS. She is of no value whatever, except as a mother ship?

Admiral WINSLOW. She is of no value whatever, except to lie at San Diego at anchor. She really is not seaworthy. I had her down in the Gulf of California with me, and I convoyed her back. Her boilers are giving out, and if she got caught on a lee shore she would not have power to get off.

Mr. STEPHENS. Why did you use the *Iris*?

Admiral WINSLOW. You mean why did I use her for myself?

Mr. STEPHENS. Yes.

Admiral WINSLOW. Because she was the only thing I had there to use, except the destroyer, and the *Iris* was more convenient.

Mr. STEPHENS. Then, the commander in chief of the Pacific Fleet, when his flagship was away, had nothing else to use except a vessel obsolete in every possible way, and carrying no guns whatever?

Admiral WINSLOW. I could have used a destroyer. I had some destroyers there.

Mr. STEPHENS. Even the commander of the destroyer fleet does not use the destroyer as a flagship, does he?

Admiral WINSLOW. He lives aboard the *Iris*, normally, but when the destroyers are working, he goes aboard one of them, because the *Iris* will not keep up with them, and he would get left behind.

Mr. STEPHENS. You have one armored cruiser in your active fleet; how many are there in the reserve fleet?

Admiral WINSLOW. They have four in the same class as the *San Diego*, and then there is the *Charleston*, the *Milwaukee*, and the *St. Louis*, which are smaller ships.

Mr. STEPHENS. They are cruisers, though, are they not?

Admiral WINSLOW. They are cruisers; they have some armor; they are large cruisers, but have no turret guns.

Mr. STEPHENS. You have one armored cruiser in commission and five armored cruisers in reserve; is that right?

Admiral WINSLOW. Yes.

Mr. STEPHENS. How many cruisers have you in active commission?

Admiral WINSLOW. Six; that is, including gunboats.

Mr. STEPHENS. But the gunboat is not a cruiser, is it?

Admiral WINSLOW. She is doing the work on the Mexican coast.

Mr. STEPHENS. You are making a gunboat do the work of a cruiser?

Admiral WINSLOW. No; but she is doing the work better than a cruiser could do it. She is in a harbor where there is shoal water, and a larger cruiser could not get in there.

Mr. STEPHENS. Have you one gunboat or two?

Admiral WINSLOW. One is in the navy yard, and one is doing the work down there.

Mr. STEPHENS. One gunboat that is really serviceable?

Admiral WINSLOW. They take turns down there.

Mr. STEPHENS. How many cruisers have you in reserve, Admiral?

Admiral WINSLOW. Armored cruisers?

Mr. STEPHENS. Five, you said, of armored cruisers?

Admiral WINSLOW. Yes; five armored cruisers, and three protected cruisers.

Mr. STEPHENS. How many destroyers have you in your fleet?

Admiral WINSLOW. Five.

Mr. STEPHENS. And how many in the reserve fleet?

Admiral WINSLOW. Four.

Mr. STEPHENS. How many submarines in the active fleet?

Admiral WINSLOW. Seven; three *H* boats and four *K* boats.

Mr. STEPHENS. How many in the reserve fleet?

Admiral WINSLOW. I think three *F* boats.

Mr. STEPHENS. And battleships?

Admiral WINSLOW. I have not any.

Mr. STEPHENS. You have not any at all in active commission?

Admiral WINSLOW. No.

Mr. STEPHENS. Nor are there any in reserve?

Admiral WINSLOW. The *Oregon* is out there, but she does not belong to me.

Mr. STEPHENS. Is she in reserve?

Admiral WINSLOW. She is assigned to the Naval Militia.

Mr. COOPER of Wisconsin. Mr. Chairman, will the gentleman yield there?

Mr. STEPHENS of California. Yes.

Mr. COOPER of Wisconsin. That testimony about the conditions existing out there refers to the present year?

Mr. STEPHENS of California. Yes; in February, 1916.

Mr. COOPER of Wisconsin. There is no battleship out there under Admiral Winslow?

Mr. STEPHENS of California. There has been no battleship there under Admiral Winslow or any other admiral, except when the big fleet went around the world.

Mr. COOPER of Wisconsin. So that if it were necessary to relieve or strengthen the fleet on the Pacific coast you would have to send battleships from the Atlantic clear around the Horn or through the Panama Canal?

Mr. STEPHENS of California. Yes; and it would take a battle fleet almost three weeks to go from the Atlantic through the canal to San Francisco. I read further:

Mr. STEPHENS. Of the seven submarines in active service, where are they located?

Admiral WINSLOW. There are three of them at San Pedro, or were there when I left there, and the *K* boats are at Honolulu.

Mr. STEPHENS. Honolulu is how far from the Pacific coast proper?

Admiral WINSLOW. I have forgotten the exact distance. I think it is about 2,000 miles, is it not?

Mr. STEPHENS. Between twenty-one and twenty-two hundred miles.

Admiral WINSLOW. Something like that.

Mr. STEPHENS. Admiral, with this fleet which you have named, you are supposed to take general care of the territory you have outlined, are you not?

Admiral WINSLOW. Just now I am taking care of the west coast of Mexico. I do not understand that there is anything else out there that needs taking care of.

Mr. STEPHENS. But if there were anything, or if anything developed anywhere on the Pacific coast, it would be your duty to look out for it, would it not, with your vessels?

Admiral WINSLOW. Yes.

Mr. STEPHENS. Admiral, with the fleet that you have named to this committee, do you think the Pacific coast proper is adequately prepared for defense?

Admiral WINSLOW. No; certainly not. I do not think that there is any pretense that it is, with that fleet.

Mr. STEPHENS. Admiral, is the American Navy prepared to-day to fight an enemy that would be at all likely to attack this country on the Pacific Ocean.

Admiral WINSLOW. You mean the whole Navy?

Mr. STEPHENS. Yes, sir; in its present condition and position.

Admiral WINSLOW. When you come to talk about the present position and all that, you are going into strategy, and if you want me to talk about that you had better talk behind closed doors, because I do not think it ought to be given out.

Mr. STEPHENS. If I ask any questions to which you think you should not give an answer, I hope you will withhold your information until later.

Admiral WINSLOW. No. If you want me to say whether we have sufficient fleet out on the Pacific, we have not any fleet on the Pacific; we do not pretend to have; nothing but that one armored cruiser, but if we had more men, I suppose we would commission the other armored cruisers, but so far as we have, our force is all in the Atlantic. That is known as a matter of statistics. Anybody can get the names of the ships we have out there, and what we have here, but what we would do in the event of war in the Pacific, or war in the Atlantic, involves strategy, which should not be given out.

Mr. STEPHENS. Admiral, tell us the condition, if you can, of the cruisers and armored cruisers that are in reserve to-day; how long it would take to put them in condition to go to sea, fit to fight.

Admiral WINSLOW. I do not know the condition of all of them. I think some of them could be commissioned just as soon as you could put the men and stores upon them.

Mr. STEPHENS. How many of them?

Admiral WINSLOW. I do not know. The *Maryland* was put out of commission very lately, and I do not know what they are doing with her in the navy yard; but as she was then, she could have gone right back into commission. The *South Dakota* has gone up to the Mare Island yard to be docked; I do not think they are going to do much more on her than to dock her. The *Milwaukee* is at San Diego now. She could be commissioned right away, I think. I have asked for her to be a parent ship for destroyers. I do not know the condition of the *Charleston* or the *St. Louis*. You see, they pass out of my control when they are not in my command.

Mr. STEPHENS. Admiral, how long has it been since the *Milwaukee* was in active commission?

Admiral WINSLOW. I do not think she has been in active commission for a long time.

Mr. STEPHENS. Seven, or 8, or 10 years?

Admiral WINSLOW. I should think several years.

Mr. STEPHENS. Has she fired any guns at all in that time, that you know of?

Admiral WINSLOW. I doubt it very much.

Mr. STEPHENS. Are there not a number of the cruisers and armored cruisers now in reserve that have not fired their guns for a good many years?

Admiral WINSLOW. I dare say—the protected cruisers. The *Maryland* was about to have target practice, and she was put out of commission just about a week before the time for firing, so she did not fire. She was put in reserve. I do not know when she had fired before that.

Mr. STEPHENS. Would you like to send such vessels to sea, without having experimented with their guns first? Would you feel it a safe thing to do?

Admiral WINSLOW. Their guns are not different from any other mechanism. You lay a ship up for a long time, and when you start her out you will find about everything wrong; you will find her piping leaking, joints leaking, and unless you work things up to approximately their maximum capacity from time to time, they will not work up to their maximum capacity when you want them.

Mr. STEPHENS. Then ships do deteriorate and very rapidly when they are in reserve?

Admiral WINSLOW. Oh, they undoubtedly deteriorate when in reserve.

Mr. STEPHENS. And they become inoperative?

Admiral WINSLOW. Undoubtedly, unless they can be taken out frequently and driven at full speed and their turrets and gun mechanism and everything else worked just as it would in action.

Mr. STEPHENS. Admiral, what would you think the difference would be in the value of a ship as a fighting ship before going into reserve, and five years after, when she would come out?

Admiral WINSLOW. You are going to keep her in reserve five years on a stretch?

Mr. STEPHENS. Yes; that has been done with some of the boats on the Pacific, as I understand—cruisers and armored cruisers now in reserve.

Admiral WINSLOW. She would not be fit to go into action until she had had considerable tuning up, and very likely she would have to go back to a navy yard; and then it would require considerable time to develop her personnel. That has been our experience with the Atlantic Fleet. I have seen ship after ship come out that way and join the fleet, and in a short time they had to go back to the navy yard.

Mr. STEPHENS. What would you consider her percentage of value when she went out, compared with when she went in?

Admiral WINSLOW. As to when she went into reserve?

Mr. STEPHENS. Yes.

Admiral WINSLOW. If she had to go back to the navy yard, she would not have any percentage of value. She would not be of any use to the fleet at all; but she might have a value for driving at low speed, but it would be very unlikely that she could go up to her speed, and her men would be untrained.

Mr. STEPHENS. Supposing, Admiral, the armored cruisers now in reserve in Pacific waters had been there for five years, what would you estimate their percentage of value to be as compared with their value when they went into reserve? How much do they deteriorate, ordinarily?

Admiral WINSLOW. I do not know that it could be expressed mathematically. You would find them all different; you would find some that would have more to be done to them than others. You would not be justified in running them at full speed, because you would take too much chance of killing men. You would have to work them up to their efficiency gradually, and train the men.

Mr. STEPHENS. You would not equip a vessel that had been in reserve for some years with men and supplies, and send her out to fight unless you had to, would you?

Admiral WINSLOW. I would, if I had to, of course.

Mr. STEPHENS. I say, unless you had to.

Admiral WINSLOW. But the chances are she would not get very far. She might, if she had been very well cared for, but the chances are that some of her steam piping or water pipes would go to pieces if you put them under pressure; the gaskets and all those things dry out. She might not have seriously deteriorated, understand; but those little things mean as much as anything else when you come to use them. Aboard our ships we always work our turrets and our gun mechanisms at very frequent intervals, and that is the only way that we can know they will work.

The CHAIRMAN. That is what you keep the crew on them for, is it not?

Admiral WINSLOW. Yes; but still they can not take her to sea and run her. There is a great difference between 50 pounds of steam and 250 pounds.

The CHAIRMAN. But ships in reserve are occasionally taken out for trial practice on short trips, are they not?

Admiral WINSLOW. Not very much, and not under very high pressure.

Mr. STEPHENS. What is the condition of the destroyers on the Pacific coast?

Admiral WINSLOW. I think they are all being overhauled now for the time being. They are about to go up for their annual overhauling. They are not in bad condition. They are old boats, and their speed is cut down, but they are in good seaworthy condition; I mean, with this temporary overhauling.

Mr. STEPHENS. Admiral, you have no vessels that are new, have you?

Admiral WINSLOW. No; we have nothing new.

Mr. STEPHENS. On the Pacific coast now?

Admiral WINSLOW. No.

Mr. STEPHENS. Everything that you have there is practically obsolete, is it not?

Admiral WINSLOW. You would not call those destroyers entirely obsolete. They have a military value.

Mr. STEPHENS. I did not say "entirely obsolete." I said "practically obsolete."

Admiral WINSLOW. The ships were not good ships originally, but they could still do approximately any fighting that they have ever done before, if we put them in order. They have low-powered guns and are not very fast ships.

Mr. STEPHENS. What are the largest guns you have aboard?

Admiral WINSLOW. Eight-inch guns.

Mr. STEPHENS. If you were to approach an enemy with the fleet that you have, how many enemy battleships do you think it would take to conquer the fleet that you have, supposing the personnel of both fleets fighting as best they knew how?

Admiral WINSLOW. Bar luck, one good battleship ought to be stronger than all we have got.

Mr. OLIVER. Mr. Chairman, will the gentleman permit a question there?

Mr. STEPHENS of California. Yes.

Mr. OLIVER. Did not the hearings disclose that it was the continuous policy of the General Board to keep the fleet together on the Atlantic?

Mr. STEPHENS of California. Yes; and I will say to my colleague that I do not expect a division of the Atlantic Fleet as at present constituted, but I do want battleships and submarines and destroyers and air craft added to this program, in order that we may have some to send to the Pacific coast. [Applause on the Republican side.]

Mr. BUTLER. Mr. Chairman, will it annoy the gentleman for me to ask him a question?

Mr. STEPHENS of California. No.

Mr. BUTLER. With but few or no exceptions have not the admirals recommended battleships, and have they not said that if we could build but two or three ships they should be cruisers, but every man among them has demanded battleships?

Mr. STEPHENS of California. Yes.

Mr. BUTLER. I will call attention to specific statements of those officers before the discussion closes.

Mr. STEPHENS of California. It is my recollection that every man who came before us testified to the necessity of battleships. They recommended that battleships be authorized, though some of the officers thought that if we were to have but two or three ships constructed it would perhaps be better to construct cruisers; but none of them, according to my recollection, recommended cruisers without battleships if we had a fairly large program.

Mr. CALLAWAY. Mr. Chairman, will the gentleman yield?

Mr. STEPHENS of California. Yes.

Mr. CALLAWAY. I want to ask the gentleman if it is not a fact that no man appearing before the committee recommended battleships unless we were going to build more than four capital ships except Admiral Badger, and Admiral Badger was asked to put a table in the record showing what was necessary to balance the ships, and——

Mr. STEPHENS of California. If the gentleman will shorten his question I will be glad to give him the time, but I can not give him time for a speech.

Mr. CALLAWAY. Admiral Badger put a table in the record showing that it would take six cruisers to balance the battleships that we have.

Mr. STEPHENS of California. I am willing, for argument's sake, to admit the gentleman's statement concerning construction of more than four capital ships, but the majority of the committee has not followed the recommendations of the officers he speaks of. You are proposing to build more than four capital ships, and not one dreadnaught is provided for in the program.

Mr. CALLAWAY. The question I asked was——

Mr. STEPHENS of California. I can not yield further, Mr. Chairman. I have only a few minutes, and I must get through.

The CHAIRMAN. The gentleman declines to yield.

Mr. STEPHENS of California. The testimony of Admiral Fiske, in reply to questions from me, I will now read.

Mr. MEEKER. Mr. Chairman, will the gentleman yield there for a question?

Mr. STEPHENS of California. Yes.

Mr. MEEKER. Will the gentleman please explain to the House why the committee has refrained from placing any dreadnaughts on the Pacific coast?

Mr. STEPHENS of California. Well, the majority of the officers of the Navy candidly say that that fleet should not be divided when it is no larger than we have now.

Mr. MEEKER. I beg the gentleman's pardon. I mean for the building of new dreadnaughts for the Pacific.

Mr. STEPHENS of California. I believe the day is not far distant when dreadnaughts and battle cruisers will be built for the Pacific coast. I am not sure but that it will follow the 4th day of next March, because I am sure the complexion of this House will be changed at that time. [Applause on the Republican side.]

Now I read further:

Mr. STEPHENS. Do the men on the reserve fleet get any sea practice or gunnery practice?

Admiral WINSLOW. Yes, sir; they get sea practice sometimes. For instance, the *Milwaukee* is now the flagship of the commander in chief of the Pacific. She was not long ago up to San Francisco and then she went down to San Diego.

Mr. STEPHENS. Then the men on the *Milwaukee* have had some sea practice?

Admiral WINSLOW. Yes; and other ships go to sea once in a while for short distances, and there is an effort to drill them as much as they can, but they do not have gunnery practice, because you can not have gunnery practice with a reduced crew like that.

Mr. STEPHENS. The men in the reserve fleet, while in reserve, really never get any gunnery practice?

Admiral WINSLOW. I do not think they ever do, except on the destroyers. The reserve destroyers have practice. They are not required to have the same gunnery practice that the other ships have, but one of them did have practice this year with their small guns and they have their torpedo practice, but the larger ships do not.

Mr. STEPHENS. What do you think is necessary in submarines for the adequate defense of the Pacific coast?

Admiral WINSLOW. If I answered that question I would merely give you figures. I noticed the figures that Admiral Grant gave you, but to answer that question intelligently it ought to be put on the game board at the War College under different conditions.

Mr. STEPHENS. Do you think the number, 48, given by Admiral Grant adequate?

Admiral WINSLOW. I should not say that was excessive. I think probably they would work it out to use more, because you can not use submarines all the time anywhere. You have to rest them up. They can not stand the life. Therefore you can not say if you had 48 submarines you could keep them moving all the time; very likely you would not have more than 60 per cent or 70 per cent, if you had any above 50 per cent, actively after the enemy.

COMMITTEE ON NAVAL AFFAIRS,
HOUSE OF REPRESENTATIVES,
Monday, February 14, 1916.

STATEMENT OF CAPT. J. S. M'KEAN, UNITED STATES NAVY.

Capt. MCKEAN. I am assistant for matériel in the Office of Naval Operations. I have general charge of the material of the whole service. It is the old office of aid for matériel under another name, with some limitations and some additions.

Mr. STEPHENS. In your opinion, how many submarines should we have on the Pacific coast?

Capt. MCKEAN. On the coast itself?

Mr. STEPHENS. Yes, sir; on the main coast.

Capt. MCKEAN. I would work that question as Admiral Grant did, in squadrons of 18, divisions of 6, and sections of 3, and I should say 9 to operate from each of four bases. That would be 36 altogether as a minimum.

Mr. STEPHENS. You said the minimum was 36. Would that be adequate, do you think?

Capt. MCKEAN. I think if they were good boats; yes. That is a question. That is difficult water to mine and is excellent water for torpedo-boat work. Then the fleet submarines would be 12 more, which would make 48 for the coast.

Mr. STEPHENS. Then you agree with Admiral Grant in the total number of submarines?

Capt. MCKEAN. I do not recall what he put at the coast stations, but that is my idea.

Mr. STEPHENS. Forty-eight was his number.

Capt. MCKEAN. Forty-eight would be the minimum.

Mr. STEPHENS. In the Army and Navy Journal, in the issue previous to the last one, there was given as along the Pacific coast one armored cruiser and five cruisers in active service.

Capt. MCKEAN. That is, in the active fleet with Admiral Winslow. The flagship is the only armored cruiser in the outfit.

Mr. STEPHENS. It stated that those five cruisers were of the third class. Does that mean that they are the poorest of the cruisers?

Capt. MCKEAN. They are just about one remove from a gunboat. We have cruisers of the first, second, and third classes. That includes the *Cleveland*, *Yorktown*, and that class, some of them entitled to be called "cruisers."

Mr. STEPHENS. In reserve there were at that time five armored cruisers and three cruisers.

Capt. MCKEAN. Yes, sir; five of the same class as the *South Dakota*, the *San Diego*, *West Virginia*, *Colorado*, *Maryland*. Then there are the three—the *Charlestown*, *St. Louis*, and *Milwaukee*.

Mr. STEPHENS. In torpedo boats, it stated there were six in active service and four in reserve.

Capt. MCKEAN. Five in active service and four in reserve—nine oil burners—on the west coast. I do not see where they got the sixth. They may be counting a torpedo boat as in reserve. There are nine oil-burning torpedo-boat destroyers on the west coast.

Mr. STEPHENS. Are those in active service in pretty good fighting condition?

Capt. MCKEAN. They are all in about the same condition. The whole nine of them were just declassed the other day to coastal torpedo craft. They are neither fast enough nor long-endurance enough to rate as destroyers which must keep up with the fleet. The fleet has gotten faster and they have gotten slower and dropped back, and we classified them the other day as coastal torpedo craft.

Mr. STEPHENS. What about the submarines?

Capt. MCKEAN. We have three H's operating and three F's under repair.

Mr. STEPHENS. I have named everything on the Pacific coast proper that we have, except two gunboats.

Capt. MCKEAN. Two gunboats and the battleship *Oregon*.

Mr. STEPHENS. The *Oregon* is not a first-line battleship at this time, is she?

Capt. MCKEAN. She is legitimately in the third line, coast defense.

Mr. STEPHENS. She is now more than 23 years old, is she not?

Capt. MCKEAN. Yes, sir.

Mr. STEPHENS. And would not be sent out to fight if we could help it?

Capt. MCKEAN. Oh, she would be sent out to fight, but would not be sent out far. She would not be sent out with the fleet to fight, because her slow speed would detain the fleet.

COMMITTEE ON NAVAL AFFAIRS,
HOUSE OF REPRESENTATIVES,
Tuesday, February 22, 1916.

The committee this day met, Hon. LEMUEL P. PADGETT (chairman) presiding.

STATEMENT OF REAR ADMIRAL CHARLES J. BADGER (RETIRED), MEMBER GENERAL BOARD.

Mr. STEPHENS. With one obsolete battleship, proud of her as we are, a dozen cruisers, nearly all of them third class, three submarines in fighting condition to-day, with three more under repair, and nine or ten torpedo-boat destroyers on the Pacific coast, do you consider that coast very well defended?

Admiral BADGER. Mr. Stephens, the assignment of ships to stations is a matter of policy in the Navy Department, and I will have to beg that you will not require me to answer a question which would be possibly a criticism of the Navy Department's policy.

Mr. STEPHENS. You would like to be excused from answering that question?

Admiral BADGER. The assignment of ships by the Navy Department is not a subject which I think any officer in the Navy should criticize publicly.

Mr. STEPHENS. I am not so anxious to criticize the department as I am to have the Pacific coast well defended.

* * * * * * *

Mr. STEPHENS. Was the board's program of July intended to defend the Atlantic coast only?

Admiral BADGER. It was intended to increase the power of the Navy.

Mr. STEPHENS. Did the board forget that there are two coasts in this country?

Admiral BADGER. No; we think of it all the time.

Mr. STEPHENS. I thought you had, but I can not understand why the board does not make some recommendation for adequately defending the Pacific coast.

Admiral BADGER. That care will come when we get the necessary number of ships.

THE COMMITTEE ON NAVAL AFFAIRS,
HOUSE OF REPRESENTATIVES,
Friday, March 24, 1916.

The committee this day met, Hon. LEMUEL P. PADGETT (chairman) presiding.

STATEMENT OF REAR ADMIRAL BRADLEY A. FISKE.

Mr. STEPHENS. Admiral Fiske, until a short time ago you were Chief of Operations, were you not?

Admiral FISKE. They called it aid for operations.

Mr. STEPHENS. When did you resign?

Admiral FISKE. The 1st of April, 1915.

Mr. STEPHENS. Previous to that time you were acquainted with the general duties of the fleets of the United States?

Admiral FISKE. Yes, sir.

Mr. STEPHENS. What are the duties of the fleets?

Admiral FISKE. To enforce the policies of the country.

Mr. STEPHENS. Can you be a little more specific?

Admiral FISKE. Every Government has certain ideas which it wishes carried out, and certain defense which it thinks necessary. The Navy is to defend the policies of the country. It may be by actual battle, and it may be forced actually to defend the country upon invasion, or it may be compelled to go somewhere else to prevent somebody from doing something he ought not to do. If we were attacked, for instance, in Porto Rico by a foreign fleet, we might have to send the fleet there. If our Panama Canal should be assailed, we might have to send the fleet there. Do I answer your question?

Mr. STEPHENS. Is it the purpose of the Navy to have the fleet to patrol and in a measure take care of the ocean in which it is?

Admiral FISKE. I think it is for our country, because our coasts are so far apart. They are joined only by the canal. That canal is not a ditch through the sand, but it is a whole organized machine, and, like all machines, it is apt to get out of order. If it should get out of order at any time, we might not be able to send our fleet through. If half of our fleet got through, the canal might be put out of order, by intention, by some hostile act, or by some accident. There we would have our fleet divided; and it might take a long while to get that repair made.

Mr. STEPHENS. The fact that the Panama Canal is uncertain as to operation, in addition to trouble that might come to it from an enemy, makes it almost impracticable to have one fleet protect both coasts, does it not?

Admiral FISKE. Absolutely impracticable, because we might be attacked on both coasts. If we are attacked on the Atlantic coast, it is thoroughly possible for us to be attacked on the Pacific coast at the same time.

Mr. STEPHENS. Are you acquainted with the size of the fleet on the Pacific coast?

Admiral FISKE. Yes, sir.

Mr. STEPHENS. Can you give its component parts?

Admiral FISKE. No, sir; I might get them.

Mr. STEPHENS. Let me recite them: One battleship, 23 years old, now used as a training ship; one armored cruiser in active commission and five in reserve; five cruisers in active commission and three in reserve; five torpedo boat destroyers in commission and four in reserve; three submarines active on the coast; four submarines active at Honolulu; and three in repair at Mare Island Navy Yard; and two gunboats. So far as you know, is not that the Pacific Fleet complete?

Admiral FISKE. That is about correct, sir; yes.

Mr. STEPHENS. What part of it is stationed at Honolulu?

Admiral FISKE. I do not remember now.

Mr. STEPHENS. There are four submarines at Honolulu, are there not?

Admiral FISKE. Yes; I know that.

Mr. STEPHENS. With that exception, all the rest of the fleet is along the Pacific coast proper?

Admiral FISKE. Yes, sir.

Mr. STEPHENS. Do you know how much of the Pacific coast and the Pacific Ocean that fleet is taking care of?

Admiral FISKE. All of it.

Mr. STEPHENS. In other words, it takes care of the Pacific coast from the Aleutian Islands off Alaska to the Straits of Magellan below South America, and the ocean farther west than the Hawaiian Islands?

Admiral FISKE. Yes, sir.

Mr. STEPHENS. That is a much larger territory than the Atlantic Fleet has to take care of, is it not?

Admiral FISKE. Yes, sir.

Mr. STEPHENS. Do you know what proportion the Pacific Fleet bears to the Atlantic Fleet?

Admiral FISKE. Hardly any proportion; it is so small. You would have to work it out by mathematics.

Mr. STEPHENS. In fighting strength, what would your opinion be as to comparison?

Admiral FISKE. One to one hundred or less.

Mr. STEPHENS. About 1 per cent?

Admiral FISKE. Yes, sir.

Mr. STEPHENS. In your estimation, how much of an enemy fleet would it take to conquer the Pacific Fleet, supposing the Pacific Fleet to be fully prepared for battle?

Admiral FISKE. Just a fleet a little larger; that is all.

Mr. STEPHENS. How many enemy battleships do you think it would take to conquer the Pacific Fleet if fully prepared?

Admiral FISKE. One battleship would be plenty, provided it had colliers and could get coal and supplies.

Mr. COOPER of Wisconsin. As I understand, that exactly corroborates the testimony of Admiral Taylor.

Mr. STEPHENS of California. It corroborates everybody who has spoken about the Pacific Fleet and its size and condition.

Mr. COOPER of Wisconsin. One enemy battleship could destroy our Pacific Fleet.

Mr. STEPHENS of California. The testimony before the committee shows that one enemy battleship could destroy our whole Pacific Fleet, even though our fleet was prepared and in the pink of condition.

Mr. FESS. Have we no battleships there at all?

Mr. STEPHENS of California. We never have had a battleship there, except the *Oregon* at the time of its construction, and she is there now, being used as a Naval Militia ship; but she is more than 23 years old and is only considered to-day a third-line battleship.

Mr. FESS. Why is that coast so defenseless?

Mr. BUTLER. I hope the gentleman will tell him right out.

Mr. STEPHENS of California. Because this country has not built enough battleships and battle cruisers, destroyers, and submarines to send some of them over there. Because this Congress and the last has not got awakened to our defenselessness.

Mr. FESS. It is time we are doing it.

Mr. BUTLER. Is it not a fact that we can not divide our fleet until we have more ships?

Mr. STEPHENS of California. We must have a larger number of all kinds of ships, battleships as well as smaller ships and auxiliary vessels, in order to have some to send over there.

Mr. TRIBBLE. Will the gentleman yield for a question?

Mr. STEPHENS of California. Yes.

Mr. TRIBBLE. The gentleman has a good deal to say about what is going to occur after the 4th of next March. Is it not a fact that this bill carries more than $100,000,000 in money more than any bill that ever passed a Republican Congress?

Mr. STEPHENS of California. That does not matter at this time. In my judgment the bill ought to carry $300,000,000 more instead of $100,000,000 more; or $500,000,000 more, if that be necessary for the construction of a fleet that will adequately defend this country, both on the Atlantic and Pacific.

Mr. TRIBBLE. That is all right; but the gentleman has not answered my question.

Mr. STEPHENS of California. I thought I had answered it. Please repeat it.

Mr. TRIBBLE. I will ask the gentleman another question. He criticizes this bill and what the Democratic Party has done for the Navy. I will ask the gentleman if year after year the Democratic Party has not done more for the Navy and appropriated more money for it than was ever appropriated by Republican Congresses?

Mr. STEPHENS of California. The records of recent Democratic and Republican Congresses speak for themselves. The United States Navy had second place previous to 1911. The

conditions in this country have been different in the last few years, though, than they were previous to 1911, and the Democratic Party has not risen to the occasion.

Mr. TRIBBLE. How have conditions been different in the last few years, until this war came on?

Mr. STEPHENS of California. I will ask, Mr. Chairman, that I be allowed to use my own time.

The CHAIRMAN. The gentleman from California is entitled to the floor.

Mr. FOCHT. The gentleman made an alarming statement a moment ago.

The CHAIRMAN. The time of the gentleman from California has expired.

Mr. BUTLER. I yield to the gentleman five minutes more.

Mr. FOCHT. The gentleman said that any foreign battleship could destroy the entire Navy we might have on the Pacific coast.

Mr. STEPHENS of California. That we have now.

Mr. FOCHT. Do you undertake to say that the submarines would offer no resistance whatever to an enemy battleship?

Mr. STEPHENS of California. We have but three submarines there in active service.

Mr. FOCHT. Supposing we had one good one, would not that destroy a battleship?

Mr. STEPHENS of California. Not if the battleship was awake.

Mr. FOCHT. A battleship will have to get pretty close to land before it can destroy anything, will it not?

Mr. STEPHENS of California. No; it can stand off almost 20 miles and do very serious damage.

Mr. FOCHT. I should like to ask some gentleman, and I will ask the gentleman from California, since he is on the floor, and since he is so persistent about battleships, to say something about the efficiency of the submarine. I can not understand why some one does not bring forward the merits of the submarine, since it has been effective in European waters. When it costs but $500,000 and a battleship costs $20,000,000, why do we want to spend all the money on battleships instead of on submarines?

Mr. STEPHENS of California. The gentleman must not take all my time.

Mr. FOCHT. Please answer my question.

Mr. STEPHENS of California. I will.

Mr. FOCHT. Please answer my question instead of reading so much essay there. [Laughter.]

Mr. STEPHENS of California. I would like to say to the gentleman that this is my essay, or my speech, whatever the gentleman pleases to consider it, and I propose to make it in the way that I desire. [Applause.] However, I am quite willing to answer the gentleman's question. Ever since I came here I have been fighting for more submarines. In committee my motion was that 80 submarines be put in this program; when that was refused I moved that 50 be built. Every year I have moved that 50 submarines be added to our fleet. [Applause.]

Mr. TRIBBLE. If the gentleman will permit me, I will testify that he has advocated more submarines than anyone else.

Mr. STEPHENS of California. Thank you. I must go on.

Mr. Chairman, the few pages of naval hearings just read prove beyond question the utter lack of adequate naval preparation for even halfway defense of the Pacific coast. For the naval defense of Alaska and all that part of the United States west of the Rocky Mountains; for the naval defense of Seattle, Tacoma, Portland, San Francisco, Santa Cruz, Santa Barbara, Ventura, Los Angeles, and San Diego this great country of ours has but one armored cruiser, five cruisers, five torpedo-boat destroyers, three submarines, and two gunboats ready for service, and five armored cruisers, three cruisers, four torpedo-boat destroyers, three submarines, and one battleship of the third line in reserve. Does any man think that is adequate defense?

Admiral Winslow, commander of the Pacific Fleet, told us that even though every active ship and every reserve ship there had its full complement of guns, men, and ammunition, prepared to fight for its very life, that one enemy battleship could defeat them all. Admiral Fiske said that in fighting strength the Pacific Fleet is to the Atlantic Fleet as "1 to 100 or less" and that "one battleship could conquer the Pacific Fleet."

Is it any wonder, Mr. Chairman, that ever since I came to Congress I have labored for a larger share of the Navy's fighting craft for the Pacific coast? Is it any wonder that in season and out of season I talked for more ships on the Pacific? There is not one Member of this House without relatives or intimate friends on the Pacific coast, and there is not a community in the United States without many of its former citizens in Washington, Oregon, or California. We here to-day are engaged in building up the defenses of our country, in order to preserve our children, our wives, our mothers, and our fathers. Your children or your parents live now with us on the Pacific coast. Adequate protection for every part of the United States is demanded. The money is a secondary consideration. I am sure you will soon heed our call and give us what we ask. I know the Atlantic Fleet will not be divided, perhaps it should not be, and so I want more ships of every kind, to the end that the Pacific coast and the Atlantic coast may both be adequately defended.

Our Navy should be the second navy in the world, and it is my personal opinion that it should be made so at the earliest day possible. The General Board of the Navy knows what this country needs to put us in second place, and in the early part of this month it made the statement published herewith.

Additional ships, personnel, and munitions necessary to place the United States second in naval strength.

[This report was made by the General Board of the Navy May 2, 1916.]

The table includes United States ships built, building, and authorized to date. For the second naval power the data are for ships built, building, and authorized July 1, 1914, corrected for known additions and losses since that date.

Comparison of United States with present second power.							Additional required to make United States second in naval strength.		
							Ships and cost to build.		
Classes of ships.	Present second power.			United States.			Number.	Unit cost. (A)	Total cost. (D)
	Built.	Building.	Total.	Built.	Building.	Total.			
Dreadnaughts	20	2	22	9	8	17	6	$17,213,431	$103,280,586

Aircraft				200	600	1,038,190					8,038,190
Required for ships to be authorized for United States to become second in naval strength				2,393	38,996	35,791,458		47,661,450			687,465,087
Required for ships now building and not to be completed in 1917				361	6,035	5,511,177		13,129,475			67,158,779
Present shortage in personnel and munitions of all naval ships completed to 1917, inclusive (war basis)				1,960	31,262	28,817,341		8,000,000			36,817,341
Total additional required for United States to become second in naval strength (war basis)				4,714	76,293	70,129,976		68,790,925			791,441,207
Personnel authorized at present				3,551	51,500						
Total personnel when United States becomes second in naval strength				8,265	127,793						

The personnel enumerated above does not include chaplains; professors of mathematics; naval constructors; civil engineers; midshipmen; officers and men required to man merchant ships taken for use in war; Marine Corps—the enlisted strength of Marine Corps should be 20 per cent of enlisted strength of the Navy; commissioned strength of Marine Corps should be 4 per cent of its enlisted strength.

I am willing to be guided by that statement as to numbers of ships and men, munitions and aircraft. Personally I think we should at this time and in this bill authorize all the ships mentioned and build them as fast as three shifts per day can construct. If the committee had done as my motions made in executive session would have had them do, the naval appropriation bill now before us would authorize the construction of 6 dreadnaughts, 10 battle cruisers, 21 scouts, 80 destroyers, 9 fleet submarines, and 78 coast submarines. The day following that committee meeting the newspapers gave detailed statements of the motions made and lost, but the information did not come from me, hence I am revealing nothing when I say that in turn as each type of vessel was reached my motion was to authorize of that type the number recommended for second place by the General Board of the Navy. In my judgment that would be the wisest plan to follow. It costs a quarter of a million dollars and a year's time to make the plans for a battleship. Authorization in one bill of all we need would save time and money through the standardization of the different types. I see no reason why a number of battleships, or battle cruisers, or destroyers, or submarines could not be built from copies of the one set of plans selected.

Mr. Chairman, I come now to aeronautics, the latest development in the naval service. Aircraft though comparatively new are most important. They are the eyes of the Navy, and a fast developing means of defensive attack. When Capt. Mark L. Bristol, United States Navy, in charge of aeronautics, appeared before the committee he gave us much valuable information, and from his testimony I now quote:

Aircraft for the fleet are required for three general purposes, namely, the mobile fleet, the coast defense, and the advance bases.

Aircraft have passed the experimental stage in development to a great extent. The general principles of design and construction are fairly well established. It is now a question of deciding upon the mission they have to perform in war and providing the necessary types of aircraft and the officers to man and maintain them in order to carry out that mission. It is not a question of developing this service gradually, but of getting it as soon as possible, so that our fleet will conform to existing requirements. The mission of our air service, though it may be changed in the future, is for scouting, for patrolling, for fighting an enemy's aircraft, for attacking submarines and unarmed vessels and naval auxiliaries, for controlling gunfire of battleships, battle cruisers, and coast fortifications, and for carrying dispatches. Aeroplanes and dirigibles are required for all these duties. Kite balloons are required for controlling gunfire from ships and advance bases, as well as elevated points of lookout from aircraft stations.

There are several secondary duties that aircraft may be required to perform, according to the special character of the operations of the fleet.

* * * * * * *

The one thing that has kept us back more than anything else in the development of our aeroplanes has been the motor question. I would like to state right now and here, rather than in answer to some questions I have heard asked here by members of the committee, that I believe absolutely, if you will pay our manufacturers, they can produce and manufacture anything that can be produced or manufactured anywhere else in the world, and just as good, if not a little better. The reason the motor has not developed in this country is because there has not been a demand for it. The development would have been more rapid if the appropriations for aeronautics had been larger.

Aeronautical appropriations should now and hereafter be ample. The one now recommended by the board is not too large and can be used to great advantage. Until battleships and battle cruisers can be built and commissioned the Pacific coast must look to submarines and aircraft for its defense, and I register a hurry call for all we can get.

More of our Government yards could be fitted for larger construction, and with a big building program assured the private shipbuilding and aircraft yards of America would quickly prepare to build rapidly. Thus again would we be ready in private plants and Government yards for any emergency.

We should issue bonds to pay the bills. For adequate defense of the United States concerns those who are growing up even more than those already grown, and all who reap should pay.

Social, industrial, and financial preparedness is so absolutely necessary and our duty is so plain that when once attention is called no further argument seems necessary.

We should have all the ships and men and aircraft necessary to make the United States the second naval power of the world. We can, if we will, get it done quickly. If we need a great Navy at all, we will need it most in the next few years. As it was impossible to secure consent to authorize all of the second-place program in this bill, I have joined with my Republican colleagues in recommending the authorization of the larger part in this bill and the remainder in the bill of next winter.

It is my earnest, sincere belief that a greatly increased Navy will keep us out of war. If regardless of all our preparation war should be forced upon us, then can we better defend ourselves and better preserve to the women and children of the Nation their sons, husbands, and fathers.

Mr. Chairman, when this world war is over and world peace conferences are called, the United States must participate. Our delegates will be respected or neglected according to the world's estimate of our power as a Nation. If adequately armed, our offer to disarm will mean something and be listened to. If we have only a diminutive Army and a little Navy, our delegates will receive little attention and less consideration. We can well afford to throw away a thousand million dollars' worth of ships if continuing peace would result.

Mr. Chairman, I have not urged that any sum be appropriated in this bill for any naval development in the district I represent.

I want nothing established there unless it is for the general good. I would not vote to build a navy yard there or anywhere else until after competent authority had determined that to be the best place to locate it. I did ask the committee to insert a clause in the bill authorizing a board of naval experts to examine the Pacific coast, including Los Angeles Harbor, and report upon the advisability of establishing a third navy yard, and if found advisable to recommend a location for it. The committee placed such authorization in the bill, and I hope there will be a unanimous vote in its favor. [Applause.]

Mr. EMERSON. As the gentleman has studied the question very carefully, I should like to ask him what has happened, either in connection with this European war or otherwise, to justify the building of so many battle cruisers at this time?

Mr. STEPHENS of California. The theory of those who know concerning ships and fleets and conditions all over the world is that we should have battle cruisers in addition to battleships. England, Germany, Japan, and Russia have them, and we need them, too. What they have we must have also. [Applause.]

The CHAIRMAN. The time of the gentleman from California has expired.

Mr. HENSLEY. I yield 10 minutes to the gentleman from Texas [Mr. CALLAWAY].

Mr. CALLAWAY. Mr. Chairman, as the gentleman from the Pacific coast [Mr. STEPHENS of California] makes so much fuss about not having any fleet on the Pacific, I have asked for 10 minutes at this time to answer that. It might appear to people who do not know anything at all about naval strategy and the way fleets are operated, after hearing the gentleman's statement, that the Pacific coast is badly treated, and that it ought to have a fleet. The truth about it is that the naval officers who testified before our committee all stated that it was not the policy of the naval officials to scatter the fleet. It was the policy of all navies to keep the fleet together. The question was asked if England, the greatest naval power in the world, scattered her fleet, and all answered that she did not. Of course, the naval officers want battleships enough to have the Pacific full of battleships and enough to have the Atlantic full of battleships.

The only reason why anybody would ever suggest that we should scatter our fleet and have a part in the Pacific and a part in the Atlantic would be that you had so many that you could not use them all and scattered them around for the benefit of the localities where they feed them and rehabilitate the ships.

Mr. EMERSON. Will the gentleman yield?

Mr. CALLAWAY. Yes.

Mr. EMERSON. What does the gentleman say as to the statement that if we had some trouble in the Pacific we should be without battleships.

Mr. CALLAWAY. Every man that came before the committee said that if a foreign power should attack us the first thing it would do would be to meet our fleet, and no foreign navy would think of attempting to make a landing until our fleet was swept from the ocean.

Mr. EMERSON. But suppose they came from the west.

Mr. CALLAWAY. If they came from the west, they would have to come 7,000 miles, and we could get around to take care of them by the time they got there.

Mr. KAHN. Will the gentleman yield?

Mr. CALLAWAY. Yes; but you people over there seem to have plenty of time, and if you will give me time I will stay here and answer your questions until midnight.

Mr. BUTLER. Would the gentleman be willing to stay and answer at midnight?

Mr. KAHN. The gentleman refers to the fact that on the Pacific local feeling is responsible for the desire to have a battleship fleet over there. Is it the local feeling in Texas that objected to taking away our Army from the frontier for months?

Mr. CALLAWAY. Oh, we are talking about battleships. Don't get the Army down in Mexico mixed in it.

Mr. KAHN. It is a parallel case.

Mr. CALLAWAY. Oh, parallel case nothing. [Laughter.] I want to read you something from a naval officer to give you an idea of what the naval officers want. This is in accordance with the ideas of people who live about navy yards and in the territory controlled by the steel and ordnance concerns. The naval officer does not consider what it costs. He only considers that he wants everything that he can get. I am going to read from the testimony of the president of the War College and a distinguished naval officer, Admiral Knight.

Mr. BUTLER. Admiral Knight, do you think that the number of ships you have recommended here at this time would enable us to catch up with the other fleets if they would continue to build as they have done?

Admiral KNIGHT. I do not. May I enlarge?

Mr. BUTLER. You may. It will be a pleasure to have you do it.

Admiral KNIGHT. I took some care this morning to make it clear that the program which I suggested to you was the program which I believed could be laid down at once. I also urged that a committee be appointed to investigate, organize, and mobilize the shipbuilding reserve of this country, so that next year we might be ready to do a tremendously greater amount than we can do now. If Mr. Browning is right in believing that the establishments of this country can this year lay down a larger number of capital ships than I have recommended, please understand me as recommending them with all possible emphasis. In general terms, I think that this year's program should provide for every ship that can possibly be laid down this year.

Mr. BUTLER. When would you have it in your own mind that it would be advisable for us to have on hand, ready for operation, the largest fleet in the world?

Admiral KNIGHT. To-morrow.

Mr. BUTLER. Would you advise calling upon all the industrial facilities of the United States to assist us in constructing a great fleet?

Admiral KNIGHT. I should. That is what I have already advised.

Mr. BUTLER. Let me ask you—I want to ease my own mind, if the committee will permit me—why should we prepare any defense if it is not one that will succeed? Anything short of actual defense means defeat, does not not?

Admiral KNIGHT. Yes. The General Board, in studying this subject, had before it two sides to the shield. First, what do we want and when do we want it? We want a Navy equal to the largest maintained by any nation in the world, and we want it now. That is one side of the shield. The other side of the shield is, When can we get it? We questioned them as to the present facilities of the shipbuilding yards of this country, including the navy yards, the facilities of the armor plants, etc. We then said in substance this: We are limited this year with regard to the amount of work that can be done, apparently. Let us provide for the doing of that amount of work this year. Let us at the same time encourage Congress and the Navy Department to get very busy to see if they are by any happy chance larger than we think they are, getting the shipbuilders together. Let us try to get everybody working together, in the hope that very soon we may be able to develop facilities which will enable us to enter upon an accelerated program.

* * * * * * * *

We can go on from year to year, each year taking advantage of the best that we know at that time. Build all we can this year with what we know now. Build all we can next year with what we know next year.

Mr. MEEKER. Does the gentleman object to that coming from the head of the War College; is that unpatriotic?

Mr. CALLAWAY. I am trying to show that naval officers consider only their desires and their fancies and not the real necessities of the Government.

Mr. MEEKER. Do you object to that policy?

Mr. CALLAWAY. Yes; I object to the policy based solely on what they can get. Admiral Knight says further:

Mr. KELLEY. And in view of the uncertainty of our needs, and the long time it would take to reach the point where you say we ought to be, don't you think this would be a good time to stick to the original plan we have followed for 20 years and just try to get into second place as quickly as we can?

Admiral KNIGHT. I do not think we ought to stop there. I think the situation is such that we ought to try to get everything that can possibly be built this year. I think it ought to be provided for. We will not make any mistake. It will not carry us too far.

Mr. KELLEY. Do you think the plan for building, for five years, a certain number, such as the General Board worked out, at the request of the department, is a better arrangement than the second-place plan which we have held to for so long?

Admiral KNIGHT. I think the plan which the General Board had in mind, of building every ship that it is possible to build this year and every ship that it is possible to build next year, and to keep on building as fast as possible, is the most rational plan.

I could go through this testimony from end to end, showing the only consideration to be, "How much can we get?" It is the same with people who come from navy yards and the territory where the controlling interest is steel and ordnance manufacturing or shipbuilding.

Mr. HENSLEY. Where would that lead us, according to Admiral Fletcher?

Mr. CALLAWAY. According to Admirals Fiske, Badger, and Fletcher, it would lead us into bankruptcy or war.

Mr. EMERSON. We have these men to advise us on this subject.

Mr. CALLAWAY. We have them to advise us on the technicalities of the Navy, but not on the general policies. We should fix the governmental policies ourselves. What we want the Navy for and how much money we can afford to spend on it—I decline to follow them when they tell me that their advice leads this country to bankruptcy or war. They say that is a certainty. I prefer to take some risks to accepting such a safe certainty.

Mr. EMERSON. How would you know how much or how many if the experts did not advise you?

Mr. CALLAWAY. Look through the whole hearings and the advice from these experts does not show when you work it out like a lawyer works out a case that we need a single thing to enable us to defend ourselves against an attack reasonably to be expected from any power. There is 3,000 miles of ocean between us and every country we need to consider in determining the size of our Navy.

Mr. EMERSON. You differ from a great many people.

Mr. CALLAWAY. I am taking their testimony. Who is going to attack us? England? She has got her hands full.

Germany? She can not get aniline dyes to us or milk to her shores for the babies. Japan? France? Oh, they say after the war is over those nations are going to come across the ocean and eat us. Germany, with a navy in weight of a broadside from her guns, according to Admiral Badger, weaker than we are, going to come across 4,000 miles of ocean, crippled, a bankrupt, horrified by the war through which she has just passed, crape on every door for lost son, husband, or brother, with an enemy at her back, and sweep from the seas a navy greater than her own in weight of a broadside from her guns, pass our forts, which Gen. Weaver says are the best in the world, and levy tribute on New York, Boston, and Philadelphia.

Mr. KELLEY. Mr. Chairman, will the gentleman state to the House why the Germans can not get the analine dyes to this country or milk in to the babies?

Mr. CALLAWAY. Because she is surrounded by the allies' surface fleet, which is more than three times as large as her surface fleet, and dyes and milk are transported in craft that travel on the surface of the sea.

Mr. KELLEY. The gentleman has said that we could defend ourselves against even Great Britain.

Mr. CALLAWAY. That is what I said, because England is 3,000 miles across the ocean from us, and the history of this war and of the world shows that it is impossible to wage war successfully against a nation anything like equal across a great expanse of water.

Mr. KELLEY. The gentleman means now while this war is going on?

Mr. CALLAWAY. I mean always. It always has been so, and the development of torpedoes and submarines have infinitely increased the perils of the deep.

I am not going to fool with you gentlemen any more unless you give me some time. I have got to talk a little about submarines.

Mr. FOCHT. One question while the gentleman is answering about submarines. I wish he would explain what the President said when he said that war was at arm's length and might come in the morning. Was that buncombe or was he sincere; and if so, what did he mean?

Mr. CALLAWAY. Answer that question for yourself.

Mr. FOCHT. But I am asking it.

Mr. CALLAWAY. Let me read to you something about submarines. Right in the beginning of this war three English scout cruisers, the *Aboukir*, *Hogue*, and *Cressy*, off the English coast were submarined by one little old-type submarine and sent to the bottom in less than an hour. You talk about your big fighting craft. These ocean monsters never sighted the instrument that did the work.

Mr. HOPWOOD. How many battleships of Great Britain have the submarines sunk?

Mr. CALLAWAY. Nine.

Mr. HOPWOOD. Where were they?

Mr. CALLAWAY. Three of them were in the Dardanelles. Oh, they say that if you have the surface of the water patroled with scouts and destroyers the submarines can not do the work. The English got down there and made the landing on April 25, 1915. This is what an English correspondent who was on the ground says:

> The Dardanelles expedition, if it served no other purpose, is an object lesson on the difficulties encountered by a hostile fleet operating many hundreds of miles from its base in the face of submarine attack.
>
> Up to May 20 an immense fleet of predreadnaught battleships was able to lie off the coast and render the expeditionary army immense moral support by protecting its flanks and encouraging the troops who love to hear the great shells whistling over their heads. On May 13 the *Goliath* was sunk in the Straits during the night by torpedo attack. On May 20 the first submarine was sighted. The entire fleet had to weigh anchor and steer about to avoid giving a sitting shot.

And now we come to these superdreadnaughts that my friend from Illinois [Mr. Foss] told you were the fighting strength of the Navy. Dreadnaught! The dread nothing. Watch what they did at the Dardanelles:

> The more valuable battleships, like the *Queen Elizabeth*, the *Agamemnon*, and the *Lord Nelson* (they are among the finest ships afloat) faded away toward the west and were not seen again. On May 25 the *Vengeance* was narrowly missed by a torpedo, and the battleship *Triumph* was sunk. On May 27 the battleship *Majestic* was also sunk. On the following day there was not a single battleship off the Gallipoli coast. All had been obliged to fly to protected harbors for safety.

Where have they been ever since? They went home into the ports, and not only into their own home ports, but they ran nets across the mouth of the harbors so the submarines could not get in.

Where have the German battleships been all the while? In the Kiel Canal with both ends of it stopped up.

Mr. KELLEY. How many submarines is the gentleman for?

Mr. CALLAWAY. I am for enough, and I think we have enough of the kind that we have tried out. We should have, according to the testimony before our committee, some 800-ton submarines, but that type has not yet been tried by us, and we should make a test of them before authorizing any considerable number.

Mr. HENSLEY. I yield the gentleman two minutes more.

Mr. MADDEN. Mr. Chairman, will the gentleman yield for a question?

Mr. CALLAWAY. If the gentleman from Pennsylvania will give me some more time.

Mr. BUTLER. I will yield the gentleman one minute.

Mr. MADDEN. Does the gentleman believe in a navy at all?

Mr. CALLAWAY. Yes; I believe in a navy big enough to protect us.

Mr. MADDEN. What does the gentleman think would be a big enough navy to protect us?

Mr. CALLAWAY. We can figure that out if you will get politics, promotions, and profits out of the question. [Applause on the Democratic side.] We are across the ocean 3,000 miles from an enemy that has any navy. Talk about battleships and battle cruisers. Every nation except us equipped with a navy has been engaged in the most gigantic struggle in the history of mankind for two years, and these floating palaces that they say do the fighting have not fired a shot, and no man dare say they will during this war.

Mr. MADDEN. It does not follow that they would not if they had the opportunity.

Mr. CALLAWAY. Every nation in the world that has a navy, except this one, has been engaged in a gigantic struggle for two years, and battleships and battle cruisers have not been worth a continental. What makes you think now that they will be? Foolishness, rot! There are millions of dollars in it, and they have splendid decks for officers to prance up and down and hold receptions on, always cleared for social action. Magnificent quarters, more than a thousand men aboard, the daily news printed on ship, an ice plant, every thing done right there—the pride of the ocean.

Mr. MADDEN. Does the gentleman intend to vote for the bill?

Mr. CALLAWAY. Yes; in preference to a bigger one. Let me tell you what men said about these battleships when I asked them, every one of them, "What will a battleship do in the face of a submarine?" They said, "Run, run." "What will they do if the screen is destroyed?" "Run." The protecting screen is the scouts and the destroyers that surround it. "What will they do when the protecting screen is gone?" The reply was, "It is helpless." Did not they say that. Answer out of your heart of hearts when you come to discuss it.

Mr. HOPWOOD. Will the gentleman yield?

Mr. CALLAWAY. Give me a minute or two more.

Mr. BUTLER. Mr. Chairman, I like my friend well enough to give him one minute.

Mr. HOPWOOD. What nation has control of the seas, and why does it have control of them?

Mr. CALLAWAY. England has control of the surface of the seas because it has more of the small surface craft, three to one, than the central powers.

Mr. HOPWOOD. Battleships.

Mr. CALLAWAY. The kind of craft that actually controls the surface—scouts, torpedo-boat destroyers, submarines, and that class of craft.

Mr. HOPWOOD. Have they got more submarines than Germany?

Mr. CALLAWAY. Well, I do not know and you do not know and nobody else knows how many any of them have. We know the battleships have not done anything.

Mr. HOPWOOD. They have kept Germany off the seas.

Mr. CALLAWAY. Well, that is a bald statement, with not a scintilla of evidence to base it on. Tom, Dick, and Harry with grave mien and dignified air have stated that, and yet you can search nearly 4,000 pages of record where we sought day after day to get all the facts, and no one gave testimony to show that except by a mere personal statement, while looking as wise as an owl and grave and sure as an oracle. [Applause on the Democratic side.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. CALLAWAY. Can the gentleman give me another minute?

Mr. BUTLER. I will yield another minute to the gentleman.

Mr. CALLAWAY. This English correspondent further says:

> The facts are plain; dreadnaught fleets are useless for offensive purposes provided you are dealing with an enemy supplied with submarines. They are a poor defense, as well because they can only deal with the enemy's fleet as a whole, provided it chooses to come out and fight.

Local defense must be left to the submarines destined to remain in home waters.

Come across the ocean! There is about as much danger of England coming across the ocean and whipping us, or Germany, or any other country, in the face of submarines and torpedoes, developed as they are, as there is of a crippled hound pup getting by a bunch of alligators in a Florida swamp. They can not do it. [Applause.]

The CHAIRMAN. The time of the gentleman has again expired.

Mr. PADGETT. Mr. Chairman, I yield to the gentleman from Georgia [Mr. VINSON].

Mr. VINSON. Mr. Chairman, preparedness to increase the efficiency of the Military and Naval Establishments of the United States is a nonpartisan question, and is not, should not, and has not, up to this hour of debate, on either side of this aisle been circumscribed by the narrow limits of party. I am a Democrat, a believer in the creed of Jefferson and Jackson, but my country and its safety comes ahead of any party.

The military and naval preparedness undertaken by Congress and provided for in the bills that have heretofore passed the House and the naval bill now under consideration has but one object and purpose in view—that is, the adequate defense of this country.

In this day of almost world war I have at heart no sectional nor political interests, but only the Republic's safety. I am intent solely upon lending my aid and support, and giving my vote to those preparedness measures which will increase the efficiency of the military and naval establishments of this Government to guarantee proper protection to the Nation's safety.

Nations learn from the experience of other nations, and the war now devastating all Europe from the Garden of Eden to the Thames has aroused the American people and called their attention to their utter unpreparedness to defend the Nation and to preserve this the greatest Republic on earth.

I abhor war and detest that spirit which would make military despotism the chief object and purpose of a nation's thought. I defend the validity of the doctrine that would make of the civilian a paw of a military caste, and assert that a free civil life should be at all times the chief aim of national existence. Neither now nor never can the specter of militarism of the control of our national life rear its dragon head in this democratic land. Firm in the belief am I that however numerous are to be the glistening bayonets and dull-colored warships which we must now create to guarantee the efficiency of our Military and Naval Establishments to protect our shores from the threatening influence of devastating war, that these bayonets and ships ever shall remain as a bulwark of personal liberty, and never become the wall of a barracks in which its creators might bring the populace to the wheel of the chariot of aggression to be driven in other lands.

The policy of preparedness undertaken by the House as set forth in the military and naval bill, is not open to the criticism hurled against it by some, that it seeks to saddle on the people of this Republic a form of military despotism. If for a single moment I thought that this policy of preparedness for defense in any of its numerous forms provided for in the various bills in this House would give birth to a spirit of militarism in this free land, I would oppose it to the utmost of my ability.

The American citizen devoutly wishes to be left at peace with all the nations of the earth, and he trusts and prays that "the grass will continue to grow green for his flocks and herds unstained by blood and uncrushed by the hoof of war." Let not the gates of the temple of Janus be opened, "For blessed are the peacemakers for they shall be called the children of God." The peace which the American people so devoutly hope will continue to be their heritage of to-day and their legacy to all generations yet to be born in this Republic, must be insured and guaranteed by adequate preparation for defensive purposes. I am fearful that some of us, and many of the pacifists throughout the country, misjudge the measure by which peace may be maintained and accomplished and thereby permit our very love for peace to impair the preservation of it. I am a hater of war and a devoted lover of peace, but, sir, Mr. Chairman, in my hour of seclusion and study I have to the best of my humble capacity held up the lamp of the past to the face of the future, and I call God to witness that I would be recreant and faithless to my conscience and to the people who have honored me with their suffrage, and the hundred million American citizens of this Republic, which you and I and my other colleagues represent in this the greatest law-making body on earth, if I did not proclaim as far as my voice will reach that I am fully convinced and realize that peace to be had must sometimes be battled for. That to be preserved it must be guarded and protected, and that to be protected it must be surrounded by impregnable barriers.

Believing as I do, it becomes my duty to my country and to my God to advocate and support the establishment of those barriers by increasing the military and naval efficiency of this Republic, which I trust will insure peace to America until principalities and powers have gone away forever, and the everlasting Republic is established where the brotherhood of man and the Fatherhood of God are sung to the music of the spheres.

This Nation finds itself face to face with imperative duty. The dreams of the pacifists have been shattered, the hopes of a world-wide disarmament deferred, and the formation of a compulsory arbitration league among the nations of the earth, bequeathed to the wisdom and the will of future generations. However much we may desire to aid in the establishment of a world-wide peace and to make war a crime against the law of the nations, we can not disregard the ambitions of other peoples and the policies and purposes of other States, and by a premature disarmament and failure to maintain our means of defense leave our Republic an inviting and helpless field for conquest. No Government which fails to provide for its own preservation against the assaults of every probable foe is entitled to the support of its people. A primary duty of government is self-preservation, and no sophistry of logic can justify it in stripping itself of its means of defense and relying for its preservation upon the mercy, the pity, or the love of other nations. As in the relations of private life, the power of our municipal law must at times be invoked to prevent wrongs or to redress them, so in our international relations times come when the armed forces, the Executive of the Nation, must be called upon to prevent or redress national wrongs, and that one in authority who would deprive our Republic of its means of defense or make them less effective than the necessities of the Nation demands is little less than a traitor to his people, and deserves public contumely and disgrace.

While the military and naval preparedness for the defense and the preservation of the Republic is a fundamental duty, no right-thinking American would wish that, under the guise of preparation for the defense of our State, its institutions, and its instrumentalities of trade, there should be built up armies and navies purposed to wage wars for the conquest of territory, the oppression of the people of weaker nations, or to limit the exercise by them of the rights of our sister nations.

The naval preparation undertaken by us ought to be bounded by the needs of the Nation, having regard for our position among the States of the world, the location of our possessions, the extent and the routes of our trade, the policies we may adopt in our international relationships, and the dangers which threaten us.

I remind you, sir, of the purposes which we ought to have in view in whatever measures of naval preparation we may adopt. Primarily, the protection from conquest and invasion of the home land should have the chief place in our plans. Without this protection entirely adequate, then all other preparation is valueless and without avail. Even though the Canal Zone be converted into a veritable Gibraltar, or Hawaii be made impregnable, if continental United States is inadequately defended against invasion all these defenses are less than useless, for Panama, Hawaii, and the Philippines may be as successfully attacked in Washington or New York as in Central America or the Pacific.

Preparation to defend our insular possessions, to maintain for our commerce the freedom of the seas, to defend the greatest engineering enterprise and commerce carrier of the century, the Panama Canal, to maintain America's open-door policy in the Orient, to enforce our policy of noninterference by monarchical governments in the affairs of Central and South American Republics, to defend our Nation's honor and protect and redress American citizens wherever wronged is the least that duty will permit us to provide.

Whatever may have been our opinion of the adequateness of our military and naval preparation to accomplish our proper defense and protection in the past, the European war has called attention to many defects in our plans and system and has furnished us with new reasons for an increase in our military and naval forces and equipment.

This war has fused the male population between the ages of 15 and 55 years in Europe into fighting machines such as the world has never seen. The millions of men who compose these armies are now hardened and seasoned veterans, inured to the hardships of war; they have been tested and proven in battle; their officers have proven their military theories on hundreds of battle fields and in many campaigns; unfit and imperfect equipment has been discarded; new and more terrible engines

of war have been devised; skill in handling and moving troops increased; methods of maintaining, equipping, and provisioning improved; every department of military activity tested in the ordeals of an active campaign has been improved and made more effective. The fighting instinct has been aroused, and when the war is over each of the nations involved will have an army against which no equal number of men in the world unused to war can stand.

Besides converting the men of Europe into seasoned veterans, and testing all of the instrumentalities of war, this conflict has disclosed the ambition of some of the nations involved, and these, I am apprehensive, threaten the peace of America. The rules of war have been disregarded; international law has been trampled under foot; the rights of neutral nations denied; the seas well-nigh closed to neutral commerce; new hatreds have been engendered; old animosities aroused, new jealousies kindled, and America, careful as she has been in her dealings with the belligerent nations, has not escaped the envy and the hate of many of them.

This war will leave the victorious nations with large armies of seasoned troops, with all of its departments working perfect adjustment—a fit time and fit circumstance to pursue the national ambition, and no man, or set of men, can prophesy the possibilities involved in such a situation. Then, too, both victor and vanquished will bear a weight of debt heretofore undreamed of; will face distress, trade losses, inadequate revenue, increased expenses, the charge of crippled soldiers and their widows and orphans—a situation likely to incline the victors to undertake new conquests of territory and trade, and to the imposing of limitations on commerce, in order to recoup their fallen fortunes.

American territory and trade, and the territory and trade of those South American Republics under her protection, offer most promising and inviting fields for conquest and exploitation.

Recognizing that no man, nor set of men, can foretell the future effect that the European war will have upon this Nation, and being confronted with the duty of giving to the country a more efficient Military and Naval Establishment, Congress, not in a state of hysteria, but in a conservative frame of mind, after much deliberation and painstaking care, did on the 20th of May pass a military bill giving to the Nation a better military defense than it has heretofore had in the history of this Government.

Mr. Chairman, owing to the European war it is impossible to obtain any definite information as to the relative strength and increase that has been made since the beginning of the war in the navies of the belligerents of Europe, and from reliable information it seems now as if all of the nations engaged in war will come out of the same with larger navies than at the beginning. Therefore it is imperative that this Government should provide for additional increase to our Navy.

I shall in a brief manner endeavor to call the House's attention to the necessary increases provided for in this bill so as to place our Navy in a better state of efficiency.

The Naval Committee deserves the thanks of the House for the exhaustive and careful study they have given to this subject. For months and months they have devoted almost their entire time to investigating how the Navy should be strengthened and to place it in a greater condition of preparedness.

There has been much inaccurate and unjust criticism and many varied opinions and statements from irresponsible sources in regard to our Navy, but I want to call the House's attention to the fact that there is no body of officers in the navies of the world that are better educated, and there are none more skilled in their profession and none required to maintain a higher standard of efficiency than those of the United States Navy.

The enlisted men who man our ships are the best the country can produce. They come from good homes and from every State in the Union. They are picked from the high mental and physical standard for their work. They are well cared for, well clothed, well fed, and well paid. The Government, however, is amply repaid for this by their efficiency.

In a statement before the Naval Committee Admiral Fletcher, the commander in chief of the Atlantic Fleet, stated, in substance, that, as far as he could ascertain, there is no fleet on the Atlantic, or any fleet, of which more exacting requirements are demanded.

This fact is borne out by the results shown in the maneuvers, war games, and target practice, and the criticism of the United States Navy that has been heralded through the country by the jingo press has been neither well founded nor justified.

The bill under consideration provides the largest building program ever undertaken by any Government at one time in the history of the world for strengthening a navy. It provides:

Five battle cruisers, to cost $20,433,531 each.
Four scout cruisers, costing $5,571,900 each.
Ten destroyers, costing $1,325,314 each.
Three submarines of a surface displacement of about 800 tons, costing $1,205,302 each.
Seventeen smaller submarines, costing $731,302 each.
One fuel ship, costing $1,363,272.
One ammunition ship, costing $2,714,650.
One hospital ship, costing $2,250,000.

In addition to the construction of the various war vessels above enumerated, the bill provides that $2,000,000 be appropriated for the development of aviation for naval purposes.

The bill also seeks to remedy the shortage of the enlisted personnel of the Navy and recommends an increase of 13,500 enlisted men for the Navy and an increase of 3,079 enlisted men in the Marine Corps, making a total increase in the enlisted personnel of the Navy Department of 16,579.

We have passed previous bills at this session of Congress authorizing an increased number of midshipmen at the Naval Academy to provide line officers for the Navy, and the bill under consideration recommends that officers be taken from civil life for engineering and aviation duty.

By these provisos in the bill the commission personnel should be fully met, and it is the belief of the naval board and also of the committee reporting this bill to the House that it is possible for the Naval and Marine Corps to be recruited to their strength within the next fiscal year.

A new and wise precaution for future preparedness is provided for in the ammunition for new ships and those now under construction. The bill provides that in the interest of real preparedness a new practice, whereby appropriations are made in the bill simultaneously with the authorization of the ships, for all powder and shells that are necessary, so that the powder and shells, active and reserve, will be on hand when the vessels herein authorized and now under construction are placed in commission. In other words, the bill recommends an appropriation of $13,720,000 to fully supply with all ammunition all ships heretofore authorized, and $11,245,925 for ammunition for all ships herein authorized, making a total for ammunition of $24,965,925.

This provision of the bill is made in the interest of real preparedness in view of the experience of the belligerent nations of Europe in the failure to obtain munitions of war with as great rapidity as was expected. The total of the bill recommended, exclusive of the increase of the Navy, is $142,389,773.99. The amount necessary to carry on the construction of new ships heretofore authorized and herein authorized amount to $98,859,378, making, together with the $200,000 for the peace commission authorized, a grand total of the bill of $241,449,151.99. The naval appropriation act of last year amounted to $149,661,864.88, making an increase of $91,787,287.11 recommended over last year's bill, and all of which is found to be necessary to place the Navy, the first line of defense of the country, in a better state of preparedness.

Under previous acts of Congress and in addition to the building program provided for in this bill now under consideration there is now being constructed in the navy yards and shipyards in this country 8 battleships, 9 destroyers, 2 fuel ships, 2 miscellaneous transports, and 38 submarines.

According to the table prepared by the Office of Naval Intelligence, taking the *Delaware* value as 100, the comparative value of battleships of the Navy is as follows:

Ship.	Comparative value when completed.	Comparative value corrected for age in 1914.
Indiana	20.64	7.4
Massachusetts	20.64	7.4
Oregon	20.64	7.4
Iowa	20.96	10.09
*Kearsarge	23.55	15.07
*Kentucky	23.55	15.07
Alabama	21.41	14.72
*Illinois	21.41	14.72
*Wisconsin	21.41	14.72
Maine	28.84	22.20
*Missouri	28.84	22.20
*Ohio	28.84	22.20
*Georgia	30.40	31.54
*Nebraska	30.40	31.54
*Virginia	30.40	31.54
*New Jersey	30.40	33.10
*Rhode Island	30.40	33.10
*Connecticut	51.46	46.19
*Louisiana	51.46	46.19
*Kansas	49.98	46.06
*Minnesota	49.98	46.06

Ship.	Comparative value when completed.	Comparative value corrected for age in 1914.
*Vermont	49.98	46.06
New Hampshire	49.98	47.10
Michigan	78.51	75.37
South Carolina	78.51	75.37
Delaware	100.00	97.44
North Dakota	100.00	98.56
Florida	100.28	99.64
Utah	100.28	99.64
Arkansas	135.64	135.42
Wyoming	135.64	135.42
New York	169.38	169.38
Texas	169.38	169.38
Nevada	190.31	190.31
Oklahoma	190.31	190.31

The 16 ships marked with a star made the cruise around the world in 1907–1909, and their comparative value, as shown by the above table, was 597.48. The comparative value of battleships added to the fleet by completion or authorization since the around-the-world cruise is 3,409.39. It must be understood, however, that the comparative value of battleships of other nations has increased in the same proportion.

Summary of vessels in the United States Navy July 1, 1915, by types.

Type.	Fit for service, including those under repair.		Under construction.		Authorized.		Total.	
	Number.	Displacement.	Number.	Displacement.	Number.	Approximate displacement.	Number.	Displacement.
Battleships:		*Tons.*		*Tons.*		*Tons.*		*Tons.*
First line	8	189,650	7	213,800	2	64,000	17	467,450
Second line	25	340,146					25	340,146

[1] Undetermined. [2] Except 18 new submarines.

It is true, Mr. Chairman, that the minority members on the Naval Committee denounce the naval program as set forth in this bill and contend that the appropriation of $241,000,000 is wholly inadequate and urge more liberal appropriation to place the Navy in a great state of preparedness.

It is contended that the bill as reported from the committee ignores the opinion of the naval experts and the recommendation of the Secretary of the Navy, and is based on a compromise with interests which wanted no additional preparation and those who wanted only a slight increase.

The minority report contends that there should be 2 additional dreadnaughts, 8 battle cruisers instead of 5; 50 coast defense submarines instead of 20; $3,500,000 for additional aircrafts instead of $2,000,000; a larger increase in the personnel; the creation of a national defense council, and a means for rushing the building program by using more than one shift of workmen daily.

But after a careful examination and study of the bill under discussion, I am confident that in the opinion of the country the naval bill will sufficiently increase the Navy to meet any present or future emergency, and that it has brought it up to the highest point of efficiency.

When this bill now under debate has become the law of this Nation we will have fully met the demands of the American people, and have given to them adequate preparation for defensive purposes.

To carry out the provisions of the military bill heretofore passed, it is estimated that it will cost approximately $150,000,000, or, in other words, an increase of over $49,000,000 over last year's bill.

I have just called your attention to the estimated cost for increase of the Navy to carry out the provisions of the naval bill. It is of the utmost importance to the people of this country to be informed from what source this enormous expense will be derived, for it naturally follows that the national budget, on account of the increase to the Military and Naval Establishment of the country, will surpass any in the history of this Republic.

Mr. Chairman, I want to go on record as saying that I am unalterably opposed to the issuing of bonds to provide the revenue to meet the provisions set forth in these bills, and I shall oppose any effort to saddle upon the people of this Nation a bonded indebtedness for this purpose.

I am thoroughly of the opinion that the method by which this increased expenditure should be met is:

First. By increasing the rate of the present income tax.

Second. By the establishment of a Federal inheritance tax.

Third. By the establishment of an excise tax on the profits of munitions of war, such as rifles, cannon, explosives, shells, and such like.

As I interpret the system of taxation, it should consist in pulling the most feathers with the least squawking, and this is certainly what will be accomplished if the revenue to defray the expenses provided for in the naval and military bill be raised in the methods I have above pointed out.

By adopting this taxation it will raise a sufficient amount of revenue to defray the necessary expenses of the naval and military bills and will also permit Congress to repeal the emergency act of 1914, which I trust will be speedily done.

I shall not consume your time in discussing the income tax, as it is the most equitable of all taxation, but in passing I desire to say that during the last fiscal year, ending June 30, 1915, the present income tax produced over $80,000,000 in revenue, and the increased rate now contended for, and which will be provided for by the Ways and Means Committee to meet the urgent demands for our Army and Navy, it is estimated that it will bring into our Treasury an additional hundred million dollars.

The other method by which we should provide for the raising of the additional revenue required to meet this expenditure should be, as I have stated, by the enactment of a Federal inheritance tax.

This is no new form of tax, and by the adoption of such a tax we will not be sailing out upon unknown seas.

An inheritance tax was enforced in Egypt, so historians inform us, 117 years before the birth of Christ. On the luminous pages of Gibbon's History of the Decline and Fall of the Roman Empire the historian tells us that—

> When Augustus resolved to establish a permanent military force for the defense of his government against foreign and domestic enemies he instituted a peculiar treasury for the pay of the soldiers, the rewards of the veterans, and the extraordinary expenses of war. The ample revenue of the excise, though peculiarly appropriated to those uses, was found inadequate. To supply the deficiency the emperor suggested a new tax of 5 per cent on all legacies and inheritances.

There is no truer statement than "history repeats itself." It became necessary six years after the birth of Christ for Emperor Augustus, in the establishment of a "permanent military" force, to inaugurate an inheritance tax. We to-day are confronted with increasing our Army and Navy; and if the views of Members on this side of the House are carried out, we will adopt the same principle of taxation that the Roman emperor enforced when he was confronted with a similar duty.

There is no principle of taxation which has such a long and honorable history supporting it, and none which has the indorsement of such leading economists of ancient and modern times. It has been adopted in almost all the countries of Europe and is to-day enforced in every State of this Union but six.

I know of no theory of taxation which has more to commend it, and I know of no formation of taxation easier to defend. It is wise, simple, and effective.

"Wise, because it does not touch the private property during the life of the owner and therefore levies no burden upon business activity; simple, because it is easily ascertained and collected while estates are being administered in the probate court; effective, for the reason that by the application of progressive rates it places no burden on the poor, but permits those who have much to contribute to the Government somewhat in proportion to their ability to pay."

An inheritance tax does not invade any right. It trespasses on no principle or maxim of law. It does not overstep any constitutional barriers. It can not be said by the opponents of this form of taxation that it is revolutionary, socialistic, or paternalistic, but it is, on the contrary, a measure of practical wisdom and social justice and has been truly styled an "institution of democracy."

The right of inheritance is not a natural but a civil right, and on this point I respectfully invite the House's attention to Blackstone's Commentaries, wherein he says:

The right of inheritance or descent to children and relations of the deceased seems to have been allowed much earlier than the right of devising by testament. We are apt to conceive at first view that it has nature on its side, yet we often mistake for nature what we find established by long and inveterate custom. It is certainly a wise and effectual but clearly a political establishment, since the permanent right of property vested in the ancestor himself was not natural but merely a civil right.

There can be no doubt that the right to take property by devise and descent is a creature of law and secured and protected by its authority.

The Federal Government has heretofore imposed an inheritance tax at different periods of its history. The first act imposing a tax of this character provided for a light graduated tax on inheritance other than those received by wives, children, and grandchildren. The act took effect in July, 1798, and remained in force four years.

This system of taxation was recommended in Congress in 1815, but the recommendation was not adopted. In 1862, during the Civil War, an inheritance tax was imposed as a war revenue measure. The law was repealed by the act of July 14, 1870.

During the Spanish-American War the revenue bill at that time contained a provision for taxation of legacies and distributing shares and was repealed in 1902.

During the fiscal year prior to the European war England received $131,000,000 in inheritance taxes. It is estimated, taking into consideration the wealth of this country, that this form of taxation will bring into the coffers of the United States over $50,000,000 during the first year.

The last and other method by which we should provide revenue to meet the provisions of the military and naval bill should be by the establishment of an excise tax on the profits of war-munition plants. Based on a calculation of the profits reported as being made by munition plants, it can be conservatively estimated that by the establishment of such a tax we will raise a revenue of approximately $35,000,000 during the next fiscal year.

The burden of taxation should fall upon those most able to bear it, and the methods which I have pointed out to the House by which this revenue should be derived will not place an additional burden and hardship upon the backs of the masses of the people of this Nation.

Since we will by legislation increase the Military and Naval Establishments of this country by passing conservative laws, with that object and purpose in view, I devoutly hope that the casting of every gun and the building of every ship will be done with a prayer for the peace of America. Let dreams of conquest be forgotten; let ambition for world's supremacy have no place in our hearts; let us pursue our worthy national ambition in deference to the rights of others, and then, if war is ever forced upon us, let us conquer a lasting peace without staining our arms or sullying our victory by a single dishonorable or ignoble act. Let us pray for the peace of America. "Let peace be within our walls, and prosperity within our palaces." "Let truth flourish out of the earth and righteousness look down from heaven."

The CHAIRMAN. The time of the gentleman has expired.

Mr. VINSON. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Georgia asks unanimous consent to extend his remarks in the RECORD. Is there objection? [After a pause.] The Chair hears none.

The CHAIRMAN. The gentleman from Missouri [Mr. HENSLEY]. [Applause.]

Mr. HENSLEY. Mr. Chairman, I have been somewhat amused at certain gentlemen on the Republican side of the House who, having gotten recognition, at once began to explain that they deeply regretted that anyone would discuss matters pertaining to politics when an important measure of this kind is pending. Every time you have made that statement I at once realized to a certainty that you were preparing to commit the greatest political assault of which you were capable. This ought not to be a political question. We ought to rise above political views and ideas in the discussion of this question. In criticizing our Navy and characterizing it as being lamentably weak you talk as though the Democrats have been in uninterrupted control of this Government for 20 or 30 years when, in fact, we have only been in control of the affairs of government a little over 3 years, and you were in absolute control for 16 years immediately preceding us. If conditions in our Navy were as bad as you charge, you should be held accountable. Here I desire to read from the hearing of Admiral Blue when before our committee this year:

Mr. HENSLEY. As a fighting machine, it has never been in better shape than it is to-day; is not that true, Admiral?
Admiral BLUE. Never in better shape than it is to-day, in my opinion.
Mr. HENSLEY. And in your opinion, its improvement is constant?
Admiral BLUE. Yes; all the time.
Mr. HENSLEY. And has been for the last three or four years more rapid than it was preceding that time?
Admiral BLUE. I think so; yes.

The Secretary of the Navy, Mr. Daniels, stated when before our committee also that the efficiency all along the line has been greatly increased within the last three years.

And during the three years of President Wilson's tenure in office we have spent for new naval construction $181,945,535. But the total for new naval construction during the first three years under Mr. Taft's administration was only $79,345,266. The total for the same purposes was $80,805,302 during the first three years of the first Roosevelt administration, and the total for the same purposes was $87,497,706 during the first three years of the second Roosevelt administration.

Continually since the Sixty-second Congress I have insisted that in order to properly balance our Navy and make it more efficient and of the greatest value as a fighting force we needed, more than anything else, additional submarines, aircraft, and other auxiliaries, including battle cruisers, instead of additional battleships. This bill does not provide for battleships. It provides for five battle cruisers which are more powerful and more expensive than battleships. It also provides for additional submarines and aircraft, and it is therefore in effect in that respect an indorsement of the position I have taken all along in my efforts to promote the efficiency of our Navy. All of the testimony of the experts before our committee is in support of that position. Admiral Dewey stated before the Committee on Naval Affairs about 15 years ago, after he had witnessed the first demonstration of the Holland type of submarine off the Potomac, "That if the Spaniards had had one of those boats over at Manila he never could have won the victory that he did." He said more than that. He said that "I could take two of these things and defend the port of Galveston against the combined navies of the world." [Applause on the Democratic side.]

What attention did the Republican Party, which was in power for many years after that, give to the subject of submarines with a view of promoting the efficiency of our Navy, about which they pretend to be so much concerned now? [Applause on the Democratic side.] I have said heretofore, and I say it now, that I have been inclined to believe that one reason why more submarines and craft of that kind were not provided was because receptions could not be held on them as could be held on dreadnaughts, and furthermore, there were no such profits in the manufacture of submarines. These are the reasons why you did not build submarines and thereby really promote the efficiency of our Navy. You absolutely ignored them, as I have previously stated. In support of my statement, let me call your attention to some of the testimony before our committee. It shows what has been done under a Democratic administration. Here is what Admiral Griffin, Chief Engineer of the Navy Department, said:

Until Admiral Grant was appointed to command the submarine flotilla the Navy Department itself apparently did not take submarines very seriously, and that is best evidenced by the fact that the officers who were ordered to command them were the most junior and inexperienced officers in the service. They were ensigns and lieutenants—

And, mind you, Admiral Grant was detailed to command the submarine flotilla by Secretary Daniels, under this administration.

Admiral Griffin further advised our committee that at the outbreak of the European war Germany had fewer submarines than we had.

Mr. MEEKER. Will the gentleman yield for a question?

Mr. HENSLEY. Certainly.

Mr. MEEKER. In the light of what you have said here of defending Galveston with two of those submarines, why is it that the submarine operators are fearful of an armed merchantman? They say that a merchant vessel carrying goods with two small guns can put a submarine out of business if they get a shot at it.

Mr. DECKER. He means that they get alongside.

Mr. HENSLEY. That is an entirely different question. The estimate placed upon the value of submarines by Admiral Dewey was based on the unrestricted use of the same. That means, of course, that the submarine will remain submerged. There is no occasion for a submarine to come to the sur-

face in attacking an enemy ship. It is constructed for fighting submerged. It is simply not constructed for surface fighting, and would be at a decided disadvantage on account of lack of armor and in many other ways.

Mr. KELLEY. The Secretary of the Navy recommended 25 submarines, but this bill contains only 20.

Mr. HENSLEY. I think that is as many as we can get ready. The gentleman is familiar with the difference of opinions of the experts with respect to the types of submarines which we should build. Our coast submarines are of the 400-ton type, and we have authorized three 1,200-ton type. The experts tell us that the smaller type has not sufficient radius of action or habitability for the men. They also tell us that the large 1,200-ton type can not submerge quickly enough. For these reasons they desire an intermediate type, which they have not as yet perfected.

The Democrats have authorized two battleships per year each year except one, just as the Republicans did for years. I opposed the construction of battleships for reasons heretofore stated, and aided in striking out the one ship to which I refer. However, the Democrats each year, except in this one instance, followed the policy of building two battleships per year. And now you try to make it appear that because of our failure to provide that one additional battleship, and notwithstanding the further fact that we have really appropriated more money each year for other construction than you did, we have fallen behind to such an extent that it will take from $500,000,000 to $800,000,000 to put us into second place, which is not correct. We have the second strongest navy afloat now and have had all along.

Mr. KELLEY. Could not the gentleman say that we sold two of those ships?

Mr. HENSLEY. Well, they said they were old ships that were sold—antiquated—as the gentleman knows.

Mr. Chairman, I shall give this bill my support, not because it meets with my approval in every respect, for it does not, but because it represents the best collective thought of the committee. I did not think during the preparation of the bill nor do I think now that it is necessary, on account of any real or imaginary emergency, to authorize five battle cruisers, not one of which can be completed within less than three to four years. Personally I feel that a less number of ships of this kind at this time would constitute ample provision for our national defense; and, of course, the cost would be much less. We can not always have our way about these things. I do not understand how any Member can afford to vote against this bill, rounded out as it is, and in favor of the Republican minority report, which carries such tremendous increases—six battle cruisers and two battleships and many other increases all along the line—though I find no fault with those who do not agree with me. Several of the Democrats on the committee favored larger increases than this bill carries, and the minority report indicates how the Republican members of the committee stood. I realize, as President Wilson has so well said, that men may honestly differ upon this great question. President Wilson said in his speech in the city of Pittsburgh:

> No man ought to draw this thing into controversy in order to make party or personal profit out of it. I am ready to acknowledge that men on the other side politically are just as deeply and just as intelligently interested in this question as I am, of course, and I shall be ashamed of any friends of mine who may take any different view of it.

President Wilson in his speech in New York said:

> It is a surprising circumstance, also, that men should allow partisan feeling or personal ambition to creep into the discussion of this fundamental thing.

The hearings of all the experts who appeared before our committee show that they are unanimous in their recommendations of battle cruisers, asserting that they are necessary in order to make our battleships effective fighting units. The experts say that battle cruisers constitute the eyes of the Navy. I suspected heretofore, as I suspect now, that the attitude of the Armor Plate Trust had something to do with the demand heretofore for the construction of those large dreadnaughts.

It was stated in the debate on this bill last year, and I subscribed to that view, that our ships were not constructed for speed—to run—but were constructed to fight. In view of what we have witnessed in the present war, the use to which the submarines have been put, rendering the larger slow craft almost helpless, I am inclined to the opinion now that greater speed is necessary so that the big boats may be able to outrun the submarines. Dreadnaughts have played a very little part, if any, so far as fighting is concerned in the European war. Then, too, we have no fast battle cruisers at present, while all other great powers have them. They will, therefore, tend to round out our Navy with the necessary defensive auxiliary craft, and will make our Navy stronger and more efficient from every angle.

I was strongly opposed to the five-year program, for, in the first place, this Congress should not undertake to bind future Congresses by a continuing contract. As each Congress comes fresh from the people it should have an opportunity from year to year to reflect their views. And, in the second place, we would create the wrong impression among other nations by such a course. Up to date Great Britain and her allies have lost scores of boats representing an enormous tonnage. Germany and her allies have also lost an enormous tonnage. Who is wise enough to foresee what will happen before that war has ended? We may have by that time a Navy stronger than the combined navies of Europe.

Secretary Daniels and Admiral Badger both stated when before our committee that no man can tell what the relative strength will be at the conclusion of the war; that the lesson of this war could not be learned until the war is over, and the lessons of this war might completely change the relative fighting value of the craft we now have or make it practically obsolete. The experts who appeared before our committee have within one year changed their demands for dreadnaughts to the very strongest demands for battle cruisers. Other changes may be necessary before the war is over. We can take care of the situation from year to year more intelligently. The adoption of this program would have the tendency of destroying the hope in the breasts of millions of people for a saner and a more humane way of settling disputes between nations, because there is no humanity whatsoever in war. If we adopted a five-year program it would appear as though this great Nation was trying to bolster up an institution, European militarism, which is crumbling and falling under its own weight. I do not believe in supporting any such institution, except in so far as is necessary in order to safeguard our national rights.

I am pleased to say that I am one of 30 Members who, realizing several months ago that this Congress would likely make large increases in the appropriations for military purposes, turned our faces squarely against putting a stamp tax upon gasoline, telegrams, telephone messages, checks, notes, and so forth, and thus directly place the burden upon the poor of the land. We wrote letters to the Committee on Ways and Means and used every influence we could with the committee against reporting a revenue bill of that kind, declaring that we would not vote for it. We insisted that the burden should be placed upon the wealth of the country for these military increases by further increasing the income tax and by the enactment of an inheritance-tax law and by placing a tax on munitions of war, and we are advised that such a tax measure will be presented to this Congress.

If this legislation is carried out properly, in a large measure those responsible for the agitation for increases, especially the ammunition people, will have to bear their just portion of the burden; and why should they not have to bear their share of the burden? It is enough that the masses of our land must be depended upon for the fighting in time of war, and they should not be put in the attitude of promoting their own destruction, which, in my opinion, contributing to preparedness to a large extent means. The big ammunition concerns have placed the dollar above every other consideration. They, in my opinion, would involve this Nation in war rather than give up their profits from the traffic in their death-dealing wares. Public meetings have been held, speeches have been made, demanding that this Nation join the allies in this war. Many people do not realize to what extent they are willing to involve our country.

We have heretofore reported to this House from the Committee on Naval Affairs a bill providing for Government manufacture of armor plate, which has been added to this bill by an amendment. It will go a long way toward taking the profits out of the manufacture of war materials and stop the unwarranted agitation now going on and which has been going on for years. There should be no profit in war. I am advised that before the European war began British citizens owned stocks in German and French ammunition concerns; that German citizens owned stocks in British and French ammunition concerns; and that perhaps this situation exists now. War traffickers are no respecters of nations. They had just as soon hold stock in the ammunition concerns of one country as another, provided only that the profits are the same. They have been playing one country against the other. Each country has made increases each year. At the end of the year their positions, relatively speaking, remained the same, for rarely ever did one country to any great extent outbuild the other. But there was a change; and what was it? The profits of these traffickers had increased; the burdens upon the people, who frequently had been misled by pleas of patriotism, had increased. Yea, and there was still another change. The probabilities of war had increased also. The instruments of war and the sentiment for war created by

the war gods make them more willing to depend upon their state of preparedness and resort to war than they otherwise would.

Mr. Grace, president of the Bethlehem Steel Co., stated before our committee that at the beginning of the war in Europe the stock of his company was selling on the market for $30 per share; that at the time he was testifying it was selling on the market at $530 per share. I have no doubt that he is true enough to his stockholders to put forth every effort in behalf of his company so that it may continue making big money after the war in Europe is over. What is more natural than that he and his people desire this country to buy their wares when they no longer need them over there? Should our people be so silly as to do it? Many other ammunition plants in this country have enjoyed about the same experience. Lloyd George in a speech in the Parliament of England recently referred to J. P. Morgan as their munition agent in America. Morgan, the head of the banking interests of this country, if not of the world, a British munition agent, is making millions on the sales of munitions to the allies. He also has been selling bonds to our people. Is he and the great institutions with which he is connected neutral as between the warring nations? I am calling attention to these things to indicate to what extent these ammunition traffickers go. Indeed are they true Americans? Should their counsel be adhered to in piloting our ship of state? The Good Book says, "That where your treasure is there your heart is also." The Congress of the United States is made to feel the influence of these people in various ways, by the use of the metropolitan press and by their representatives and in some instances by magnificent banquets. I sometimes fear that too many Members of Congress forget that great silent body of people who are not permitted to come in person and make an appeal in their own behalf. And while the saintly ammunition traffickers are busy pushing their present foreign trade by every means possible they are scheming and planning ahead so that their business may not cease when the war comes to an end.

They want the people of these United States so wrought up that this Government will at once become a market place for their wares when the European war is ended, and they are investing millions in a propaganda to make this country an object of prey and plunder for them. They are not praying and working for the relief of the millions of mortals in the war of Europe who are suffering all the agonies of hell itself. Millions of our people have contributed of their money to help the destitute people of Europe and those cursed by this awful war, but the same ships bearing gifts going from the very hearts of our people to those sufferers have borne ammunition for the slaughter of others. These same traffickers are largely responsible for the hysteria in this country, and are urging in every way possible that we go away beyond what this bill provides for. No good citizen wants this country to be in a defenseless state, but this is not the spirit that is prompting these ammunition traffickers. It is the spirit of greed and avarice. It is the riches and not the safety of our country about which they are mostly concerned. They are capitalizing patriotism and by playing upon those finer emotions are making millions of money almost overnight. Mr. Maxim, the inventor, the writer of Defenseless America, the author of the Battle Cry of Peace, and whose brother is a knighted British citizen and ammunition manufacturer in England, recently urged the organization of a defense league in St. Louis, and when the people responded and the league was organized there at once appeared in the papers of that city an advertisement offering stock in his ammunition concerns for sale. This did not set well with the members of the league in St. Louis and some of the most prominent citizens of the city withdrew from the organization, asserting that the whole propaganda was too apparent and that they would not be duped in any such manner. The Battle Cry of Peace, his play, is being put by means of picture shows into every district of the country possible to excite and stir up the people and make it appear as though this country is entirely defenseless nothwithstanding we have in the last 10 years spent hundreds of millions of dollars more upon the defenses of our country than Germany has spent.

We have spent millions more in the last 10 years upon our defenses than Germany and Japan combined, including this bill, and many times more than Japan has spent upon her Navy. Mr. Maxim in his book, "Defenseless America," says—

> that Great Britain should come over here and whip us in order to teach us a lesson.

She tried that and failed on two distinct occasions over 100 years ago, when we were only three or four millions strong and scattered over a vast territory, with little wealth to speak of, and now, by the grace of God and 100,000,000 of freemen, and with billions of wealth, she can not start to do it. He further says:

> The unpleasant truth should be realized that invading armies must, with other luxuries, have women. As a result, they leave a large progeny—wrens in the nests of the doves of peace. Hence, inasmuch as soldiers are the pick of the manhood of their country, they are likely to do about as much toward securing the survival of the fit in America as they would in any country.

And further on, in arguing in favor of war, he says:

> That war is a great mixer of races and that usually mixed types benefit enormously from their compound blood.

How do the Christian mothers and daughters of this country feel upon this subject? How do the God-fearing and patriotic fathers, who produce the wealth of our country in time of peace and who constitute the only hope for the security of our country in time of war, feel upon the suggestion that Mr. Maxim makes of the survival of the fit by debauching the homes of the country? Yet this man, the real leader of this propaganda and who has done more than any other dozen men in stirring up public sentiment and in creating fear in the land, is permitted to run up and down and through the land teaching his blasphemous doctrine in order to excite the people so that he and his kind can better rob and plunder them.

Only a few days ago in my office, in the presence of Mr. CALLAWAY and several others, a gentleman recited the part that he had been taking in this propaganda to stampede the people to where they would demand enormous appropriations for preparedness. He was first employed by the Navy League, that bunch of simon-pure patriots to which attention has been called by myself and others for several years, at so much per week and expenses. He went to the country making speeches, pretending to give the people information concerning our "unfortunate" state of unpreparedness. Later on he was employed by the National Security League at $150 per week and his expenses, with a definite territory of the country to cover. He told us that he met Col. R. M. Thompson, Herbert Satterlee, brother-in-law of the present J. P. Morgan, and several other gentlemen at 103½ Wall Street and stated that in a few minutes time $30,000 was raised with which to begin the preliminary movement to bring about a $500,000,000 appropriation by this Congress for the Navy alone. He named several other gentlemen who were also employed by these men closely allied with the ammunition traffickers to stir up sentiment to stampede the country. Now, this gentleman confessed that he did not know anything on earth about our state of preparedness or what the other nations have. Preparedness is a relative term, and in determining our state of preparedness we must know how our Nation compares with the state of preparedness of other nations, because a man is strong or he is weak according to the strength of his adversary. This gentleman did not know the number of dreadnaughts we have, whether or not we have any battle cruisers, the character of our submarines, the nature of our coast defenses, or anything of that kind, yet he was employed to go over the country to enlighten the people upon the subject. Thus you see how false impressions have been made upon our people concerning our state of preparedness.

What is our present state of preparedness arrived at by men who are competent to judge? Gen. Weaver's testimony concerning our coast defenses is as follows:

> I have been a close student of the whole subject, naturally, for a number of years, and I know of no fortifications in the world, so far as my reading, observation, or knowledge goes, that compare favorably in efficiency with ours.

In speaking particularly of the guns, he said:

> The guns now mounted and those contemplated will give us an entirely satisfactory defense.

And when inquired of concerning the range of the guns carried upon foreign battleships with ours, and whether they had a greater carrying range than our guns, he answered in the negative. And when this question was put to Gen. Weaver by Mr. MCKELLAR—

> In your judgment, is it not unfair and misleading to the American people to have a public man make a statement that would lead you to believe that the coast cities of our country are wholly at the mercy of some invading enemy?

Gen. Weaver replied:

> I do not know that there is any officer who is acquainted with the facts that would make such a statement.

I desire to quote from Gen. Nelson A. Miles, who has had about as much experience, I presume, along military lines as any man in our Government. He said:

> Having had much to do with placing and the construction of our fortifications, and inspecting every one along the Atlantic, Pacific, and Gulf coasts, as well as having had an opportunity of seeing all of the great armies of the world and many of their fortifications, including the Dardanelles, I am prepared to say that our coasts are as well defended as the coasts of any country, with the same class of high-

powered guns and heavy projectiles, and I have no sympathy for the misrepresentations that have been made in an attempt to mislead the public.

And further on in his testimony he declares:

These over-seas expeditions spring from the minds of men writing about preparedness who know less about preparedness than anything else.

And on the 31st of January of this year Gen. Miles, before the Senate committee, declared further:

The placing of an army on American soil is the last thing any European Government would attempt; it could never be reembarked. It would dissolve like snow beneath the midday sun. Whenever it has been attempted it has resulted in disaster.

But in spite of the testimony of such men as Gen. Weaver and Gen. Miles and our information gotten from history, we are continually hearing or seeing put upon canvas the frightful scenes of how an invading force will without any difficulty whatsoever, and without the loss of any men, land a large army upon American soil. And some pretend to believe that at the conclusion of the present European war the armies of Europe will be consolidated and united for the purpose of invading this country. Impoverished as those nations will be, with $58,000,000,000 of indebtedness already and bleeding from every pore, they will certainly have their fill of war and will not desire to take on any new engagements with a country separated by many thousands of miles of water. It is said that including interest, sinking fund, and pensions, the annual expenditure of Great Britain will soon reach $3,000,000,000, an amount nearly equal to 25 per cent of her total income. This is about twice the amount of our total expenses of government, which are enormous. You can not believe that those nations will even attempt that unless you believe that the people of those nations, together with their rulers, are nothing more nor less than highwaymen, robbers, brigands, ready to go out and pillage any nation or country without the slightest provocation.

The naval expenditures of this country as well as the naval expenditures of all other countries have been increasing from year to year at a most alarming rate. I said in the Sixty-third Congress that in 10 to 15 years we would be appropriating $500,000,000 or more for the Naval Establishment of this country alone. Only a few years ago a Missourian upon this floor startled the whole country by declaring that Congress to be a billion-dollar Congress, and yet to-day we are appropriating nearly $3,000,000,000 for each Congress and have been appropriating nearly that sum for several Congresses past. These are stupendous figures. On the basis of 100,000,000 people, it represents $30 for every man, woman, and child of our country, and for each family of five the sum of $150 for two years, or $75 each year.

We find this bill now carries $269,479,255.24, $120,000,000 more than has been carried by any naval bill heretofore. The naval bill carried in 1896 the sum of $30,000,000. So you see that in 20 years, a short period in a nation's history, the cost for running this establishment alone has increased over $239,000,000, or an increase of from 700 to 800 per cent, including the amount carried in this bill. In the face of these figures we have people in our country talking as though we have totally neglected our Navy. Now, while I realize, as you all must realize, that in the final analysis these ponderous burdens fall upon the backs of the producers of our land, yet no citizen, I undertake to say, complains or will complain of the burden of these expenditures if they are necessary and for the public good. We all desire our country to be protected, and adequately protected, against any foreign foe. With these facts known, I can not believe that on the part of thinking men and women in this country there can be the slightest apprehension with reference to our safety when we are as well prepared as we are and with our preparations going on as steadily as they are. But, Mr. Speaker, the thing I most fear is that this Nation will give too much thought to the preparation for war, as though that is the most important thing to be obtained, until we are swept from our standards to that of a military State. We all know that many of our people to-day are obsessed upon the question. In many sections of our country the good women and girls are being trained by military men and are wearing uniforms and making preparations as though war was right upon us, and some of our people go so far as to advise military training in all the public schools of our country. We have now under existing law 100 schools and colleges over the country supplied with officers from West Point Military Academy who teach military tactics.

The Hay bill which passed Congress a few days ago provides for 786 more such teachers in our schools and colleges. I was in hopes that the awful war would teach another lesson to the people of the world and that we would not become so steeped in this thought of military preparedness as some appear to be. Many people seem to deplore Prussian autocracy, and yet by their actions they would have us approach that same militarism just as nearly as possible. The fact of the business is the difference between the European countries engaged in war, in respect to militarism, is only in a degree. Great Britain has expended more money upon her navy than Germany has expended upon her land forces, and militarism upon the water is the handmaiden of militarism upon the land. Are we going to permit this European situation to change all of our ideals? Within the last 50 years at least one-third of the habitable globe has changed from monarchical forms of government to republican forms of government. These are serious questions, and should be dealt with seriously, for we all know that the bent of mind of the people of a nation affects the attitude of that nation. As the people think, so are they. If we wish to cultivate a military spirit, the thing to do is to talk upon military subjects and to teach those subjects to the rising generation. If we wish to stand for peace, that peace which many gentlemen insist is brought about only by militarism, as though you could cure militarism with militarism, the nation and the nation's people should be engaged in thinking and teaching the doctrine of peace.

There can not be two true standards—one for the government of individuals and another for the government of nations.

If the people are not honest and candid, it follows that the nation is not honest and candid. The nation can not be above its source. Governments have been instituted in order that the greatest happiness may inure to mankind, in order that the weak may be protected from the aggression of the strong, in order to insure the peace of society. For the violation of any of the rules of law set up by society within a nation an unprejudiced and unbiased jurisdiction passes upon the case, and when the guilt is established punishment of some character is administered. Why should not this be the case between nations? And that brings me to the last consideration. There is appended to this bill a resolution which should and, in my judgment, will give more hope to humanity, if carried out in the right spirit, than all the balance of the bill put together. The resolution is as follows:

Upon the conclusion of the war in Europe, or as soon thereafter as it may be done, the President of the United States is authorized to invite all great Governments of the world to send representatives to a conference, which shall be charged with the duty of suggesting an organization, court of arbitration, or other body, to which disputed questions between nations shall be referred for adjudication and peaceful settlement, and to consider the question of disarmament and submit their recommendations to their respective Governments for approval; that the President is hereby authorized to appoint nine citizens of the United States, who shall be qualified for the mission by eminence in the law and by devotion to the cause of peace, to be representatives of the United States in such conference; that the President shall fix the compensation of the said representatives and such secretaries and other employees as may be needed. Two hundred thousand dollars, or so much thereof as may be needed, is hereby appropriated and set aside and placed at the disposal of the President to carry into effect the provisions of this paragraph.

Mr. Chairman, so far as I know, if this provision remains in the bill, it is the first instance where a great legislative body has taken a definite certain step of this kind. Can you imagine a more propitious time for a move of this kind on the part of this Nation than when the European war is concluded, and I pray God that the end may not be far distant? Each nation will have suffered irreparable losses in men and in property, millions of men and boys will have been mutilated and slaughtered and millions will have been laid beneath the sod, fighting for something they knew not what. Other millions will have been maimed and made dependents for the remainder of their lives, many of whom, as the medical fraternity tell us, will be steeped in disease, which condition will be passed on to even the third and fourth generations; and when the survivors of all the nations return to their respective homes and there face the vacant seats about the hearthstones, when they look into the faces of the mothers, and in many instances widowed by the war, and into the faces of the other loved ones and see the misery depicted there; yea, more than that, when they see, as many of them will see, that the sanctity of the homes has been destroyed and all because of the beauty and the superb glory of militarism, men of Congress, what will the state of militarism be at that time? Can you imagine that it was ever more prostrate than it will be then? What is our duty? Shall we be recreant to all the impulses of our being and false to the duty that we owe humanity by undertaking to resuscitate militarism and breathe the breath of life into the hydroheaded monster and transplant it from the war-torn fields of Europe to our own blessed land? I can never believe that to be the spirit of America. Or shall we Americans discharge our full duty to our God and perform our true mission by saying to those nations and to those people, and with the spirit that it should be said, "You have drunk to the very dregs of the cup of militarism while we have conserved our men in our fair land? We could have taken advantage of your struggle and made

every preparation for war and for conquest, but we did not. We appeal to you and to all the nations of the world to join us in providing and setting up a proper mechanism, a court of arbitration, wherein international disputes may be settled peacefully without the resort to war."

Is not that the true spirit of America, Mr. Speaker? It can be done, and this Nation can enjoy the glory of having taken the initiative in a great cause that means more to humanity than nearly any other. It is not a new thought. International disputes have been settled by negotiation and arbitration on many an occasion. Justice Brewer, in a great speech on this subject, called attention to the fact that—

> in South America, Chile and the Argentine Republic disputed for years over their boundary. They were gathering for a desperate and fearful struggle, when in the hour of impending conflict the song of the angels of peace touched the hearts of both nations. They settled their dispute, sold or converted into merchant ships some of their war vessels, and thus took a foremost position in the way of national disarmament. In commemoration of this, on the summit of the Andes, nearly 3 miles above the level of the sea, on the border line fixed between these nations, has been uplifted a colossal statue of Christ, cast from the bronze of the old cannon left there by the Spaniards at the time of the struggle for Argentina's independence, and on it is this inscription: "Sooner shall these mountains crumble into dust than Chileans and Argentines shall break this peace which at the feet of Christ, the Redeemer, they have sworn to maintain."

Mr. EMERSON. Mr. Chairman, will the gentleman yield there?

What question was there in dispute that a court of arbitration could have passed upon, so that it could have brought about a conclusion?

Mr. HENSLEY. The same questions to which the gentleman refers will be argued out between the statesmen of those countries after millions have been slaughtered in that awful war. Why could they not at least have attempted to settle those same questions in advance of that awful carnage? I hope that the war will be brought to a conclusion by arbitration, and I am sure that whatever means are taken to bring about the termination of the war, in that way could have been utilized to prevent the war and the nations concerned would not have suffered as they have. [Applause on the Democratic side.]

I have said on other occasions, and I say it now, that I would not give an ounce of the clear-thinking brain matter that has enabled the President to steer the great ship of state clear of all entangling alliances while this European situation has been so horrible for millions of pounds of armor plate and other excessive military preparations. Only a few days ago my attention was called to the statement made by Lord Bryce, former ambassador from Great Britain here at Washington, one of the greatest thinkers of the age, and certainly no man upon this floor would refer to him as being a dreamer, in which he outlined the things for which England stood, and he concluded his statement with an appeal for a league of peace, using this language:

> The obstacles in the way of creating such a league are many and obvious, but, whatever else may come out of the war, we in England hope that one result of it will be the creation of some machinery calculated to avert the recurrence of so awful a calamity as that from which mankind is now suffering.

The statesmen of Germany are also anxious for this to be done, and I say, Mr. Speaker, that if it does not result in the nations of the world setting up some machinery for the settlement of international differences, then, indeed, the war will have been fruitless and the suffering, the agonies of millions of men, women, and children reduced to a wanton, heathenish crime.

It remains for us to make good. Let us not spread the deadly germ that fructifies every few generations with a slaughter of the flower of the land. If we do, if there is no escape from it, and this fair land must follow in the path of the monarchies of Europe, then civilization is a farce and the doctrine of the "tooth and the claw" becomes potential in our Nation as well as in those older nations. No longer should we in a national way, or individually, for that matter, pretend to stand for and be actuated by the life-giving spirit of our Maker, for the spirit of Christ can not exist and live in the poisonous, deadly atmosphere of militarism any more than can a lily, which must for its beauty bask in the sunlight, be nourished by the gentle breezes, and moistened by the rain and dew from heaven, exist and live and flourish in the poisonous gases and fumes of the bottomless pit of hell. My friends, the Bible is true or it is not true. We believe in it or we do not. I, for one, though my efforts may be weak and impotent, shall stand by the old story which constitutes the only hope of man for this life and for eternity. Yes; I shall stand by the country and its institutions as established by our fathers, though in some respects their teaching may have been provincial, and I appeal to Congress, and through Congress to the hundred millions of freemen of our land, to set their faces against the present horrible situation. And I bespeak for the people of the Nation, without regard to where they were born or where their parents came from, absolute loyalty and fidelity to the flag of our country both in time of peace and in time of trouble. If war comes, if all else fails and we can not escape, we stand ready, if needs be, to fight and to die to perpetuate our liberty, a democracy, if you please, which is the only hope of a constitutional form of government. Men do not have to wear uniforms or shoulder straps to be patriots. We can be true to our convictions and do our whole duty in the world and serve a nobler purpose in time of peace than we possibly can by fighting and killing our fellow man in war. So, in conclusion, Mr. Speaker, I say may the God of the universe, who rules the destinies of men and nations, guide us and give us wisdom to see the right and courage and manhood to do the right even though by so doing we may suffer from the taunts and ridicule of those who do not agree with us.

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. BUTLER. Mr. Chairman, may I ask the Chair how much time has been consumed on either side?

The CHAIRMAN (Mr. LLOYD). One hour and twenty-five minutes has been consumed by the gentleman from Tennessee [Mr. PADGETT], and two hours and nineteen minutes has been consumed on the side of the gentleman from Pennsylvania.

Mr. BUTLER. Does the gentleman from Tennessee wish to consume some time on that side?

Mr. STEPHENS of California. Just a moment. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from California asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. SLEMP. Mr. Chairman, I make the same request.

The CHAIRMAN. The gentleman from Virginia [Mr. SLEMP] makes the same request. Is there objection?

There was no objection.

Mr. HELVERING. Mr. Chairman, I make the same request.

The CHAIRMAN. The gentleman from Kansas makes the same request. Is there objection?

There was no objection.

Mr. ROBERTS of Massachusetts. Mr. Chairman, I make the same request.

The CHAIRMAN. The gentleman from Massachusetts makes the same request. Is there objection?

There was no objection.

Mr. MEEKER. Mr. Chairman, was not that privilege granted to everyone?

Mr. BUTLER. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. BUTLER. Can general consent to extend be given by Committee of the Whole?

The CHAIRMAN. Consent can be given to each individual, but not general consent.

Mr. BUTLER. I had hoped that the chairman of the committee [Mr. PADGETT] would make a general request when opportunity offered.

Mr. PADGETT. I did make a request this morning, but the gentleman from Illinois [Mr. MANN] stated that at that time he would object; but I hope at a later time to renew that request.

Mr. BUTLER. It is desirable that everyone should have that opportunity. The gentleman from Tennessee has used how much time, Mr. Chairman?

The CHAIRMAN. One hour and 25 minutes.

Mr. BUTLER. How much time has the gentleman from Missouri [Mr. HENSLEY] consumed?

Mr. PADGETT. That time has been charged to me.

The CHAIRMAN. The Chair at first misunderstood the gentleman's inquiry. Two hours and 41 minutes have been yielded to the gentleman from Tennessee. Two hours and 19 minutes have been yielded to the gentleman from Pennsylvania.

Mr. BUTLER. Now, Mr. Chairman, I yield to the gentleman from Connecticut [Mr. TILSON] 20 minutes. He has brought his arsenal with him, and I yield him time in order that he may shoot it away. [Laughter.]

The CHAIRMAN. The gentleman from Connecticut [Mr. TILSON] is recognized for 20 minutes.

Mr. TILSON. Mr. Chairman, I am in favor of a strong, adequate Navy, because I believe it is best for the country to have such a Navy. I intend to vote for not only the battle cruisers reported by the majority of the committee, but also for the battleships that will be proposed by the minority and offered by way of an amendment.

I have wondered, however, whether with all our battleships, with all our cruisers and other craft, with all the guns they carry, there is the possibility of our being found, in case of war, inadequately prepared in the very vital item of ammunition. I have wondered because this is precisely the situation confronting us in the Army. We need not only a reserve supply of ammunition, but also the potential possibility of manufacturing ammunition in vast quantities upon short notice in case of war.

Mr. CALLAWAY. Mr. Chairman, will the gentleman yield?

Mr. TILSON. Yes; I yield to the gentleman from Texas.

Mr. CALLAWAY. Mr. Grace, of the Bethlehem Steel Co., was before our committee, and I asked him what their capacity for manufacturing munitions was, and he answered it was unlimited.

Mr. TILSON. That is undoubtedly true, as I shall show a little later, provided we have or the private manufacturer has certain special appliances. These special appliances are the things I am going to talk about in the few minutes during which I shall address the House.

Mr. CALLAWAY. This is a manufacturer of munitions, the only manufacturer that is turning over this stuff ready to be used, and he answered the question, when I asked him about it, "How much can you turn out?" And he said, "You need have no uneasiness about it; any amount you want."

Mr. TILSON. I think that is true, provided we have or somebody has the necessary special tools and fixtures which are absolutely necessary for the manufacture of anything of that kind by mass production.

Mr. CALLAWAY. May I just read that he never put that qualification in at all. He said that he could turn out any amount desired without any "ifs" to it.

Mr. TILSON. I shall take the gentleman's word for it, and am very glad to hear that such is the case. To my mind that would indicate that the manufacturer in question is already equipped with these things, for they are surely necessary. It is my intention to address myself to the subject of preliminary preparation for the manufacture of arms and ammunition, so far as it applies to the land forces, because I have given considerable thought to this particular phase of the subject. Since I addressed the House on February 29, upon a bill I had previously introduced covering the subject, the Committee on Military Affairs has approved the subject matter of that bill, which in the form of an amendment I offered on the floor of the House and which is now the law, authorizing the purchase or manufacture of the special tools and fixtures of which I am speaking.

Napoleon is credited with saying that an army travels on its stomach. The bleaching bones of thousands of his veterans on the snowy steppes of Russia after the retreat from Moscow testify to the truth of that proposition. An army must still travel in the same way. An army can not travel or fight unless it is fed; but after an army has marched, after it is in a position to fight, it can not be effective unless it has an adequate supply of arms and ammunition. A modern army fights in the workshops back of the base of supplies. For each man at the front there must be one in the shop. If there is not, the man at the front will soon find himself at the mercy of his more fortunate opponent. As I have said, I am in favor of a larger Navy. I believe in a stronger Army than we now have, though I do not believe we should ever have a large standing Army in this country. I believe in a well-trained citizen soldiery. The truth is, however, and it ought to be more generally understood that all these are futile unless we have the arms and ammunition in sufficient quantities. If we had a million men already trained, a reserve twice as large as that, and as many more volunteers in the training camps back of them, nevertheless, if we have not meanwhile adequately prepared ourselves to manufacture the arms and ammunition that they must have, those men can not be effective. In order to manufacture the arms and ammunition needed, you must have these things of which I speak, and of which I have brought here an exhibit of a few very simple ones for ocular demonstration.

Let me repeat and emphasize the fact that without these simple looking things—I have a number of them here which any Member can look at, if he so desires—without these things it is impossible for us to produce the matériel necessary for a real conflict. Without them it is impossible to produce it at all in quantities. Listen to this statement: It will require more than a year to produce the necessary gauges, dies, templets, fixtures, special tools, and other appliances necessary to manufacture small arms, small-arms ammunition, and field-gun ammunition in sufficient quantities to carry on a real war.

I wish that statement could be emblazoned across the sky until every person in this country who thinks or talks preparedness or refuses to think about it might read it by day and meditate upon it by night, for the statement is as true as it is startling.

Mr. CALLAWAY. Mr. Chairman, will the gentleman yield?

Mr. TILSON. I will yield to my friend for a question.

Mr. CALLAWAY. Do you suggest that the Government supply itself with all this necessary equipment to turn out arms?

Mr. TILSON. That and nothing more. I think the Government should supply itself with these things, instead of proceeding to build large factories at great expense, which would have to be equipped with these things even then before they would be of any use.

Mr. CALLAWAY. You do not consider the arms in the hands of private manufacturers throughout the country?

Mr. TILSON. They have not got them. That is just the trouble. Great Britain came here asking for rifles, any amount of rifles that she could get.

Mr. CALLAWAY. You do not believe what the president of the Bethlehem Steel Co. said about turning out these orders, then?

Mr. TILSON. I am not attempting to answer the gentleman or Mr. Grace in regard to ammunition for the Navy. I have not yet qualified as an expert in regard to the Navy, but I know whereof I speak concerning the Army. I know it to be a fact that Great Britain, having come to this country seeking all the rifles she could get, and offering good prices for them, was unable to get them at all for over a year. I have the statement right here of a well-known and responsible Englishman, made to an American audience, and if the gentleman will excuse me, I will read it into my remarks at this time. He says:

> We were unable to put into the field a tithe of the men we recruited because we were without rifles, and contracts were immediately placed in America, but it takes time to make the patterns, equip the factories, and build the necessary machinery—

What it took the time to make was these simple-looking things, the gauges and other special appliances.

> and it was only last February—

February, 1916, and remember these hurry-up contracts were made in the autumn of 1914—

> that rifles were beginning to go out in quantities. An army is as strong as its infantry, and the weapon of the infantryman is his rifle. The wastage of rifles is enormous, and it has been calculated by military experts that for every man in the ranks there must be a reserve of from three to five rifles to repair loss and damage if the army is to be kept up to its maximum efficiency. Germany is said to have had this reserve at the outbreak of the war. Incidentally I may remark, the United States had several hundred thousand rifles in its armories which the British Government would have bought at almost any price, but your Government, mindful of its strict obligations of neutrality, refused to sell us a single rifle, which, of course, was perfectly proper.

Yes, we had 700,000 new Springfield service rifles all told, and almost half as many Krags, and, of course, we acted properly in not parting with them.

The same statement informs us that in December, 1915, Mr. Lloyd-George told the House of Commons that in May, 1915, after the war had been in progress 10 months, England was turning out only 2,500 high explosive shells daily against Germany's 250,000—a hundred times as many. We know the reason now—Germany had the gauges, Great Britain had to get them after the war started.

Here is a little story carrying its own comment. It is said to be a true story, but whether literally exact as to hours and minutes is not important, as we know the substance and point of the story to be true. It well illustrates the meaning of real preparedness:

> It is the afternoon of July 28, 1914, in a quiet little German valley. To the right, over there behind that growth of trees where you see the smoke arising, is a huge manufacturing plant, the home of a world-famous ignition system. The noonday sun is shining down on the peasants at work in the field, and the atmosphere of peaceful industry is everywhere apparent.
>
> But now it is 2 o'clock p. m. The telegraph key in the office of that manufacturing plant clicks furiously. War has been declared, and the nation needs arms and men and needs them quickly!
>
> Now what do you suppose is happening over there in that factory? Is there the fussing and fuming and delay that we witnessed last month down by the Rio Grande? There is not. Is the machinery stopped and the plant shut down? No. The lathes and milling machines hardly hesitate in their whirring, but instead of turning out magnetos, rifle parts begin to clatter into the shipping room.
>
> At 2.10 o'clock the employees formed in line and marched by the pay window, where each received a little slip of paper bearing exact instructions as to what each individual should do. One-third of them reported immediately at the recruiting station to receive arms and equipment for the front. Another third, according to instructions, reported for duty as expert repairmen on automobile and aeroplane ignition systems, and one-third returned to their lathes and devoted themselves to the manufacture of rifle parts. In short, each man had a preordained duty that fitted cog for cog with the needs of the moment.
>
> How long do you suppose it would take you to change your plant from its present product to the production of rifle parts? Would not a year be a minimum estimate of the time required? Yet over there in that little German valley, one hour's time saw the last magneto rushed from the shop and the appearance of the first rifle lock; one hour's time turned the huge factory from magnetos to war equipment. That illustrates what we mean by real preparedness. Of course the fixtures and

jigs were ready, and doubtless had been ready for months or years. Of course the drawings, the plans, the gauges, and the tools were there ready—prepared.

Unfortunately our Congressmen are not versed in things mechanical. Therefore to them the change from the production of magnetos to rifle parts within a single hour's time seems like nothing more than a pretty and spectacular bit of hurry-up work. It would be a great service to the Nation if some one would tell them that a change of this nature requires months of preliminary thought and labor; that jigs and fixtures and dies are not the product of a moment; that designs, blue prints, and gauges do not grow on trees and that interchangeability of parts and intelligent inspection are the result of training and not of inspiration.

England was 10 months raising her capacity to produce high-explosive shells to 2,500 daily, and other equally necessary things quite as slowly. The interesting part of England's lesson to us as neutrals is that within 20 months after the war began the British ministry of munitions was said to be in control of more than 3,000 munition factories employing 1,500,000 men and 250,000 women. What England has done we can do; but do we wish to do it under such conditions? It is well known that our own situation as to matériel is much the same as that which Great Britain had to face at the outbreak of the war. Certainly we are no better off. The consoling fact in regard to our own situation is that we have many more than 3,000 factories that could be transformed readily into munition factories capable of producing all the arms and ammunition we should ever need in case of war. If we have ready the things for which I am contending, we may approximate the occurrence in the little German valley in case war should come. If we have them not, I think we may be able to get them within 20 months—if the war has not sooner ended.

Mr. SLAYDEN. Will the gentleman yield?

Mr. TILSON. I yield to my friend.

Mr. SLAYDEN. These factories in this country that have been supplying the belligerents are now thoroughly well equipped, I presume, with all this material?

Mr. TILSON. Not to manufacture the United States Army service rifle. Their rifle is different from ours and their artillery is entirely different. They would be forced to have made every one of these gauges, and it would take perhaps 800 different gauges to make this one rifle. Let me show my friend. It takes 120 different gauges to make one piece, the receiver, and probably not many of the gauges these private manufacturers now have would be of any use in the manufacture of our rifle. We must have a new, complete, exclusive outfit for everything that is different in the slightest degree.

Mr. SLAYDEN. The gentleman believes that our Government should buy these things and store them?

Mr. TILSON. Yes; should have them made and ready.

Mr. SLAYDEN. Suppose in the meantime some man invents a different and vastly improved rifle, of what value will these things be?

Mr. TILSON. They will be of no value when the rifle is discarded and new ones will have to be made for the improved rifle; but that is far better than either of the other two alternatives left us, one of which is that we have an inadequate supply of rifles and no preparation to make more, which is unthinkable, and the other that we manufacture a vast reserve supply of rifles, which would cost multiplied millions and which would all have to go to the scrap heap when they become obsolete. Can not the gentleman see the great advantage of my plan?

Mr. BUTLER. Will the gentleman yield for one question? Does not the gentleman think it quite advisable to consider the proposition of some of these ammunition makers, that for small sums of money they will keep their factories ready to make immediately thousands and thousands of rounds of ammunition, so that the Government may not be put to the expense of making it at this time?

Mr. SLAYDEN. If the gentleman asks me that question, I will say that I think we should.

Mr. BUTLER. I was asking the gentleman from Connecticut.

Mr. TILSON. I believe that the Government itself should manufacture for the most part the small arms and small-arms ammunition that it uses in time of peace; because the facilities for doing it are already in existence, so that it would be an economic loss not to utilize them. For war, however, all the Government could possibly manufacture would be but a drop in the bucket. Therefore, we should have private manufacturers, and as many of them as possible, make a portion of the peace-time requirements, so that they may keep their machinery, their special appliances, and their organization in readiness to produce when needed. That was our policy until about five years ago in regard to small-arms ammunition.

Mr. BUTLER. I will give the gentleman another minute or two. Does the gentleman recall the question asked him by the gentleman from Texas [Mr. CALLAWAY]? Does the gentleman remember the statement that the gentleman from Texas [Mr. CALLAWAY] made, that Mr. Grace, president of the Bethlehem Steel Co. said that immediately, within 90 days, they can make more ammunition than the Government can hire men to shoot away?

Mr. CALLAWAY. Will the gentleman let me read that?

Mr. TILSON. I have not set myself up as an expert on the Navy or naval matters, and yet I have a notion that in the manufacture of ammunition in quantities for the Navy some of these things I am talking about will be necessary.

Mr. CALLAWAY. This is a question of naval ordnance. This is what he said:

Mr. CALLAWAY. In this country, should demand come for any amount of arsenal matériel, could not that be distributed to different people in the component parts and assembled in almost unlimited quantities?

Mr. GRACE. If you will keep in existence, Mr. CALLAWAY, the facilities which have been built up during this war, the United States need never have a fear and you people in Washington need never have a fear or worry about where you will get your matériel.

Mr. TILSON. I think that is substantially correct. Our main dependence should be, must be, upon our private industrial resources; and that is just what my plan seeks to do—to organize and prepare to utilize what we have, instead of discouraging and trying to destroy private industries. In my judgment, we shall act with extreme folly if, shutting our eyes to the facts, we blindly proceed to waste the public money in building an uncalled-for armor-plate factory, a lot of expensive ammunition factories, and all that sort of thing. On the other hand, I do believe in the Government manufacturing the special appliances which can be of no use to anyone except the manufacturers of war materials. They do not amount to a great deal in the aggregate. The whole cost of the essentials necessary to equip enough private establishments to produce all the small arms, small-arms ammunition and field artillery ammunition that we should probably need in case of war would not be as much as the cost of one battle cruiser.

Mr. CALLAWAY. It is said here that $60,000 would keep these things in existence.

Mr. TILSON. I do not know just what the gentleman, from whom the gentleman from Texas is reading, is talking about. Evidently it does not cover what I am talking about, because I have here the testimony of Gen. Crozier and other experts who go fully into the matter, from which it appears beyond all question that it would require at least $200,000 to procure enough of these special appliances to manufacture 1,000 rifles a day.

Mr. CALLAWAY. I do not think the gentleman understood my statement. Mr. Grace said they could keep in existence the equipment they have at the present time, which could turn out all the materials that would be needed. I asked him if in any quantity, and he said "Yes; any quantity whatever."

Mr. TILSON. He may possibly mean the expense of keeping what he has already. He can not mean the initial expense of procuring an adequate stock of these necessary articles. I know that he can not be talking about the things that I am talking about, for $60,000 would not go very far.

Mr. FESS. Will the gentleman yield?

Mr. TILSON. Yes.

Mr. FESS. What would be the entire amount in expenditure to keep and preserve what Mr. Grace was talking about?

Mr. TILSON. I do not know, because I have no idea as to just what he was talking about. I could tell the gentleman something about the cost of the things I am talking about.

Mr. EMERSON. The gentleman has brought a lot of material and ammunition in here that I would like to have him explain.

Mr. TILSON. I should like to do so, and I would if I had more time. If I do, I must ask that I be not interrupted further.

Mr. BUTLER. I will yield the gentleman two minutes more time.

Mr. TILSON. This shell [illustrating] is a 6-inch armor-piercing shell for one type of coast-defense gun. The projectile alone weighs 108 pounds and is supposed to pierce 6 inches of Krupp cemented armor plate at 5,000 yards. This [illustrating] is a dummy detonating fuse, the actual fuse being a confidential matter, so that I could not secure one of them. This [illustrating] is a shrapnel complete and ready for firing from a 3-inch gun. This [illustrating] is a shrapnel projectile sectionalized so that you can see the inside. It is loaded with 252 large bullets incased in rosin, having a time fuse which explodes it at the right time in its flight. A gentleman on the munitions board of Canada who called at my office a short time ago told me it cost that Government $100,000 to get the gauges for manufacturing the time fuse alone. He said further that at that particular time he had all the concerns in this country East and West able to make gauges that he could secure obligated to make them.

The black powder at the base of the shell is exploded by a time fuse which is set and lighted as it is discharged from the gun. Smokeless powder is used as a propelling force. The time fuse is set so that at the proper distance in front of the target the shell explodes and releases the bullets. These are embedded in rosin, which catches fire as the bullets spread going on their mission of death.

Mr. BUTLER. It does not burst; it shoots out of the end like a gun.

Mr. TILSON. The charge of black powder at the base is just enough to burst the container so as to release the bullets and spread them, but does not add to the force or velocity.

The CHAIRMAN. The time of the gentleman from Connecticut has expired.

Mr. BUTLER. Mr. Chairman, I yield to the gentleman five minutes more.

Mr. TILSON. This is one of the gauges [illustrating] I am speaking of which determines the size of the opening in the shrapnel that receives the time fuse. One end of this gauge must go into the opening, and the other end must not. Yet, there is only one one-thousandth of an inch difference. The difference between the two is what is called "the tolerance." The same principle applies to these gauges and a number of others. All are made of costly tool steel and must be carefully made by skilled mechanics after the most careful designing. It requires time to make them and they are expensive. However, they are absolutely necessary before you can proceed to manufacture rapidly and in large quantities. It is not a new principle. It is used in every great industry where mass production is required. My object is to have the Government apply the same principle in the most vital of all things, our national defense.

My desire is to save this country from the folly of rushing madly into making huge appropriations for costly factories to manufacture what we should need in case of war when we have the factories in nearly all parts of the country, located not only in New York, Pennsylvania, and New England, but all over the country, equipped with the necessary machinery—with lathes, turret lathes, milling machines, all sorts of machines, and many of the tools and appliances such as are used as well for the industries of peace. In fact, we have thousands of factories with everything that is necessary except the special appliances that I speak of.

When we provide ourselves with these, that is all that we need do. We shall then be ready on short notice to turn out all the arms and ammunition that we may need. I hope that we may never need any of it. I hope that not a single tool we provide will be used except to make arms and ammunition in comparatively small quantities for training purposes. I hope they will all go out of date without being needed; but whether used or unused, they will be the cheapest and most effective insurance that we can have. If we prepare ourselves by adequately providing these appliances, we need not carry a reserve so large as to be burdensome, and yet we shall be ready to make quickly what we need in case of war.

Mr. HELGESEN. Will the gentleman yield?

Mr. TILSON. Yes.

Mr. HELGESEN. Has the gentleman an amendment in the military bill for this purpose?

Mr. TILSON. Yes; the Army organization bill carried the so-called Tilson amendment authorizing appropriations for these things. The fortifications bill carries a million dollars for the purpose, and the Army appropriation bill will carry something more. I feel greatly encouraged with the progress that is being made, and personally feel very much gratified that two such able, well-informed men as the gentleman from Kentucky [Mr. SHERLEY] and the gentleman from Virginia [Mr. HAY] have so readily and handsomely recognized the importance of my amendment in their respective bills.

The CHAIRMAN. The time of the gentleman from Connecticut has expired.

Mr. PADGETT. Mr. Chairman, I yield to the gentleman from Indiana [Mr. LIEB].

Mr. LIEB. Mr. Chairman, I have a letter directed to me from A. R. Hawley, president of the Aero Club of America, and I send it to the desk and ask that it be read in my time.

The Clerk read as follows:

THE AERO CLUB OF AMERICA,
297 Madison Avenue, New York, May 25, 1916.

Hon. CHARLES LIEB,
Congress Hall, Washington, D. C.

MY DEAR MR. LIEB: Under separate cover there is being sent to you a copy of the special edition of the New York World, which was delivered to Washington by aeroplane.

Being the first metropolitan newspaper to be delivered by air route to the National Capitol, this copy of the World will have historical value, and you may wish to keep it.

You will notice in this number an appeal to Congress to train 2,000 militiamen, coast guardsmen, and mail carriers so as to form a reserve of trained aviators, who, while being employed daily for peaceful purposes, will be available to meet any emergency.

While the special edition of the World was being printed a cablegram was received by the 15 Canadian aviation students being trained at Newport News, Va., from Earl Kitchener, the British war minister, declaring that "one aviator is worth an army corps."

This proves that we were modest in our estimate that a trained aviator is worth 1,000 soldiers in the Mexican campaign. Had we 100 aviators at the Mexican border, the history of the Mexican trouble would undoubtedly read quite differently.

We are glad to say that the aeroplane which carried these copies of the New York World to Washington was the Curtiss battleplane bought by the Aero Club of America with funds subscribed to the national aeroplane fund. From Washington it will be sent now to the New Mexico National Guard for service on the Mexican border.

Page 3 of this letterhead gives a brief résumé of some of the results obtained by the national aeroplane fund. Since this was printed a number of other States have taken up aviation, making close to 40 States that have taken steps to organize an aviation section in the militia. A dozen States are appealing to the Aero Club of America for aeroplanes and for means with which to pay for the training of militia officers in aviation. Assistance is given them as fast as the funds received permit.

There is a limited number of the first "aeroplane edition" of the New York World on hand, and if you or any of your friends would like an extra copy for historical interest, we would be very glad to send one.

Thanking you for your cooperation and support of this important movement, I remain,

Very sincerely, yours, ALAN R. HAWLEY,
President Aero Club of America.

Mr. LIEB. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD on the bill.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. PADGETT. Mr. Chairman, I yield five minutes to the gentleman from Texas [Mr. SLAYDEN].

Mr. SLAYDEN. Mr. Chairman, I have sat here and been interested in listening to the discussion that went on between my friend and colleague, Mr. CALLAWAY, and my friend from Connecticut, Mr. TILSON. They seem to be unable to reach a common understanding as to what they were talking about; and, of course, when technically instructed people, as they are about these military and naval matters, fail to understand each other, it is confusing to the rest of us, who are mere untrained laymen. I wanted to learn from the gentleman from Connecticut [Mr. TILSON] whether these parts that he regards so important that we should have a reserve supply on hand, so that factories that are engaged in the manufacture of industrial products can quickly convert their plants into the making of implements, or enlarge the output of a factory engaged in the production of implements of war, are confined to shoulder arms, or do they extend to the manufacture of parts for these 6-inch and 3-inch shells?

Mr. TILSON. Mr. Chairman, if my friend will permit me, I will state that it will apply to anything that is produced in large quantities which you wish to manufacture by what is called mass production. It happens that the small-arms ammunition is used in enormous quantities. Rifles are used in enormous numbers and the field-artillery ammunition is used in such great quantities as no one had any conception of prior to the beginning of this war. In order to manufacture these articles by the repetitive process all these various jigs, gauges, and special appliances must be had, and I say what I absolutely know that it costs about $100,000 to make enough of those special appliances to produce by mass production the particular time fuse which I have in my hand.

Mr. SLAYDEN. Do the same factories that will have all these parts you speak of make the 3-inch shells and the shoulder arms?

Mr. TILSON. The same kind of machinery would be used. For instance, the Baldwin Locomotive Works and the American Locomotive Co. are manufacturing that particular time fuse for Canada and they are manufacturing it in large quantities.

Mr. SLAYDEN. My friend from Texas [Mr. CALLAWAY] was evidently speaking about the projectiles required for the Navy, and except for the few rifles in the hands of the marines they want only the larger caliber ammunition.

Mr. TILSON. Those large articles that are specially made one at a time—machine made—perhaps can not be manufactured in the repetitive way. It is like comparing the Swiss watch to the Ingersoll watch. What we desire in regard to these things is that we should have the appliances such as we make an Ingersoll watch with so that we can make them fast. That is what we want.

Mr. SLAYDEN. Mr. Chairman, I am very much obliged to the gentleman for his elucidation of this interesting question. He made a statement with which I have a good deal of sympathy. I have always believed that it would be most unwise from the point of view of military defense to put the private makers of munitions of war out of business.

Mr. TILSON. I think it would be suicidal.

Mr. SLAYDEN. I am talking heresy, perhaps, but I frequently do.

Mr. TILSON. The gentleman is talking good sense.

Mr. SLAYDEN. I have never had sympathy with that project. I was never in a powder factory in my life, and the Lord being my helper I never will go into one. But I never believed that it was wise by legislation to rely entirely for the manufacture of our gunpowder upon the output of a Government factory, because we all know the difficulty of getting appropriations necessary. I have the honor of having been frequently denounced as one of those contemptible pacifists, and I really regard it an honor to be so spoken of.

Mr. DAVIS of Texas. Mr. Chairman, will the gentleman yield?

Mr. SLAYDEN. In one moment. But I want to see conditions of such a nature existing that if the emergency does come we can meet any danger, however unexpected.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. BUTLER. Mr. Chairman, I yield 10 minutes to the gentleman from California [Mr. KAHN].

Mr. KAHN. Mr. Chairman, I have listened with a great deal of interest to the progress of this debate. The trouble with many of the gentlemen who favor the majority report of the committee is that they look for unattainable Utopias. I am afraid that so long as the world goes around we will have wars. I have often stated on this floor that nations are only aggregations of individuals. Solemn treaties will be broken in the future just as they have been broken ever since the dawn of recorded history—just as civil contracts are broken by individuals day after day despite the teachings of preachers and moralists. The gentleman from Missouri [Mr. HENSLEY] spoke of courts of arbitration. Civil and criminal cases are tried in courts, and most Americans abide by the decisions of judges and juries. But there are exceptions of the rule. Why, I remember within the last five or six years a case occurred almost within a stone's throw of this Capitol, in which a litigant before a court in the State of Virginia became dissatisfied with the decision of the judge. The litigant pulled out his pistol, killed the judge, the clerk of the court, and the sheriff, and undertook to shoot up everybody in sight. True, that is an unusual case. And, Mr. Chairman, wars come through unusual conditions.

Mr. CALLAWAY. Will the gentleman yield?

Mr. KAHN. Certainly.

Mr. CALLAWAY. On account of that one occurrence would the gentleman advise the people in all the United States to arm themselves?

Mr. KAHN. Oh, I did not say that. I say that it is the unusual that brings about war. In my opinion it is necessary to prepare in order to guard against the happening of the unusual. The gentleman referred sarcastically to the people on the Pacific coast as being mightily afraid because they did not have a battleship fleet over there, and intimated that their solicitude for the battleship fleet was not so much a matter of defense as it was a mercenary desire to reap material advantages for themselves. That seemed to be his frame of mind as I listened to his statement.

Well, now, down on the Texas border the Army of the United States has been encamped for something like four years. I understand that there was a movement here in Washington a year or two ago to withdraw some of the troops from the Texas border and return them to other stations throughout the country. When that program of the War Department became known the whole State of Texas demanded that the soldiers be kept down there near the Mexican border. Was that on account of some material benefit to the people of Texas? The gentleman probably takes that as an expression of the interest of his people in the United States Army, and thinks that all the people of the United States are like the people of Texas in that regard. Now, I want to assure my friend from Texas [Mr. CALLAWAY] that the people of the Pacific coast——

Mr. CALLAWAY. Will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. KAHN. Certainly.

Mr. CALLAWAY. I think they are just exactly like the people everywhere else, and wherever they are benefited by the soldiers down there they want them kept, and would like to have the benefit of one kind or another.

Mr. KAHN. Mr. Chairman, I would rather believe they want them kept there because they feel that in case of trouble with Mexico they would have the military arm of the Government ready to defend the citizens of the gentleman's State as well as their property. Personally I am very glad that they were there. I am exceedingly sorry that there were not more of them there, that is all. There should have been more there. I firmly believe that if we had had more there probably there would not have been any raid into the State of Texas.

Mr. SLAYDEN. Will the gentleman yield for a question?

Mr. KAHN. Yes.

Mr. SLAYDEN. Does not the gentleman know that at Columbus there were plenty of troops to have driven back or repelled or defeated the little band that Villa brought in there?

Mr. KAHN. Oh, there undoubtedly were. But there was somebody's carelessness there, and some day we will find out whose carelessness it was. [Applause.] I believe it was indefensible carelessness. Somebody was evidently "asleep at the switch." The soldiers were there. If they had been watching as they should have been watching, that incident could never have occurred. I for one am determined to find out somehow or other what were the facts and conditions that enabled that band of cutthroats and bandits to make their successful raid into Texas.

Mr. FARR. Will the gentleman yield?

Mr. KAHN. I do.

Mr. FARR. Was the machine gun in readiness for operation?

Mr. KAHN. It was in readiness for operation. But it got clogged because, in my judgment, the men had not had enough drill with the machine guns. I believe that if they had been drilled much more frequently the clogging would not have occurred.

Mr. HARDY rose.

Mr. KAHN. I can not yield.

Mr. HARDY. Just one question.

Mr. KAHN. Well, I yield.

Mr. HARDY. I desire to ask the gentleman if that was not the Regular Army, and if they had not been down there quite a while so as to have enabled them to be trained?

Mr. KAHN. Oh, yes; there is no question about that, and I do not attempt to excuse it at all. I think it was criminal carelessness, if you want to know my opinion about it.

Mr. HARDY. By the Regular Army?

Mr. KAHN. By the Regular Army in Columbus, N. Mex., at that time; yes. I do not defend it. I do not attempt to palliate it or excuse it. But if the Regular Army had been drilled in the use of the machine guns as they should have been, if the sentinels had been at their posts as they should have been, if the proper number of guards had been posted, the chances are that incident never would have occurred, and the chances are that gun never would have become clogged.

Mr. DAVIS of Texas. Will the gentleman yield?

Mr. KAHN. I only have 10 minutes, and I want to utter a few words in regard to some statements made here on the floor during this debate.

The CHAIRMAN. The gentleman declines to yield.

Mr. KAHN. The chairman of the Committee on Naval Affairs, Mr. PADGETT, in response to a question that was put to him as to a statement of the President of the United States that we were the fourth nation in naval strength, and that in his—the President's—judgment we ought to be first, replied that the President of the United States was evidently mistaken when the latter made the assertion. Mr. Chairman, the President of the United States is Commander in Chief of the Navy of the United States. I believe he would not make such a statement to the country except upon such authority that there can be no mistake about it. When he said that we were fourth and that we ought to be first I believe he was right, and I do not think, with the chairman of the Committee on Naval Affairs, that he was mistaken about it when he made the statement. [Applause on the Republican side.] The distinguished chairman of the committee, the gentleman from Tennessee, also stated that we were building as many ships this year as, in his judgment, the country could stand. That may be so in the gentleman's opinion, but let me call the attention of the gentleman to this fact: That if the country had constantly followed a program of the building of two or more battleships every year it would not have become necessary at any time in our history suddenly to expend over $100,000,000 additional for the necessary vessels. It would not be necessary to do that. True preparedness is achieved when the Nation embarks on a policy of building a certain number of ships every year in order that we may continue in first or second place. To allow the country to slide into fourth place and then in a single year to appropriate a hundred million dollars or more in an effort to recover lost ground falls far short of that character of statesmanship the American people expect from their Representatives. It seems we now are compelled to spend such a large sum in a single year in order to amend the blunders of the past. I believe the pro-

gram submitted by the minority will amend those blunders more effectively than will the program of the majority of the Committee on Naval Affairs.

If we were to follow a program to build up the Navy as it should be built up, we would not have to make these unusual expenditures that the gentlemen on the other side complain of at this time.

Mr. CALLAWAY. Will the gentleman yield?

Mr. KAHN. How much time have I left, Mr. Chairman?

The CHAIRMAN. The gentleman has two minutes remaining.

Mr. KAHN. I regret I can not yield. I just want to refer to one other matter. Reference has been made here by the gentleman from Ohio [Mr. FESS] to our obligations under the Monroe doctrine. I believe that when this war is over our obligations will materially increase under the Monroe doctrine. Four years ago, on the 24th of May, 1912, the lamented Admiral Mahan, one of the great international authorities on navy matters, published an article in the New York Times in which he pointed out that he had but recently seen two British sources in which there had been statements made that the time had come when the European powers ought to serve notice upon the people of the United States that Europe would no longer recognize the Monroe doctrine. That was over two years ago—yes; it was nearly two years and a half before this European war broke out. That statement came from that great naval authority. If European nations were chafing under the Monroe doctrine then, how much more restive will they be when this war is over? Mr. Chairman, I venture the assertion that when this war is over, when the warring nations send their plenipotentiaries to sit at the council table to determine the conditions of peace, we will have much more to be afraid of than any of the gentlemen who have spoken for a small Navy have any idea of. We have made no friends among the nations during this conflict. On the contrary, we have incurred the hatred of nearly all the belligerents. Our weakness on the seas has compelled us to engage in a diplomatic fight for every right that we are entitled to as neutrals under the law of nations. If we had had a proper Navy undoubtedly our rights would have been respected from the very first. Surely the lessons of this war will not be lost entirely, even upon the "small Navy" advocates of this House.

Mr. TILSON. Mr. Chairman, I did not have time to complete what I was saying, and I would like to ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Connecticut asks unanimous consent to extend his remarks in the RECORD. Is there objection? [After a pause.] The Chair hears none.

Mr. BUTLER. Mr. Chairman, I have only two or three minutes' time, although I should like to have an hour or two, because I have many things I would like to say on the subject of preparation for either peace or war. We are theorizing about what is to become of us in the future. What will happen when the present war is done I do not know, and therefore I do not propose to make a prophecy or express an opinion. By this paper [indicating] you will see whether we are prepared if the invader should appear. A copy of this paper has been sent to every gentleman in this House. I do not criticize him for not having read or examined it. Perhaps if he knew of the importance of the paper he would consult it. It does not lie, neither does it guess. It contains, as far as it is possible to ascertain, information telling us of every battleship that has been built by all the armed nations to the beginning of the present war. It contains the name and size of every cruiser and every sort of warcraft. It was carefully prepared by the General Board. You can make your own comparison and draw your own conclusions.

Mr. CALLAWAY. You mean all over the world?

Mr. BUTLER. Yes.

Mr. CALLAWAY. Is it not a fact that Admiral Badger and Admiral Fletcher both stated before our committee that a battleship was helpless in the face of a submarine or if the screen fleet was destroyed? If that be a fact, I want to know the value of a battleship.

Mr. BUTLER. Mr. Chairman, let me answer the gentleman now. I will ask every one of you if any of you heard me make a statement about the value of a battleship? I always like to answer my friend's questions. I do not know whether they have any value or not. It is not for me to say. I am simply a civilian, sent here charged with a duty which I desire intelligently to perform, and in that performance I depend upon those whom I assume know better than I do. Perhaps I am wrong. [Applause.] I do not know which end of the gun needs the most attention. Why should I know? It is my business to provide a gun. It is also my business to assist in providing the number of guns that are recommended and the character of gun that is required.

I will try, however, before this debate concludes next Friday to answer the gentleman's question. I opposed the submarine for many years. Why? Because I was suspicious of its usefulness. I opposed the submarine until the military men said it was the best weapon known to disturb and affect the morale of the crew of a battleship. I voted for them only when the Navy experts agreed it was wise to buy them. I believe when a man's nerve is shattered his effectiveness is in a large part destroyed. It was here that my high opinion of the submarine began. I will not cease to recommend the construction of battleships, although the seas are filled with submarines. Their real military value is described by the experts. Their military accomplishments are yet to be told. I will endeavor to answer my friend's question. And it is the opinion of military men that battleships will not venture into places where submarines are. Their close relationship is not desirable. I do not know whether 100 submarines or 200 submarines or 500 submarines would protect us from our public enemies, but I have come to this conclusion—and upon it I propose to elaborate if the time can be found—that it is for us as men of sense to say, as men who do not invite war, men who have not raised our sons for slaughter pens, as present belligerents seem to have raised their sons as cattle are raised for the shambles, to say whether or not we will spend our money to save the flesh that we have produced and the product we have stored to resist the invader if he comes. I do not know whether he will come, but I believe that we should prepare to drive him away if he does come. Otherwise we should avoid these vast expenditures, store our tribute, and have it ready to hand to him when he appears. Why waste our sons and expend our treasure unless we prepare for a successful resistance?

My mind is easy to-day, because I have joined with my colleagues in recommending a plan of defense that is definite. If there is anything that I wish to do here, it is to be definite and have some fixed purpose in view. I have joined the minority of the committee in its recommendation for a Navy sufficient in numbers of ships and numbers of men to put the American Navy in the second place upon the seas within a period of three years, and from this I shall not retreat. In the necessary increase I have been guided solely by the judgment of the General Board, the highest and most reliable authority among military men. I have not guessed; I have adopted its opinion. What safer guide can be found?

It may be wrong to recommend that this Nation should go to second place, but that is definite, to say the least. It is time for definite action and my colleagues accept the responsibility——

Mr. CALLAWAY. Mr. Chairman, will the gentleman yield there?

The CHAIRMAN. Does the gentleman from Pennsylvania yield to the gentleman from Texas?

Mr. BUTLER. Yes.

Mr. CALLAWAY. Did not all of the naval authorities that appeared before our committee state that nobody could tell what the relative sizes of their navies would be at the close of this war? How, then, can we be definite in taking second place if that is true?

Mr. BUTLER. Well, Mr. Chairman, in one hour we may be No. 1. I did not think it worth while during our hearings to ask any military man who appeared what our relative position would be after this war is over. If those fleets clash, I presume without the expenditure of a dollar on our part we will have a No. 1 fleet, but I do not know whether those fleets will come together or not. [Laughter.]

Mr. FARR. Mr. Chairman, will my colleague yield?

Mr. BUTLER. Yes.

Mr. FARR. Did not all the authorities agree that every belligerent nation is stronger to-day than it was before the war began?

Mr. BUTLER. I presume they are. All we can safely do here is to make our comparisons upon naval strength at the beginning of the war.

Mr. HARDY. Mr. Chairman, will the gentleman yield?

Mr. BUTLER. Yes.

Mr. HARDY. Why should Germany build more battleships when she knows that under present conditions she must remain in the Kiel Canal?

Mr. BUTLER. Oh, I suppose, Mr. Chairman, they have built these ships with the idea that they will use them.

Mr. HARDY. For fun?

Mr. BUTLER. No; not for fun. They have built them because——

Mr. HARDY. They are not going to use them.

Mr. BUTLER. But it is consistent with their military operations. They build them because they are in war, and they deem it necessary to have them, perhaps. They had better have them on hand than be without them.

Now, I want to answer a question that was asked here to-day. I do not believe we can whip our enemies by congressional legislation alone. I do not believe that anyone can be overcome with a statute. [Laughter.] All the preparation we can make here will not defend us. If we can not construct our battleships there is no reason under the sun why we should provide for them. Hence the minority demands immediate construction.

Mr. HARDY. I do not believe anybody thinks we can whip anybody with a statute book, but is it not the gentleman's observation that these pacifists are about as ready to fight as anybody you ever saw? [Laughter.]

Mr. BUTLER. No. Personally I come from a class of people who do not believe in war, at least many of them have said so, and I credit their sincerity.

Mr. HARDY. Oh, I believe you are as bad as anybody. [Laughter.]

Mr. BUTLER. I admit my wickedness. It is a pleasure to be able to tell my friend from Texas that I live in a county where you saw many Quaker meetinghouses in 1861; a county that had, perhaps, at that time 50,000 men, women, and children in it, and more than 7,200 men marched to battle during the four years of our Civil War. Their patriotism stirs me deeply. I do not know whether they should be called pacifists or not. [Laughter.]

Mr. FESS. They are fighting Quakers! [Renewed laughter.]

Mr. BUTLER. Oh, no. There is no such a thing. I think I ought to explain to you who do not know any more about these honorable people than the gentleman does that Quakers believe in settling differences peaceably. It is remarkable on account of the gentleman's admitted intelligence that he should know so little of what George Fox contended for. They may be "pacifists"; a good many of them are. Some people want others, perhaps, to do their fighting for them. [Laughter.] That does not apply to the real Quaker. On this line permit me to say that I have responded to many letters on the subject of great preparation, and oftentimes I have said in the letter, "Tell me the name of your son who is anxious to go on a battleship's deck." I have been waiting for the reply, and I am waiting for the recruit. [Laughter.] I do not know whether parents are ready to make the sacrifice. American sons are ready when the drum beats, and their names will be found among the willing.

Now, I wish gentlemen would examine this paper. It is a late production. On it you will see the size of the French fleet. You can make a comparison between it and the American fleet. Each one has the same number of ships. On some of their ships the guns are longer than they are on our ships and on others the guns are shorter. Some of the ships have a larger displacement than ours and some have less. Some have more men, and I think some have more guns, and there is a difference as to the cost of the ships, but the number is the same. Then, there are the ships of the German Navy. Germany has 5 battleships more than we have, and England has to-day more than 90 battleships. Can we hope to equal her? What should we do?

Gentlemen will have to determine. I do not care what others do. I am for a definite program; and I think it is advisable, if we propose to make a defense, that it should be one that is creditable to our Nation and a certain security to our one hundred millions of people. I will say to my good friend from Texas [Mr. HARDY] that the people of his State will quickly contribute to our defense. The gentleman comes from a State that has been made famous by the Texas Rangers. The State I come from furnished 400,000 men in 1861–1865. [Applause.]

Now, Mr. Chairman, I yield five minutes to the gentleman from New York [Mr. SWIFT].

The CHAIRMAN. The gentleman from New York [Mr. SWIFT] is recognized for five minutes.

Mr. SWIFT. Mr. Chairman, this Congress, chosen to exercise the paramount legislative powers under the Constitution of the United States during one of the most notable and critical epochs of the history of mankind, when the integrity and perpetuity of republics and empires is menaced by force of arms on land and sea, is now summoned to consider a naval policy which, though conceived in the mist of good intentions, is feeble in character, ignores the sound judgment of our naval experts, and fills the minds and hearts of our countrymen with disappointment and dismay, and this afternoon, as a Representative of the great city of New York, I want to voice my protest against this very inadequate proposal.

Mr. CALLAWAY. Mr. Chairman——

The CHAIRMAN. Does the gentleman from New York yield to the gentleman from Texas?

Mr. SWIFT. I decline to yield. I want to say to my colleagues that the blood of a southern woman flows in my veins, that I spent 11 years of my early manhood in the West, and I perhaps am not fettered with the prejudices that some of my colleagues from distant regions imagine may dwell in the breasts of the men who reside in our metropolis. I am not a politician. I have never had any legislative experience until I came to this House. I want to state in further introduction that when the President entered this Chamber and delivered his message to this Congress, convened in joint session, I was profoundly impressed with the high import of that act in the life of the Nation. It was a scene of great significance, and presented another illustration of the justification of our constitutional form of government. In this historic forum, dedicated to the free expression of the thoughts of men, there were then and there assembled the Representatives vested by the people with the supreme authority to enact legislation for the promotion of the national welfare, and as a Member of this honorable body I thought of the great responsibility imposed upon each Representative in the exercise of his constitutional powers.

It has been my pleasure to make the acquaintance of perhaps one-fourth of the membership of this House. I want to say that when I came down here I entertained some of the popular delusion that perhaps the Members of this House were not fully qualified to discharge the legislative functions of the supreme lawmaking body of the land. Since coming here I have found out that that popular opinion, if it does exist, is entirely unjustified. I am convinced that every Member is conscientious in the discharge of his duty, and I deprecate the vicious attacks of the press in certain quarters upon the integrity and fidelity of Congress, because it is obvious that such outbursts tend to create disrespect for the supreme lawmaking power, the dignity of which should be maintained and guarded as inviolate as the judiciary which is empowered to construe and interpret its legislative enactments. Yet on some occasions evidence of narrow sectionalism has appeared, manifested by the expression of strong prejudice against the city of New York, New England, and the Atlantic seaboard.

Because I found Members here well informed on many subjects, for that reason I have been the more amazed that a program of this inadequate character has been presented to this House for serious discussion.

I want to say just a word about the interest of New York in this naval program. There is undoubtedly abroad some sectional prejudice against the city of New York, which is absolutely unjustified. While the city of New York needs no defense against attacks which are conceived in imagination and not founded on fact, yet it is proper to observe that the basic element of the greatness of the metropolis is the character of the people who dwell within its borders. The blood of many races flows in the veins of its inhabitants, who are inspired by patriotism and sublime confidence in the great mission of the American Commonwealth. [Applause.]

New York is not a sectional entity, but a component part of our great Republic. It is a national institution, and its history and present greatness should dispel jealousy and promote emulation.

When any portion of our population on the coast or in a distant region have been overwhelmed by the calamity of flood, earthquake, tornado, or conflagration the succor of the metropolis has been rendered with liberality to the stricken inhabitants. Disaster in any area, resulting in the extinction of life or the destruction of property, impairs, temporarily at least, national progress and efficiency.

If an attack by an alien foe upon the city of New York, unprotected by an adequate Navy, should force capitulation, such a catastrophe would menace the very existence of the Republic.

It is generally believed and universally hoped that our Nation will not be involved in the European conflict, but common prudence requires sufficient preparedness to meet the lust of a conqueror or the exponent of commercial greed.

Every Member of this body has assumed the constitutional obligation to provide for the common defense, and the metropolis, through its Representatives, now demands the fulfillment of that obligation by the prompt adoption of a comprehensive plan for naval enlargement through new construction commensurate with the recommendations of the General Board and the wisdom of our naval experts.

The supine indifference of a portion of Congress to possible national danger is analogous to the spirit of the Asiatic in the Alexandrian conquest as portrayed by Matthew Arnold:

The brooding East with awe beheld
Her impious younger world.
The Roman tempest swelled and swelled,
And on her head was hurled.
The East bowed low before the blast,
In patient, deep disdain;
She let the legions thunder past
And plunged in thought again.

Mr. Chairman, I do not believe that such is the spirit of the people of our country, but that they are actuated by the loftiest ideals of citizenship to properly discharge their duties in the hour of pending peril. We therefore do not come as suppliants, but as equals, prompted by the truth that the former position of this Republic in naval strength must be reestablished to protect our coasts, insure the unmolested transportation of our mails and commerce, and maintain the national honor on the seas in every clime. [Applause.]

Mr. BUTLER. Mr. Chairman, I presume we have consumed more time on this side than has been consumed on that side.

Mr. PADGETT. Yes.

Mr. BUTLER. Will it be understood that on next Monday we will have an equal division of time? Three members of the committee, Mr. BRITTEN, Mr. FARR, and Mr. ROBERTS, desire to speak on that day. The gentleman from Massachusetts [Mr. ROBERTS] will close the debate on this side, and I have anticipated that we would have an hour and a quarter on our side on Monday.

Mr. PADGETT. There will not be quite that much time.

Mr. BUTLER. Will the chairman of the committee have an understanding with me that the time will be equally divided on Monday?

Mr. PADGETT. I will be very willing to do that.

Mr. BUTLER. I am very much obliged to the gentleman for his courtesy.

Mr. ROBERTS of Massachusetts. We have two others on our side who wish to speak, and who must speak to-day, unless gentlemen on that side desire to occupy the time.

Mr. PADGETT. I have no one on this side who wishes to speak, except the gentleman from Indiana [Mr. Cox], who wanted five minutes.

Mr. ROBERTS of Massachusetts. Then the chairman of the committee will have no objection to our utilizing more time to-day than is used by his side, not to interfere with an equal division on Monday?

Mr. PADGETT. That will be all right. Mr. Chairman, I yield five minutes to the gentleman from Indiana [Mr. Cox].

Mr. COX. Mr. Chairman, briefly I want to submit a few observations hardly germane to the pending bill. I do not belong to that class of people in this country carried away with the idea of tremendous preparedness. I believe in a reasonable amount; and from my point of view this committee has gone the limit. I intend to support the measure as presented by the majority members of the committee.

But what I desire to say, briefly, is this—and I do not want it to be understood that I am offering any particular criticism upon the Navy Department or upon anybody connected with it, and especially nothing against any member of the Naval Committee or any Member of this House.

The gentleman from Pennsylvania [Mr. BUTLER], in quoting some other Member a moment ago, struck a keynote. We can not prepare the country by statutes. We can not prepare this country by declarations made on the floor of Congress; we can only furnish the means of preparing the country, to put the means in the hands of men competent to work out the details of it. The foreign war has demonstrated many things. From my viewpoint—and it is extremely limited, because I am far from being a military man—from my viewpoint it has demonstrated the absolute necessity of torpedoes. The torpedo has practically bottled up every battleship in Europe to-day, and it will do it in the future. If I am correctly informed, the average range of a torpedo is somewhere between six and eight thousand yards.

There is a man living in New York State, born and raised in my county, by the name of Simmons—no better and no worse for that—who claims to have invented a torpedo which will carry full weight and full strength 23,000 yards. I recall last summer that the newspapers were filled with stories that the Navy Department had called to its aid many scientific inventors in the United States, which, in my judgment, was a splendid idea. This young man Simmons, as I am informed by him, and I believe it to be true, time and time again has sought an interview with the Navy Department solely for the purpose of getting them to scrutinize and investigate his torpedo. For some reason or other he has never been able to get within gunshot distance of them.

Two weeks ago he forwarded to me the photographs and drawings of his torpedo. I inclosed them and wrote a letter, addressing it personally to the Secretary of the Navy, inclosing Mr. Simmons's personal letter that he wanted an interview with him or some one in authority, with a view of seeing whether or not he had a matter that would be of value to the Government.

The Secretary of the Navy informed me by letter that the device of Mr. Simmons had been submitted to the Navy Department and gone over and found to be unworkable; but the Secretary's letter said it was the Hudson Maxim torpedo, which could not be true, impossible to be true, because the Patent Office will not patent the same invention to two different men.

Mr. Chairman, we all remember very well—for some men in this House are old enough to remember—that when the *Merrimac*, covered with railroad iron, was literally sweeping everything off the seas as fast as she came to it, when she steamed into Hampton Roads on the night previous to the engagement between the *Monitor* and the *Merrimac*, Ericsson had traveled from New York to the city of Washington time and time again from the time the war broke out down to that time trying to get the Navy Department interested in his invention, but they turned him down.

Since I came to Congress Mr. Sperry, from Connecticut, who served on the committee with me, showed me a promissory note where he and five other men had given their own obligations to the amount of $360,000 to build the *Monitor*. It was turned down by the Navy Department until that time. The *Monitor* completely revolutionized naval warfare from that time to this.

I do not know whether there is anything in Mr. Simmons's invention or not, but I do insist that because he is not well educated and a poor boy is no reason to refuse him an audience, and he ought not to be ignored, for he is a wizard when it comes to mechanical ideas and inventions.

The CHAIRMAN. The time of the gentleman from Indiana has expired.

Mr. PADGETT. I yield to the gentleman two minutes more.

Mr. COX. Having thought out this torpedo, and the Navy Department having called to its aid these great scientific inventors in this country, it seems that this man Simmons should be given an audience with the Navy Department, with a view of seeing whether he has anything worthy of consideration.

Men like Prof. Nicholas Murray Butler, one of the greatest scientific men in this country, have gone over his invention and say it will revolutionize modern naval warfare. Papers like the Scientific American have devoted page after page to this man's invention, and yet for some reason or other, I know not why, he has never been able to get his invention before your Naval Board or before those in authority down there, with a view of determining whether or not he has an invention that will prove of value. The time might come, it may be knocking at our doors right now, and it may knock at our doors next year, when the Simmons torpedo would do for our country exactly what the Ericsson invention did for modern warfare during the Civil War. I am not offering any criticism, but when a man has gotten up an invention he ought to be given a chance. I am told by him, and I think I am correctly told, that foreign Governments right now are competing for his invention. He has never asked a dollar for it of his Government.

Mr. EMERSON. Mr. Chairman, will the gentleman yield?

Mr. COX. For a question.

Mr. EMERSON. How does the gentleman account for that, then?

Mr. COX. I am unable to account for it.

Mr. EMERSON. Why does not the gentleman take it to the President?

Mr. COX. It is not my place to take it to the President. We have a Secretary of the Navy who is supposed to do these things, and I am not criticizing the Secretary of the Navy. I am distinctly saying that I know nothing about patents, but I am saying that this young man has never had a square deal at the hands of the Navy, and I repeat and affirm that if a man like Edison had worked out this invention he would have gotten an audience with the Navy Department. Ericsson and his Yankee cheese box sitting on a plank was denied an audience at the hands of the Navy, yet his little *Monitor* saved Washington City from bombardment if not from capture, and to-day there is a bill pending on the calendar of the House proposing to erect a monument to the memory of Ericsson at a cost of $100,000. The time may be near when the Simmons torpedo would be worth billions of dollars to us and save countless thousands of human lives. When everybody is crying preparedness, I say give him a chance. Simmons is not a highbrow; poor, with but little education, but a wonder in in-

vention. He lives with machinery; he dreams about inventions. Right now some of the European Governments are dickering with him concerning his torpedo. I have known him all of his life. Strictly sober, absolutely honest. After leaving the farm he served 12 years in the Regular Army. In my judgment he would make many men who now claim to know something of the Navy realize that he, too, knew something about it if they would meet him in the open field and discuss it with him.

Mr. PADGETT. Mr. Chairman, I simply wish to state that Mr. Simmons asked for a hearing before our committee and the committee gave him a hearing, and I do not wish to comment upon what he said. I now yield 15 minutes to the gentleman from Washington [Mr. LA FOLLETTE].

Mr. LA FOLLETTE. Mr. Chairman, I confess that I approach the consideration of this bill making appropriations for the naval service with some degree of doubt and apprehension. The majority report states that the bill recommends an appropriation of $142,389,773.99, exclusive of the increase of the Navy, and for the increase to the Navy it recommends an appropriation of $98,859,378, and then states, and not in irony, that for the expenses of a peace commission it advises and provides for an appropriation of $200,000, making a grand total of $241,449,151.99, which is, as stated, an increase over the grand total of appropriations carried in last year's naval appropriation bill of some $91,787,287.11, which increase is justified by the very pertinent and appealing assertion that it was "found to be necessary to place the Navy, the first line of defense of the country, in a better state of preparedness."

The ranking minority member of the committee, Mr. BUTLER, of Pennsylvania, a day or two ago made the assertion on the floor of the House that this bill in reality calls for appropriations that will eventually aggregate more than $361,000,000, or some $120,000,000 more than is appropriated by the bill.

I have read the minority report carefully, and while it disapproves the bill I find that the disapprobation is not because of the appropriation of too much money, nor is it because a hundred and twenty millions of dollars more appropriation is demanded by the bill than shows on its face. The criticism really goes to the other direction and objects to the bill because it has not provided additional authorization for battleships, destroyers, submarines, auxiliaries, and aeronautics, and, in addition to that, criticizes the majority of the committee for not providing for some 11,183 more men than the bill under consideration provides for, to take care of and man the ships already in commission and those soon to go into commission.

It is pretty safe to say that if the present bill in reality calls for appropriations aggregating $361,000,000, none of which the minority Members would eliminate, and the additional authorizations were made to take care of and sanction all of those items they claim should have been provided for by this bill, its total authorizations would have approximated a half a billion dollars or more.

The minority report indicates that its recommendation is "not urged on account of any threatened danger from any particular quarter," but "on the contrary it is based on the natural and normal requirements for the defense of the country."

Mr. Chairman, I am constrained to remark that the American people would hardly hold this Congress blameless if we should authorize appropriations, directly or indirectly, under this bill aggregating $500,000,000.

Mr. MEEKER. Does the gentleman think that in the minds of the American people it is a question of how many hundred millions or the adequacy of defense? Is it money or defense?

Mr. LA FOLLETTE. I think that if we were in no danger the millions would cut a great figure in their consideration of the matter.

If we in reality feel that the country is not threatened with danger from any quarter and are making provision only as a matter of precaution, would we be justified in the authorization? That is the question.

It was only a Congress or two ago when some of those who are now most insistent for the immediate authorization for large increases in both Army and Navy were standing for small Army and Navy appropriations. The sudden change of heart must either come through fear of invasion and a well-grounded belief that we are in danger from some direction or they are trying to square themselves with their consciences for their past stand on the question and thus contributing to their country's unprepared condition. The question now is, Are we justified in making extraordinarily large appropriations so that we may speedily be on a war footing—both Army and Navy—if we are in no danger from any source? Why not go more slowly and not place a large indebtedness and excessive taxation on our people?

Let us be honest with ourselves and the country.

Mr. Chairman, I am and always have been for reasonable preparedness—I might say for reasonably adequate preparedness—for national defense and offense.

Unlike our honored leader of the minority, Mr. MANN, since I have been a Member of this House I have not been associated with the small Army and Navy forces and have never voted with them. I have voted for the two-battleships program and for the largest additions to our Army and Navy defenses that have been recommended by the majority members of the Army and Navy Committees of the House, and I have never been reproached by my constituency nor by my conscience for so voting. I believe that it is the part of wisdom for the United States to be reasonably prepared for defense and for offense—if justice and right demands and justifies the latter—at all times. I had that opinion before the present deplorable conflict in Europe, I still have that opinion, and I believe I will still have the same mind, if I am alive, when and after that conflict is ended.

But, Mr. Chairman, I am not one of those—and I have no desire to be so classed—who believe that the signs of the times are portentous of calamities that will steal upon us like a thief in the night; that we are liable, like Belgium, to be assailed without warning and, like her, to be ravished and laid waste to satisfy the ambition, the greed, or the hate of any nation or group of nations of the earth.

We are now some 130 years of age as a Nation, and we have never yet been assailed. We have initiated every war in which we have been engaged. Why, then, this sudden fear, this hysteria and apprehension? Have we conducted ourselves in such a way or so unjustly as to incur the enmity of one or more of the nations of the earth? On what grounds and for what purpose will we be assailed all at once and after 130 years of immunity from attack?

I have heard assertions galore "for revenge," "for greed and tribute," "to down the idea of freedom as exemplified in republican forms of government," but I have not heard a tenable argument in favor of any of these contentions.

The very reasonable argument has been made against danger of invasion from Europe in "that after the present conflict is ended the countries engaged in war there would be so impoverished and depleted of money, supplies of all kinds, and men that they would not be in any condition to assail the United States even though they felt an incentive to do so." The reply is made that history shows that nations that have been engaged in great wars have large numbers of seasoned troops, all trained and eager for further carnage when their wars end, and for this reason we must prepare.

Our fitness at the close of our great Civil War is pointed out; it is said that all we had to do was to tell France to get out of Mexico and she got. To be sure she did. That does not in any way go to prove that we were in any financial or physical condition to invade France or carry war into Europe. We could easily have driven her from Mexico and could have given a good account of ourselves had France attempted to assail us in the United States.

We were in no condition to make war on her abroad, and I do not think I misstate the facts when I say that we never contemplated such action.

Mr. Chairman, would-be experts can figure to a nicety just how many men some nation in Europe could land on our shores in a given time. Oh, yes; it is dead easy! I have seen some recent newspaper articles purporting to report the testimony of certain Army and Navy officials before committees of the House and Senate. In the Washington Herald of January 28 Gen. Leonard Wood is quoted as having told the House Committee on Military Affairs that it would be possible for an enemy to land 400,000 troops on American soil in 30 days. I wonder that the committee did not faint from fright! He told the committee further that if attacked under present conditions by a first-class power our Navy in less than 60 days would be at the bottom of the sea.

Why so long a period as that? He could as easily have said 30 days as 60, and with just as much reason and knowledge. He further said that in his opinion the American Navy now stands fourth in the list. The Secretary of the Navy, with all the naval data that it is possible for our Navy to procure, boldly states that we are third. There is a great discrepancy here. Which of these two men is more worthy of credence?

Gen. Wood says that the transportation of our Army—and we suppose he means to imply therewith all necessary supplies, food, ammunition, and guns—is dead easy by sea, and he points to the landing at Gallipoli as proof. I suppose he sees no difference between a landing but a few hundred miles from French ports at a point in close proximity to British supply depots, such

as Gibraltar, and at Egyptian points and making the same kind of an attempt 3,000 miles away.

It is true that in the case of one of the belligerents Canada would be at our door; but it is very questionable whether Canada would not a liability instead of an asset in case of war between that country and ours. Gen. Wood is reported as having said that the "Government experts know for a certainty that it would be entirely feasible for an enemy to lie at Far Rockaway Beach and throw shells into Fourteenth Street, New York City." "Government experts," God bless them! A few years ago these same experts attempted to induce the United States to abandon many of its Army posts, which had been bought and built at great expense to the Government at points where previous "experts" had said they were imperatively needed, and to reduce our entire number to eight posts, their expert knowledge plainly indicating that to be the proper number. Since they gave that expert advice to the country and to Congress it has been found expedient to erect 10 new Army posts along the Mexican border, 2 more than our experts advised in all.

I fear that the most of our expert advice is theory pure and simple; and while I believe in giving due consideration to it all, I fear we would be "up against it for fair" should we attempt to put all their expert, theoretical advice into practice.

Mr. Chairman, I have no doubt but that an enemy fleet could lie off Rockaway Beach and throw shells into Fourteenth Street, New York, if such a fleet had the latest and most modern guns. We have no need to go into any hysteria over that. We would not be compelled to install even a new or larger size gun at Sandy Hook to make that impossible. All that is needed is to remount our 12-inch guns already there, giving them a different and more elevated arc to play in, and this fearful condition would no longer exist. And this improvement can be made at a relatively slight expense, but as a further precaution a battery of 16-inch guns is to be installed there.

Mr. Chairman, I think that the alarmists and agitators, as well as those whom they are, I believe, unduly exciting, are like the old man who said "I am an old man and my life has been full of troubles most of which have never happened."

Mr. Chairman, can it be possible that the United States is in this deplorable condition as to ability to offer defense in case of invasion and offense in case of necessity? Is it possible that after expenditures by this Government of three and one-half billions of dollars on our Army and Navy since 1901, that this country is in the deplorable condition pointed out to us by the press, by the Navy League, by the Aero Club, by Gen. Wood, by Col. Glenn, by the great flood of literature that is being circulated throughout the country, instigated, no doubt, by a feeling of pure philanthropy and by the most exalted patriotism and love for home and country? Perish the thought that any of this is done through sordid greed or for fear that millions of dollars, in many cases entirely too easily obtained, might be wrenched from the grasp of the holders by foreign greed or by internal discord and revolution. As all government is primarily inaugurated for the safeguarding of life and property, with the emphasis on the latter word, in the final analysis that is probably one of the prime incentives to the present preparedness propagnnda.

Mr. Chairman, as I have already suggested, is it possible that after the expenditure of billions of dollars we as a Nation are likely to see our land overrun by a foreign foe and New York City laid waste by a foreign fleet? Is our coast defense at that point totally inadequate to protect the city?

I take some comfort from the statement of Gen. E. M. Weaver, of the United States Army, and Chief of the United States Coast Artillery, made to the National Geographic Society in this city recently. Gen. Weaver said that the coast defense of this country is prepared to give an efficient account of itself in case of emergency. He further stated that the organization and system of the mine-laying branch of the service is so well developed that any harbor in the country can be mined completely within 48 hours; and further, that the fortifications along the coasts, before points of great commercial wealth—I presume he included New York—with protecting waters and of high strategic value, are well built and that the system of range fire is accurate, and that one shot could be fired every 52 seconds from our 12-inch guns.

The same authority stated before the Military Committee in the Sixty-third Congress:

> I know of no fortifications in the world, as far as my reading, observation, and knowledge go, that compare favorably in efficiency with ours; and Gen. Crozier, Chief of Ordnance, speaking of our coast-defense guns, says: "In my opinion these guns, with other advantages, which our land-defense fortifications have, will be adequate for maintaining a successful combat with vessels of war armed with any gun which is now under construction anywhere in the world, to my knowledge."

It is refreshing to know that we have some splendid coast fortifications and some efficient guns mounted therein. And it is also a fine thing for this country that we have some men who are not overcome with fear and who have not been influenced to the point of making utterances that are a disgrace to the uniforms they wear, who refuse to decry the guns and appliances that they have been furnished by the Government with which to conduct our defense. We owe a debt of gratitude at this time for the cool-headed utterances of such men as Gen. Weaver and Gen. Miles, who refuse to decry their country and add to the wave of hysteria being forced upon it systematically for educational purposes.

Mr. Chairman, Gen. Wood, a very high authority, thinks it very likely that this country will be in war with a first-class power, or with first-class powers, in the near future. There are other men of American birth who do not share in that opinion and who do not think it would be an easy or a feasible proposition to invade America from Europe.

Sir Hiram Stevens Maxim, the inventor of the Maxim rapid-fire gun, an American born in the State of Maine, and who became a naturalized British subject, stated, as published in Everybody's Magazine for January:

> The great wealth and population of the United States and its distance from the warlike nations of Europe make it practically impossible for any European nation to invade the country.

He does not think it such a simple matter as does Gen. Wood. Sir Hiram Maxim is an older brother of Mr. Hudson Maxim, who has probably done more to excite the fears of our citizens as to our unprepared condition than has any other man in the United States.

One brother says we are in no danger, the other is almost hysterical and overcome with his solicitude for our defenseless condition, and he is staged in most of the moving-picture shows of our country addressing large audiences of his fellow citizens, imploring them to wake up and importune Congress to make immediate preparation for national defense. Like his brother Hiram, who was knighted by Queen Victoria, Mr. Hudson Maxim is an inventor of powder and other appliances for destroying human life in warfare, and he built a town in New Jersey named Maxim and conducted there a powder and dynamite factory of immense capacity. He later sold smokeless-powder inventions to the Du Pont-de Nemours Co., of Wilmington, Del., and is now one of its consulting engineers and development experts. He sold the United States Government a formula called "Maximite," the first high explosive capable of sending a projectile through heavy "armor plate." He has since invented a superior smokeless powder, called "stabillite," and a detonating fuse for armor-piercing projectiles; also "motorite," for driving automobile torpedoes, and various other inventions. He is also an author and has written a work on the science of poetry and the philosophy of languages, and as a chemist and scholar he takes high rank among the notables of the earth. His principal fame and fortune come though from the invention and manufacturing of war products. War is his principal asset in trade, and if the United States Government would embark on the sea of war preparedness and of militarism, as advocated by the gentleman, it would no doubt buy millions of dollars worth of the products invented, manufactured, and sold by this gentleman and his associates.

It is easy for us to be biased in favor of those conditions that naturally contribute to our business, and this bias is apt to grow on us through our environment. Sir Hiram Maxim, with nothing to gain by this country's action, sees no danger to us from abroad—the brother thinks we are in dire peril and cries "Prepare! Prepare!" Which is more worthy of attention?

Mr. Chairman, I am inclined to agree with those citizens of our country who are of the opinion that we will be in but little danger from any of the warring nations of Europe if the present war there is fought to a finish; yet I do not think it wise to hammer our cannon into plowshares and our swords into pruning hooks. The world has not advanced as yet to that beatific state where we could safely do that. I think that we should continue calmly and dispassionately to build up our Navy, to increase our coast defenses, and to strengthen to some extent our standing army, but not in such a hasty and precipitate manner as to work a hardship on the Nation and increase inordinately the burden of taxation.

Mr. Chairman, I am not one of those who in the past advocated to any great extent Government ownership of utilities, nor have I been enthusiastic in regard to Government paternalism; but, Mr. Chairman and gentlemen, since I have been a Member of this House I have received enough newspaper clippings, briefs, and personal letters from citizens and corporations in favor of private citizens or corporations exploiting the Government to make me at times question the wisdom of aught

but Government ownership and control of everything with which the Government is directly interested and which is necessary for Government use. I am fully convinced that the wise and sane thing to do in respect to our Army and Navy supplies is for the Government to manufacture them.

Immediately when an idea of this kind is advanced a large part of the press and all those interested in furnishing the Government with supplies or hope to be able to furnish them in the future begin to flood Congress with clippings and letters explaining what an unwise and inexpedient thing it would be for the Government to manufacture them. A few months ago when the Navy Department refused to award contracts to private yards for the building of two battleships because of the exorbitant price bid and made the award to two Government-owned yards, Members of Congress were flooded with letters and briefs defending the bids of the private yards and boldly proclaiming the falsity of the Government's estimates of cost, and so forth, and claiming that the Government made no allowance for overhead charges, which the private yards had to take into account.

Government estimates were based on actual knowledge of cost of material, workmanship, overhead charges, and every contingent factor. The Government will not only make a substantial saving on first cost but will, no doubt, save thousands of dollars in the upkeep of the vessels after they go into commission. It has been found that the vessels built in the Government yards, where there is no incentive to slight the work in order to make an unholy profit, have invariably stood the test of time and stress much better than those vessels that have been constructed in private yards.

Mr. Chairman, I have been receiving, as no doubt have all other Members of Congress, almost daily printed letters from the Bethlehem Steel Co., protesting against the Government erecting factories for manufacturing its own armor plate. In its letter No. 10 it says:

> The Secretary of the Navy, in his annual report, estimates that the Government can make armor plate at $262.79 per ton in a plant of 10,000 tons capacity, running at full speed. The prevailing price is $425 a ton. He estimates the difference as the advantage of Government over private manufacture. The estimate is absolutely fallacious.

The company then goes on, exactly as did the champions of the private shipbuilding yards, when the Government let the contract to its own yards, to say that—

> The Secretary's estimate covers mere shopwork; it omits many important items which must enter into actual cost.
> For administration and general expense.
> For insurance, taxes, and depreciation of plant.
> For interest on investment and working capital.

Is it likely that the engineers who compiled the cost estimates for the Secretary of the Navy were not competent? I should judge their estimates to be conservatively high instead of the reverse. The best steel rails for railroad use have been manufactured and sold for $25 per ton. Armor plate manufactured from iron or steel costs $425 per ton, or seventeen times the cost of steel rail for a ton or armor plate. I know nothing about the manufacturing of armor plate, but I would hazard a guess that the Secretary's estimate is high enough to cover all overhead charges, interest, administration, depreciation, and so forth.

Buying armor plate at $425 a ton would, I should judge, be equivalent to making millionaires over night.

Mr. Chairman, I have no doubt but that the Members of Congress who have received copies of the numerous letters of the Bethlehem Steel Co. likewise received a circular reading as follows:

> WE ALSO ASK A HEARING BEFORE CONGRESS ACTS.
>
> *To the Members of Congress:*
>
> The Bethlehem Steel Co. is issuing a series of statements giving reasons why, in their judgment, the United States Government should not erect an armor plant.
>
> Up to this date their statements have contained few points which were not disclosed before various congressional committees and thrashed out over and over again.
>
> But in their statement published in the newspapers of April 13, they did make one new statement to which we call your attention.
>
> They say, "Armor plate for our battleships is a vital factor in national defense. It is supremely important that its durability be the highest obtainable."
>
> We ask Congress to remember one of the gentlemen who signed this statement, calling attention to the fact that the quality of armor plate should be the "highest obtainable," was superintendent of the Carnegie Steel Co. when "pipes or shrinking cavities, erroneously called blowholes, in the plates were plugged by the contractors and the defect concealed from the Government inspector." (CONGRESSIONAL RECORD, Aug. 23, 1894, p. 8638.)
>
> The Government imposed a fine of $140,484.94 for this deception.
>
> Now, the Bethlehem Steel Co. asks, "Is Government manufacture of armor for battleships wise?"
>
> The people hope Congress will answer "Yes."

Mr. Chairman, I imagine the fine mentioned in this circular was based on a percentage of the agreed price; otherwise, I presume it would not have carried 94 cents as a part of the penalty; but, be that as it may, the certainty remains that had the Government been manufacturing its own armor plate there would have been no incentive for the sake of making a profit and preventing a loss to use defective armor plate nor would there have been any attempt made to use it.

The procuring of good material and workmanship would be much better assured, I think, in a Government-owned plant. The Government is manufacturing powder at two-fifths the price it used to pay for it and 50 per cent cheaper than it has paid for part of its needs right along. Is it wise or expedient to tax all our people to pay these enormous profits to private individuals?

The plea that other Governments are paying as much or more to private companies for supplies is no justification for the American Congress submitting to the payment of enormous and unreasonable profits to any company or individual. The simple fact that other Governments submit to such exploitation is no excuse for a progressive and enlightened country such as is ours to submit to that character of treatment. The taxes of our citizens will be high enough if we carry out the various programs for preparedness advocated on both sides of this aisle, if we get armor plate and all other naval and military supplies at their true value.

Mr. Chairman, I feel a much greater inclination to vote for large appropriations for our Navy and for our coast defenses than for other branches of our Military Establishment. I believe it the part of wisdom to make as efficient as possible those units of defense most essential for our protection from foreign invasion. While our Navy is well named our first line of defense, I personally feel that it is really second in importance. Our coast and harbor defenses should in reality be our first consideration and our Navy second in moment, but I consider them very nearly of a parity.

If, unfortunately, some country should conclude to attack us, the more damage we can do to such country's vessels carrying its forces to our shores the better it will be for us—loss of life in decisive battles on the sea are comparatively nil compared with loss of life in decisive battles on land. As already stated, I consider our Navy and coast defenses our most important protection, and think we should make reasonable appropriations for their improvement and upkeep as an insurance against trouble at all times; but I do not think it wise to unnecessarily crowd matters and place a grievous burden on our people.

Mr. BUTLER. Mr. Chairman, I yield 20 minutes to my colleague from Pennsylvania [Mr. COLEMAN].

Mr. COLEMAN. Mr. Chairman and Members of the House, you have listened this afternoon to a discussion of battleships and cruisers and submarines and shells, and I now ask your attention for a little while to the amendment to this bill provided for in the special rule brought into the House yesterday, appropriating $11,000,000 for the erection or purchase of a Government armor plant. Personally I do not believe the Government under existing conditions can erect a plant of 20,000 tons capacity for $11,000,000. I doubt if it can be done within a cost of $15,000,000, and am of the opinion that it will approximate a cost of $20,000,000. But whether $11,000,000 or $15,000,000 or $20,000,000, it is in my judgment an unwise and unjustifiable and inexcusable expenditure of public funds. I wish to call the attention of the House to the words of a former President of the United States as follows:

> It is the duty of those serving the people in public places closely to limit public expenditures to the actual needs of the Government economically administered, because this bounds the right of the Government to exact tribute from the earnings of labor or the property of the citizen, and because public extravagance begets extravagance among the people.

I especially commend to the majority Members of this House these words of a former Democratic President, and distinguished American citizen, Mr. Grover Cleveland. While we should carefully consider the item of cost with reference to the proposed plant, the principle involved is of vastly more importance.

Now, I live in the vicinity of Pittsburgh, near by, though not within the district where the Carnegie armor plant is located; but, if I properly understand myself, my attitude on this question does not in any manner depend upon this fact. And just here I wish to state that my experience in politics teaches me that in these modern days it is of no particular advantage to have the active support in an election of those successful people whom a short time since we so greatly honored as our captains of industry. The modern mind seems to have assumed an attitude of antagonism to successful people, and we are acting as though we believed in the theory of Proudhon that "property is theft," especially when in the possession of other people.

Though not one of those persons who have succeeded in accumulating wealth, I yet can not bring myself to the point of believing that the man whose genius has permitted him to attain pronounced success along this line is to be looked upon and classed as a thief and a robber. And I am of the opinion that the rare individual who in the field of industrial and commercial enterprise does accomplish great things, and as a result accumulates wealth, performs at the same time a great service to his country, and that his deserved personal accumulation is insignificant in comparison to the greater benefit accruing to the public. And, further, I am so pronounced a believer in the superiority of private over Government ownership that I believe the wealth of such men, derived as it is from the profits of the business, does not equal the waste of Government operation under its necessarily more cumbersome system.

The real question, then, before us is not so much one of cost as it is a question of principle. Is it the right or wrong thing to do? This is the problem with which we are now confronted. And just here I wish to give expression to a thought that is impressed upon me more and more as the days of this session pass by, and that is that men seem to have lost all reverence for things which a short time since they blindly worshiped.

In view of this fact it would be well for us to pause and take stock of our political resources and examine those principles of government hitherto considered of prime importance before in our mad desire for change we destroy the whole splendid structure that has cost us so much of effort and sacrifice to erect.

At the time of the formation of our Government our people were believers in a sturdy individualism, and the members of the constitutional convention were firm adherents of the doctrine of natural rights. A great change has come over us, and we have been and still are moving away from the individualism that characterized our ancestors and are steadily advancing in the direction of paternalism. So strong has been this trend that it is now a serious question as to whether we have not reached a point at which we should hesitate before traveling further in the direction of—let us give it its true name—socialism.

How striking the contrast in the movement of this country to-day with that of ancient Greece, where, as they moved away from the system of tribal control in their progressive advance, the radical was advocating freedom of the individual and the right to do what one would with his own; and here, where these privileges have heretofore been considered as vested rights, the movement is in the opposite direction, which causes us to wonder at the strange workings of the human mind.

Now, whatever your thought may be of the doctrine of natural rights the fact remains that at the time of the formation of our Government they were recognized as rights fundamental. The constitutional guaranties of life, liberty, and property with which we are so familiar had their origin in this doctrine and were provisions inserted in the Constitution to protect these established and well-understood rights. The judges in our early history when construing the Constitution rendered their decisions on the theory that these rights were fundamental and should be protected from legislative enactment. Justice Patterson, who was himself a member of the Constitutional Convention, in the case of Van Horne's lessee against Dorrance, in 1795, said:

> The right of acquiring and possessing property and having it protected is one of the natural inherent and inalienable rights of man.

And whether we read the words of Patterson or Marshall or Wilson or Story or Kent or other great jurists, it is the same story of this doctrine of natural, inalienable, or absolute rights. And as a result of this deep-rooted conviction, these early judges established, under the power of judicial review, more firmly than they otherwise would have been established, these supposed natural rights.

Now, you will agree with me that these rights are not as firmly founded in our laws as they were formerly. This is certainly true with respect to the right of property. True, the judicial department still protects property rights from violent legislative action. But even judges, and it can be more truly said of the general mass, are more and more inclined to interpret our constitutions as having conferred almost plenary power on the legislative department, and under these conditions it is the more important that Congress act independently of executive and other interference and conservatively with due regard to the well-grounded principles of protection to life, liberty, and property that lie embedded in our institutions.

The sense of property—

Says Kent—

> is inherent in the human breast and is graciously bestowed on mankind for the purpose of rousing them from sloth and stimulating them to action. And so long as the right of acquisition is exercised in conformity to the social relations and the moral obligations which spring from them, it ought to be sacredly protected.

In the case before us we will by the passage of this bill destroy the property of the individuals owning the armor-plate concerns, and in two of these instances you will destroy property created at the request of this Government through its representative, the Secretary of the Navy (Secretary Whitney in the case of the Bethlehem Steel Co. and Secretary Tracey with respect to the Carnegie Co.). How can such action be justified? How can this Congress seriously consider such punishment of the people who at the request of the Government has endeavored to render the service required of them? And especially so in consideration of our traditions in so far as property rights and their protection are concerned.

The right of property in this country has hitherto been considered a vested right—that is, the right and privilege of enjoying that which was legally acquired. In the cases mentioned it was not only legally acquired but at the solicitation of the Government that now threatens its destruction, and in one instance, that of the Carnegie Co., entered into most reluctantly and only in an effort and with the desire of serving the Government.

Under our laws the State has no authority even under modern rulings to take the property of the individual without just compensation. And denying to private individuals a fair return on the capital invested is a taking of property without compensation. Business is property just as much as real estate, and the Government has no greater moral right to destroy the property of business men without compensation than it has to take the real estate of individuals. In our country every step in the world of business and social life has been taken upon the faith that the law will protect the investor in his vested rights. For the legislature to overthrow these rights if persisted in to any great extent will work ruin to private industry.

But these abstract notions of justice and right do not seem to sway us in our dealings with corporations, trusts, and monopolies. We feel that these large combinations of capital have acquired more than their due share from the new and rapidly developing system of industry. Perhaps this is true. I am inclined to think that it is, and am ready to join with others in the passage of such wholesome legislation as will transfer the benefits of this industrial system to the general mass. For I believe in the more equitable distribution of the earth's surplus, but at the same time maintain that property rights that have been legally vested should be protected under our laws, and that last of all should they be interfered with by the Government, whose duty it is to render protection.

We hear much of the Armor Trust, and whether or not there is any justification for the charges that have been made I submit to you we should not pass legislation based on the spirit of reprisal. We must not allow any antagonism toward trusts to prompt us in passing unjust and harmful legislation. And, after all, the trusts are not an unmixed evil. For certain it is that conditions of labor have improved under their direction, and that the safety of employees is given more consideration and that old-age pensions have been adopted as a policy. Our remedy against their evils is control.

But while regulating by law and forcing improved conditions of labor and restriction of prices let us not assault the property, the very citadel of the creature thus under our control, for there is danger that we destroy in our wild denunciation and antagonism their great power for good. We must still have room for the growth and development of the individual. We must not put limitations upon his capacity. This development of individuality has brought the trust, which is just as well adapted to modern business needs as was the workman proprietor of early days or the small factory manager of later times. With all their evils they contain a vast amount of good, and, in my judgment, the problem will work out its own solution to the general advantage.

Now, it may be true, as the Good Book says, that:

> The rich are full of violence and treasures of wickedness.

And, yet, I believe that there is much of justice in the words of Story, delivered in the Massachusetts convention of 1820, when he said:

> The poor man ought to be protected in his rights, not merely of life and liberty, but of his scanty and hard earnings. I do not deny that the poor man may possess as much patriotism as the rich, but it is unjust to suppose that he necessarily possesses more. Patriotism and poverty do not necessarily march hand in hand; nor is wealth that monster which some imaginations have depicted, with a heart of adamant and a scepter of iron, surrounded with scorpions stinging everyone within its reach, and planting its feet of oppression upon the needy and the dependent. Such a representation is not just to our country. There is no class of very rich men in this happy land, whose wealth is fenced in by hereditary titles, by entails, and by permanent elevation to the highest offices. Here there is a graduation of

property from the highest to the lowest, and all feel an equal interest in its preservation. * * * In our country the highest man is not above the people; the humblest is not below the people. * * * The richest man among us may be brought down to the humblest level; and the child with scarcely clothes to cover his nakedness may rise to the highest office in our Government. And the poor man while he rocks his infant upon his knees, may justly indulge the consolation that if he possesses talents and virtue there is no office beyond the reach of his honorable ambitions.

And by way of emphasizing the words of Story, let me quote from that great man who is the ideal of what Story had in mind and whose wonderful ability is only now dawning upon the world, the friend of the poor and the oppressed, the great emancipator, Abraham Lincoln:

Property is the fruit of labor; property is desirable; is a positive good in the world. That some should become rich, shows that others may become rich, and hence is just encouragement to industry and enterprise. Let not him who is houseless pull down the house of another, but let him work diligently and build one for himself, thus by example assuring that his own shall be safe when built.

With such notions of property as are thus embedded in our institutions shall this Government of ours destroy the investment of these people who risked their money in a new venture at the urgent request of the Government. Surely not with any regard to the idea of right in the abstract.

Mr. SLOAN. We have, as I understand, a Government navy yard to build ships of war in competition with private navy yards and private shipbuilding establishments, and also a plant to manufacture the powder which is needed by the Government.

Mr. COLEMAN. Yes, sir; and in the navy yards there have been two large battleships constructed—the *Florida* and *New York*—and the sister ships of each of those battleships have been constructed in private yards. In one case, according to the figures of Admiral Watt it cost $2,269,000 more to construct a ship of the same kind in a navy yard than it cost in a private yard. In the other instance, it cost $1,463,000 more for the Government to construct a ship than it did the private company. And therefore the waste and extravagance in the public yard is evidently greater than the profits of the privately-owned concerns.

Mr. RAKER. Will the gentleman yield?

Mr. COLEMAN. I will.

Mr. RAKER. The *Oregon* was constructed at the Mare Island Navy Yard by the Government. Now, as to her sister ship, what was the difference in cost?

Mr. COLEMAN. I do not remember anything about that. That was 23 years ago.

Mr. RAKER. The sister ship—and I forget her name now—was constructed by a private yard.

Mr. COLEMAN. I was speaking of the *New York* as against the *Texas* and the *Florida* as against the *Utah*.

Mr. RAKER. Take from the way we stand now, does not the gentleman believe that we would get cheaper material if the Government had a plant of its own?

Mr. COLEMAN. I do not believe so, because you are paying $425 a ton for armor. The average cost has been about $440 per ton, and that is less than England, Germany, France, or any of the other nations are paying. England is now paying $503 a ton. Germany is paying $490 per ton, and France $460 a ton, and we are paying $425 a ton.

And, setting aside the question of property rights and taking into consideration the facts that confront us, I say that you can purchase armor more cheaply at $425 than the Government can manufacture it. But the Bethlehem Steel Co. has gone further and said to you that they would manufacture armor, in view of the larger five-year contract that is to be made, for $395 per ton; and the Midvale Steel Co. have offered to manufacture armor for $402.50 per ton, and they have gone further and have said that they would allow the Federal Trade Commission or any chartered public accountant to inventory their plant with a view to obtaining a fair price. And I ask you men, in view of our traditions and our belief in the principle of individual liberty if there is any excuse under these conditions for the Government entering into the field of industrial enterprise? [Applause.]

Mr. TAGUE. I would like to ask the gentleman if the Government did not pay more for the plates on the ships made than Germany and France were paying at the time?

Mr. COLEMAN. According to the Navy Yearbook, which is the best authority I have, the amount paid by England is $503 per ton.

Mr. TAGUE. I mean at the time the ships were built?

Mr. COLEMAN. I do not think at any time within 20 years.

Mr. TAGUE. Is it not a fact that the United States Government was paying 15 per cent more at the time?

Mr. COLEMAN. I can not answer that. But I say if it is true, it is no reason why you should take away this business from private concerns, because the difference in cost of wages in this country and abroad is so much greater than 15 per cent that the wonder is that we do purchase armor at all for a less price than the Governments abroad pay.

Mr. TAGUE. I would like to ask the gentleman if it is not a fact that the two supply ships that are now being built are being built by the United States Government at more than $250,000 less than private concerns bid on them?

Mr. COLEMAN. You can not tell under the present existing method of bookkeeping in the Navy Department how much they cost, because they are not charging indirect expenses. Therefore some expenses are not added to the costs that are charged up by the private concerns.

Mr. RAKER. I understand that Japan has a Government plant. What are they paying now?

Mr. COLEMAN. They have a plant, and they are paying, according to my recollection something about the same that we are paying now.

Mr. RAKER. Does not the gentleman believe that the Bethlehem Steel Co. and the other company named by him are reducing their prices because they realize that the public sentiment in this country is such that we are going to have a Govrnment plant, and they have reduced it on that account?

Mr. COLEMAN. Not on account of public sentiment, but on account of the larger amount to be furnished.

Mr. RAKER. And they would really have raised it if it had not been for the determination of the people to have their own plant?

Mr. COLEMAN. I do not agree with the gentleman, for this reason:

Now, it must be perfectly apparent to the gentleman that these armor-making concerns that have been manufacturing armor plate at about one-third or two-thirds of the capacity of their plants must necessarily charge more for the output of their plants than they could afford to do under a larger contract that would enable them to run their plants at their full capacity; and it is on the basis of running their plants at full capacity that they are willing to give a lower price. Does that answer the gentleman's question?

Mr. RAKER. Yes.

Mr. COLEMAN. According to the Yearbook, Japan pays $490 a ton as against $425 a ton, which we pay.

Mr. CALLAWAY. Mr. Chairman, does not the gentleman know that the public at this time demands an armor plant in order to cut off the pressure that is brought to bear upon Congress and the country generally by the stockholders of the private concerns to keep up the value of their stocks on the market?

Mr. COLEMAN. Personally I do not believe that the manufacturers of munitions and of armor plate are any more concerned about building up a great Navy than are the average people of this country. I do not believe that patriotism is confined to any one class of people in this country, and I think you will find just as much of it among the manufacturers of these things and the owners of the plants as you will find among the men who work in the factories. They are all patriotic.

Mr. CALLAWAY. Does the gentleman know that the Bethlehem Steel stock has gone up from $30 a share to $530 a share, and they hope to keep up the value of their stock after the war is over by furnishing munitions to this country and other countries?

Mr. COLEMAN. The gentleman knows that, whatever the profits have been in the past few years, it has not been due to any armor concern; and, of course, the war in Europe, calling for these immense amounts of ammunition at the prices named by the manufacturers, where the manufacturers can get almost any price they ask for, necessarily means large profits; but these profits have no bearing on the Government armor plant and no relation to conditions that will exist in this country after the war is over.

Mr. CALLAWAY. Does not that explain the enormous pressure that is coming from the Atlantic seaboard at this time in behalf of what is known as "preparedness"?

Mr. COLEMAN. No; it has little, if any, connection with that pressure.

Mr. CALLAWAY. If I had any stock in that company and $500 of value was about to be squeezed out of every $530 worth of the stock I would want the war to continue.

Mr. COLEMAN. Now, I will say to the gentleman that there is nothing of that kind under consideration here at the present time.

Mr. CALLAWAY. That pressure is responsible for the people's effort to get away at this time from the exactions of the armor plants.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. COLEMAN. Mr. Chairman, I ask permission to proceed for five minutes more.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. COLEMAN] asks unanimous consent to proceed for five minutes more. Is there objection?

There was no objection.

Mr. MEEKER. Mr. Chairman, will the gentleman yield?

Mr. COLEMAN. Yes.

Mr. MEEKER. I want only to say that the gentleman from Texas [Mr. CALLAWAY] has left the impression that if he were a stockholder he would be for preparedness.

Mr. CALLAWAY. Does the gentleman from Missouri say he would not be for preparedness if he owned a lot of that stock?

Mr. MEEKER. I will say I am for preparedness, and I have no stock. [Applause.]

Mr. RAKER. Mr. Chairman, will the gentleman yield?

Mr. COLEMAN. Yes.

Mr. RAKER. It has been suggested by the gentleman from Texas [Mr. CALLAWAY] that this stock has increased up to $500.

Mr. COLEMAN. I do not know what it is.

Mr. RAKER. Well, assuming that that is the case——

Mr. CALLAWAY. It is now worth $530 a share, and if it is true that they were selling only at a fair profit to the Government when it was $490 a ton, what are they charging foreign countries now?

Mr. COLEMAN. I do not think they are manufacturing armor plate now for foreign governments.

Mr. CALLAWAY. Then how does the gentleman explain his statement that they are becoming enormously wealthy selling to foreign countries?

Mr. COLEMAN. That is shells that they have been selling.

Mr. CALLAWAY. They have not been selling armor plate?

Mr. COLEMAN. No. Now, I can not yield further, Mr. Chairman. I want to get down to some of the people who are in favor of this. Senator TILLMAN says it would be better if we should have the manufacturers supply the Government at a reasonable price. Under the Butler amendment which is proposed in this bill, providing that the Federal Trade Commission shall make an inventory of these plants and recommend what would be a fair price on the cost of manufacture, with a reasonable profit, I say to you that there is nothing left upon which you can base an argument in favor of a Government armor plant. Rear Admiral Strauss, in a statement before the Naval Committee on January 25, says: "If the private firms will furnish armor plate at a fair profit, and will continue to do so under all conditions, I can see no special advantage in the Government going into the business." Do you see any advantage? If not, why should we, on the part of the Government, strike down the property of individuals and enter into the business, costing us more to manufacture armor than we paid for it before?

Mr. KEATING. Mr. Chairman, will the gentleman yield for a question, just for information?

Mr. COLEMAN. Yes.

Mr. KEATING. Is this Bethlehem Steel Co., that the gentleman mentions so frequently, the same company that sold a lot of armor to the Government with blowholes in it?

Mr. COLEMAN. It is not. The armor plate with the so-called blowholes in it was manufactured by the Carnegie Steel Co., and after an investigation was made by the Government the Carnegie Steel Co. was fined, and the company offered to take any one of those plates off the vessel and have it tested ballistically at Indianhead at their own expense, asking only that the Government should pay the charges if it did not meet the test, and their offer was not accepted by the Government, showing that it was merely a case of a so-called mountain that turned out to be a mole hill.

Mr. KEATING. But they were found guilty, were they not?

Mr. COLEMAN. They were found guilty and fined.

Mr. KEATING. And now you are acquitting them.

Mr. COLEMAN. But after a further investigation the Government remitted the fine, and it never was collected from the company. Now, on the other hand, let me say to the gentleman that that investigation showing up the blowholes in the Carnegie armor plate is nothing in comparison with the frauds developed in the investigation of the Krupp concern in Germany, where the Berlin superintendent of the Krupp armor-plate plant was fined and imprisoned, and other directors also fined, which shows the danger of the connection of the Government with private business concerns.

Let me say further in that connection, if the Government manufactured its own plate, interested as it would be in holding down the cost of the product, would it not be more likely to accept questionable armor for the purpose of making a low cost record than it would in the case of a private company whose product it could reject instantly through its inspectors if it were found in the least degree defective?

But Secretary Daniels insists that the Government should manufacture its own armor, and says:

> It is my intention to eventually secure armor for the United States Navy at the actual cost of manufacture. This, it is my firm belief, can be achieved by the erection of a Government armor plant, and it is my intention to lose no opportunity to urge upon Congress the advantages of its construction.

Certainly under such circumstances we can obtain armor at cost. But what will that cost be? Doubtless greater than is now being paid for armor and unquestionably greater than armor can be purchased under the provisions of the Butler amendment.

While there remains no good reason under the conditions that have been referred to for the Government building an armor plant, there are many reasons why it should not do so. All experience teaches us of the waste and extravagance of Government ownership and operation. Under the conditions recited it would be a violation of the spirit of the fourteenth amendment respecting the rights of property. It would be the most pronounced step yet taken by our Government in the direction of Government ownership, against the dangers of which the whole modern world admonishes us. It is contrary to the spirit of our institutions, under which we have enjoyed an orderly and uninterrupted progress, to which nothing has contributed more than the protection of property rights and the encouragement of individual enterprise.

I might cite many authorities to sustain this contention, but will content myself with referring to the wisdom of Woodrow Wilson, whose words I especially commend to the consideration of those on the majority side:

> The limit of State functions is the limit of necessary cooperation on the part of society as a whole, the limit beyond which such combination ceases to be imperative for the public good and becomes merely convenient for industrial and social enterprise.

And, again, from the same authority:

> Whatever is merely convenient is optional, and therefore not an affair of the State. Churches are spiritually convenient; joint-stock companies are capitalistically convenient; but when the State constitutes itself a church or a mere business association it institutes a monopoly no better than others. It should do nothing which is not in any case both indispensable to social or industrial life and necessarily monopolistic.

Mr. DAVIS of Texas. Will the gentleman yield for one question?

Mr. COLEMAN. I want to finish my statement, and I hope the gentleman will be brief.

Mr. DAVIS of Texas. If the gentleman thinks the Government representatives would accept questionable material on these contracts, would they not be just as likely to accept questionable guns made by the Government?

Mr. COLEMAN. My friend, human nature is the same wherever you go.

Mr. DAVIS of Texas. Amen!

Mr. COLEMAN. And the people who have control of production are interested in getting the best possible results at the least possible cost, and naturally there would be a tendency to accept things when made in a Government plant that the Government inspectors would reject if coming from a private concern.

Now, in conclusion, I want to give you Democrats particularly something more, that I think will be good for you to hear.

The CHAIRMAN. The time of the gentleman has expired.

Mr. COLEMAN. I would like two minutes more.

Mr. ROBERTS of Massachusetts. I suggest to the gentleman that on Tuesday next there will be quite a good deal of debate.

Mr. COLEMAN. I have got mountains of this yet.

Mr. ROBERTS of Massachusetts. We have used a good deal more time than the other side already to-day, and we do not want to ride a free horse to death.

Mr. COLEMAN. Give me one minute.

Mr. ROBERTS of Massachusetts. I will give the gentleman one minute.

Mr. COLEMAN. I want to read to you the words of Woodrow Wilson, which may be found in the Atlantic Monthly of November, 1907:

> The country is still full of men who retain a deep enthusiasm for the old ideals of individual liberty, sobered and kept within bounds by the equally old definition of personal responsibility, the ancient safeguards against license; and those men are right in believing that those older principles can be so used as to control modern business and keep government outside the pale of industrial enterprise.

I commend those words to you, gentlemen of the Democratic Party——

Mr. DAVIS of Texas. Will the gentleman yield?

Mr. COLEMAN. No; I can not yield. I quote further from the same distinguished authority:

Our very political ideals are now to be decided. We are to keep or lose our place of distinction among the nations, by keeping or losing our faith in the practicability of individual liberty.

I do not know what Democrats may say in answer to this plea; but I, for one, take my stand boldly with those whose faith is still firm in the efficacy of individual enterprise. [Applause on the Republican side.]

Mr. PADGETT. I yield five minutes to the gentleman from Georgia [Mr. ADAMSON].

Mr. ADAMSON. Mr. Chairman, I am deeply touched by the solicitude of the distinguished gentleman who has just taken his seat [Mr. COLEMAN], who fears that establishments of the kind proposed will not pay the Government. I am not an advocate of governmental ownership or operation of any of the instrumentalities of business in which private capital can and will engage on honest and fair principles.

In the case of the proposed establishment of munition plants, however, it appears not only that it would pay the Government in three respects, but it is absolutely necessary for three reasons. The first is, the Government by having a plant of its own, managed and conducted by itself at its own expenses, can make certain of having what it wants and needs at the proper time. In the second place, it can make what it needs or wants as good as it pleases without any dispute or altercation with private parties who try to mulct the Government on their contracts. In the third place, we could assuredly prevent our armor plate and other supplies from costing the Government 50 per cent more for our own use than our patriotic manufacturers sell the same things to Russia, 10,000 miles away. I think that answers the gentleman's speech. [Applause.]

Mr. ROBERTS of Massachusetts. Mr. Chairman, I yield 10 minutes to the gentleman from Delaware [Mr. MILLER].

Mr. MILLER of Delaware. Mr. Chairman, I rise to say a few words with respect to the American naval officer, inasmuch as several things have been said about him in this Chamber this afternoon which I think need an answer. The naval officers need no defense. Their work and service speak out better than I am able to do. They are not so considered, judging by the applause which met the remarks of certain gentlemen on the Democratic side. At the inception of the Government our forefathers decreed that the Army and the Navy should be kept out of politics. That was a very wise move. But they did not fix it so that politics could be kept out of the Army and the Navy. I agree in part with what the gentleman from Texas [Mr. CALLAWAY] said, that if you remove politics from this Army and Navy question the country might get what it wants in the right kind of preparedness. I agree in part with what the gentleman from Missouri [Mr. HENSLEY] said along the same line. But, gentlemen of the House, I do not agree with what I think was an unwarranted assault by them on the integrity of the American naval officer, and incidentally on the men that serve under him. My friend from Texas [Mr. CALLAWAY] intimated that it was due to the desire and greed of these officers for more "business"; that they desired more ships which would give us a real line of defense. If I have not stated it verbatim, I think I have given his idea. He has no more basis to accuse them of ulterior motives in doing their duty and advising the country what we need in ships than we have to accuse the gentleman who made the statement with ulterior motives for making what I consider, as far as he was concerned, a sincere statement on the floor of the House, mistaken and erroneous as it may be.

I heard the gentleman from Missouri [Mr. HENSLEY] remark in discussing the question as to why more submarines had not been built that it was due to the fact that the American naval officers did not like to have a class of vessel upon which receptions of a social nature could not be held. I do not like to bring it up when he is absent from the floor, but I have waited patiently for my time, and I think the Members of the House will agree with me that that was the inference which he desired to be drawn from what he said.

Now, the first American submarine of the A class was authorized in 1900.

Mr. CALLAWAY. Will the gentleman yield?

Mr. MILLER of Delaware. I do not mean to be discourteous to the gentleman from Texas, but I have only a few minutes, and I can not yield. I did not interrupt him in his remarks. At the conclusion of what I have to say, if I have any time I will be glad to yield. If the particular remark of the gentleman from Missouri was made facetiously, all right, but I do not think it was, because when he made it he was discussing the question of international peace, and he approached the gentleman from Ohio [Mr. EMERSON] in a bellicose fashion and was serious. [Laughter.] Therefore I take it that he was in part serious when he drew the inference that the American naval officers did not like the submarines because they could not hold receptions of a social nature on the quarter-deck.

I will relate an incident to answer facetiously the gentleman from Missouri as to the "social" possibilities of submarines.

The gentleman seems to have forgotten that during the administration of one of our ex-Presidents, his daughter wanted to go down in a submarine; she went down to the navy yard and got into the submarine, and the young lieutenant pulled down the hatch and started up the engines, and after a time when she thought she had had a nice ride under the water she was let out, but as a matter of fact the boat was moored to the wharf all the time. [Laughter.]

To be serious, the American naval officer and men under him are the highest type of American citizens. They are really serving the country and for an amount of money which none of us would serve if we had to render the amount of service that they do. Do gentlemen know that when ships or the fleet visit ports for silver-service ceremonies or other events that the officers foot the bills out of their own pockets and the Government does not put up the cost, but they have to do so themselves? This quarter-deck entertaining has another side.

Mr. CALLAWAY. Will the gentleman yield?

Mr. MILLER of Delaware. I prefer not to yield. The officers are the hired experts of our Navy. The Navy is one of the insurance policies of the Government, and the premium we pay on it every year is represented by the annual naval appropriations. We hire these officers as experts to run the Navy as an individual or corporation hires its trained experts.

When these experts in their line of business are called upon for their suggestions and ideas they ought not to be met with sarcastic rebuffs, but they should be given due consideration. Nobody hires experts in business and then ignores their advice in the manner in which Congress treats the advice of our naval experts. We often hear the remark that the mere fact of a naval board of officers advising something is a good reason why it should be turned down.

The General Board of the Navy represents the expert administrators that this Government has to run the Navy, and while I am not carried away by naval or military hysteria, I do believe that those men in the Navy, who give their lives, because it is a life work, to the Government, should not be held up to scorn and sarcasm. They have no vote and they can not reach the people who make these accusations in the way that the voters in their districts can; and in the few minutes I have I think I can utilize it to the best advantage in bringing out a few points on their side. If the gentleman from Texas [Mr. CALLAWAY] now has something to suggest, I would be very glad to yield to him briefly.

Mr. CALLAWAY. I wanted to ask the gentleman if he had read the hearings, in which Capt. Sims said there was nothing like a Navy officer's place in the whole world for a snap, except it be a Supreme Court appointment?

Mr. MILLER of Delaware. I will say to the gentleman that I have not read all the hearings, but I was aware of that verbiage before he refreshed my memory with it. But be that as it may, we all of us heard the distinguished gentleman from Texas [Mr. CALLAWAY] and the equally distinguished gentleman from Missouri [Mr. HENSLEY] cast aspersions upon the character and patriotism of the naval officer, leaving us to believe——

Mr. CALLAWAY. Mr. Chairman, will the gentleman yield?

Mr. MILLER of Delaware. No; I will not yield. Leaving us to believe they brought in their recommendations and announced their advice for ulterior motives, namely, more "business." Mr. Chairman, the gentlemen who are here may wonder why I am so interested in the American naval officer. When I was 10 years old I made up my mind that I was going to go through the Naval Academy and endeavor to serve my country in the Navy, and one of the reasons I did not have the opportunity was because I had defective eyesight. I have seen the naval officer all over the country, and I have seen him in all sorts of predicaments except in actual warfare. They are a credit to the Nation and they are real, unselfish public servants. The same applies to the American Army officer, whom we hear accused of "prancing around in gold lace."

One question the gentleman from Missouri [Mr. HENSLEY] brought up to which I wish to call attention. He was discussing in all sincerity the question of world peace. Gentlemen of the House, as long as this globe is inhabited by the kind of people that make up the human race to-day, human nature is not going to change, and the people that go to make up the various nations of the globe are going to be the controlling factors in the nations of the globe, and you know very well that the time has not arrived when human beings will cease fighting each

other, either physically, mentally, or in a legal way. Therefore, why should the nations that are composed of these various peoples of the globe be any different in the future from what human nature has taught us to know they have been in the past. I could not let that remark of the gentleman from Missouri go by without saying a few words on the other side of the question. I listened with intense interest to the remarks of the gentleman and was very much impressed by his sincerity. I disagree with him as to his deductions.

We have heard to-day a discussion as to the reserve fleets, and I just want to bring one thing to the attention of the House, a situation that arose in connection with the calling out of one of the vessels of our reserve fleets at the League Island Navy Yard last year, when the *Alabama* was ordered to the Virginia Capes for neutrality duty in connection with the interned German auxiliary cruisers. I purposely consulted a friend of mine in the department about this matter to-day. The *Alabama* was ordered out at 5 p. m. on the 27th of March, 1915. That was a Saturday, and she got away in the prescribed time of 48 hours, on Monday afternoon, for the Virginia Capes, but every other battleship in the Atlantic reserve fleet at League Island Navy Yard, Philadelphia, had to be stripped of officers and men to make up the complement of the *Alabama* when she sailed forth, even on a peaceful mission of neutrality. I think it well to bring this to the attention of the House, because we understand that all over the country we have what is known as the reserve fleets, manned with a 40 per cent complement crew, ready to leave on 48 hours' notice for any duty, whether on peace, frolic, or fight. Yet here last year we had a concrete example of what it took to send one of those boats, the *Alabama*, from the League Island Navy Yard on a peaceful mission to the Virginia Capes. It stripped every other one of those vessels in the reserve fleet of officers and men in order to prepare that boat to go forth. I do not need to draw any conclusions as to what would have to have been done in order to send forth the whole reserve fleet, and that is an argument in favor of increasing the enlisted force of the Navy as it is increased in this bill, and of increasing it even to the extent asked for by the General Board. [Applause.]

Mr. ROBERTS of Massachusetts. Mr. Chairman, I yield five minutes to the gentleman from Pennsylvania [Mr. FOCHT]. [Applause.]

Mr. FOCHT. Mr. Chairman, I have listened with much profit to the illuminating discussion of this question of whether the country shall be protected by dreadnaughts or submarines. The afternoon's debate seems to have resolved itself into a question as to which would be most potent and effective in resisting an invading foe or one that attempted to invade us. Now I want to congratulate both sides of this House, those who are for the submarines and those who are for the dreadnaughts, upon the manner in which they have endeavored to reach a proper conclusion, for, after all, my friends, we must realize that we are to meet conditions as they are to-day, and the quicker the better, and by such means as are at our command; and the deductions to be made from the rather contradictory evidence presented before this committee is a task of some proportions confronting us.

Now as to the submarine and the dreadnaught, from what the gentleman from Texas has said, notwithstanding the arguments of Mr. Foss and several other friends on this side, it is evident to my mind that with the continued development of aircraft and of the efficiency and potency of the submarine, by the time you could complete a dreadnaught, I give it as my opinion that the dreadnaught in the presence of a submarine would be no more potent and efficient than an empty collar box floating on the bosom of the Potomac River. [Applause.] Notwithstanding it is the judgment of the experts that we should have dreadnaughts, and I shall vote for any reasonable number that may be provided for in the bill, it is my opinion that with the further development of the efficiency of submarines naval warfare and all kinds of warfare must end, because it will mean annihilation.

Mr. CALLAWAY. Will the gentleman yield?

Mr. FOCHT. If you will give me time. I want to say to my friend, with respect to standing under that Cross down on the Andes Mountains, and what it typifies and symbolizes, I regret indeed the difference between men and nations can not be thus settled, but the world seems to have gone war crazy. The big imperial bosses of Europe, even though they are intermarried and of the same blood, are determined to war to annihilation, as some have declared, and therefore, my friends, in the presence of this insanity and the fact that there is no longer the restraint of the Christian religion attached to their actions, we as American patriots must see to it that this Government is amply prepared to defend the integrity of this one free country the world has ever seen, or, as Lincoln said, we are the only kind of people it is worth while having a country like this for, the plain people. The gentleman from New York a moment ago said that he was deeply moved—"impressed," I believe, was the word—when the President of the United States appeared on the floor of this House and delivered a speech. I myself can not say that I was so greatly impressed; instead, it rather reminded me of some of the pomp and circumstance that attended the coronation of a Cæsar, quite out of keeping with the democracy of this country, and assuredly from the attitude of my friends on this side to-day, as I have heard their deliverances and their utterances, it made no impression on them if his purpose was to come here and stir up any war feeling and spirit for preparedness. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. PADGETT. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. LLOYD, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 15947 and had come to no resolution thereon.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. SHERWOOD, for five days, on account of memorial services and private business.

To Mr. BARNHART, indefinitely, on account of sickness in his family.

To Mr. HOLLINGSWORTH, to attend Memorial Day exercises on May 30, at Canton, Ohio, and deliver an address to the Canton Grand Army of the Republic Post and citizens.

ENROLLED BILL SIGNED.

The SPEAKER announced his signature to enrolled bill of the following title:

S. 4856. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors.

SENATE BILL REFERRED.

Under clause 2 of Rule XXIV, Senate bill of the following title was taken from the Speaker's table and referred to its appropriate committee, as indicated below:

S. 1288. An act for the relief of Simon M. Preston; to the Committee on Claims.

ADJOURNMENT.

Mr. PADGETT. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 10 minutes p. m.) the House adjourned to meet on Monday, May 29, 1916, at 11 o'clock a. m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Secretary of the Treasury, transmitting copy of a communication from the Secretary of War submitting estimates of urgent deficiencies in appropriations required by the War Department for the service of the fiscal year ending June 30, 1916 (H. Doc. No. 1167); to the Committee on Appropriations and ordered to be printed.

2. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, report on preliminary examination of north shore of Long Island, N. Y., between Huntington Harbor and Plum Gut, with a view to the construction of a harbor of refuge (H. Doc. No. 1168); to the Committee on Rivers and Harbors and ordered to be printed, with illustrations.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills were severally reported from committees, delivered to the Clerk and referred to the several calendars therein named, as follows:

Mr. VENABLE, from the Committee on Indian Affairs, to which was referred the bill (H. R. 489) authorizing the Shoshone Tribe of Indians residing on the Wind River Reservation in Wyoming to submit claims to the Court of Claims, reported the same with amendment, accompanied by a report (No. 775), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. LEVER, from the Committee on Agriculture, to which was referred the bill (H. R. 15913) to authorize the Secretary of Agriculture to establish uniform standards of classification for cotton, to provide for the application, enforcement, and use of such standards in transactions in interstate and foreign commerce, to prevent deception therein, and for other purposes, reported the same without amendment, accompanied by a report (No. 777), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. GANDY, from the Committee on Indian Affairs, to which was referred the bill (H. R. 14944) authorizing the Secretary of the Interior to transfer on certain conditions the south half of lot 14 of the southeast quarter of section 21, township 107, range 47, Moody County, S. Dak., to the city of Flandreau, to be used as a public playground, reported the same with amendment, accompanied by a report (No. 778), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. GRAHAM, from the Committee on the Judiciary, to which was referred the bill (H. R. 14299) to amend section 33 of an act to codify, revise, and amend the laws relating to the judiciary, approved March 3, 1911, reported the same without amendment, accompanied by a report (No. 776), which said bill and report were referred to the House Calendar.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, the Committee on Pensions was discharged from the consideration of the bill (H. R. 15066) granting a pension to George W. Johnston, and the same was referred to the Committee on Invalid Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills and resolutions were introduced and severally referred as follows:

By Mr. LOBECK: A bill (H. R. 16060) providing for the classification of salaries of veterinary inspectors and lay inspectors (grades 1 and 2) employed in the Bureau of Animal Industry, Department of Agriculture; to the Committee on Agriculture.

By Mr. McANDREWS: A bill (H. R. 16061) to extend the present leaves of absence of postal employees; to the Committee on the Post Office and Post Roads.

By Mr. GRIFFIN: A bill (H. R. 16062) granting leaves of absence to employees of the Postal Service; to the Committee on the Post Office and Post Roads.

By Mr. RANDALL: A bill (H. R. 16063) granting leaves of absence to employees of the Postal Service; to the Committee on the Post Office and Post Roads.

By Mr. MORRISON: A bill (H. R. 16064) to incorporate the Federal Council of the Churches of Christ in America; to the Committee on the Library.

By Mr. HILLIARD: A bill (H. R. 16065) to fix standard sizes for baskets or other open containers for small fruits, berries, vegetables and other dry commodities, and for other purposes; to the Committee on Coinage, Weights, and Measures.

By Mr. DAVENPORT: A bill (H. R. 16066) repealing all laws giving authority to the chief or governor of the Creek Tribe of Indians to enter into a contract for employment of a national attorney for the Creek Tribe of Indians, subject to the approval of the President of the United States; to the Committee on Indian Affairs.

By Mr. ELLSWORTH: A bill (H. R. 16067) for the tuition, board, books, paper, and traveling expenses to and from their respective homes of six Chippewa boys to either academies or colleges for the school year ending June, 1916; to the Committee on Indian Affairs.

By Mr. CARAWAY: A bill (H. R. 16068) to authorize the construction, maintenance, and operation of a wagon bridge across the Black River at or near Bennetts Ferry, Ark.; to the Committee on Interstate and Foreign Commerce.

By Mr. HUDDLESTON: A bill (H. R. 16069) to provide for public education upon political questions and for the dissemination of information upon political issues and matters of a political nature of public interest; to the Committee on Election of President, Vice President, and Representatives in Congress.

By Mr. JOHNSON of Kentucky: A bill (H. R. 16070) to dispose of unclaimed bank deposits in the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

By Mr. DAVENPORT: Resolution (H. Res. 250) calling for copies of the report of Linnen & Cook and S. M. Brosius on the charges filed against R. C. Allen, national attorney for the Creek Tribe of Indians; to the Committee on Indian Affairs.

By Mr. MAPES: Joint resolution (H. J. Res. 230) authorizing the National Society United States Daughters of 1812 to file its historical material in the Smithsonian Institution and to make annual reports to the secretary thereof; to the Committee on the Library.

By Mr. GARDNER: Joint resolution (H. J. Res. 231) relating to the European war; to the Committee on Foreign Affairs.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills were introduced and severally referred as follows:

By Mr. BEAKES: A bill (H. R. 16071) granting a pension to Marcilla Dusseau; to the Committee on Invalid Pensions.

By Mr. CLINE: A bill (H. R. 16072) granting an increase of pension to John W. Paulus; to the Committee on Pensions.

By Mr. COLEMAN: A bill (H. R. 16073) for the relief of the McClintic-Marshall Construction Co.; to the Committee on Claims.

By Mr. ELLSWORTH: A bill (H. R. 16074) granting an increase of pension to William Mitchell; to the Committee on Pensions.

By Mr. FARR: A bill (H. R. 16075) granting an increase of pension to Elizabeth Davis; to the Committee on Invalid Pensions.

By Mr. HOLLINGSWORTH: A bill (H. R. 16076) granting an increase of pension to Sarah A. Polen; to the Committee on Invalid Pensions.

By Mr. KING: A bill (H. R. 16077) granting an increase of pension to William M. Ferris; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16078) granting an increase of pension to Sadie C. Henderson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16079) granting an increase of pension to Thomas G. Willstead; to the Committee on Invalid Pensions.

By Mr. LAFEAN: A bill (H. R. 16080) granting an increase of pension to Alcesta F. Holahan; to the Committee on Invalid Pensions.

By Mr. MOORE of Pennsylvania: A bill (H. R. 16081) granting an increase of pension to William H. G. Murray, alias Henry Gordon; to the Committee on Invalid Pensions.

By Mr. RODENBERG: A bill (H. R. 16082) granting an increase of pension to David M. Crow; to the Committee on Invalid Pensions.

By Mr. SCULLY: A bill (H. R. 16083) granting an increase of pension to William S. Jackson; to the Committee on Invalid Pensions.

By Mr. SLOAN: A bill (H. R. 16084) granting an increase of pension to L. E. Benton; to the Committee on Invalid Pensions.

By Mr. SMITH of Michigan: A bill (H. R. 16085) granting a pension to Bertha E. Jones; to the Committee on Invalid Pensions.

By Mr. TAVENNER: A bill (H. R. 16086) granting an increase of pension to John W. Dewrose; to the Committee on Invalid Pensions.

By Mr. TILLMAN: A bill (H. R. 16087) granting a pension to James H. Schneider; to the Committee on Pensions.

By Mr. TREADWAY: A bill (H. R. 16088) granting a pension to Caroline Koch; to the Committee on Invalid Pensions.

By Mr. TAGGART: A bill (H. R. 16089) granting a pension to Mary H. Bisbey; to the Committee on Invalid Pensions.

By Mr. WICKERSHAM: A bill (H. R. 16090) for the relief of the officers and crew of the lighthouse tender *Armeria;* to the Committee on Claims.

By Mr. THOMAS S. WILLIAMS: A bill (H. R. 16091) granting a pension to Thomas E. Pendergrass; to the Committee on Pensions.

By Mr. WILSON of Illinois: A bill (H. R. 16092) granting a pension to Inger Nass; to the Committee on Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By the SPEAKER (by request): Memorial of General Conference of the Methodist Episcopal Church at Saratoga, N. Y., in re Sunday rest law for the District of Columbia; to the Committee on the District of Columbia.

By Mr. BAILEY: Petition of National Automobile Chamber of Commerce, New York City, relative to extending further the usefulness of the Bureau of Mines; to the Committee on Mines and Mining.

By Mr. CANDLER of Mississippi: Petition of sundry business men of Columbus and Starkville, Ohio, favoring bills to tax mail-order houses; to the Committee on Ways and Means.

By Mr. CAREW: Petition of Philadelphia Wholesale Lumber Dealers' Association, favoring passage of House bill 651, relative to duty of carriers; to the Committee on Interstate and Foreign Commerce.

By Mr. DALE of New York: Memorial of Wyoming State Democratic convention, relative to woman suffrage; to the Committee on the Judiciary.

Also, petition of Madeleine G. Hooton, of Binghamton, N. Y., favoring passage of bill to establish a probation system in United States courts; to the Committee on the Judiciary.

Also, memorial of National Society for the Promotion of Industrial Education, New York City, favoring passage of the Smith-Hughes vocational education bill; to the Committee on Education.

By Mr. DOOLING: Memorial of Gadsden (Ala.) Chamber of Commerce, favoring passage of the Shields water-power bill; to the Committee on Interstate and Foreign Commerce.

By Mr. FLYNN: Petition of Automatic Printing Co., of Bridgeport, Conn., against passage of House bill 6458, relative to type-casting machines; to the Committee on Patents.

By Mr. GOOD: Petition of sundry citizens of the State of Iowa, against passage of the Sunday-observance bill in the District of Columbia; to the Committee on the District of Columbia.

Also, petition of sundry citizens of the State of Iowa, against passage of bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. LINTHICUM: Petition of Paul E. Birkmeyer, of Baltimore, Md., favoring passage of Nolan bill; to the Committee on Reform in the Civil Service.

Mr. O'SHAUNESSY: Petition of Bakery and Confectionery Workers of America, favoring passage of House bill 10318, employers' liability act; to the Committee on the District of Columbia.

Also, petitions of American Association for Labor Legislation and Cooperative Employment Bureau, favoring passage of House bill 15316, workmen's compensation bill; to the Committee on the Judiciary.

Also, memorial of Newport Humane Club, relative to State inspection of food-producing animals; to the Committee on Agriculture.

Also, memorial of New Britain (Conn.) Chamber of Commerce, favoring passage of the Pomerene bill; to the Committee on Interstate and Foreign Commerce.

Also, petition of Rhode Island Antituberculosis Association against Senate joint resolution 120, relative to Public Health Service; to the Committee on Interstate and Foreign Commerce.

Also, petition of Fred Mitchell, Alton, R. I., against House bill 14666, providing for registration of design; to the Committee on Patents.

By Mr. PAIGE of Massachusetts: Memorial of nine voters and Congregational Church of Royalston, Mass., favoring national prohibition; to the Committee on the Judiciary.

By Mr. SLOAN: Petition of Mrs. R. J. Fricke and 37 others, favoring public hearing provided for in the Emerson resolution looking toward securing a guaranty covering proposed shipment of milk; to the Committee on Foreign Affairs.

By Mr. TAYLOR of Colorado: Memorial of Knights of Luther and Ladies Auxiliary of Denver, Colo., against bills to amend the postal laws pertaining to religion; to the Committee on the Post Office and Post Roads.

By Mr. WILLIAMS: Petition of 48 citizens of Edwards County, Ill., favoring a Christian amendment to the Constitution; to the Committee on the Judiciary.

SENATE.

MONDAY, *May 29, 1916.*

(Legislative day of Thursday, May 18, 1916.)

The Senate reassembled at 11 o'clock a. m., on the expiration of the recess.

RIVER AND HARBOR APPROPRIATIONS.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 12193) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. KENYON. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Hollis	Oliver	Sterling
Bankhead	Husting	Overman	Stone
Brady	James	Owen	Sutherland
Brandegee	Jones	Page	Swanson
Chamberlain	Kenyon	Pittman	Taggart
Chilton	La Follette	Poindexter	Thomas
Clark, Wyo.	Lane	Pomerene	Thompson
Clarke, Ark.	Lea, Tenn.	Ransdell	Tillman
Culberson	Lippitt	Reed	Vardaman
Cummins	Lodge	Saulsbury	Wadsworth
Curtis	McLean	Sheppard	Walsh
Dillingham	Martin, Va.	Sherman	Warren
Fletcher	Martine, N. J.	Shields	Weeks
Gallinger	Myers	Simmons	Williams
Gore	Nelson	Smith, Ariz.	Works
Harding	Newlands	Smith, Mich.	
Hardwick	Norris	Smoot	

Mr. TAGGART. I desire to state that the senior Senator from Indiana [Mr. KERN] is unavoidably absent.

The VICE PRESIDENT. Sixty-six Senators have answered to the roll call. There is a quorum present. In accordance with the unanimous-consent agreement, at this time the Senate will proceed to vote without further debate upon the pending motion of the Senator from Wisconsin [Mr. HUSTING], which is a motion to recommit the bill with instructions.

Mr. CLARKE of Arkansas. I ask for the yeas and nays on that vote.

The yeas and nays were ordered.

Mr. LODGE. I ask that the motion may be read.

The VICE PRESIDENT. The Secretary will read the motion.

The SECRETARY. The Senator from Wisconsin [Mr. HUSTING] moves that the pending bill (H. R. 12193) be recommitted to the Committee on Commerce with instructions to report a substitute therefor appropriating an amount not in excess of $20,000,000 for the maintenance of river and harbor projects adopted by Congress and now under improvement and for the further prosecution of work on rivers and harbors adopted by Congress: *Provided*, That the amounts for such maintenance and prosecution shall be apportioned by the Chief of Engineers under the direction of the Secretary of War.

The VICE PRESIDENT. The Secretary will call the roll on agreeing to the motion of the Senator from Wisconsin [Mr. HUSTING].

The Secretary proceeded to call the roll.

Mr. JAMES (when Mr. BECKHAM's name was called). My colleague [Mr. BECKHAM] is unavoidably absent. He is paired with the Senator from Delaware [Mr. DU PONT]. This announcement may stand for the day.

Mr. DILLINGHAM (when his name was called). I have a general pair with the senior Senator from Maryland [Mr. SMITH], who is absent. I am informed that if he were present he would vote "nay," and as I desire to do the same I feel relieved from my pair. Therefore I vote "nay."

Mr. CHILTON (when Mr. GOFF's name was called). I wish to announce for the day that my colleague [Mr. GOFF] is absent on account of illness.

Mr. HARDING (when his name was called). I have a pair with the junior Senator from Alabama [Mr. UNDERWOOD]. On account of his absence I withhold my vote. If I were at liberty to vote, I would vote "yea."

Mr. SAULSBURY (when his name was called). I transfer my pair with the junior Senator from Rhode Island [Mr. COLT] to the senior Senator from Maryland [Mr. SMITH] and vote "nay."

Mr. THOMAS (when his name was called). I have a general pair with the senior Senator from North Dakota [Mr. MCCUMBER], which I transfer to the senior Senator from Indiana [Mr. KERN] and vote "yea."

Mr. WILLIAMS (when his name was called). Repeating the explanation made by me on Saturday, and asking that the announcement may stand as long as the river and harbor bill is before the Senate, I vote "nay."

The roll call was concluded.

Mr. TAGGART. I wish to announce that the Senator from Indiana [Mr. KERN] is unavoidably absent, and that if he were present he would vote "yea." As announced, he stands paired on this vote with the senior Senator from North Dakota [Mr. MCCUMBER].

Mr. SMITH of Michigan. My colleague [Mr. TOWNSEND] is unavoidably absent from the Chamber. He is paired with the junior Senator from Florida [Mr. BRYAN].

Mr. SIMMONS (after having voted in the negative). I transfer my pair with the Senator from Minnesota [Mr. CLAPP] to the Senator from California [Mr. PHELAN] and let my vote stand.

Mr. TILLMAN. I wish to announce that I am paired with the Senator from West Virginia [Mr. GOFF]. I would vote "yea" if I could get a transfer of my pair.

Mr. GALLINGER. I wish to announce the unavoidable absence of the Senator from Maine [Mr. BURLEIGH] on account of illness. He is paired with the Senator from Arkansas [Mr. ROBINSON].

Mr. TILLMAN. I am informed by the Senator from Colorado [Mr. THOMAS] that I can transfer my pair with the Senator from West Virginia [Mr. GOFF] to the Senator from South Dakota [Mr. JOHNSON]. I do that and vote "yea."

Mr. THOMAS. I will state to the Senator from South Carolina that I am informed the Senator from South Dakota [Mr. JOHNSON] was paired on Saturday with the Senator from Illinois [Mr. LEWIS].

Mr. TILLMAN. I withdraw my vote under that statement.

Mr. OWEN. I wish to ask if the Senator from New Mexico [Mr. CATRON] has voted?

The VICE PRESIDENT. He has not.

Mr. OWEN. I withhold my vote. I understand that the Senator from New Mexico [Mr. CATRON], if here, would vote "nay." I would vote "yea" if I were not paired with that Senator.

Mr. CURTIS. I have been requested to announce the following pairs:

The Senator from North Dakota [Mr. GRONNA] with the Senator from Maine [Mr. JOHNSON];

The Senator from Michigan [Mr. TOWNSEND] with the Senator from Florida [Mr. BRYAN];

The Senator from South Dakota [Mr. JOHNSON] with the Senator from Illinois [Mr. LEWIS]; and

The Senator from Nebraska [Mr. HITCHCOCK] with the Senator from New York [Mr. O'GORMAN].

The result was announced—yeas 27, nays 41, as follows:

YEAS—27.

Ashurst	Gallinger	Lodge	Sutherland
Borah	Gore	Norris	Taggart
Brady	Hollis	Page	Thomas
Clark, Wyo.	Husting	Pomerene	Thompson
Cummins	Kenyon	Shafroth	Wadsworth
Curtis	La Follette	Sherman	Warren
Fall	Lane	Smoot	

NAYS—41.

Bankhead	Jones	Pittman	Sterling
Brandegee	Lea, Tenn.	Poindexter	Stone
Broussard	Lippitt	Ransdell	Swanson
Chamberlain	McLean	Reed	Vardaman
Chilton	Martin, Va.	Saulsbury	Walsh
Clarke, Ark.	Martine, N. J.	Sheppard	Weeks
Culberson	Myers	Shields	Williams
Dillingham	Nelson	Simmons	Works
Fletcher	Newlands	Smith, Ariz.	
Hardwick	Oliver	Smith, Ga.	
James	Overman	Smith, Mich.	

NOT VOTING—28.

Beckham	Goff	Kern	Phelan
Bryan	Gronna	Lee, Md.	Robinson
Burleigh	Harding	Lewis	Smith, Md.
Catron	Hitchcock	McCumber	Smith, S. C.
Clapp	Hughes	O'Gorman	Tillman
Coll	Johnson, Me.	Owen	Townsend
du Pont	Johnson, S. Dak.	Penrose	Underwood

So Mr. HUSTING's motion was rejected.

Mr. NEWLANDS. Mr. President, I renew the amendment I offered the other day, an amendment which was inserted in the river and harbor bill some two years ago by the Senate. I understand that the Senator from New Hampshire [Mr. GALLINGER] will not press his point of order against it.

Mr. CLARKE of Arkansas. Mr. President, the amendment has been read heretofore. The purport of it is quite well understood. I have no objection to its going into the bill, with the reservation that the whole subject to which it relates—and which is a broad one—will receive consideration commensurate with its importance when the matter reaches conference. I do not think it is well to take up any time at this stage of the consideration of the pending bill to go into the matter more elaborately; but I feel satisfied that that particular amendment, taken in connection with one offered by the Senator from Washington [Mr. POINDEXTER] and another by the Senator from Iowa [Mr. KENYON], will constitute a fund of information and suggestion that will be valuable to the conference, and it may be that we can evolve some plan by which river and harbor items may be robbed somewhat of the criticism that is now directed against them.

Mr. GALLINGER. Mr. President, when this amendment was offered two or three days ago I made a point of order against it. I think that instead of being placed in this bill it ought to be considered as a separate measure; but in view of the statement made by the chairman of the committee, I shall not renew the point of order as far as I am concerned.

The VICE PRESIDENT. The question is on the amendment of the Senator from Nevada.

Mr. REED. Mr. President, before the amendment is accepted I want, if I can, to get a copy of it. There have been two or three amendments, and I am in doubt which one is before the Senate.

Mr. CLARKE of Arkansas. If the Senator from Missouri desires to debate the amendment, I am willing to have it go out on a point of order.

Mr. REED (after examining the amendment). I have nothing to say, Mr. President.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Nevada [Mr. NEWLANDS].

The amendment was agreed to, as follows:

SEC. 8. That a commission, to be known as the river regulation commission, consisting of the Secretary of War, the Secretary of the Interior, the Secretary of Agriculture, the Secretary of Commerce, the chairman of the Commerce Committee of the Senate, the chairman of the Interstate Commerce Committee of the Senate, the chairman of the Rivers and Harbors Committee of the House of Representatives, and the chairman of the Committee on Interstate and Foreign Commerce of the House of Representatives, is hereby created and authorized to bring into coordination and cooperation the Corps of Engineers of the Army and other scientific or constructive services of the United States that relate to the study, development, and control of waterways and water resources and subjects related thereto and to the development and regulation of interstate and foreign commerce, with a view to uniting such services through a board or boards in investigating questions relating to the development, improvement, regulation, and control of navigation as a part of interstate and foreign commerce, including therein the related questions of irrigation, forestry, swamp-land reclamation, clarification of streams, regulation of flow, control of floods, utilization of water power, prevention of soil waste, cooperation of railways and waterways, and promotion of transfer facilities and sites, and in forming comprehensive plans for the development of the waterways and water resources of the country for every useful purpose by cooperation between the United States and the several States, municipalities, communities, corporations, and individuals within the jurisdiction, powers, and rights of each, respectively, and with a view to assigning to the United States such portion of such development, promotion, regulation, and control as can be properly undertaken by the United States by virtue of its power to regulate interstate and foreign commerce, and by reason of its proprietary interest in the public domain, and to the States, municipalities, communities, corporations, and individuals such portion as properly belong to their jurisdiction, rights, and interests, and with a view to properly apportioning costs and benefits, and with a view to so uniting the plans and works of the United States within its jurisdiction and of the States and municipalities, respectively, within their jurisdictions, and of corporations, communities, and individuals within their respective powers and rights, as to secure the highest development and utilization of the waterways and resources of the United States; and such river regulation commission is authorized to appoint as members of such board or boards such engineers, transportation experts, experts in water development and utilization, and constructors of eminence as it may deem advisable to employ in connection with such plans. And for the expenses of such organization, investigation, and plans the sum of $500,000 is hereby appropriated.

Mr. HARDWICK. Mr. President, I offer the amendment which I send to the desk.

The VICE PRESIDENT. The amendment proposed by the Senator from Georgia will be stated.

The SECRETARY. On page 14, at the end of line 17, it is proposed to insert:

Improving Savannah River at Augusta, Ga.: Completing improvement in accordance with the report of the Board of Engineers for Rivers and Harbors submitted in Rivers and Harbors Committee Document No. 4, Sixty-fourth Congress, first session, $33,000.

Mr. HARDWICK. Mr. President, I think, when I explain this amendment to the Senate and to the Senator in charge of the bill [Mr. CLARKE of Arkansas], there will be no opposition to it.

The amendment I propose is to complete the project at Augusta, Ga. The appropriation was not included in the river and harbor bill because the Board of Engineers had not reported on it at the time the House of Representatives considered the proposition, nor had they reported on the project at the time the Senate committee considered it. Since then the Chief of Engineers has submitted a report urging this appropriation. In a letter addressed to Hon. F. M. SPARKMAN, chairman of the Committee on Rivers and Harbors of the House of Representatives, the Chief of Engineers says:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, April 28, 1916.

Hon. S. M. SPARKMAN,
Chairman Committee on Rivers and Harbors,
House of Representatives.

SIR: 1. Referring to your letter of February 7, 1916, inclosing a copy of a resolution by the Committee on Rivers and Harbors of the same date, requesting the Board of Engineers for Rivers and Harbors to review its report on the survey of Savannah River at Augusta, Ga., printed in House Document No. 615, Sixty-fourth Congress, first session, with a view to determining whether, in its opinion, any further improvement of the locality is necessary or advisable in the way of additional revetment or otherwise for the protection of the work already done by the Government, as well as the probable cost of the same, I have the honor to inclose herewith a report of the board, dated April 12, 1916, in response thereto, together with a report by the district officer, Col. W. C. Langfitt, Corps of Engineers, dated March 17, 1916.

2. As a result of its further investigation of this subject, the board finds that there has been some erosion of the bank at King Mill tailrace, which, in its opinion, should be checked by revetting the bank for a short distance, at an estimated cost of $33,000, this revetment being considered advisable for the protection of the work already done by the Government.

3. After due consideration of the subject, I concur in the views of the board. The full amount of the estimated cost of the improvement should be provided in one appropriation.

Very respectfully,

W. M. BLACK,
Chief of Engineers, United States Army.

Mr. President, the situation is just this: We have spent a large amount of money on this project at Augusta, Ga. We thought we had completed it; but since this bill passed the House and since it was reported by the Committee on Commerce of the Senate, the Board of Engineers find that it is necessary to expend $33,000 in addition for revetment work, to preserve the work which has already been done and to save the money which we have already spent. I will only say that I ask that this amendment be put into the bill on the same terms that I asked for the insertion of the other amendment. I am sure that the conferees on the part of the other House will readily agree to it, and that the conferees on the part of both Houses will, in conference, conclude that it is an absolutely necessary item. Otherwise, I shall not expect the Senate conferees to insist upon its adoption.

The VICE PRESIDENT. The question is on the adoption of the amendment offered by the Senator from Georgia.

The amendment was agreed to.

Mr. TAGGART. Mr. President, in view of the discussion which has prevailed here on the river and harbor bill for some days past on the various motions which have been submitted for the reduction of the appropriations for some of the projects therein contained and the motions to reduce the appropriations having been defeated, it is evident to my mind from the votes of those who are opposed to the reduction of such appropriations that they consider all of the projects embraced in this bill as meritorious. I therefore offer the amendment which I send to the desk, which I ask may be read and adopted.

The VICE PRESIDENT. The amendment proposed by the Senator from Indiana will be stated.

The SECRETARY. At the end of the bill it is proposed to add the following as a new section:

SEC. —. That none of the appropriations herein made, except for maintenance and for projects partially completed, shall become available until the Secretary of War shall first determine that the improvement will promote or that it is essential to the interests of interstate or foreign commerce.

Mr. CLARKE of Arkansas. Mr. President, that evidently revolutionizes the policy of framing river and harbor bills, as prescribed by act of Congress, and is therefore new legislation. I make the point of order against the amendment.

The VICE PRESIDENT. To what act of Congress does the Senator from Arkansas refer?

Mr. CLARKE of Arkansas. To the act of Congress referring these projects to the Board of Engineers and their formal adoption by act of Congress. The provision of law is that when they are reported by the Board of Engineers and an appropriation has been made for the beginning of actual work, they are then in the sense of Congress adopted projects, and they are continued under that system until a different one is provided. You could add conditions to the expenditure of public money in an appropriation bill, but this amendment is not directed to any particular project; it undertakes to deal with all of them. It would require additional surveys, and it delegates to an executive officer the legislative function of discriminating between these particular projects which Congress heretofore has by formal action adopted. I, of course, could get together the different acts of Congress covering these subjects, if it be deemed necessary to do so.

The VICE PRESIDENT. But, as the Chair reads the amendment, it is simply a limitation on the expenditure of these appropriations.

Mr. CLARKE of Arkansas. It could not be a limitation on them so as to change the course of the appropriation without——

The VICE PRESIDENT. The Chair is inclined to think that the point of order is not well taken.

Mr. CLARKE of Arkansas. I will submit, if the Chair is going to rule in that way.

The VICE PRESIDENT. It is a limitation of the appropriation. The question is on the amendment.

Mr. KENYON. On that question I ask for the yeas and nays, Mr. President.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. HARDING (when his name was called). Repeating the announcement of my pair with the Senator from Alabama [Mr. UNDERWOOD], I withhold my vote.

Mr. SAULSBURY (when his name was called). Repeating the announcement of my pair and its transfer as on the last roll call, I vote "nay."

Mr. SIMMONS (when his name was called). Making the same transfer of my pair as announced on the former vote, I vote "nay."

Mr. THOMAS (when his name was called). Announcing the same pair and transfer as before, I vote "yea."

Mr. TILLMAN (when his name was called). I transfer my pair with the Senator from West Virginia [Mr. GOFF] to my colleague [Mr. SMITH of South Carolina] and vote "yea."

Mr. WARREN (when his name was called). I have a pair with the senior Senator from North Carolina [Mr. OVERMAN]. I do not see him in the Chamber, and I therefore withhold my vote.

The roll call was concluded.

Mr. TOWNSEND. I have a pair with the junior Senator from Florida [Mr. BRYAN], and therefore withhold my vote.

Mr. HARDWICK (after having voted in the negative). I transfer my pair with the Senator from Kansas [Mr. CURTIS] to the Senator from New Jersey [Mr. HUGHES] and allow my vote to stand.

Mr. GALLINGER. I am requested to announce the following pairs:

The Senator from Maine [Mr. BURLEIGH] with the Senator from Arkansas [Mr. ROBINSON];

The Senator from New Mexico [Mr. CATRON] with the Senator from Oklahoma [Mr. OWEN];

The Senator from Rhode Island [Mr. COLT] with the Senator from Delaware [Mr. SAULSBURY];

The Senator from Delaware [Mr. DU PONT] with the Senator from Kentucky [Mr. BECKHAM];

The Senator from North Dakota [Mr. GRONNA] with the Senator from Maine [Mr. JOHNSON];

The Senator from South Dakota [Mr. JOHNSON] with the Senator from Illinois [Mr. LEWIS]; and

The Senator from Nebraska [Mr. HITCHCOCK] with the Senator from New York [Mr. O'GORMAN].

The result was announced—yeas 21, nays 37, as follows:

YEAS—21.

Ashurst	Jones	Oliver	Thomas
Brady	Kenyon	Page	Thompson
Fall	La Follette	Pomerene	Tillman
Gallinger	Lane	Sherman	
Gore	Lippitt	Smoot	
Husting	Norris	Taggart	

NAYS—37.

Bankhead	Lea, Tenn.	Ransdell	Stone
Brandegee	Lodge	Reed	Swanson
Broussard	McLean	Saulsbury	Vardaman
Chamberlain	Martin, Va.	Sheppard	Wadsworth
Chilton	Martine, N. J.	Shields	Walsh
Clarke, Ark.	Myers	Simmons	Weeks
Culberson	Nelson	Smith, Ariz.	Williams
Fletcher	Overman	Smith, Ga.	
Hardwick	Pittman	Smith, Mich.	
James	Poindexter	Sterling	

NOT VOTING—38.

Beckham	Dillingham	Kern	Shafroth
Borah	du Pont	Lee, Md.	Smith, Md.
Bryan	Goff	Lewis	Smith, S. C.
Burleigh	Gronna	McCumber	Sutherland
Catron	Harding	Newlands	Townsend
Clapp	Hitchcock	O'Gorman	Underwood
Clark, Wyo.	Hollis	Owen	Warren
Colt	Hughes	Penrose	Works
Cummins	Johnson, Me.	Phelan	
Curtis	Johnson, S. Dak.	Robinson	

So Mr. TAGGART's amendment was rejected.

Mr. KENYON. I offer an amendment to come in as a new section to the bill.

Mr. STERLING. Mr. President, I ask the Senator from Iowa if he will not, since that amendment proposes a new section, withhold it in order that I may offer an amendment which simply proposes an addition to one provision, leaving the bill otherwise as it now stands?

Mr. KENYON. I am perfectly willing to do that, but I do not see how it makes any difference. However, if the amendment of the Senator from South Dakota is urgent, I am perfectly willing to withhold the amendment which I desire to offer.

The VICE PRESIDENT. The Chair will suggest that it will not make any difference as to which amendment is first offered.

Mr. CLARKE of Arkansas. Mr. President, the amendment offered by the Senator from Iowa [Mr. KENYON] is of the same general nature as that offered by the Senator from Nevada [Mr. NEWLANDS], and, for the same reason, I hope that it will be included in the bill, so that it may be considered in connection with the general subject. I inquire which amendment is pending?

The VICE PRESIDENT. As the Chair understands, the amendment offered by the Senator from Iowa [Mr. KENYON] is pending.

Mr. CLARKE of Arkansas. That is what I supposed.

Mr. LODGE. It has not been read.

Mr. CLARKE of Arkansas. That is the amendment to which my remarks applied. The Senator from South Dakota may possess himself in patience. He will get an opportunity to present the amendment he desires to offer.

Mr. STERLING. Very well.

Mr. REED. Let the amendment proposed by the Senator from Iowa be stated.

The VICE PRESIDENT. The amendment proposed by the Senator from Iowa will be stated.

The Secretary proceeded to read the amendment proposed by Mr. KENYON, which in full is as follows:

Add at the end of the bill as a new section the following:

"That a commission is hereby created and established, to be known as the national waterway commission, hereafter referred to as the commission, which shall be composed of five commissioners, who shall be appointed by the President, by and with the advice and consent of the Senate. Not more than three of the commissioners shall be members of the same political party. The first commissioners appointed shall continue in office for terms of three, four, five, six, and seven years, respectively, from the date of the taking effect of this act, the term of each to be designated by the President, but their successors shall be appointed for terms of seven years, except that any person chosen to fill a vacancy shall be appointed only for the unexpired term of the commissioner whom he shall succeed. The commission shall choose a chairman from its own membership. No commissioner shall engage in any other business, vocation, or employment. Any commissioner may be removed by the President for inefficiency, neglect of duty, or malfeasance in office. A vacancy in the commission shall not impair the right of the remaining commissioners to exercise all the powers of the commission.

"That each commissioner shall receive an annual salary of $6,000, payable in the same manner as the judges of the courts of the United States. The commission shall appoint a secretary, who shall receive an annual salary of $4,000, payable in like manner. The commission shall have the authority to employ and fix the compensation of civil engineers, clerks, and other employees as it may from time to time find necessary for the proper performance of its duties and as may be from time to time appropriated by Congress, and in making appointments for continuous service the commission, so far as practicable, shall select its employees from the classified service.

"All property of the United States in the hands or under the control of Army engineers or other officials or of private individuals or public contractors, including dredges, steamboats, barges, yards, and other property used in the improvement of public waterways, shall be placed under the jurisdiction and authority of the commission.

"That the Secretary of War may, if practicable, detail such Army engineers as are requested by the commission to assist in organizing and establishing a comprehensive system of waterway improvement, providing that such details of engineers shall not be made to the detriment of their military duties.

"That the commission shall have the authority and it shall be its duty to make an investigation of all waterway projects now constructed in whole or in part by Federal aid. The commission shall prepare a complete and succinct statement, by years, of the amount heretofore appropriated for each project, the estimated amount required to complete such project, a report of the commerce now served and to be served, the character of such commerce given by separate items so far as can be furnished, the source of information, the interests to be served, the kind of water craft used, and such other information as may be useful in determining the public use and value of the project. The commission shall also furnish Congress, at the earliest practicable date, information concerning all harbors and waterways now improved or being improved in whole or in part by Government aid, showing the amount of commerce, character of terminals or landings, ownership thereof, and, so far as practicable, ownership of regular lines of craft used thereon; and the commission shall also report its recommendations for the finishing of the projects now being constructed or modification of existing plans or abandonment of work on any project, together with findings upon which such recommendations are based.

"The commission shall further ascertain and report what projects are now being improved for purposes other than navigation, and if for power development, a full statement of interests concerned, officers and stockholders, public use to be served, if any, private or public contribution toward expense of construction, and the commission's recommendations thereon. Said commission shall further ascertain and report what projects are now being carried on in whole or in part for land-reclamation purposes, the character of such project, amount of lands to be recovered, estimated value of such lands, ownership thereof, and contributions now being made by beneficiaries toward such expenditures, together with the commission's recommendations.

"The commission shall make a full investigation into all work now being performed by the Mississippi River Commission, the amount of money heretofore expended on such river, character and permanency of work performed, and reclamation interests now being served, if there be any, a full statement of contributions by public or private interests toward said work, together with a comprehensive and intelligible report of the probable cost of the present plans of levee construction or other river improvement now being undertaken, the percentage of project completed, and this commission's recommendation thereon. Such Mississippi River report shall be separate and distinct from reports on other projects now under improvement by the Federal Government.

"All of such data and all other available information of a pertinent character affecting particular projects or entire waterway improvements now being conducted by the Federal Government shall be collected in convenient form and presented to Congress in installments at the earliest practicable date.

"When the commission shall have reason to believe at any time that the proposed project is not for general use of the public or will not warrant further expenditures, or if contributions shall be required to be furnished before further appropriations are made or further expenditures authorized, such commission shall immediately report to Congress, with a preliminary recommendation thereon, and shall furnish a copy thereof to the United States Treasurer. That thereupon, when so recommended, the Treasurer shall withhold all funds theretofore appropriated not specifically obligated under existing contracts and shall refuse further payments until subsequent and specific action shall be had thereon by Congress.

"That prior to the presentation of any new waterway project appropriations the commission shall cause a careful survey of the proposed improvement, and if it shall appear such project is to serve a public use and is feasible, the commission shall thereupon collate data showing the estimated cost thereof, commerce to be served, water craft to be used, public terminals furnished, and contributions recommended to be made by public or private interests, together with such additional data as has heretofore been specifically required to be furnished on existing projects. The commission shall thereupon transmit to the Committee on Appropriations of the House of Representatives a full report concerning such new project or projects, its recommendations thereon, and, if requested so to do, all other and further information that may be required by the Committee on Appropriations.

"Whenever the commission shall determine that any waterway project is primarily for power or land-reclamation purposes or to serve special interests, the commission may recommend Government aid for such project, notwithstanding the special interests to be served, and shall prepare data showing the proportionate amount of Federal aid recommended, together with suitable restrictions as to audit and payment of funds from the Public Treasury. Such recommendation shall be presented as a proposed separate bill to the Committee on Appropriations of the House and shall not be embodied in any general waterway appropriation bill by such committee.

Whenever any new survey shall be proposed for any waterway project the commission, prior to such survey, may require data to be furnished showing the public use and prospective commerce to be served and such other information as may be desired, and a brief synopsis of such information shall be furnished to Congress by the commission to accompany any recommendations made for new surveys.

All existing waterways, new projects, and new surveys shall be classified, so far as practicable, prior to each regular session of Congress, together with estimates of appropriations required for maintenance and improvement for the ensuing two-year period, and a brief report as to each project considered shall be separately prepared and, with the commission's recommendation thereon, shall be placed in the hands of the Committee on Appropriations of the House at the beginning of each session.

Whenever the Appropriations Committee so requires the commission shall furnish additional data concerning any project, and shall further aid the Committee on Appropriations when requested so to do in the preparation of the regular river and harbor bill, which shall be prepared and presented by the Committee on Appropriations of the House.

The commission shall further compile and cause to be published at the earliest practicable date for the use of Congress an intelligent, concise statement of past waterway expenditures by the Government and of amounts needed to complete all continuing projects, and shall further give estimates of future obligations to be incurred by new projects recommended for construction. The commission shall give preference in its recommendations to Congress of appropriations needed to complete the more important projects, and, so far as practicable, shall enter upon a program looking toward the early completion of such projects.

The commission shall make a thorough investigation of reasons for loss of river traffic and shall make recommendations for the reestablishment of such traffic. It shall ascertain and determine the most available craft for river use, and, as soon as practicable, shall prepare plans and build experimental craft for such purpose.

Whenever reason therefor shall appear the commission may fix reasonable freight rates on all interestate water-borne traffic by common carrier and upon all such traffic on navigable waters wholly within the State, subject, however, to the jurisdiction now conferred by law on the Interstate Commerce Commission to fix maximum joint rates between and over rail and water lines.

The commission shall determine the reasonableness of wharfage or water terminal charges, whether such terminals are owned by private persons or municipalities, and all river and harbor improvements, including terminal facilities, shall be under the supervision and control of the commission.

Whenever the commission shall determine that unprofitable railway freight tariffs are maintained in any given case in order to prevent waterway competition, it shall be the duty of the commission to make a report thereon in duplicate to the Interstate Commerce Commission and to Congress, with recommendations that Congress give power, if need be, to the Interstate Commerce Commission for fixing minimum railway rates.

The commission shall at the earliest practicable date adopt an intelligent system of natural waterway improvement and shall perform such other and further duties as may present themselves from time to time.

Whenever it shall be desirable to secure sworn testimony from any witness or witnesses relating to any project or to navigation generally, or whenever the commission shall have reason to believe that private interests are secretly or improperly seeking to influence the commission or to force the passage of any private or public waterway measure through Congress, the commission may cause a hearing or summary investigation to be held, and for that purpose may issue summons, subpœnas, or other writs in the same manner and under the same procedure as is more specifically set forth in the act to regulate commerce approved February 4, 1887, and the amendments thereto, which portions of such act relating to procedure, so far as applicable, are made a part of this act, and may bring before such commission all parties believed to be informed concerning the facts or interested in the passage of such measure. A complete record shall be preserved of the testimony taken at such hearing and a certified transcript thereof shall be transmitted immediately to the Committee on Appropriations.

That all unexpended balances to the credit of any project not specifically obligated under existing contracts shall from the date of the passage of this act be transferred by the Treasurer to the general fund, and all vouchers thereafter paid by the Treasurer shall be upon order of the National Waterway Commission.

That the sum of $200,000, or so much thereof as may be necessary, be, and the same hereby is, appropriated, out of any money in the Treasury, to carry out the provisions of this act.

During the reading,

Mr. STONE. Mr. President, it is not worth while to take further time with the reading of this amendment. I shall make, and I make now, a point of order against it.

Mr. GALLINGER. Mr. President, if the point of order is made against this amendment, I will reserve the right, when the bill

reaches the Senate, to make points of order against all similar amendments in the bill.

Mr. CLARKE of Arkansas. I was going to say, Mr. President, that I supposed the amendment offered by the Senator from Nevada went in with an implied understanding that if that went in others of similar character would go in.

Mr. GALLINGER. That is right.

Mr. CLARKE of Arkansas. I do not see any objection to the course indicated by the Senator from New Hampshire.

The VICE PRESIDENT. If the Senator from Missouri insists on the point of order, the Chair will be obliged to sustain it.

Mr. SMOOT. Mr. President, was the amendment read in full, or just part of it?

The VICE PRESIDENT. Only part of it.

Mr. STONE. Mr. President, I am not willing that a proposition to which I am so absolutely opposed in principle as this shall go even to a conference committee, to be reported back here without an opportunity on the part of the Senate to discuss it. I shall insist upon the point of order.

Mr. SMOOT. Yes. I was not objecting to that, but I rose simply to ask the Senator if he had any objection to the balance of the amendment being put in the RECORD, so that it will be complete?

Mr. STONE. I have no objection.

The VICE PRESIDENT. It will be printed in the RECORD, and the point of order noted at the conclusion of it. The point of order is sustained, upon the ground that it is general legislation upon an appropriation bill.

Mr. POINDEXTER. Mr. President, I renew the offer of the amendment which I offered the other day, and which I believe the Secretary has. I send another copy of it to the desk, however. In deference to the suggestions of my colleague [Mr. JONES] and some other Senators, I have changed the amount of the salary of the inspector named in the amendment from $10,000 to $7,000. The whole matter is altogether tentative, and is submitted with the understanding that it will be dealt with very freely by the committee of conference. I myself think that if we are going to have an inspector at all to investigate great expenditures, such as are provided for by this bill, we ought not to higgle over his salary; but I will leave the amount at $7,000.

Mr. THOMAS. Mr. President, will not the Senator also change his amendment so as to provide that the officer shall be appointed by the President instead of by the chairmen of the committees of the Senate and the House?

Mr. POINDEXTER. I can not accept that suggestion, Mr. President. It is entirely inconsistent with the purpose of the amendment. The central idea of the amendment was that Congress, acting through its committees which deal with this subject, should have some special source of information. The entire conduct of the work as it is at present carried on is in charge of men subject to the orders of the President. The work is now operated under one of the executive departments of the Government. This proposition is that the legislative branch of the Government, which appropriates the money, shall have some check upon the manner in which the executive department expends it.

Mr. THOMAS obtained the floor.

Mr. GALLINGER. Let the amendment be stated, Mr. President.

The VICE PRESIDENT. The Secretary will restate the amendment.

The SECRETARY. It is proposed to add at the end of the bill the following:

There shall be appointed by the chairmen of the Committee on Rivers and Harbors of the House of Representatives and the Commerce Committee of the Senate an inspector of river and harbor works. He shall be a trained and experienced civil engineer, not connected in any way with the Army. It shall be the duty of said inspector to thoroughly examine the several river and harbor projects which have been adopted by Congress, with special regard to the question of whether the moneys appropriated by Congress for these works are being expended to the best advantage from a standpoint both of economy and efficiency. In making said examination said inspector shall inquire whether the best methods are being used in the prosecution of said works to accomplish the improvement contemplated thereby. Said inspector shall also examine into the question of the needs of commerce for said improvements and the probable or prospective uses thereof in commerce and the probable or prospective results thereof on freight rates on railroads through the competition of such waterways; and for that purpose said inspector may ascertain the effect upon such rates of waterways heretofore improved and the uses that have been made of the same for purposes of transportation. Said inspector shall make in writing to Congress a full semiannual report of his observations and conclusions in the foregoing matters. He shall hold office at the pleasure of the committees above mentioned, and his successor shall be appointed as provided above. He shall be paid a salary of $7,000 a year and his necessary actual expenses, and shall have such clerical and other assistance as may be necessary, to be approved by the chairmen of said committees.

Mr. GALLINGER. Mr. President, I make a point of order against that amendment. It is general legislation; it creates a new office, and it appropriates money not estimated for.

Mr. THOMAS. Mr. President, I thought I had the floor.

The VICE PRESIDENT. The Senator from Colorado is entitled to the floor.

Mr. LODGE. He does not have the floor against the point of order.

Mr. GALLINGER. Not against the point of order, I judge.

Mr. THOMAS. If the point of order is made, I have nothing to say.

Mr. POINDEXTER. On the point of order, I should like to suggest that it seems to me a principle is involved here similar to that involved in the amendment offered by the Senator from Indiana, in that it is a proviso for the inspection of the expenditure of the appropriations made in this bill. In that respect it is a limitation upon the appropriation. It provides a means by which Congress can be informed of the expenditures for which the bill appropriates, and in that respect, it seems to me, it is a condition attached to the appropriation, and, consequently, not subject to the point of order. I will say to the Senator from New Hampshire that it is an entirely different amendment from the others of which the Senator spoke a moment ago. It does not provide for any comprehensive examination.

Mr. GALLINGER. It is different in this respect, that one point could have been made against the others, but there are three points which can be made against this as being obnoxious to the rule. That is the only difference.

The VICE PRESIDENT. The point of order must be sustained.

Mr. STERLING. I offer the amendment which I send to the desk.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. It is proposed to add, after line 15, on page 37, the following paragraph:

In the interest of navigation, and in view of the existing emergency, and to prevent further loss and destruction of property, the sum of $100,000, or so much thereof as may be necessary, for bank revetment work or other improvement at or near the city of Vermilion, Clay County, S. Dak.: *Provided, however*, That before this appropriation shall become available or any work is undertaken by the United States thereunder assurances satisfactory to the Secretary of War shall be given that the said city of Vermilion, or county of Clay, or other agencies, will provide and contribute in money, labor, or materials an amount equal to 33⅓ per cent of the amount herein appropriated for such improvement.

Mr. KENYON. Mr. President, I should like to inquire, if it is not out of order, how much that increases the appropriation.

Mr. STERLING. It increases the appropriation $100,000, or so much thereof as may be necessary for the purpose indicated. I will simply say that I think all of it will be necessary, under a statement made by the Secretary of War under date of March 25. He seemed to think that the $100,000 provided for in the joint resolution which I offered would not do more than half the work of improvement; but I think that statement was made without due and careful investigation, and I believe $133,000 will do the work of making this improvement.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. KENYON. Mr. President, a few days ago an amendment was adopted with relation to the Brazos River—a provision that the money should not be expended if the Army engineers reported against the river. That amendment was proposed in the absence of the Senator from Texas [Mr. SHEPPARD]. In conversation with me, he rather feels that it was taking an advantage of him, which was not intended, I am certain, and I know he feels it was not intended. But as he feels that way about it, I move the reconsideration of that amendment.

Mr. STONE. Which amendment is that?

Mr. KENYON. The one with regard to the Brazos River in Texas.

The VICE PRESIDENT. The question is on the motion of the Senator from Iowa to reconsider the vote whereby the amendment was adopted.

The motion to reconsider was agreed to.

Mr. KENYON. We had a yea-and-nay vote on the amendment before, and I think we should have it again. I ask for the yeas and nays.

Mr. GALLINGER. Let the amendment be stated.

The VICE PRESIDENT. The Secretary will state the amendment.

The SECRETARY. On page 23, at the end of line 25, it is proposed to insert:

Provided, That no part of the said appropriation of $200,000 shall be expended until the report of the Army engineers upon the reexamination of said project, as provided for by the last Congress, shall have been reported to Congress; and if said report shall be unfavorable to the further progress of said project, then no part of said $200,000 shall be expended thereon.

Mr. SHEPPARD obtained the floor.

Mr. LIPPITT. Mr. President, a parliamentary inquiry. Do I understand that the motion to reconsider prevailed?

The VICE PRESIDENT. It did.

Mr. STONE. Does this amendment relate to the Brazos River or to the Trinity?

Mr. KENYON. The Brazos.

Mr. SHEPPARD. Mr. President, I wish to express my appreciation of the action taken by the Senator from Iowa. I am sure that he intended to take no advantage of the fact that I was not in the Senate Chamber when he moved the adoption of his second Brazos River amendment a few days ago. I reached the Chamber a few minutes after the Senate met, and found the roll call in progress.

I now wish to appeal to the Senate, in the interest of fair play, to reverse its action in regard to the Brazos River. Certainly the presumption is in favor of a project already under way, a project which the engineers and Congress have indorsed. Appropriations for two of the rivers for which reexaminations were ordered by the last Congress have been continued in this bill, although the reexaminations resulted in unfavorable reports. This amendment makes the continuance of the Brazos River appropriation dependent absolutely upon the forthcoming report of the engineers. The report, whether favorable or unfavorable, might be based on insufficient reasons, on frivolous reasons, on reasons that might not appeal to the Senate. In view of the fact that the same rule has not been applied to the other rivers, reexamination of which were ordered, I ask the Senate to change its action.

Mr. KENYON. Mr. President, the only point with reference to this matter, concisely stated, is this: The Army engineers, under the provisions of an act of Congress, are now making a resurvey of the Brazos River. This amendment provides that the money appropriated by this bill for the Brazos River shall not be spent if the report of the engineers is against the project of the Brazos River.

Mr. SHEPPARD. Let me ask the Senator a question right there. The Senator has denounced the engineers when their reports were favorable to projects. Now he proposes to leave this river absolutely to their judgment. Where is the consistency of the Senator's position?

Mr. KENYON. I think my position is much more consistent than the position of the Senator from Texas, who, in all these matters, is following the Army engineers when they are in his favor, and when they are against him he does not seem willing to follow them.

Mr. SHEPPARD. Not necessarily. Let me say to the Senator that I do not take that position. I say, let this resurvey stand or fall on its own merits. Let the Senate reserve the right to pass on it when it is brought into the Senate.

Mr. KENYON. But if the Army engineers report against this project, no more public money ought to go into it; and this money ought not to go into it until the Army engineers do make their report. That is the position I take.

Mr. SHEPPARD. Congress has adopted this project, and the presumption is in its favor.

Mr. KENYON. And Congress has ordered a reexamination of this project. Now, what is the hurry? Why not wait until that report is made to Congress?

Of course it is true, as the Senator says about other projects, that resurveys and reexaminations are being made, and yet the money is going to be spent; and there is not any reason why the amendment should apply to the Brazos any more than to any of these other projects; but I do wish that we might save the money in the case of one of them if the report is against it.

Mr. SHEPPARD. Mr. President, the Senator knows that the reexaminations of the engineers as to two rivers have been made and have resulted in unfavorable reports by the engineers, and yet the Senate declined to follow those reports. I say, let the result of the resurvey be known before it shall be approved. The Senate ought not to abdicate its proper powers.

Mr. KENYON. Mr. President, I only know that where the Army engineers report in favor of a project they are wise and powerful men, and when they report against a project we overturn their report and go ahead just the same as if it did not exist. That is what we are doing in this case.

Mr. SHEPPARD. The Senator takes the same attitude with a reverse viewpoint as to the engineers. If the engineers are for a river, he is against them; if they are against a river, he is with them.

Mr. KENYON. I ask for the yeas and nays on this amendment.

The VICE PRESIDENT. The yeas and nays were ordered on this amendment heretofore, and the Chair rules that the motion to reconsider keeps in force the original order of the yeas and nays. The Secretary will call the roll.

Mr. SHEPPARD. I suggest the absence of a quorum.

The VICE PRESIDENT. The absence of a quorum being suggested, the Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Borah	Hardwick	Norris	Smoot
Brady	Husting	Oliver	Sterling
Broussard	James	Page	Stone
Chamberlain	Jones	Poindexter	Sutherland
Clark, Wyo.	Kenyon	Pomerene	Swanson
Clarke, Ark.	La Follette	Ransdell	Taggart
Culberson	Lane	Reed	Thomas
Cummins	Lea, Tenn.	Saulsbury	Townsend
Curtis	Lippitt	Shafroth	Underwood
Dillingham	Lodge	Sheppard	Vardaman
Fall	Martin, Va.	Shields	Wadsworth
Fletcher	Martine, N. J.	Simmons	Warren
Gallinger	Myers	Smith, Ariz.	Williams
Gore	Nelson	Smith, Md.	
Harding	Newlands	Smith, Mich.	

The VICE PRESIDENT. Fifty-eight Senators have answered to the roll call. There is a quorum present.

Mr. THOMAS. Mr. President, let the Secretary please state the amendment again.

The VICE PRESIDENT. The Secretary will read the proposed amendment.

The SECRETARY. The House text reads:

Brazos River, Tex.: Continuing improvement from Old Washington to Waco by the construction of locks and dams heretofore authorized, $200,000.

Following the figures "$200,000," the reconsidered amendment reads:

Provided, That no part of the said appropriation of $200,000 shall be expended until the report of the Army engineers upon the reexamination of said project, as provided for by the last Congress, shall have been reported to Congress, and if said report shall be unfavorable to the further progress of said project, then no part of said $200,000 shall be expended thereon.

The VICE PRESIDENT. The yeas and nays were ordered upon the amendment. The Secretary will call the roll.

The Secretary proceeded to call the roll.

Mr. SAULSBURY (when his name was called). I transfer my pair to the junior Senator from South Carolina [Mr. SMITH] and vote "nay."

Mr. SIMMONS (when his name was called). Transferring my pair with the Senator from Minnesota [Mr. CLAPP] to the Senator from California [Mr. PHELAN], I vote "nay."

Mr. THOMAS (when his name was called). Announcing the same pair and its transfer, I vote "yea."

Mr. THOMPSON (when his name was called). I am paired with the Senator from Illinois [Mr. SHERMAN]. In his absence I withhold my vote.

Mr. TOWNSEND (when his name was called). I have a general pair with the junior Senator from Florida [Mr. BRYAN]. As I stated the other day when this amendment was up, I am permitted to vote upon it. I vote "yea."

Mr. WILLIAMS (when his name was called). Upon this particular item I do not feel released from my pair. I therefore transfer my pair to the Senator from New Jersey [Mr. HUGHES] and vote "nay."

The result was announced—yeas 28, nays 32, as follows:

YEAS—28.

Borah	Gallinger	Lane	Smoot
Brady	Gore	Lippitt	Sterling
Clark, Wyo.	Harding	Lodge	Sutherland
Cummins	Husting	Norris	Taggart
Curtis	Jones	Oliver	Thomas
Dillingham	Kenyon	Page	Townsend
Fall	La Follette	Shafroth	Wadsworth

NAYS—32.

Bankhead	James	Ransdell	Smith, Mich.
Broussard	Lea, Tenn.	Reed	Stone
Chamberlain	Martin, Va.	Saulsbury	Swanson
Chilton	Martine, N. J.	Sheppard	Underwood
Clarke, Ark.	Myers	Shields	Vardaman
Culberson	Nelson	Simmons	Walsh
Fletcher	Pittman	Smith, Ariz.	Warren
Hardwick	Poindexter	Smith, Md.	Williams

NOT VOTING—36.

Ashurst	Bryan	Clapp	Goff
Beckham	Burleigh	Colt	Gronna
Brandegee	Catron	du Pont	Hitchcock

Hollis	Lewis	Owen	Smith, Ga.
Hughes	McCumber	Penrose	Smith, S. C.
Johnson, Me.	McLean	Phelan	Thompson
Johnson, S. Dak.	Newlands	Pomerene	Tillman
Kern	O'Gorman	Robinson	Weeks
Lee, Md.	Overman	Sherman	Works

So the amendment was rejected.

Mr. KENYON. I move to strike out all after the enacting clause of the bill and to substitute the following.

The VICE PRESIDENT. The amendment proposed by the Senator from Iowa will be read.

The SECRETARY. Strike out all after the enacting clause and insert:

That there is hereby appropriated, out of any money in the United States Treasury not otherwise appropriated, for the maintenance and improvement of rivers and harbors, $25,000,000, to be expended under the direction of the Secretary of War. In the allotment of such funds provision shall first be made for maintenance and urgent commercial and military needs of harbors and waterways. Not exceeding $50,000 shall be used for new surveys and no allotment other than for necessary maintenance shall be made for any project heretofore recommended by Army engineers for abandonment or for modified improvement. And the engineers shall present to the next Congress, at the beginning thereof, a complete report of all expenditures with such further recommendations for abandonment of projects or modification as by them may be determined for the public good.

Mr. KENYON. On that amendment I ask for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. SAULSBURY (when his name was called). Transferring my pair as last stated, I vote "nay."

Mr. SIMMONS (when his name was called). I transfer my pair with the junior Senator from Minnesota [Mr. CLAPP] to the Senator from California [Mr. PHELAN] and vote "nay."

Mr. THOMAS (when his name was called). I announce my pair and its transfer as before and vote "yea."

Mr. TILLMAN (when his name was called). I announce the same transfer of my pair as before and vote "yea."

The roll call was concluded.

Mr. JAMES. I transfer the general pair I have with the junior Senator from Massachusetts [Mr. WEEKS] to the junior Senator from Maryland [Mr. LEE] and vote "nay."

Mr. WARREN. Has the senior Senator from North Carolina [Mr. OVERMAN] voted?

The VICE PRESIDENT. He has not.

Mr. WARREN. I announce my pair with that Senator and withhold my vote.

Mr. CURTIS. I have been requested to announce the following pairs:

The Senator from Maine [Mr. BURLEIGH] with the Senator from Arkansas [Mr. ROBINSON];

The Senator from New Mexico [Mr. CATRON] with the Senator from Oklahoma [Mr. OWEN];

The Senator from Delaware [Mr. DU PONT] with the Senator from Kentucky [Mr. BECKHAM];

The Senator from North Dakota [Mr. GRONNA] with the Senator from Maine [Mr. JOHNSON];

The Senator from South Dakota [Mr. JOHNSON] with the Senator from Illinois [Mr. LEWIS]; and

The Senator from Nebraska [Mr. HITCHCOCK] with the Senator from New York [Mr. O'GORMAN].

The result was announced—yeas 23, nays 34, as follows:

YEAS—23.

Ashurst	Gore	Lodge	Taggart
Brady	Harding	Norris	Thomas
Clark, Wyo.	Husting	Pomerene	Thompson
Curtis	Kenyon	Shafroth	Tillman
Fall	La Follette	Smoot	Wadsworth
Gallinger	Lane	Sutherland	

NAYS—34.

Bankhead	James	Poindexter	Smith, Mich.
Brandegee	Jones	Ransdell	Sterling
Broussard	Lea, Tenn.	Reed	Stone
Chamberlain	Lippitt	Saulsbury	Swanson
Clarke, Ark.	Martin, Va.	Sheppard	Underwood
Culberson	Nelson	Shields	Vardaman
Dillingham	Oliver	Simmons	Williams
Fletcher	Page	Smith, Ariz.	
Hardwick	Pittman	Smith, Md.	

NOT VOTING—39.

Beckham	Goff	McCumber	Robinson
Borah	Gronna	McLean	Sherman
Bryan	Hitchcock	Martine, N. J.	Smith, Ga.
Burleigh	Hollis	Myers	Smith, S. C.
Catron	Hughes	Newlands	Townsend
Chilton	Johnson, Me.	O'Gorman	Walsh
Clapp	Johnson, S. Dak.	Overman	Warren
Colt	Kern	Owen	Weeks
Cummins	Lee, Md.	Penrose	Works
du Pont	Lewis	Phelan	

So Mr. KENYON's amendment was rejected.

Mr. LA FOLLETTE. Mr. President, I offer the amendment which I send to the Clerk's desk.

The VICE PRESIDENT. It will be stated.

The SECRETARY. On page 27, after line 12, insert a new paragraph, as follows:

That the Secretary of War is directed to investigate the character and drafts of vessels which would be accommodated by the Welland Canal when enlarged by the Dominion of Canada and what improvements would be necessary upon the Great Lakes and harbors thereof to secure the benefit of such ocean commerce as may pass through such Welland Canal.

Mr. LA FOLLETTE. Mr. President, I do not wish to detain the Senate, but I feel the adoption of an amendment of this character would greatly improve the standards of this bill. It is a proposition national in its proportions. It has not the smell of "pork" upon it anywhere.

Mr. GORE. Mr. President——

The VICE PRESIDENT. Does the Senator from Wisconsin yield to the Senator from Oklahoma?

Mr. LA FOLLETTE. I do.

Mr. GORE. Did the Senator from Wisconsin say this amendment did not have the "smell of pork" about it?

Mr. LA FOLLETTE. I did.

Mr. GORE. Then I should like to suggest that it is subject to a point of order. [Laughter.]

The VICE PRESIDENT. The Chair refers the point of order to the Senate to decide.

Mr. LA FOLLETTE. Well, Mr. President, the Senate would not sustain the point of order.

The Welland Canal was constructed in 1833. It connects Lake Ontario with Lake Erie. It is, as everyone knows, wholly upon Canadian territory. It was enlarged in 1871; and again enlarged in 1900. It is now being reconstructed or enlarged, and will be completed in 1918 to a depth and width to admit of ocean going vessels passing through it.

Mr. President, if all of the harbors upon the Great Lakes are to share in the benefits of the enlargement of this canal, if we are to be able to load and unload ocean going vessels in the harbors of the Great Lakes, it is absolutely necessary for us to investigate existing conditions and to determine what changes and improvements must be made in order that ocean going vessels may dock at the ports of the Great Lakes.

Mr. President, Great Britain—which country, as I understand, has succeeded to the control of the Welland Canal, considers the enlargement of the Welland Canal so as to carry ocean-going vessels to be a good business investment. Surely the United States should improve the harbors which will be accessible to vessels passing through the Welland Canal, to a depth sufficient to accommodate such vessels. This canal is being enlarged so that it will have a depth of 25 feet. However, the improvements are to be so constructed that the sills of the locks will have a depth of 30 feet. The locks are to be 800 feet in usable length by 80 feet in width in the clear. The canal on the bottom will be 200 feet wide.

The present available depth in the various harbors of the Great Lakes, as I understand, is from 20 to 22 feet, and we shall be shut out from the benefits that will come from the enlargement of the Welland Canal unless we begin to make provision for changing the depth of water in our Great Lakes harbors. Ultimately, I have no doubt this work will require a very considerable expenditure of money. It means, ultimately, the deepening of the entrance to the harbors, of those harbors, and of the basins necessary to the best use of those harbors to a depth that will accommodate ocean-going traffic.

But, Mr. President, if all that has been done and all that has been expended, upwards of $800,000,000 in the improvement of the harbors and waterways of this country, is to be given anything like a meaning that shall be a benefit to the people of the country, then we should not stop at the expenditure of whatever is necessary to bring ocean-going vessels to the harbors of this great chain of lakes, this great inland sea that reaches out almost half-way across the continent.

Mr. LODGE. Mr. President, may I ask the Senator from Wisconsin a question?

Mr. LA FOLLETTE. Certainly.

Mr. LODGE. I am entirely in sympathy with this amendment; I think it is a most important one; but, merely for my own information, I desire to ask a question. Of course this deepening of the Welland Canal will admit very large vessels. What has been done about getting them up by the Lachine Rapids? Are they likewise enlarging those canals?

Mr. LA FOLLETTE. I am not advised about that, Mr. President.

Mr. LODGE. I suppose that will follow.

Mr. LA FOLLETTE. I suppose that would naturally follow in order to secure the benefit of the deepening of the Welland Canal.

Mr. LODGE. I do not make that suggestion in opposition to the amendment at all. I think it is very important that we should have just this thing.

Mr. GALLINGER. Mr. President, will the Senator from Wisconsin permit me to make a suggestion?

Mr. LA FOLLETTE. Very cheerfully.

Mr. GALLINGER. I chance to be very familiar with that part of the country, and I wish to say that I do not see how these great vessels could get through either the Lachine Canal or the Cornwall Canal, which are comparatively small waterways. Possibly the Dominion of Canada has great projects in mind of enlarging those canals in the same way that she is going to enlarge the Welland Canal, but I can not, for the life of me, see how ocean-going vessels, drawing the depth suggested, could possibly get up or down to the Lakes.

Mr. LA FOLLETTE. As I understand, with the present watercourses, I do not believe they could.

Mr. GALLINGER. No.

Mr. LA FOLLETTE. But I apprehend, of course, that, in order to get the largest possible results from the development now going on at the Welland Canal, the British Government must contemplate enlarging these other canals; and I think it follows very logically that we ought to make this investigation, in order that the people of this country may avail themselves of the great benefit that will result from the enlargement of this canal.

I do not wish to take the time of the Senate another moment, Mr. President. I believe the amendment I have offered is meritorious and will commend itself to the judgment of the conference committee.

Mr. BRANDEGEE. Mr. President, before the Senator from Wisconsin takes his seat, I wish to make a suggestion. I have the amendment before me, and I see that it provides—

> That the Secretary of War is directed to investigate * * * what improvements would be necessary upon the Great Lakes and harbors thereof, etc.

I am not sufficiently familiar with the geography of that section of the country to be sure about it, but I have wondered whether that language would take in the connecting and adjacent waters—if there are any rivers between the lakes connecting them—or other adjacent waters or canals. I think it would do no harm to insert some words that would broaden the amendment, so that the investigation would not be confined to the lakes themselves.

Mr. LA FOLLETTE. I think the amendment covers the situation; but if the Senator from Connecticut has anything to suggest in that connection, I should be very glad to accept it, because I think the investigation should be as broad as possible in its character.

Mr. BRANDEGEE. I am willing to leave the matter to those who are more familiar than am I with the geography of that section; but I was simply going to suggest that after the words "the Great Lakes and harbors thereof," there be inserted "and tributaries thereto and connecting or adjacent waters," or some such language as that. I do not insist upon it at all, for I have no doubt the conference committee would work out the proper language anyway.

Mr. LA FOLLETTE. Mr. President, it is not my information that there are any such tributaries which it would be important to have investigated; but I see no objection to accepting the suggestion of the Senator from Connecticut. There may exist conditions of which I was not advised when I prepared this amendment.

Mr. BRANDEGEE. Having called attention to it, I am perfectly content to leave it to the conference committee to work out the proper language.

Mr. LA FOLLETTE. They will doubtless have full information on the subject.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Wisconsin.

The amendment was agreed to.

Mr. LA FOLLETTE. With the further indulgence of the Senate for just a moment, I wish to offer another amendment, which I send to the Secretary's desk.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 34, after line 24, it is proposed to insert:

> Improving the Duluth-Superior Harbor, Minn. and Wis., by enlarging the Superior Harbor basin in accordance with House Document No. 651, Sixty-fourth Congress, first session, $180,000; and the Secretary of War is hereby authorized to enter into a contract for such material and work as may be necessary to complete the said project, to be paid for as appropriations may from time to time be made by law, not to exceed in the aggregate $180,000, exclusive of the amount herein appropriated.

Mr. LA FOLLETTE. Mr. President, I think I can say all that I care to say upon this amendment in five minutes, and perhaps it might be as well to put into the RECORD some facts which might obviate the necessity of my appearing before the conference committee upon this subject.

This amendment, of course, is in no sense local in its character. The Superior-Duluth Harbor is one of the great harbors of the world. The tonnage received and shipped at the Duluth-Superior Harbor is greater than that at any other inland harbor of this country or of the world. It is simply astounding. Thirty-three million tons is the measure of commerce received at that great inland port, the farthermost point to the west of this great chain of lakes that is, I believe, to be connected in the near future with the ocean transportation of the world.

Mr. HARDWICK. Mr. President, if the Senator will yield for just a moment, I will ask if he knows the reason for the remarkable decrease, as great as are the figures he has suggested, compared with the commerce of that port the year before?

Mr. LA FOLLETTE. I am not able to account for that. I was going to call attention to it.

Mr. HARDWICK. I hope the Senator will, and I am sorry that I have troubled him.

Mr. LA FOLLETTE. The tonnage in 1914 was 33,000,000 tons. In 1913 it was 46,000,000 tons. I apprehend, Mr. President, that it will be found that the tonnage of other great world harbors fell off at about that time. I apprehend that there may have been an influence which was national, or perhaps world-wide, in its character affecting commerce everywhere.

Mr. HARDWICK. If the Senator will pardon me just a moment, that same argument would apply to every project in this bill against which continual assaults of that character have been made on this floor, would it not?

Mr. LA FOLLETTE. Yes; if the comparisons are made only within that short period of time.

Mr. HARDWICK. Within those two years.

Mr. LA FOLLETTE. Mr. President, the most accurate information which I have been able to obtain upon the subject—and I have been somewhat amazed to find that there is not a department of this Government which can tell you what is the tonnage of the commerce of the great harbors or ports of the world, excepting as it has relation to customs duties—but from the best information that I could obtain in 1913 the tonnage in and out of London by water was only 41,000,000 tons; at Liverpool but 35,000,000 tons in 1913; at Chicago but 14,000,000 tons; while this great inland harbor, Duluth-Superior, located on Lake Superior, at the tip of the chain of lakes, at a point that is like an index finger reaching out toward the West, had a commerce in 1914, as I have said, of 33,000,000 tons.

Mr. President, there has been expended on that harbor a very large sum of money, but it has been justified by the national character of the commerce. It is a distributing point for a vast territory to the west; it is the assembling point for a vast territory that ships to the East and to the great ports of the world.

The total number of vessels arriving and departing at this port in 1914 was 9,712, with a net tonnage of 28,000,000. They have immense ore docks there; iron-ore docks, with a capacity of 797,000 tons; coal docks, with a capacity of 10,908,000 tons; grain elevators, with a capacity of 31,625,000 bushels. In 1895 there were received and shipped at this port only 6,000,000 tons of commerce; but it had grown by 1914, in less than 10 years, to be 33,000,000 tons.

Maj. E. D. Peck, the engineer officer in charge of the work at this harbor, in a report upon this project, gives some interesting and important data with respect to the business of this harbor. He says:

> Through the existence and development of the large iron fields and the extensive grain-producing areas which are economically tributary to this port, and as the distributing and forwarding center for coal, lumber, and other commodities, Duluth-Superior Harbor ranks as of the first importance. The natural advantages of the harbor have been developed by the Government under various projects at a total cost of $7,418,002.25, as of June 30, 1914. The estimated value of commerce as of December 31, 1914, was $4,845,914,693.
>
> The total number of tons received and shipped for the calendar year 1914, was 33,535,704 with a total valuation of $287,002,960. Total number of vessels arriving and departing 9,712; net registered tonnage of all vessels arriving and departing 28,216,139. The average number of tons of cargo received per day during the season of navigation for 1914 was 45,176; the average number of tons shipped per day for same period was 97,528. Interlake traffic covered a period of 235 days. The harbor has iron-ore docks with a total storage capacity of 797,592 gross tons, coal docks with total capacity of 10,908,000 short tons, and grain elevators with total capacity of 31,625,000 bushels, and these freight-handling facilities are being increased annually. From a total of 6,325,351 tons of freight shipped and received in 1895, the commerce has increased to 33,535,704 tons shipped and received in 1914. From the curve of increase shown in the harbor commerce, and with a knowledge of the sources of supply which create this traffic it is believed that the prospective commercial importance of this harbor is

very great, and that any reasonable necessary aid to insure the safety of vessels using it would be fully justified.

Representative SPARKMAN, in the discussion upon this bill in the other House, speaking of this project and this harbor, said:

Now, the gentleman [Mr. LENROOT] has a project that is a very important one. I have been there and I know what his harbor is. There is not a more important inland harbor in the whole country than his, and I think it not only worthy but urgent, and as soon as we have a bill with new projects in it I think that will be taken care of.

The Superior-Duluth Harbor, Mr. President, is not only the greatest inland harbor in the United States, but it is the second greatest harbor of our country, and I think, from such evidence as I have been able to gather somewhat hastily, that it ranks second amongst the harbors of the world. Because of its great commerce and because of the pressing need of this improvement I offer this amendment, with great confidence that it will not only commend itself to the Senate but to the conference committee.

This amendment proposes merely that, in accordance with the recommendation of the engineers, who have investigated this subject thoroughly, there shall be deepened a basin of 160.2 acres, sufficient to enable the vessels that come into that great port, either by the Superior entrance or the Duluth entrance, to make their turn and anchor safely. The engineers, who have experience in this business, recommend precisely the amendment which I have offered.

Maj. Peek, the engineer officer in charge, speaking of the general difficulties attending navigation at this harbor, has this to say:

These exist mainly in the opposing action between waves and outflowing currents at the Duluth entrance during the prevalence of northeast storms, which create a very turbulent condition of the water at the entrance, and at such times during high wind vessels entering are in danger of losing steerage way and being carried ashore or against the piers. The occurrence of logs and snow are also temporary deterrents to navigation.

At Superior entry during storms the entrance is accomplished by vessels with much less difficulty and risk than at the Duluth entrance. This is probably due to the wider entrance between breakwaters and canal piers, the protection afforded by the breakwaters and reduction of wave height through the stilling basin; but after entering the harbor from the canal the basin from east to west is only 1,500 feet wide, and the four ore docks of the Great Northern Railway Co. are situated opposite the harbor entrance. This limited distance is too short for the larger class of vessels to be manipulated with safety in approaching their docks during northeast storms, and it is of common occurrence for such vessels to go on the ground in the vicinity of the mouth of the Nemadji River in preference to going up against the docks without proper control. No accidents have occurred in the new entrance that are attributable to the existence of conditions resulting from the improvement. On June 27, 1914, during a severe storm, the steamer *Mataafa*, through an accident to its anchor equipment, let go her anchor and swung off on a long chain; unable to recover the anchor, its stern beat along the north canal revetment for several hours before rescued by harbor tugs and inflicted very considerable damage to the vessel as well as damage of a minor character to the revetment.

Gen. Black, in a report upon this improvement, said:

It will be seen from an examination of the map that there is practically no space available in the vicinity of Superior Entry for the anchorage of large vessels. Superior Harbor Basin and Superior Front Channel are used for through traffic and for turning purposes, and experience has shown that the area now available is not sufficient for the latter purpose. It is believed that the magnitude of the commerce to be affected is sufficient to justify the estimated cost of the work. The board therefore concurs in the opinion of the district officer and the division engineer that it is advisable for the United States to undertake the improvement as outlined by the district officer, at an estimated cost of $360,000 and $3,000 per annum for maintenance. The sum of $180,000 should be made available in one appropriation with authority for continuing contract for completion of the work.

Gen. Dan C. Kingman, Chief of Engineers, in his report to the Secretary of War concurring in and approving the reports upon this project, said:

The basin is designed for turning and does not afford facilities for anchorage. Its width is too small for the larger class of vessels to be handled with safety in approaching their docks during northeast storms, and it is a common occurrence for such vessels to go aground.

I will not take another moment of the time of the Senate upon this subject. It is a worthy amendment; it is an amendment of importance to all the people who live between the Atlantic and the Pacific in the great northern belt of States. It is in no sense local in its character. I have been voting, Mr. President, against amendments that were local and which seemed to me not properly a part of any national scheme of commerce and not properly a subject of appropriation.

Mr. VARDAMAN. Mr. President——

The VICE PRESIDENT. Does the Senator from Wisconsin yield to the Senator from Mississippi?

Mr. LA FOLLETTE. I do.

Mr. VARDAMAN. I want to ask the Senator what amount of appropriation this amendment asks for.

Mr. LA FOLLETTE. The total amount necessary to make this improvement is $360,000, of which it is proposed by the engineers—and I follow their recommendations—that $180,000 shall be appropriated for this year. They also estimate that it will cost, as I remember now, $15,000 a year to keep the improvement intact.

Mr. VARDAMAN. Is it for continuing an improvement?

Mr. LA FOLLETTE. Oh, no; this amendment provides for a completed project. All that will be required hereafter will be the expenditure of a small appropriation of about $15,000 to take out the silt and sand and deposits that may drift or be washed in there naturally by river currents or lake waves. But this appropriation will be sufficient to remove every permanent obstruction, and hereafter there will be required only a small annual appropriation for maintenance.

Mr. VARDAMAN. The engineers have made an estimate for it, I understand?

Mr. LA FOLLETTE. My amendment is based upon the estimate of the department and the recommendations of the engineers.

Mr. OLIVER. Mr. President——

The VICE PRESIDENT. Does the Senator from Wisconsin yield to the Senator from Pennsylvania?

Mr. LA FOLLETTE. I do.

Mr. OLIVER. I rise to express the hope that the Senate will agree to the amendment proposed by the Senator from Wisconsin. The harbor of Duluth is just as important to the industrial interests of western Pennsylvania as it is to the people of Minnesota and Wisconsin. Too much attention can not be paid, too much money can not be spent, in improving the harbors upon the shores of Lake Superior, from which we draw all of the supplies of ore with which to run our furnaces, and to which we send a large part of the coal produced in the great State which I, in part, represent.

Mr. SMITH of Michigan. Mr. President, this item proposed by the Senator from Wisconsin undoubtedly has merit; and I want to call the attention of Senators to the fact that if the amendment proposing a lump sum of $25,000,000 had prevailed, just this kind of an amendment would have been entirely cut off. The new item proposed in the bill for the extra channel in the St. Clair River would have been cut off. The fourth lock at the Soo would have been cut off. Every new and meritorious item proposed in this bill, including the East River, the Los Angeles and San Diego Harbors, would have been cut off by a $25,000,000 lump-sum appropriation.

Mr. SUTHERLAND. Including Arcadia?

Mr. SMITH of Michigan. No, Mr. President; I think not. Every item in this bill to which criticism has been directed, without a single exception, is included in the items to which allotments were made by the Secretary of War from the lump sum that was last placed at his disposal. We of the committee feel that unless Congress is to abandon entirely the improvement of our rivers and harbors, special allotments made by the Engineer officers to going projects must be arrested. No project can be completed on such a plan. The Brazos River, the Trinity River, all of these items which have been criticized as undesirable, and yet they are favored with special allotments by the Secretary of War out of the lump sum voted last year and which Senators upon both sides of the Chamber vote for as though they were attempting to purge their consciences of some great sin.

Mr. CLARKE of Arkansas. Mr. President, there is nothing objectionable about this item except the fact that the bill has already attained very large proportions.

Mr. SMITH of Michigan. I am not opposed to this item.

Mr. CLARKE of Arkansas. The amendment comes to the Senate authenticated, as all items in the bill were at one time authenticated, by the approval of the Board of Engineers; and, so far as I have anything to say about it, I hope the amendment will be adopted.

Mr. SMITH of Michigan. I am not opposed to this item and shall vote for it.

Mr. CLARKE of Arkansas. Let us get at it, then.

Mr. SMITH of Michigan. Nevertheless, I can not resist the temptation to say that if this whole river and harbor legislation should eventuate in the passage of a lump-sum appropriation—and I understand, now that $20,000,000 has been voted down and $25,000,000 has been voted down, that we are soon to have an opportunity to vote for $30,000,000—a lump sum of $30,000,000 placed to the credit of the War Department for river and harbor work would be allotted in part to the very items in this bill against which Senators have fought with such feeling, while items like this proposed by the Senator from Wisconsin, the East River item, and the one which was put into the bill at my instance for the building of a new channel in the St. Clair River, like the one for the building of the fourth lock at the Soo, which is absolutely demanded, would fall by the wayside. Not one of them would get an allotment under the twenty, twenty-five, or thirty million dollar lump sum which Senators upon both sides of the Chamber are urging should be appropri-

nted, instead of this carefully worked out plan proposed by the engineers of the Government.

I did not want this matter to come to a vote without calling attention to that very marvelous inconsistency that can hide its offense in a lump sum and appear in most virtuous garments when the vote is taken for specific improvements throughout the country, national in character. This bill has been carefully prepared under the immediate eye of the War Department and its Corps of Engineers, nine-tenths of it inherited by us from past Congresses, which had the approval of distinguished men whose character and reputation should make them safe from unfair and unjust criticism. I do not want it understood that any Senator can salve his conscience with a $25,000,000 lump sum which will go to old projects that have been criticized over and over again on this floor, and that he is committing a great offense when he votes for the specific items that bear the approval of the War Department and of the Engineer Corps of the Army, nonpartisan in character, now in the bill.

If Senators who live in the interior, and have no waterways to improve, could go down before the Engineer Board of the Army and undertake to get them to review projects that have received the disapproval of the local engineer, they would soon find the difficulties in their pathway. The members of that board owe no obligation to anyone, political or otherwise.

I think this amendment proposed by the Senator from Wisconsin is a very meritorious one. I do not know just why it did not get into the bill in the first place; probably because the report may not have reached here in time, just as some of the reports for projects that have been approved, affecting my own State, have not reached here yet. This is probably a belated report; but it has my very warm approval, and I hope it will be adopted.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Wisconsin [Mr. LA FOLLETTE].

The amendment was agreed to.

Mr. NORRIS. Mr. President, on page 8 of the bill, I move to strike out line 3.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 8 of the bill it is proposed to strike out line 3, in the following words:

Toms River, N. J.: For maintenance, $2,000.

Mr. NORRIS. Mr. President, I shall not detain the Senate longer than a few moments.

Mr. GALLINGER. Mr. President——

Mr. NORRIS. I yield to the Senator from New Hampshire.

Mr. GALLINGER. In view of the excoriation we received from the Senator from Michigan [Mr. SMITH] does not the Senator think he is rather rash to make this motion?

Mr. NORRIS. I will say to the Senator that one of the reasons I have for making it is to use this as an opportunity to reply somewhat briefly to what the Senator has said.

Mr. KENYON. Mr. President——

Mr. NORRIS. I yield to the Senator from Iowa.

Mr. KENYON. I was going to ask if this amendment had any relation to Arcadia.

Mr. SMITH of Michigan. It is in the same Temperate Zone.

Mr. NORRIS. Yes; it is of the same general character.

Mr. President, I do not expect even to ask for a roll call upon this motion. This amendment is one of 19 somewhat similar to this one that I had prepared and expected to offer if occasion should demand it—some of a little more importance, and involving a little more money. We have been discussing this bill for quite a considerable length of time, however; it has been very fully debated, and amendments similar to the one I have offered have been voted down over and over again. So it is quite apparent that it is not possible to make any motion to strike out any appropriation in this bill and succeed; and that having been determined by a fair and honest discussion extending over several days, I have no desire further to prolong it.

I do not believe, Mr. President, as I have said before, that the bill under consideration is constructed along proper lines and on the proper fundamental ideas. This particular amendment that I have offered applies to Toms River in New Jersey. It is a completed project. In this bill $2,000 is appropriated for the maintenance of the project. During the year 1914 there was commerce on this river of 92 tons. It can not be said, as it has been said with reference to other similar motions to strike out appropriations from this bill, that it is not a completed project, and therefore that it is not fair to say that when it is completed there will not be a very large commerce. This is a completed proposition. It is not a very expensive one. It has not cost the Government very much, but the Government is paying somewhere in the neighborhood of a dollar a ton for all the commerce on that river even for maintenance, without regard to interest on any of the money that it has invested in the improvement. It is interesting to know—we have been working on it for a great many years—that the official record, the report of the Army engineers, shows, in Document 346, Sixtieth Congress, on page 4, why it was desirable to develop this river. I quote now from Col. Taylor, of the Engineer Corps, in the document referred to:

> Toms River is located on one of the three principal automobile lines of travel and has a large and increasing business from this source. Suitable depth in the river would increase this traffic, owing to the ease with which owners could communicate with their yachts at this point.

So we have developed this river for several years, and one of the principal and official reasons given for its development is that men who have yachts out on the ocean along the New Jersey shore, and who go from their yachts to their homes, riding from the harbor in automobiles, are able, since this improvement has been developed, to come nearer with their automobiles to their yachts. So we have expended several thousand dollars a year for quite a number of years in order that the owners of yachts may bring those yachts up closer to a connection with their automobiles.

In my judgment, this is no worse than a good many items contained in the bill upon which we have had roll calls, debate, and consideration. For that reason this amendment or any other amendment that I had intended to offer would not have any effect upon the legislation, and it would only tend to add cumulative evidence, I think, to the illustrations that are already in the RECORD.

It seems to me that the Senator from Iowa [Mr. KENYON], although criticized and his motives sometimes impugned, has made a record in this case that is very commendable. In the face of that record, even though all of his amendments have been voted down, I doubt whether Congress or the Committee on Commerce will ever undertake to build another bill along the same lines as those on which this bill and past bills have been built. I say that without any criticism of the members of the committee. I am not criticizing them even for the form of this bill, because they are only following the precedents of the past. As we progress in government and in legislation it is not to be considered an offense, in my judgment, to criticize the methods that have been used in the past and to which attention has been directed by pointing out their defects.

It was said by the Senator from Michigan [Mr. SMITH], who favored the Duluth Harbor appropriation, as I presume all of us did, that if we had passed a lump-sum amendment such harbors would have been stricken out. But the lump-sum amendment was not offered, the motion to recommit with instructions was not offered until the Senate time and time again had voted down motions to strike out of the bill the very items the Senator from Michigan said would get in under a lump-sum amendment. In other words, those who are opposed to this system of legislation did the best they could to strike out of the bill the items that we have criticized and believed were wrong, and in all those motions I think we always found the Senator from Michigan was opposed to striking them out. So, if it is continued, your river and harbor bill really will come down to this, that you can not get a good harbor improved unless the bill that provides for the improvement of the good harbor can be included with a whole lot of rivers and harbors and creeks and mudholes and bayous that, if they stood on their merits alone, would not get any support.

Those who have opposed the methods of thus legislating have not been and are not enemies of river and harbor development where the improvement of the harbors and of rivers is of national importance. The illustration of the vote for the Duluth Harbor is an instance of it, the New York Harbor is another instance where those Senators who have been criticized because they criticized the little creeks and rivers contained in the bill were doing the best they could to make liberal appropriations for such harbors.

If a lump-sum appropriation would cut out some good harbors, it is true that the lump-sum appropriation, if the amendment offered by the Senator from Iowa had been adopted, would have saved nearly $28,000,000 to the taxpayers of the country. If those who are opposed to lump-sum appropriations for rivers and harbors would unite with those who have offered that kind of a remedy—to take out of the river and harbor bill these little creeks and rivers of no consequence—then lump-sum appropriations would be unnecessary.

Mr. SMITH of Michigan. Mr. President——

Mr. NORRIS. I yield to the Senator.

Mr. SMITH of Michigan. The Senator knows that we have passed no river and harbor bill for several years, and we have had lump-sum appropriations of $20,000,000 placed to the credit of the War Department to be expended on these identical proj-

ects. If you place another lump sum of $20,000,000 or $25,000,000 to-day you exceed by both appropriations the amount carried in this bill, and your improvements relate only to old projects that have been condemned by the Senator and others on both sides of the Chamber.

Mr. NORRIS. They have not all of them been condemned by the Senator from Michigan.

Mr. SMITH of Michigan. No; because the projects are old and have been approved. I have read the reports, and they are exhaustive and favorable. We can not play fast and loose with such matters in justice to the communities served.

Mr. NORRIS. The speeches which have been made against these condemned harbors and streams have consisted mostly in reading the official reports into the RECORD.

Mr. SMITH of Michigan. I have read the reports, and I have heard the engineers. If you are going to stop river and harbor improvement, if you are going to say that the Engineer Corps can not govern or be trusted, if you are going to limit these expenditures to $25,000,000, they should be apportioned according to merit by the Engineer Department. If the Trinity River and the Brazos are included, well and good. Both improvements have been condemned by Senators but approved by the War Department.

Mr. KENYON. I should like to ask the Senator from Michigan if he did not vote for Trinity and Brazos River improvements?

Mr. SMITH of Michigan. I did, on the recommendation of the Government engineers.

Mr. KENYON. Why does the Senator complain about them?

Mr. SMITH of Michigan. I am not complaining.

Mr. KENYON. The Senator also voted for propositions condemned by the Army engineers.

Mr. SMITH of Michigan. No, sir.

Mr. KENYON. Arcadia and the Arkansas River.

Mr. SMITH of Michigan. Arcadia was approved by Congress and by the President. The Senator speaks of Trinity River. When Trinity River has been improved as the Board of Engineers recommended it it may be a very useful improvement. The Texas Senators think so and the War Department says so. Take almost any waterway improvement. Even the Panama Canal must be completed before it is useful. In a partial state of completion it amounts to nothing. Take the New York Canal; in a partially completed state it is nothing. Yet over $100,000,000 has been appropriated by the State of New York for it. You have got to complete it before you can fairly get an accurate judgment as to whether it is a good project or not.

I am not going to condemn the Trinity River improvement, which was projected years ago—the first appropriations for it came from a Republican Congress and from distinguished Senators upon this side as well as the other—I am not going to condemn it now. The Engineer officers said it was feasible and Congress, appropriating the money, said it was practicable. If it costs $100,000 to complete a $3,000,000 improvement and the Government has spent the money, how puerile and idle it is to withhold the small sum necessary to its completion.

Mr. KENYON. Does the Senator claim that the Trinity improvement will be completed for $100,000, carrying 37 locks and dams?

Mr. SMITH of Michigan. No; I think the improvement of the entire stream is more expensive. If the Government makes it navigable as far as Dallas, perhaps it may be useful. Congress said so years ago, and spent the money on the plan.

Mr. NORRIS. I hope the Senator will make his question short. I should like to proceed.

Mr. SMITH of Michigan. If I do not make my question short, the Senator's speech will be very limited, I am afraid, and I apologize to him for the interruption.

Mr. NORRIS. The Senator from Michigan is not justified in saying that. I have not given any indication of weariness yet. I may be able to talk until sundown, but I do not believe I will. It will at least be too long for anybody to read.

Now, Mr. President, I said at the beginning——

Mr. GORE. Mr. President——

The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Oklahoma?

Mr. NORRIS. I yield.

Mr. GORE. Mr. President, I should like to occupy just a moment in connection with what the Senator from Michgian said of the Trinity River. Will the Senator from Nebraska yield?

Mr. NORRIS. Yes.

Mr. GORE. I desire to say that it was my privilege to live in the State of Texas for some five or six years, and I feel a deep concern in anything affecting the welfare or the prosperity of that great Commonwealth. I happened to live in the county of Navarro. Trinity River forms the eastern boundary of that county for some 50 or 60 miles as the crow flies, perhaps a hundred miles as the river flows. I have fished in that stream and without difficulty have stepped across it time and time again. I remember that I attended a meeting once called for the purpose of promoting the navigation of Trinity River, and that Maj. Miller in the course of his remarks opposing the enterprise declared that a raccoon could wade the stream from Dallas to the Gulf without getting his breastplate wet. Yet, I repeat, I feel an interest in the welfare of the State of Texas, and I regard the scheme to render the Trinity navigable as one of the most deserving projects in the pending rivers and harbors bill.

Mr. NORRIS. Mr. President, there is not any doubt but that if you dig a well out on the plains near a stream of water that is not half an inch in depth you could get out of that well water, and then if you dig a canal and you fix it so that it could not seep away and put a cover over it so that it could not evaporate, in time you could get enough water in that manner to navigate a battleship. That is what we are trying to do down on the Trinity. They have to build a dam every few feet, in order to hold the water back, to get it deep enough, so that a raccoon can not walk across it and so that it will hold a gasoline boat or something of that kind. That is the method of legislation that those who are opposed to this bill are opposed to. This bill is full of such things. You can get water enough if you have any kind of a supply, if you can keep the supply running and prevent its waste. So, when they canalize that river, the little stream that would not get over your ankles if you walked through it can be dammed and held back until it has a depth of 20 feet.

And when that is all done, Mr. President, it is done for the accommodation of just one city. If you canalize that river, instead of requiring one hundred thousands to complete it, it will require several hundred thousand dollars to maintain it after its completion. It will be like some other items that I remember calling attention to last year in the river and harbor bill, where the Government could have bought all the commerce, all the freight, that passed over it and paid for it at what it was worth for what it cost to maintain locks and dams on the stream.

Mr. President, that is not business. That is not what we ought to use public funds for. There is no reason why a man should not be able to say when he sees a little stream like the Trinity, as has been so well described by the Senator from Oklahoma, we can dam it up and hold the water back, and get water enough to float a ship, but it is not a practicable proposition to do. We can raise bananas up here on a farm if we will put in a heating plant and build glass houses over the farm. We can raise as good bananas here as they raise in Costa Rica, but it would cost about $5 for each banana perhaps. It is not a practical proposition. That is the trouble with very many things in this bill and other bills like it that we have passed in the past. It is the system, Mr. President, that is wrong.

Again, let me call the attention of the Senator from Michigan to the fact that the amendment now pending is not subject to the argument the Senator makes about the Trinity. Here is the Trinity, on which we spend several million dollars, and it will take several million dollars yet to complete it. The Senator said you must not criticize this river, because we do not know what is going to happen when it is completed; it may be a good thing. But the amendment before the Senate relates to one that is completed; it has a commerce of 92 tons on it; and we are paying $2,000 for maintenance to keep it up next year.

Mr. KENYON. How many tons?

Mr. NORRIS. Ninety-two.

Mr. KENYON. Is the Senator correct in his figures?

Mr. NORRIS. I was not there, but I read that from the record. It is in the committee's report, taken from the engineers' report. In 1914 it had a tonnage of 92 tons.

Mr. KENYON. The item, I suppose, received consideration by the committee?

Mr. NORRIS. Yes. This is one of the items which they so carefully prepared, as the Senator from Michigan said, under the eyes of the engineers; and the argument that it may be a great place for commerce when it is completed will not apply, because it is completed. It is finished, and the result is that millionaires who have private yachts on the ocean can bring their yachts up closer to where they can get into their automobiles from their yachts.

Now, the Senator from Michigan is just as much opposed to striking this out of the bill as he is opposed to striking the Trinity River item from the bill. In the one case he says it is not completed, and therefore we ought not to strike it out, because it may develop into something great, and in the other case he

says it is completed, we have put all that money into it, and therefore we must not give it up.

It does not make any difference which dilemma you may take or which way you go, those who favor that kind of legislation are opposed to striking anything out of the bill. We could not strike them out, as we have been trying to do for several weeks here. Then we made a motion to appropriate a lump sum as a last resort, the motion offered by the Senator from Iowa, and we are criticized for supporting that motion, because as the Senator from Michigan says, if that goes through some of these worthless projects like Trinity River will get some of the money. It was not our fault that Trinity River and such places were left in the bill. So those who favor that kind of legislation profit by their own sins. It seems to me that they are opposed to taking these streams out, and after they have prevailed and they have been left in then they are opposed to a lump-sum appropriation because these streams might get some more money under that kind of a procedure.

Mr. President, it does seem to me that as to our river and harbor bills the details ought not to be left to Congress. I believe that a lump-sum appropriation is the best way to do it. It ought not to be confined to old items. I will admit that as far as I am concerned if there is a new item that is worthy it ought to be put in, but we surely ought not to go on forever appropriating for what, in effect, I think is conceded to be wrong, simply because it has been done in the past and, as the Senator says, because it was advocated by Senators and officials who were great and who were honorable. It does not mean that we are censuring the statesmen of long ago because we find fault with the methods that they pursued. They, in their day, criticized the methods of their fathers, and, in fact, unless that had been done we would have been in a state of barbarism yet. We would not have this country with its boasted civilization if it had not been that men had the courage to criticize things that had been done honestly by honest and great men who lived before them and who lived with them.

While this bill, of course, is going through as it has been reported and as it has been slightly amended, I believe that the great Committee on Commerce, presided over by one of the very fairest men I have ever known, will profit by the fight which has been made here by the Senator from Iowa, and that through him and those who will labor with him we shall have a reform in the system by which we will get better legislation and better improvements and have at the same time more economy.

The VICE PRESIDENT. The question is on the amendment of the Senator from Nebraska [Mr. NORRIS].

Mr. CLARKE of Arkansas. Does the Senator insist on a vote on the amendment?

Mr. NORRIS. I will not ask for the yeas and nays.

The PRESIDING OFFICER (Mr. WALSH in the chair). The question is on agreeing to the amendment. [Putting the question.] The Chair is unable to decide.

Mr. REED. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Bankhead	Gallinger	Myers	Simmons
Borah	Gore	Nelson	Smith, Ariz.
Brady	Harding	Newlands	Smith, Mich.
Broussard	Husting	Norris	Smoot
Chamberlain	James	Oliver	Sterling
Chilton	Jones	Overman	Sutherland
Clark, Wyo.	Kenyon	Page	Taggart
Clarke, Ark.	La Follette	Poindexter	Thompson
Culberson	Lane	Ransdell	Underwood
Cummins	Lea, Tenn.	Reed	Vardaman
Curtis	Lee, Md.	Shafroth	Walsh
Fall	Lodge	Sheppard	Warren
Fletcher	Martin, Va.	Shields	Williams

The PRESIDING OFFICER. Fifty-two Senators have answered to their names. There is a quorum present. The question is on agreeing to the amendment offered by the Senator from Nebraska [Mr. NORRIS].

The amendment was rejected.

Mr. GORE. I offered an amendment a few days ago, which is now on the table. I ask to have it read.

The PRESIDING OFFICER. The Secretary will read the amendment.

The SECRETARY. On page 32, after line 2, insert:

Illinois River, Ill.: Improving the Illinois River from Utica to its mouth in accordance with House Document No. 762, Sixty-third Congress, second session, $1,050,000.

Mr. GORE. Mr. President, I desire to say that I voted to recommit the pending bill. I shall not vote for its passage, whether the amendment which I have offered be adopted or rejected. I have never voted for a river and harbor bill during my service in the Senate; perhaps I never shall.

During my brief service in this body I have seen some $200,000,000 or $250,000,000 appropriated for the improvement of rivers and harbors. Of course, I share the pride other Senators entertain in the splendid merchant navy which burdens the waters of these inland highways. I rejoice in that magnificent, that golden stream of commerce which makes use of these highways. But, Mr. President, in my judgment, perhaps the major portion of the money carried in this bill and carried in preceding river and harbor bills has been wasted. If river and harbor bills can be judged by their fruit, by their returns, by the benefit which they render to the taxpayers, which they render to the public, which they render to the Republic, then we must condemn this measure as we must condemn other river and harbor bills.

There is no seasonable time to waste the people's money. We are the trustees of the public revenue and we ought to husband it even with greater scruples than if it were our private property.

Mr. President, I will vote for almost any project to improve a river if the Senator proposing the project will stand up in his place in this body and assert upon his responsibility as a Senator that if he owned the river and owned the money he would make the improvement as a private investment. Upon that standard I will commit myself to river and harbor improvements.

Mr. President, the situation of the Federal Treasury is unsatisfactory. The Treasury is depleted. It is a grim condition that stares us in the face. Before this Congress adjourns we must find ways and means to add $150,000,00, perhaps to add $200,000,000, to our annual revenues.

These revenues must come out of the people's earnings; the Government's income must come out of the people's income.

Mr. President, the European war has caused a falling off in our imports; has caused a falling off in our revenues. We have already passed one war-revenue measure. That emergency measure was designed to raise some $80,000,000 a year. We now have in contemplation another revenue measure which is intended to raise approximately $200,000,000 more. As I have already observed, our revenues have been falling off and we are threatened with increasing taxes in order to supply the deficiency. In disregard of that unfortunate situation, we are expending money—I had almost said recklessly—in the $43,000,000 carried in this river and harbor bill. As a result of the war abroad and the war mania at home, we are increasing our appropriations for the Army many millions of dollars. The naval appropriation bill this year will carry an additional $100,000,000 over the $150,000,000 of last year. It will aggregate a quarter of a billion this year. This is a result of the European war, or rather a result of the imaginary terrors, of the hysteria which has grown out of the war. Preparedness at any price is not a cheap blessing. Militarism is not an inexpensive curse.

This ought to warn us, Mr. President, to practice the most scrupulous economy, not only because we are under a solemn obligation to the taxpayers of this country to conserve their revenues, but there is an additional obligation resting upon the party in power. We came here upon the pledge of economy. We reprobated Republican extravagance. In its stead we promised Democratic economy. I am anxious to see that bond redeemed to the uttermost letter—not only the letter, but the spirit of the bond should be redeemed.

Senators on the other side will vote for these vast appropriations; they will vote to compel us to lay ourselves liable to the charge of extravagance. They will not share the responsibility during the coming contest; they will not defend the pending river and harbor bill; but they will array and arouse public sentiment against the Democracy on the ground that, instead of being economical, it has been extravagant; and, sir, what sufficient answer shall we find to that indictment?

Mr. President, I was amused and delighted with the unsophisticated amendment offered by the new Senator from Indiana [Mr. TAGGART]. I say "new" because "thereby hangs a tale." The Senator from Indiana has a keen sense of humor as a rule; he has an Irish sense of humor; but his service in this body has been brief. He takes the river and harbor bill seriously. He presumed to offer an amendment providing that the Secretary of War must find that any project in this bill must be either essential to and, if not essential, at least promotive of interstate commerce or of foreign commerce.

Think of it, Mr. President! Nobody but a neophyte in this body would have offered such an amendment as that. The Senator assumed that there was some relationship between the

river and harbor bill and interstate and foreign commerce. He was misled by an association of ideas which might very well characterize a practical man or a private citizen, but which could not be pardoned on the part of a Senator who had seen any considerable service in this body.

Now, I am afraid that Senators on the other side, while professing to support this bill in good earnest, are really voting for this bill because they think that it will render Salt Creek navigable—that is certainly the only stream it will render navigable—and they think that stream will be thrown open to navigation on the 7th day of next November on behalf of Democratic Senators and other Democratic candidates. Of course, I know the great honor and the glory which it brings to a Member of Congress to return to his constituency and to point to a lavish appropriation obtained for some spring branch in his district. He may point to it as a monument, Mr. President; but I fear that it may serve as a different sort of a monument, and may bear a real epitaph, not only of Senators and Representatives but of the Democracy itself, if we persist in this policy of overrigorous economy and overscrupulous redemption of our solemn pledges to the American electorate.

As I suggested before, I should be willing to vote for almost any project if the Senator promoting the project should assert upon his responsibility as a Senator that if he owned the stream and owned the money he would make the improvement as a private investment. Perhaps that is true now. Perhaps Senators have investigated these projects; perhaps their official conduct here is but typical of what they would do in case they occupied the situation which I have described. Perhaps they fondly believe that the faith which will remove mountains will also canalize rivers and even rivulets. Indeed, I have no right to assume the contrary, but I indulge that—I will not say "presumption"— I will take it for a fact in their favor.

Mr. President, there are a few projects which, in my judgment, deserve favorable consideration. The amendment which I have proposed involves one of those projects. It involves a great inland waterway, stretching from the Gulf of Mexico, by way of the Mississippi River, the Great Lakes, the St. Lawrence River, to the Gulf of St. Lawrence; from the Gulf of Mexico, by way of the Mississippi and the Great Lakes, to the Erie Canal, to the Hudson River, to New York Bay. It would be an inland sea of 2,980 miles—the greatest inland waterway upon the face of the globe.

Mr. President, the Hudson River would constitute 212 miles of this majestic waterway. It can and will be completed in 1917 with a depth of 12 feet. This bill carries all of the appropriation necessary for its completion, save about $600,000. The Erie Canal would constitute some 365 miles of the proposed highway. It will be completed in 1918, at a depth of 12 feet, and at the expense of the State of New York.

I might add that in addition to the principal line from Lake Erie to the Hudson River, the Erie Canal has a branch up to Lake Champlain, and another to Lake Ontario at Oswego, N. Y.

Of the proposed waterway the Great Lakes would constitute 890 miles, already completed, with a depth of more than 20 feet, and already available for navigation.

In addition, the Illinois Drainage Canal is already completed to a length of some 30 miles, with a depth of 21 feet, extending from Chicago, on Lake Michigan, to Lockport. The State of Illinois has appropriated $5,000,000 to construct a canal from Lockport, the terminus of the canal just mentioned, to Utica, on the Illinois River, a distance of 65 miles. This canal is to have a depth of 8 feet. From Utica to the mouth of the Illinois River at Grafton, on the Mississippi, is a distance of 230 miles. The engineers have passed favorably on this as a feasible project at a depth of 8 feet. It would cost only $1,050,000 to complete this intervening link, which is the link involved in the pending amendment.

From the mouth of the Illinois River to St. Louis is a distance of 40 miles. To complete that link would cost $3,700,000. There is already available for navigation a channel from St. Louis to the mouth of the Ohio at a depth of 8 feet. The channel of the Mississippi is already available at a depth of 9 feet for a distance of 833 miles to what are known as the Passes of the Mississippi River. From the Passes to the Gulf, a distance of 240 miles, the channel is already available at a depth of 30 feet.

Mr. President, by the expenditure of $600,000 more on the Hudson River, by the expenditure of $1,050,000 on the Illinois River, and by the expenditure of $3,700,000 on the Mississippi from Grafton to St. Louis this mighty inland waterway could be completed, could be rendered available to navigation, and could be finished within the next two or three years.

Of course, there are two other things, in addition to mere water, which are essential to the successful navigation of our rivers. I waive, of course, the theory that you can navigate without water; I take no share in constructive navigation as a basis for the revision or reduction of railway rates. We ought to have the courage to make reasonable revision and reduction of railway rates without having recourse to this miserable fiction of artificial navigation.

In addition to that, however, terminals, docks, and wharves are essential to inland navigation. These do not exist on the Mississippi River. The same difficulty will be found to characterize many of the splendid thoroughfares provided for in this bill. In addition to that, we must safeguard the companies which embark upon inland navigation by legislation that will protect them against destructive competition on the part of railroads. I assume that that competition, if not destructive in the past, has at least been disastrous, but we have already commenced a policy of restraint to safeguard and to guarantee life to companies that undertake the navigation of our streams. What we have commenced we can and we ought to perfect.

With those two essentials the waterway which I have described would be the greatest inland waterway in the whole world. It would be many times longer than the Rhine. It traverses the most populous and the most productive region of the United States. Its entire cost of completion would aggregate only $7,000,000, less than half the cost of a battleship and only about one-third the cost of a fast battle cruiser. It would contribute, Mr. President, to the internal improvement—to the internal development of this country. It might be the cause or the instrumentality of preserving the prosperity of the great industrial centers in the Mississippi basin. I doubt if those industrial centers can maintain their standards of progress and of prosperity with the Panama Canal open to service, unless they obtain deep water to the sea. It is vital to their progress; it is vital to their prosperity.

I say, this inland waterway traverses the most populous, the most fruitful, the most productive region of the United States—the great Mississippi basin and through the entire State of New York from Lake Erie to the Hudson. It would contribute not only to the prosperity of these sections, but it would evidence the fact that in our rush to prepare for war we do not mean entirely to neglect preparation for peace.

Mr. President, the amendment which I have tendered relates only to the Illinois River from Utica to the Mississippi. That project carries only $50,000 in the pending bill. The engineers estimate that $1,050,000 will complete the work. Illinois has testified to her faith in the project by her action in authorizing the issuance of $5,000,000 of bonds for the completion of this project, and that expenditure will be of but slight service unless the United States shall join hands with the State and render the Illinois River navigable to the Mississippi.

In addition to this, we are improving the Mississippi from St. Louis to Minneapolis. The Hennepin Canal is already available from Hennepin, on the Illinois, to the mouth of Rock Creek on the Mississippi River and, if in real earnest we desire to promote inland navigation, there is no project in America more deserving of support than the one covered by the amendment which I have offered.

I believe that if you will select a few feasible projects and complete them and demonstrate their feasibility and their value to commerce, there will then be no complaint, there will then be no opposition to any real plan in the future for actual navigation; and if, upon completing the most promising projects, we are disappointed in our hopes, if they shall prove to be not feasible, if the coils of the railways have crushed them beyond all relief, let us ascertain that fact, let us arrive at a definite and a practical policy on which we can base our action intelligently for the future; abandoning a project if it be hopeless, and pursuing it vigorously to success if it be a practical project or if it renders a real return upon the investment. I am willing to vote reasonable appropriations to prepare for peace while others are voting such fabulous appropriations to prepare for war. Our permanent interest, our enduring glory must be found rather in the paths of peace than in the ways of war. I favor internal improvements; I favor real rational improvements. I desire the assurance that the people's money will be judiciously expended, that it will not be wasted, that it will be expended to promote the general welfare and will lay deep and broad the foundations of a more general and enduring prosperity.

Mr. President, I ask unanimous consent to put in the RECORD, following my remarks, a letter from Gov. Dunne, of Illinois, upon this project.

The PRESIDING OFFICER. Without objection, permission is granted.

The letter referred to is as follows:

STATE OF ILLINOIS, EXECUTIVE DEPARTMENT,
Springfield, February 21, 1916.

DEAR SENATOR GORE: I beg to acknowledge receipt of yours of the 13th instant, containing Senate Document No. 230, being a response on the part of the Secretary of War to a resolution introduced by you in the Senate.

I have just read the document with much satisfaction. It discloses the important fact that if the State of Illinois be granted a permit to construct a waterway between Lockport and Utica at a depth of 8 feet, as provided for in the bill passed by the last legislature of our State, authorizing the issuance of $5,000,000 worth of bonds for that purpose, that there will be a navigable waterway from New York to New Orleans via the Erie Canal, the Great Lakes, the Illinois waterway, the Illinois and Mississippi Rivers, of at least 8 feet in depth, leaving only the section from Utica, Ill., to St. Louis, Mo., with a depth less than 8 feet. I note that the estimate for deepening this waterway from Utica to St. Louis is $4,760,000, and that this work can be completed within three years. It inevitably follows from this that the Secretary of War should grant a permit to the State of Illinois to build a waterway between Lockport and Utica at its own cost. If this be done and Congress appropriates $4,760,000 for the deepening of the Illinois and Mississippi Rivers between Utica and St. Louis, we will have a waterway from the Atlantic seaboard to the Gulf of at least 8 feet in depth over the whole of its course.

Senators LEWIS and SHERMAN of our State are enthusiastic for the granting of this permit, and I would respectfully suggest that you and other broad-minded Senators having this splendid proposition in view would unite in endeavoring to get the Secretary of War to grant this State the permit for which she has been asking since last July.

I congratulate you upon your interest in this great project. I think the completion of a waterway between New York and the Gulf, at this reasonable cost to the United States and the State of Illinois, one of the greatest projects for the development of this country that has been launched in many years.

Very truly, yours,

E. F. DUNNE.

Hon. T. P. GORE,
United States Senate, Washington, D. C.

Mr. CLARKE of Arkansas. Mr. President, I assume that the Senator from Oklahoma submitted this amendment for the purpose of having an opportunity to make a very excellent speech, such a one as he always makes; but the amendment can not be considered in the face of objection, and I feel constrained to make the objection. It has never been referred to the Committee on Commerce. It was presented on the 9th of May and ordered to lie on the table and be printed. In addition to that, it has not been included in any estimate which has ever been made.

Mr. GORE. I will say to the Senator that there is an estimate in House Document 230.

Mr. CLARKE of Arkansas. There is a plan provided for, probably, but the improvement never has been estimated for by the department.

Mr. GORE. I think the document contains an estimate.

Mr. CLARKE of Arkansas. But the estimate is not contained in the Book of Estimates to which I have had access.

The PRESIDING OFFICER. The point of order is sustained.

Mr. CLARKE of Arkansas. Mr. President, the Senator from Wisconsin [Mr. LA FOLLETTE] has an amendment to offer to strike out an amendment already inserted in the bill; and as it is the policy of the committee to have the bill completed as in Committee of the Whole, I move to reconsider the vote by which the item was adopted in order that the Senator from Wisconsin may make any motion in connection with it that he may see proper to make.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Arkansas?

Mr. GALLINGER. Mr. President, let us understand what the amendment is.

Mr. CLARKE of Arkansas. I was going to make a statement about that. It is an amendment inserted in the bill at the instance of the senior Senator from Illinois [Mr. SHERMAN], and is contained on page 31, lines 24 and 25 and several lines at the top of page 32. I notified the Senator at whose instance the amendment was adopted that it was the purpose of the Senator from Wisconsin to make a motion to strike it out. That notification was given to him this morning. I have made some inquiry as to his whereabouts since that time, but I understand he is not to be found readily. I do not know what that means, and I simply make the motion I do in order that the matter may receive such attention as the Senate sees proper to give it.

The PRESIDING OFFICER. Without objection, the vote by which the amendment was incorporated in the bill will be reconsidered. The question now recurs on the adoption of the amendment, which the Secretary will state.

The SECRETARY. On page 31, line 23, after the numerals "$55,000," the following amendment was inserted:

And the improvement of navigation of the Illinois River authorized by an act of the Illinois General Assembly, approved June 18, 1915, providing for an expenditure of $5,000,000 therefor by the State of Illinois, be, and is hereby, authorized in accordance with said act. The Interstate Commerce Commission is hereby given power to fix reasonable charges and tolls for the use of and navigation upon the waterway created under said act of the general assembly of said State in all interstate transportation.

Mr. REED. Mr. President, I desire to ask what Senator it was who submitted the amendment?

Mr. CLARKE of Arkansas. The amendment was offered in the Committee on Commerce by the senior Senator from Illinois [Mr. SHERMAN].

Mr. LA FOLLETTE. Mr. President, I move to strike out the entire amendment offered by the Senator from Illinois [Mr. SHERMAN] and just read by the Secretary. It includes the committee amendment as well as the additional amendment regarding the control of tolls by the Interstate Commerce Commission.

I am constrained to believe, Mr. President, that if the Senate had understood the full import of this amendment proposed by the committee it would not have adopted it. I understand it was accepted by the committee without any discussion whatever, and without the presentation to the committee of the reports of the special board created by previous acts of Congress for the investigation of this important subject. It seems to have been offered in committee and adopted, as admitted by the senior Senator from Illinois when this subject was up earlier in the consideration of the bill, without any special consideration. When this subject was under discussion in the Senate the senior Senator from Illinois made certain statements which, without any intention upon his part, nevertheless, I am bound to say, were quite misleading.

It will be remembered by the Senate that the Senator from Michigan [Mr. SMITH] proposed to strike out this amendment to the pending bill and submitted some reasons in support of his motion. He was unable to prevail upon the Senate to strike it out. In the course of the debate the senior Senator from Illinois said, among other things, the following:

Mr. President, before the Senator from Michigan concludes I will ask him if he knows that the War Department, acting through its engineers, has made no objection on the question of lowering the Lake levels; that their objection, speaking through the Chief of Engineers, was entirely on the question of the possibility of the State imposing an excessive freight charge, or toll, and on the ownership of the hydro-electric power to be developed by the waterfall? The objection was based on those considerations and not on the question of Lake levels. They have not raised that question.

Mr. President, there can be no fair understanding of the import of this important amendment in the pending bill without some statement of the history of the whole proceeding. The amendment provides:

And the improvement of navigation of the Illinois River, authorized by an act of the Illinois General Assembly, approved June 18, 1915, providing for an expenditure of $5,000,000 therefor by the State of Illinois be, and is hereby, authorized in accordance with said act.

That is the amendment which, with the provision as to the control of tolls added on motion of the Senator from Illinois at the time of the debate a few days ago, is the proposition which I propose should be stricken from the bill.

It is quite misleading to the Senate, Mr. President, to say that the proposed amendment does not involve the taking of any more water from the Great Lakes. Perhaps, as limited to the terms of the amendment adopted by the committee, that would be true, but as being the basis for further application to Congress as flowing directly from the consequences inevitable from the adoption of this amendment, it falls very far from covering the case.

In so far as the improvement of navigation of the Illinois River is concerned, the withdrawal of 1,000 cubic feet of water per second would be sufficient to provide all the water necessary for navigation purposes resulting from the improvement in question.

But, Mr. President, this proposition involves much more than that. It involves the withdrawing of the water from the Great Lakes for what are called sanitary purposes in connection with the Chicago Drainage Canal, and it involves the withdrawing of larger amounts of water from the Great Lakes for water-power purposes, which are also wrapped up in the legislative act which would be approved by the adoption of this amendment. If Congress approves the scheme for which the act of the Illinois General Assembly provides, and to the approval of which, by its terms, this amendment commits Congress, it will involve the withdrawal from Lake Michigan of a vast amount of water, far beyond the navigation requirements of the proposed waterway, and far beyond the requirements for flushing of the river for sanitary purposes. It will involve the withdrawal of the water from the Great Lakes for water-power purposes in the interests of this particular State. It is a very innocent-appearing amendment, but its adoption will commit Congress to a scheme that ultimately and logically will be made the basis of the withdrawal of vast quantities of water from the Great Lakes, which will so interfere with the commerce of those lakes that it will entail upon the Federal Government the expenditure of enormous sums of money to erect compensating

works and to dredge the harbors and the entrances to the harbors over the entire Great Lakes region so as to meet the needs of commerce by restoring a proper depth of water. It will involve this Government in serious complications with Great Britain, because of treaty provisions which exist with Great Britain respecting the use of the waters of the Great Lakes.

If Congress sanctions any scheme of withdrawal of waters from the lakes for water-power purposes, it will at once violate the provisions of the treaty which has been entered into with Great Britain regarding the use of the boundary waters of the lakes common to the two Governments.

In 1899 the city of Chicago, having planned for a canal that would flush the Illinois River and carry off the sewage of that city, applied to the War Department for authority to withdraw from the Great Lakes at that particular point some 5,000 cubic feet of water per second. As I remember now, Mr. Alger was Secretary of War at the time. He granted permission for the withdrawal of 5,000 cubic feet of water per second for the purpose of flushing this canal to take care of the sewage of Chicago through the Illinois River. Subsequently it was found that the withdrawal of that amount of water seriously interfered with navigation, seriously interfered with the tonnage which the boats plying on the Great Lakes could carry and make the harbors of the Lakes, and Secretary Root, I believe, if I remember correctly, reduced to 250,000 cubic feet per minute the amount of water which the State of Illinois was permitted to use through this canal.

In order to set before the Senate the difficulties and the controversies which have arisen between the State of Illinois and the Federal Government, I think I can not do better than to read a memorandum recently made by Gen. Black, Chief of Engineers, to the present Secretary of War upon this subject. It is dated May 13, 1916. I will ask the indulgence of the Senate while I read the entire memorandum, because it bears so directly and so pertinently upon my pending amendment and for the further reason that there can be no proper understanding of this proposition without a knowledge of the history of the efforts of Chicago and Illinois to divert the waters of Lake Michigan.

Gen. Black, in his memorandum, gives a brief history of the matter involved in the pending amendment. He said:

The Chicago Drainage Canal was built under authority of the State of Illinois for sanitary purposes, and has never had the sanction of Congress. When completed in 1899, application was made to the War Department for permission to connect the canal with the south branch of the Chicago River, thereby reversing the flow of the stream which originally flowed into Lake Michigan, and diverting the waters thereof into the drainage canal. A conditional permit was granted May 8, 1899, in which the diversion was limited to 5,000 cubic feet per second. Subsequently on complaint of navigation interests the permit was modified, and on December 5, 1901, the Secretary of War fixed the amount of water allowed to be diverted at 250,000 cubic feet per minute, or 4,167 second-feet, which is now the legal limit.

From the beginning the operations of the sanitary district of Chicago have been looked upon with disfavor by navigation interests, and questions connected therewith have been constantly before the department. The reversal of the flow of Chicago River and the drawing of water into the drainage canal affects navigation seriously on account of the tendency to lower the levels of the Great Lakes, and also for the reason that current velocities in the river and its branches are materially increased. These injurious effects were clearly foreseen by the department, and hence the diversion has been restricted to the amount stated, and the Secretary of War has not only declined to increase the amount, but has consistently adhered to the position that the permit granted was to be considered of a temporary character, and that any permanent diversion of the waters of Lake Michigan into another watershed required congressional authorization.

Notwithstanding this well-understood attitude, the sanitary district has persistently sought to secure from the department permission to abstract larger and additional amounts of water. In 1907 application was made for permission to take an additional 4,000 second-feet through the Calumet River, and after careful and thorough consideration the Secretary of War denied the application, referring again to the desirability of submitting the matter to Congress.

In 1912 the matter came before the department again on an application for permission to divert from Lake Michigan into the drainage canal 10,000 cubic feet of water per second. A public hearing was held by the Secretary of War for consideration and discussion of the questions connected with this proposition. At this hearing opposition to the application was made by representatives of 23 cities and 6 States interested in the commerce of the Great Lakes and the harbors thereon; by navigation interests on Chicago River, and by representatives of the Dominion Government and of the cities of Kingston and Montreal, as well as private navigation interests. The subject was most exhaustively considered, and on January 8, 1913, the Secretary of War rendered a decision adverse to the applicants, in which he held:

1. That the diversion of 10,000 cubic feet per second from Lake Michigan would substantially interfere with the navigable capacity of the navigable waters in the Great Lakes and their connecting rivers.

2. That it would not be appropriate for the department to permit such a diversion without express congressional sanction.

3. That the provisions of the existing boundary waters treaty between Great Britain and the United States offer a further reason why no administrative officer should authorize a further diversion, manifestly so injurious to the interests of Canada.

Although the Secretary of War has fixed the limit of permitted diversion of 4,167 second-feet, and has repeatedly refused to grant any increase, it is known that the sanitary district has for many years been withdrawing a much larger amount of water. In fact, while this State organization has been prayerful as well as persistent in its application to the department, it has shown little regard for the decisions of the Secretary of War when rendered. Soon after the application of 1907 was denied the trustees of the sanitary district passed an order declaring the intention of reversing the flow of the Calumet River and withdrawing through it an additional 4,000 cubic feet of water, without the authority of the Secretary of War, unless prevented by injunction from so doing. Accordingly, in March, 1908, the Attorney General, at the instance of this department, sued out a bill of injunction restraining the sanitary district from reversing the flow of the river and from withdrawing water from Lake Michigan in a different way and in larger amount than was authorized by the Secretary of War. Again, in 1913, when the Secretary of War decided adversely to the application for permission to take 10,000 cubic feet of water, the sanitary district refused to conform to the decision, and another bill of injunction was filed by the Attorney General in October, 1913. These two suits were consolidated, voluminous testimony was taken, and the case, which has been ably argued, is now awaiting decision in the United States District Court for the Northern District of Illinois.

It has been shown that since 1910 the average daily flow through the Chicago River into this canal has been in excess of 7,000 cubic feet per second, and measurements taken by the United States Lake Survey indicate discharges in excess of 8,000 cubic feet per second, or practically doube the amount allowable under the permit of the Secretary of War. This represents a daily average withdrawal from Lake Michigan of more than 690,000,000 cubic feet, which is about equal to the entire low-water flow of the Mississippi River at St. Paul; and, by way of further comparison, it may be added that the low-water flow of the Mississippi River at Keokuk, where the large power plant of the Mississippi River Power Co. is located and operated, is only about twice as great as that now abstracted from Lake Michigan into this drainage canal. The continuous withdrawal of this volume of water will result in the permanent lowering of the surface of Lakes Michigan and Huron to the extent of 5 inches or more and of Lake Erie to nearly the same extent. That the State authorities contemplate a still greater diversion, 10,000 second-feet or more, hardly admits of doubt. The calculations of the United States Lake Survey, based upon observations covering a period of 46 years, indicate that the withdrawal of 10,000 second-feet would lower Lakes Michigan and Huron 6.9 inches, Lake Erie 5.4 inches, and Lake Ontario 4.5 inches at mean lake levels, the reduction being much greater at low-water periods.

To lower the water surface 6 inches would reduce the permissible load of one of the large modern vessels by from 300 to 550 tons, and the International Waterways Commission has estimated that the loss to navigation interests would amount to $1,500,000 per annum. Moreover, there are more than 100 works of river and harbor improvement on the Great Lakes and their connecting waters, for which appropriations aggregating more than $90,000,000 have been made. The application of this vast sum has resulted in securing specified widths and depths of channel, and to diminish these depths, even to a slight extent, will not only prove a serious injury to traffic but will undo the work that has been accomplished and necessitate the expenditure of further large sums of money for restoration. It would seem that any project that tends to reverse or annul the orders of Congress as expressed in the various acts appropriating funds for improving the harbors and channels connecting with the Great Lakes should meet the disfavor of the War Department, unless it has been sanctioned and authorized by that body.

W. M. BLACK,
Chief of Engineers, United States Army.

Mr. President, I am constrained to comment here upon the fact stated by the senior Senator from Illinois [Mr. SHERMAN] that the amendment which he proposed to this bill in committee was made without any discussion and without the presentation of any of these facts before the committee. It is but an indication, Mr. President, of how loosely river and harbor bills are prepared. The small attendance in the Senate Chamber at this particular time is a further indication of the lack of interest on the part of a majority of the Members of this body in a proposition which, as shown by all the authority upon which we act in regard to river and harbor improvements, menaces the interests of commerce in the interest of a State, not for the purposes of navigation but for the purposes of building up a water-power proposition which shall be made profitable to that State and to interests that can secure the benefit of this improvement because of their location within the State.

The act of the Illinois Legislature which this amendment would approve reads in its title:

An act to provide for the construction of a deep waterway or canal, to be known as the Illinois Waterway, from the water-power plant of the sanitary district of Chicago, at or near Lockport, in Will County, Ill., to a point in the Illinois River at or near Utica, in La Salle County, Ill., to provide for the issuance of bonds to pay for said deep waterway, to provide for the development and utilization of water power that may be generated from the water flowing through said waterway, to create a commission to be known as the Illinois Waterway Commission, and to make an appropriation to carry out the provisions of this act.

And in the first section of this law, after again describing the location of this waterway, the act contains this language:

And that there shall be erected, equipped, and maintained by the State of Illinois power plants, locks, bridges, dams, and appliances sufficient and suitable for the development and utilization of the water power of said waterway or canal.

Paragraph 9 of section 3 of the act of the Illinois Legislature contains the following:

The State of Illinois shall be liable for all damages to real estate or other property which shall be damaged by overflow or otherwise damaged by reason of the construction, enlargement, use of any channel, ditch, drain, outlet, embankment, wall, dam, crib, or other improvement or structure of that kind made under the provisions of this act.

But nowhere in the act is there any provision for the payments of damages which may be caused by the diversion of water from Lake Michigan. The act provides that the Illinois Waterway Commission shall collect tolls for the use of the said waterway, but is generous in that it provides for the free use of said waterway for the goods of and persons employed by the United States Government.

When the waterway is paid for and all the bonds which have been issued to pay for it have been paid, either out of earnings of the waterway or by the State of Illinois, then the channel which the act authorizes is to be turned over to the Government of the United States for navigation uses—

conditioned upon the proposition or agreement of said Government to maintain the channel as a waterway free from tolls for navigation and to operate and maintain the locks free of cost to the State of Illinois for all uses other than navigation, the channel and its appurtenances shall be and forever remain the property of the State of Illinois.

The mere quotation of these clauses from the Illinois statute is sufficient to demonstrate that the principal object of the State of Illinois in undertaking this improvement is not to create a navigable waterway, but is to create a great water power upon a navigable stream.

The public interest involved in this waterway is not alone that of the people of the State of Illinois or of those who reside along the banks of this river or who may be engaged in manufacturing upon the river.

It is so peculiarly situated that this waterway has an influence upon and may affect the well-being and the business of peoples situated along the whole chain of Great Lakes.

For a great number of years there has been public discussion as to the effect of the diversion of the water of the Lakes through the Chicago Drainage Canal. The water coming from Lake Michigan passes through the Chicago River, down through the canal, and finally finds its way into the Illinois River, and will be a part of the waterway which it is proposed to build under the act of the Illinois Legislature and which is authorized by the pending amendment.

When the diversion of water from Lake Michigan was first suggested it was for the purpose of cleansing the Chicago River. That river emptied into Lake Michigan and was an open sewer for the city of Chicago. By the creation of the drainage canal the course and the character of the river was changed, and instead of the river emptying into Lake Michigan it was made to empty into the waters of the Des Plaines River.

I fear, Mr. President, and there is good ground for such fear, that the sanction which this amendment gives to the development of the Illinois River will be made the ground for future action by Congress or by the War Department, which will authorize the diversion of the waters of Lake Michigan to this waterway to an extent greater than is now permitted and greater than the necessities of navigation would justify.

The Senate should appreciate the probable effects of this amendment. The report accompanying the bill discusses the improvement by the United States of the Illinois River from La Salle to its mouth at Grafton, but is silent with respect to the purposes and possible effects of the improvement to be made by the State of Illinois and to which improvement this amendment commits the Federal Government.

In 1909 there was introduced in the General Assembly of Illinois a bill to authorize the construction of a waterway from Lockport to Utica, Ill., and in the title of this bill, among other things, it is stated that its purpose is the—

development and utilization of the water power that may be created from the water flowing through said waterway.

That bill proposed that the State of Illinois should expend $20,000,000 in the creation of this waterway.

The river and harbor act approved June 25, 1910, authorized the Secretary of War to appoint a board of five members, and prescribed that such board shall report, among other things, upon the feasibility of the Illinois waterway, and also upon—

such measures as may be required to properly preserve the levels of the Great Lakes and to compensate, so far as practical, for the diminished levels in said lakes and of connecting waters thereof by reason of any diversion of water from Lake Michigan for the maintenance of the proposed waterway herein described, or diversion for any other purpose.

It further proposed—

that the report shall state the extent and character of the cooperation recommended and of the conditions considered necessary in connection therewith to fully protect the interests of the United States.

The board which made this investigation was composed of W. H. Bixby, brigadier general, Chief of Engineers, United States Army; C. MacD. Townsend, colonel, Corps of Engineers; C. Kelly, major, Corps of Engineers; J. B. Kavenaugh, major, Corps of Engineers; and John Boger, civil engineer.

This board filed its preliminary report November 1, 1910.

Under date of January 23, 1911, this board made another report and upon the subject of the conditions necessary in connection with cooperation between the United States and the State of Illinois to fully protect the interests of the United States, the report has to say:

A primary condition of that cooperation between the United States and the State of Illinois should be the exceptance in perpetuity of full responsibility for the State of Illinois or its agents for all damages by changes in lake levels, including cost of compensating works and for all damages to riparian owners, and the State should transfer to the United States the locks and the control of the waterway thus created so far as needed by navigation.

From this same report I also quote another paragraph as throwing light upon the real purposes behind the pending amendment.

This report further says:

By virtue of the act of Congress of March 30, 1822, dedicating to the State of Illinois the land necessary for a canal connecting the Illinois River with Lake Michigan, and the act of March 2, 1827, granting to the State certain public lands for the purpose of aiding in its construction, and the acceptance by the State of the conditions imposed therein, the State of Illinois obligated itself to construct a suitable waterway from Lake Michigan to the navigable waters of the Illinois River. In accordance with this agreement the State constructed the Illinois and Michigan Canal, from Bridgeport to La Salle, and improved the Illinois River by the construction of locks and dams at Henry and Copperas Creek.

For many years this waterway was a valuable route, but in recent years the State has neglected it and failed to maintain it abreast of the needs of commerce. The work now proposed by the State in connection with the canal of the Chicago sanitary district contemplates a waterway from Lake Michigan to Utica, which, although departing from the line of the old canal, substitutes a waterway more than sufficient for any probable navigation. This will, in effect, fulfill the original agreement between the State and General Government for this section and incidentally develop a water power which the State considers a profitable business investment. State or local agencies are better adapted than the General Government for conserving water power for their citizens.

The board believes that the State is more generous in its provisions for navigations than necessity requires, that the locks it proposes are larger than will be utilized, and that its original agreement would be amply fulfilled if it constructed locks 600 by 80 by 11 feet, and required at each lock ground sufficient for an additional lock should it ever be required, but it is also of the opinion that the State should be permitted to expend its own funds in such manner as it deems proper. With locks of the dimensions suggested by the board the $20,000,000 authorized to be appropriated by the State should complete this part of the waterway, and unless large expenditures are required for power rights even the larger locks could be constructed for that amount.

The report of this special board was submitted to the Board of Engineers for Rivers and Harbors, and on January 30, 1911, the Board of Engineers for Rivers and Harbors indorsed upon this report its views. It did not concur with the special board that the United States should assume any of the cost of this waterway in excess of the $20,000,000 which the State of Illinois proposed to spend, and added these significant words:

Moreover, it suggests that the amount of diversion to be permitted from Lake Michigan should be determined, if practicable, before the project is undertaken. Not only may this affect the attitude of the State toward the work, but also when the approximate minimum flow is known, it may be found advisable to substitute open-channel work for the four existing locks and dams that are retained in the plan of the special board.

It is understood that the sanitary district of Chicago and the State expect to develop considerable water power on that portion of the waterway between Chicago and Utica. As it is proposed that the navigable channel between these points shall be built without cost to the United States, it is believed that the General Government should relinquish to those local agencies any right that they may have in the power to be thus developed.

So the Board of Engineers recognized the danger to the Lake levels by the diversion of water, and counsels that before this waterway shall be permitted to be built that the amount of water to be diverted from Lake Michigan shall be determined.

The amount of water to be diverted from Lake Michigan has not been determined. Congress has not acted with respect to that subject. The War Department in 1901 did act. It acted under authority contained in the river and harbor act of March 3, 1899. The Secretary of War granted a temporary permit, under which there was authorized a diversion of 250,000 cubic feet of water per minute, or about 4,167 cubic feet of water per second. The Secretary of War at that time felt so uncertain as to the effect which this diversion would have upon the levels of the Lakes and the commerce of the Lakes that he did not give a permanent permit.

The permit was temporary in character. It is still a temporary permit. Its terms have been violated by the sanitary district of Chicago, and instead of confining the diversion to the amount therein authorized, according to the Board of Engineers, there has been diverted water to the amount of more than 7,000 cubic feet per second.

The Illinois bill of 1909 proposed a 24-foot waterway. In the final report of the board that investigated it is stated that if the waterway was to be used by vessels capable of navigating

the ocean and the Great Lakes it should have a depth of not less than 24 feet, and if it was to be used for river traffic—

navigation does not require its depth to exceed 9 feet. A depth of 14 feet, which has been frequently urged for this waterway, is greater than is necessary for river navigation and entirely insufficient for either lake or ocean vessels.

The final report of the special board of engineers on the waterway from Lockport to Utica, Ill., was made under date of August 15, 1913. That report contains some interesting data with respect to the effect of the Illinois waterway upon lake levels.

The report is contained in House Document No. 762, Sixty-third Congress, second session. I quote the following:

It is therefore evident that when the Lakes stand at mean lake level a diversion of 10,000 cubic feet per second from Lake Michigan through the Chicago drainage canal will ultimately produce a lowering of the water surface of Lakes Michigan and Huron and its connecting harbors and channels of 0.465 feet (5.58 inches), of Lake Erie of 0.448 feet (5.58 inches), and of Lake Ontario of 0.431 feet (5.16 inches); at lower stages the effect will be greater, due to the relatively smaller area of the cross section of the outlets.

The largest lake freighters recently built carry over 80 short tons of freight for each inch of loaded craft, and an uncompensated Chicago diversion of 10,000 second-feet would cause a loss to each vessel of at least 446 tons in carrying capacity for each down trip through the channels connecting with Lakes Michigan and Huron. This, based upon 25 trips per season, with vessels returning light, means a loss of at least 11,150 tons per year, and at a freight rate of 55 cents per ton represents a monetary loss of at least $6,000 per large vessel per year. During the season of 1912 there passed through the locks at Sault Ste. Marie over 72,000,000 tons of freight, the greater part of which was carried in vessels of such size as to be affected by any loss of depth caused by a Chicago diversion. The tonnage of 1913 bids fair to exceed the tonnage of 1912. The lowest estimate of the loss to American vessels alone that has been brought to the attention of the board is over $1,000,000 per annum, and the loss will increase with the increase in the number and size of vessels.

It is evident therefore that any diversion with consequent lowering of lake levels will cause a direct financial loss to vessel owners, and such a loss can be prevented only by the adoption of remedial measures.

The Board of Engineers for Rivers and Harbors considered this final report of the special board and submitted its report thereon under date of December 16, 1913, and the Board of Engineers in 1913 reiterated and emphasized the recommendations made in 1911. It says:

The special board states that a primary condition of any cooperation between the United States and the State of Illinois should be the acceptance in perpetuity of full responsibility by the State of Illinois or its agencies for all damages by changes in lake levels, including cost of compensating works, and for all damages to riparian owners; and the State should transfer to the United States the locks and the control of the new waterway thus created, so far as needed by navigation, and the locks and dams at Henry and Copperas Creek, on the Illinois River.

Again evidently impressed with the need of preserving the lake levels, the Board of Engineers say:

The investigations and studies of the special board show that the diversion of water from the lakes lowers the levels progressively in proportion to the amount so diverted, the full effect not being observable for some time, and that for the 10,000 second-feet diverted through the Chicago Drainage Canal at mean lake level the water surface will be lowered to Lakes Huron and Michigan 0.465 foot; in Lake Erie, 0.448 foot; in Lake Ontario, 0.431 foot. Such lowering would materially affect the carrying capacity of the large freight vessels, estimated at 88 tons per inch of draft, and would cause a loss on American vessels alone, at the lowest estimate, of $1,000,000 per annum.

Three methods for compensating such diversion have been considered by the special board: (1) By the construction of submerged weirs with arbitrarily controllable sluices at the lower ends of the Lakes; (2) by reducing the area of the natural outlets by the construction of fixed contraction works therein; (3) by dredging harbors and connecting channels. The investigations of the board show with certainty the result of diversion of water through a new outlet is a lowering of Lake levels. The effect of the great storage capacity of the Lakes and of the natural fluctuations of level due to natural causes, such as the varying amount of rainfall and the varying amount and direction of wind pressures, is such that the absolute level at a given time at any given place can not be predicted, and human wisdom is inadequate to regulate a variation of discharge through the outlet in such a manner as to produce a definite desired result. Method No. 1 therefore must be classed as impracticable. Compensation by dredging is practicable, but on account of the extensive areas involved this method would be unduly costly. Of the three methods, the second only is therefore favorably considered. The special board proposes to hold up the level of Lake Erie by the construction of three submerged weirs in Niagara River, at an estimated cost of $150,000, and that of Lakes Michigan and Huron by submerged weirs in St. Clair River, at an estimated cost of $325,000, the total for compensating works being $475,000, with $15,000 annually for maintenance.

After reviewing the finding of the special board, the Board of Engineers, evidently fearful that the United States by cooperation with the State of Illinois, unless such cooperation was thoroughly safeguarded, would lose its right of control of this waterway, uses this significant language:

It is the distinct recommendation of the Board of Engineers for Rivers and Harbors that the term "control of the new waterway thus created, so far as needed for navigation," shall be interpreted to include such control of the use of water for power purposes as shall be necessary to insure the conditions of flow required for navigation. Further, the board believes that the total volume of water to be diverted from the natural discharge channels of the lakes should be definitely fixed by Congress; that a project, with estimate of cost, for works necessary to compensate for such diversion should be prepared to the satisfaction of the Chief of Engineers and the Secretary of War; that before any diversion is made beyond that at present existing, the State of Illinois shall transfer to the Secretary of War the funds necessary for such works as given by the approved estimate of cost; that the works shall be built by the United States with the funds so provided; and that the control and the maintenance of such works shall be in and at the cost of the United States.

Mr. GALLINGER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from New Hampshire?

Mr. LA FOLLETTE. I do.

Mr. GALLINGER. I have heretofore taken some little interest in this proposition, but do not claim to be familiar with its details. I will ask the Senator if the amount of water diverted from the lakes up to the present time has sensibly reduced the level of the lakes?

Mr. LA FOLLETTE. It has, Mr. President; and as is disclosed by Gen. Black's memorandum to the Secretary of War is the subject of litigation between the Government and the State of Illinois. The Federal Government started the proceeding for the protection of the commerce of the Great Lakes.

Mr. GALLINGER. I was further intending to ask the Senator—and I ask these questions merely for information—whether or not the Canadian Government has ever raised an objection to the diversion of the water?

Mr. LA FOLLETTE. It has, Mr. President; and there are great, big questions—questions involving commerce of millions upon millions in value, questions involving international relations—back of a proposition placed in this bill in committee, without discussion, and approved by the Senate with very little discussion of its real merits.

Mr. GALLINGER. One further question, if the Senator pleases: We have an International Boundary Commission. Had the commission jurisdiction at all over this matter? Has it ever taken the question under consideration?

Mr. LA FOLLETTE. I am not able to answer that question.

Mr. NELSON. Mr. President, will the Senator allow me to interrupt him?

Mr. LA FOLLETTE. I shall be glad to have the Senator do so.

Mr. NELSON. We have a Waterway Commission, created under the treaty between our country, England, and Canada, of which Mr. Tawney, of our State, is a member. They have jurisdiction over these international waters.

Mr. GALLINGER. Over all matters affecting boundary disputes?

Mr. NELSON. Over all matters affecting the boundary waters of the country. They have jurisdiction over them. There is no doubt about that.

Mr. LA FOLLETTE. Now, Mr. President——

Mr. CLARKE of Arkansas. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from Arkansas?

Mr. LA FOLLETTE. I do.

Mr. CLARKE of Arkansas. I do not believe the Senator from Wisconsin wants to be understood as broadly as his naked statement would indicate. The Committee on Commerce have not included in this bill any item that has not received very considerable attention, nor have we overlooked the War Department in recommending the item as it now appears. In support of that suggestion I want the Secretary to read the letter that has been received from the Secretary of War, in which he says that congressional action on this subject is desirable.

Mr. LA FOLLETTE. Yes; but, Mr. President——

Mr. CLARKE of Arkansas. Let the Secretary read the letter, please.

Mr. LA FOLLETTE. I think I have a copy of that letter in my hand; and when the letter is read it will be observed that the Secretary of War proposes that if any such provision as is found in this bill should be adopted, there should be added provisions qualifying the indorsement by the Federal Government of this legislation on the part of the State of Illinois.

Mr. CLARKE of Arkansas. Let the Secretary read the letter, and that will be the committee's statement in support of its action.

Mr. LA FOLLETTE. If my proposition to strike out this provision should be voted down, then I propose to offer the recommendations of the Secretary of War contained in what I am led to believe is the letter which the Senator from Arkansas has sent to the desk.

Mr. CLARKE of Arkansas. All of it has now been incorporated in the amendment except one proviso.

Mr. LA FOLLETTE. I shall have an amendment to offer to the pending committee proposition if my motion to strike it out should fail.

Mr. BORAH. Mr. President, I desire to ask the Senator from Wisconsin a question.

Mr. CLARKE of Arkansas. May I ask the Senator from Idaho to suspend until the letter can be read? It is only a page or two.

Mr. BORAH. Certainly.

The PRESIDING OFFICER. In the absence of objection, the Secretary will read as suggested.

The Secretary read as follows:

WAR DEPARTMENT,
Washington, May 23, 1916.

HON. JAMES P. CLARKE,
Chairman Committee on Commerce, United States Senate.

SIR: Referring to the action of the Senate of May 22 regarding the improvement of the Illinois River, as given in the CONGRESSIONAL RECORD, I beg to state that while I think congressional action in this matter is highly desirable it is very important in the general interests of navigation, especially of those depending on the maintenance of the levels of the Great Lakes, that in addition to the proviso which was discussed yesterday, namely:

"The Interstate Commerce Commission is hereby given power to fix reasonable charges and tolls for the use of and navigation upon the waterway created under said act of the general assembly of said State in all interstate transportation"—

certain additional provisos be added to the item, as follows:

"*Provided*, That the improvement may be made in general accordance with the plans heretofore submitted to the Chief of Engineers and the Secretary of War, and subject to their approval, or on such modified plans as may be approved by the Chief of Engineers and the Secretary of War: *Provided further*, That the waterway shall be completed and open for navigation before any of the water now being, or hereafter to be, diverted from Lake Michigan shall be used for the development of power: *Provided further*, That the navigation features of the waterway and its appurtenances shall be operated and maintained in a manner satisfactory to the Chief of Engineers and the Secretary of War, and any repairs or maintenance work that may be directed by the Secretary of War on the recommendation of the Chief of Engineers shall be made within the time specified by him: *Provided further*, That when, under the terms of the act of the State of Illinois, the waterway shall be transferred to the United States for navigation purposes, the United States shall be given a clear title to such land as may be occupied by or used in connection with the locks and various appurtenances necessary for the operation of the waterway for navigation, together with all structures thereon: *Provided further*, That the amount of water to be diverted from Lake Michigan through this system of waterways shall never exceed the rate of 250,000 cubic feet per minute: *And provided further*, That nothing herein contained shall be held to prejudice or affect any rights the United States may have in the Illinois and Michigan Canal, or lands appurtenant thereto, or in any claims against the State of Illinois arising out of any failure upon the part of the State to maintain said canal as a navigable waterway."

It is true that consideration is being had by this department on an application by the State of Illinois for a War Department permit for this project. Decision in the matter has been delayed awaiting the receipt of certain papers relating to the case which had been promised to me, only part of which have as yet been received. At a hearing given to the governor of Illinois and other interested parties on the 15th instant all of these additional provisos recommended above for insertion were read to the applicants, who stated that so far as the interests of the waterway itself were concerned they were unobjectionable.

I would recommend that the item relating to the Illinois River improvement be amended by the insertion of these provisos.

Very respectfully,

NEWTON D. BAKER,
Secretary of War.

Mr. CLARKE of Arkansas. Mr. President, every one of the provisos indicated in that communication has been added to the pending amendment except the one which limits to 250,000 cubic feet per minute the amount of water which may be diverted. That has not been included.

Mr. LA FOLLETTE. Mr. President, as the committee amendment reads at present I do not find that any of the proposals of the Secretary of War has been added, aside from the one which suggests that the rates on interstate traffic through this canal shall be controlled by the Interstate Commerce Commission; and that provision would have become operative under the law without its enactment here.

Mr. CLARKE of Arkansas. That is an inadvertence, or else the Senator did not call for the reading of the amendment as it was amended here from the floor. These provisos did not appear in the amendment reported out of the committee. They were added on the floor, after the bill had been reported back; and they are part of the amendment now, except the one with reference to the limitation to 250,000 cubic feet.

The PRESIDING OFFICER. The Chair will say that he has before him the official copy, from which it appears that the amendments now stand as mentioned by the Senator from Arkansas. The amendments recommended in the letter appear to have been adopted, with the exception of the following:

That the amount of water to be diverted from Lake Michigan through this system of waterways shall never exceed the rate of 250,000 cubic feet per minute.

Mr. LA FOLLETTE. Mr. President, that is the most important proposition which the Secretary of War makes, as appears from the memorandum of Gen. Black, which I read. The fact remains, Mr. President, that this committee adopted the suggestion of a member of the committee, the senior Senator from Illinois [Mr. SHERMAN], as he had stated on the floor of the Senate, without having before it the suggestions of the Secretary of War contained in the letter just read from the desk. These suggestions were transmitted under date of May 23, and this bill was reported from the committee May 5. So the senior Senator from Illinois, as a member of this committee, put upon this bill a proposition giving authority to the State of Illinois to undertake this improvement without consideration of any of the provisions which the investigations, conducted at tremendous expense by the Federal Government, beginning away back in 1910, and bearing upon this whole proposition, had shown to be necessary, and many of which were embodied in the letter of the Secretary of War written to the chairman of the committee It was on the 22d day of May that the Senator from Michigan [Mr. SMITH] rose in his place on this floor and attacked this amendment. It appears now that the letter of the Secretary of War came as a result of the attack made on this amendment upon the floor and resulted in the adoption of a portion of the suggestions made by the Secretary of War. But the recommendation of the Secretary which is of most vital importance was not adopted. That recommendation is that the amount of water which shall be diverted through this system of waterways shall never exceed 250,000 cubic feet per minute.

Now, I should like to have the Senate keep in mind these three propositions: So far as navigation is concerned, 1,000 cubic feet per second is all that this improvement ever will require, according to the judgment of the engineers who have investigated it from time to time; 10,000 cubic feet is desired by the city of Chicago for the purpose of taking care of its sewage. How much more will be necessary in order to make this waterway a commercial proposition as a water-power scheme remains to be developed. But I want the Senate to remember that by the very terms of the act of the Illinois Legislature which it is proposed here to ratify, it provides for the development of a water power. If we blindly commit this Government to an approval of the legislation adopted by the Illinois General Assembly, we shall be called upon in the future to furnish a quantity of water sufficient to insure a return upon the millions that the State of Illinois proposes to invest under that act for water-power purposes.

But what I protest against, Mr. President, is that this innocent-looking proposition in this bill in a few lines commits Congress to an indorsement of an act of the legislature, the provisions of which not one member of this body, I venture to say, outside of the Senators from Illinois know, and it will commit Congress to furnishing water to supply the great scheme of development which it is proposed that we shall authorize and indorse in this legislation.

Mr. STERLING. I should like to ask the Senator from Wisconsin if the act of the Legislature of Illinois referred to in this proposed amendment covers the other projects, such as sanitation and water power?

Mr. LA FOLLETTE. No, Mr. President; it does not deal with sanitation at all, except by referring to the fact that there is an improvement there for sanitary purposes; but it is, first and last, a water-power proposition. That is what it is. Of course, it throws over all of it the usual suggestion that it is in the interest of navigation, but, mark you, and I should like to have Senators keep this in mind, the boards that have investigated this from time to time in the last six years say that only a thousand cubic feet per second are necessary for the purpose of navigation.

There has been a constant struggle between the War Department and the State of Illinois to prevent the taking of water through the drainage canal in excess of the amount that navigation requires for the purpose of flushing the Illinois River for the sewage of Chicago.

Mr. President, it may be that it will afford the city of Chicago a cheaper means of disposing of its sewage to drain the Great Lakes to flush the Chicago River, but we can not do that except at the expense of commerce, and at the expense of the commerce of this country. Is it right that we should impose, as the reports of the engineers say it will impose, a loss of at least a million dollars a year upon the carrying capacity of the vessels that ply the Great Lakes if we permit the increase in the flowage from the Lakes which is demanded by the city of Chicago for what they call sanitary purposes?

The other cities on the Great Lakes are not calling upon the General Government to aid in the solution of their sewage-disposal problems. The city of Milwaukee at a very large expense, running to something like $15,000,000, is providing a great intercepting sewage system and a sewage-disposal plant. The city of Cleveland is solving this problem in a similar way.

Mr. SMITH of Michigan. Will the Senator from Wisconsin permit me?

Mr. LA FOLLETTE. Certainly.

Mr. SMITH of Michigan. The Senator from New Hampshire, I think, asked the Senator from Wisconsin if the International

Boundary Commission did not have jurisdiction over this subject matter. My recollection was at the time the question was asked, and is now confirmed by the treaty itself, that except so far as the waters of Lake Michigan pass into international boundary waters the commission has no jurisdiction because Lake Michigan is not an international water. In so far as the waters from Lake Michigan pass into the international channel or boundary waters the commission has jurisdiction and not otherwise. So, it becomes all the more important that Congress itself should take jurisdiction of a question so threatening as is the question raised by the Senator from Illinois by his amendment.

Mr. LA FOLLETTE. I quite agree with the Senator from Michigan. It is, I understand, true that the treaty with Great Britain provides that water may be used from these Lakes for sanitary purposes, and it therefore becomes a question of domestic policy on the part of the Government as to whether we will undertake to draw from these Lakes water for the purpose of taking care of the sewage of the cities bordering upon the Lakes to the extent of seriously interfering with the commerce of the Lakes.

I am not aware that there is any other great plan which does so interfere as does this Chicago plan, but I am certain from all of the investigation that has been made that the taking of more than 250,000 cubic feet of water per minute from the Lakes will result in such a lowering of the lake levels as will cost those who are operating vessels upon the Lakes something like a million five hundred thousand dollars a year through compelling them to load lighter in order to get into the harbors and alongside the piers and docks.

Mr. CLARKE of Arkansas. It might serve to limit the disputed questions in the proposition offered by the Senator from Wisconsin for me to say that I shall offer to include in the amendment the proviso that was omitted, including the limitation suggested by the War Department. So the Senator may discuss it as if that proviso was in the amendment.

Mr. LA FOLLETTE. For 250,000 feet?

Mr. CLARKE of Arkansas. Whatever it says, 250,000 cubic feet per minute. The Senator has the letter before him?

Mr. LA FOLLETTE. I have.

Mr. CLARKE of Arkansas. We will put that proviso in the amendment.

Mr. LA FOLLETTE. Mr. President, I think it will serve to shorten this discussion considerably, and with that assurance from the chairman of the committee I will simply offer that as an amendment to the bill as amended and will discontinue discussing this matter any further.

The PRESIDING OFFICER. The amendment will be stated.

The SECRETARY. Add to the proviso already agreed to the following:

Provided further, That the amount of water to be diverted from Lake Michigan through this system of waterways shall never exceed the rate of 250,000 cubic feet per minute.

Mr. LA FOLLETTE. With that amendment added to the amendment already adopted, which, as I understand, fully complies with the suggestion that comes from the War Department, I am disposed to withhold any further suggestion which I had intended to make.

The PRESIDING OFFICER. The Chair will state that the amendment is not in order at this time.

Mr. CLARKE of Arkansas. Why not?

The PRESIDING OFFICER. The question before the Senate is to adopt the amendment.

Mr. CLARKE of Arkansas. The vote was reconsidered, and it is now open.

Mr. LA FOLLETTE. Then I may offer that as an amendment to the pending committee amendment, may I not?

Mr. CLARKE of Arkansas. The amendment is open to further amendment. The proposition is to adopt it.

The PRESIDING OFFICER. The Chair would rule that the Senator may offer his amendment as an amendment to the committee amendment.

Mr. CLARKE of Arkansas. That is right.

Mr. LA FOLLETTE. I so offer it.

The PRESIDING OFFICER. The Chair desires to state that it will be quite inappropriate there. Its proper place is in the part of the amendment which was subsequently adopted and which is not embraced in the motion to reconsider.

Mr. CLARKE of Arkansas. I move to reconsider the vote by which the amendment was adopted. We can get at it that way.

Mr. LA FOLLETTE. That would open the whole matter.

Mr. CLARKE of Arkansas. That is all right.

The PRESIDING OFFICER. The Senator from Arkansas moves to reconsider the vote by which the amendment was adopted appearing in the bill at page 32, after line 2, and after the amendment offered by the Senator from Illinois.

The motion to reconsider was agreed to.

Mr. LA FOLLETTE. I offer the amendment which I send to the desk.

Mr. CLARKE of Arkansas. The amendment offered by the Senator which includes the omitted proviso has not yet been adopted.

Mr. LA FOLLETTE. I offer the entire proposition that the War Department sent down.

Mr. CLARKE of Arkansas. That is all right. I withdraw, then, that part of the amendment offered by myself heretofore. As the Senator from Wisconsin says he has included all the amendments recommended by the Secretary of War——

Mr. LA FOLLETTE. I have.

Mr. CLARKE of Arkansas. So it appears as an entire amendment. I withdraw the amendment, the vote upon which has just been reconsidered.

The PRESIDING OFFICER. The Secretary will read the amendment offered by the Senator from Wisconsin in lieu of the Senate amendment, the amendment offered by the Senator from Illinois, and the amendment the vote on which has just been reconsidered.

Mr. LA FOLLETTE. Pending the adoption of this amendment, I ask leave to add to what I have said the remaining portion of this communication addressed by Gen. Black to the Secretary of War, also a letter which I have received from the Merchants and Manufacturers' Association of Milwaukee, and in addition to that I will ask leave to incorporate in my remarks certain extracts from reports made upon this subject heretofore. It will save the time of the Senate not to read these, and the facts there stated will be of value to the committee of conference.

The PRESIDING OFFICER. Without objection, permission is granted.

The letter of the Merchants and Manufacturers' Association of Milwaukee is as follows:

MERCHANTS AND MANUFACTURERS' ASSOCIATION,
Milwaukee, May 26, 1916.

Hon. ROBERT M. LA FOLLETTE,
Senate Chamber, Washington, D. C.

MY DEAR SENATOR: Your telegram regarding the amendment to the rivers and harbors bill was duly received. We thank you for the interest manifested.

The colossal diversion of lake waters into the Chicago Drainage Canal is becoming a serious menace to the commerce of the Great Lakes. You no doubt have access to all the reports, hearings, etc., etc., on the subject. Having made a study of the subject for the past 10 years, I may be permitted to present to you a historic outline of this controversy, and, at the same time, submit to you some of the views we entertain and the conclusions to which we hold.

Historic outline: In 1899 Secretary of War Russell A. Alger granted a permission to the sanitary district of Chicago to divert 300,000 cubic feet per minute of Lake water into the drainage canal, conditional, however, upon any evil effects that such diversion would have on the levels of the Great Lakes. In 1901 Hon. Elihu Root, then Secretary of War, reduced the grant to 250,000 cubic feet per minute.

Thereafter petitions made by the drainage canal authorities for an increased flow of water into the canal were denied by Secretaries William H. Taft and Henry L. Stimson. A petition filed early this year by the State of Illinois, permitting the extension of the canal, was denied by Secretary Garrison, ostensibly on legal grounds, but also because it involved a greater diversion of the lake waters.

Almost since the opening of the drainage canal more than 600,000 cubic feet, or more than double the amount originally granted, have been taken out.

Two years ago the United States Government brought an action against the drainage board seeking to enjoin them from taking the excess of 250,000 cubic feet per minute. The case is still pending in the Federal court at Chicago.

Lake levels and Lake commerce: The real issue hinges upon the question whether the illegal diversion of Lake waters really reduces the levels of the Lakes and whether the commerce of the Lakes is injured thereby. The answer to these questions is most decidedly in the affirmative.

The report of the International Waterways Commission, the reports made by Gen. Bixby, former Chief of the United States Corps of Engineers, Secretary Henry L. Stimson, the evidence brought out at the hearing called by Secretary of War Baker on May 15, 1916, the charts of the Lake levels kept on file by the Government engineers, all prove that the levels have been reduced from 6 to 10 inches and that such reduction has already caused a loss of millions of dollars to the navigation interests.

The drainage canal: The people of Chicago, in defending the illegal diversion of lake waters, hold that the physical welfare of 3,000,000 people is involved, and that therefore the loss to the lake commerce is of secondary importance. This would ordinarily be true if it were not for the fact that better means for the disposal of sewage are at the command of Chicago, just as they are to all other American cities.

The city of Milwaukee this spring voted the sum of $2,500,000 for a modern sewage-disposal system, which, when completed, will cost between $10,000,000 and $12,000,000. If each lake port city resorted to a wholesale diversion of water for sanitary purposes the harbors and navigable rivers on the Great Lakes, with the exception of those entering Lake Superior, would be destroyed.

The Chicago Drainage Canal will in future require more water, rather than less, if the growth of the city continues, in order to carry its sewage into the Illinois River and thence to the Mississippi River.

Navigation waterway: The project of utilizing the drainage canal, which now extends for a distance of over 30 miles from Chicago to Lockport, Ill., for navigation purposes has been entertained for some years. In this connection a movement was begun some years ago which exploited the Lakes-to-the-Gulf deep waterway, and which provided for a continuous channel at a depth of from 18 to 24 feet from Lake Michigan to the Mississippi River, utilizing the drainage canal on the east and the Desplaines and Illinois Rivers on the west to complete the navigation highway.

The engineers who studied the project soon discovered that such a waterway would not be feasible unless the Mississippi River could be developed into a deep and dependable channel. The Illinois authorities, therefore, after years of controversy, concluded to reduce the proposed waterway to an 8-foot barge canal. The present State administration of Illinois is committed to this project.

Creating water powers: Eight years ago the people of Illinois voted a bond issue of $20,000,000 for the purpose of constructing the deep waterway from Lockport, the present terminus of the Chicago Drainage Canal, to the Mississippi River, and equip the same with locks and dams and large power plants.

The campaign literature which was circulated throughout the State, and upon which the bond issue was carried, guaranteed to the people that the water powers so created would net the State, by the sale of power, the sum of $2,500,000 annually.

When the controversy as to the depth of the waterway led to the reduction of from 24 to 8 feet, with a proportionate reduction in the cost, the present administration agreed upon an expenditure of $5,000,000 instead of $20,000,000, and at the same time providing the retention of the proportionate water-power benefits.

In fact it soon developed that the Chicago Drainage Canal, which had originally been built for sanitary purposes, was rendering a larger service in the power that it provided, which power is now utilized for lighting a portion of the city of Chicago and in providing both light and power to a number of manufacturing concerns located along the canal region between Chicago and Lockport, than in any service it rendered as a navigation highway.

The Illinois State authorities therefore concluded that an extension of the canal with its alluring prospects for additional water powers would prove a most profitable investment. The vote of the people authorizing the bond issue had laid greater stress upon the earnings derived from the sale of power than upon the prospects of constructing a utilitarian waterway and upon the tolls that might be exacted.

The consent of the United States was deemed necessary, and a petition was accordingly presented to the Secretary of War, accompanied with the arguments made by Gov. Dunne that the petition by a sovereign State to dig an intrastate canal could not be denied, and with the further argument made by the attorney representing the State of Illinois that the Secretary of War enjoyed no discretionary powers in determining upon the merits of the project in hand.

Inasmuch as the project, however, includes the Illinois River, which is a navigable highway, and therefore under the jurisdiction of the United States, in that it contemplates the exaction of a toll and must employ the waters of the Great Lakes for its operation, the petition was adversely recommended by Gen. Kingman, Chief of the United States Corps of Engineers, and denied by Secretary Garrison.

The present Secretary of War, Newton D. Baker, will in all probability deny the same petition, which is now before him. Hence the Illinois authorities will try to attain their object through Congress.

Argument and conclusions: The situation may be summed up as follows:

The disposal of sewage at Chicago can well be effected with the original grant of water, namely, 250,000 cubic feet per minute, and that the excess, illegally taken and constituting 350,000 cubic feet per minute, is used to operate the water powers at Lockport, Ill.

The ship-canal project is fostered more largely for the purpose of insuring the continued illegal diversion of water, or, rather, to secure a legal sanction of the same, than to provide a commercial utility. In other words, the real purpose behind the cry of sanitation and ship canal is the continued steal of a colossal flow of lake waters for power purposes.

We hold that the Great Lakes are a God-given blessing conferred upon a nation, that their use is dedicated to the cause of navigation, and that their waters can not be used for domestic or sanitation purposes in any unreasonable degree, and that there is no warrant in law or morals that could sanction their use for power purposes.

No section or locality has the right to use the gifts of nature at the expense and to the detriment of the larger unit. The State of Illinois can not consistently create a local advantage at the cost and to the menace of the commerce of the Great Lakes.

We therefore enter a most earnest protest against any action on the part of the Secretary of War or on the part of Congress that will sanction or legalize the present unwarranted diversion of lake waters into the Chicago drainage canal.

We address this communication to you not so much for the purpose of bringing any new facts or information to the subject, but to inform you just what our thinking and reasoning on the subject is.

Trusting that you will give it the attention that it may deserve, we remain,

Respectfully, yours, WM. GEO. BRUCE, *Secretary.*

The PRESIDING OFFICER. The amendment will be read.

The SECRETARY. The entire amendment as amended will read:

Beginning on page 31, line 23, after "$55,000" in line 23, insert: "and the improvement of navigation of the Illinois River, authorized by an act of the Illinois General Assembly, approved June 18, 1915, providing for an expenditure of $5,000,000 therefor by the State of Illinois, be, and is hereby, authorized in accordance with said act. The Interstate Commerce Commission is hereby given power to fix reasonable charges and tolls for the use of and navigation upon the waterway created under said act of the general assembly of said State in all interstate transportation: *Provided*, That the improvement may be made in general accordance with the plans heretofore submitted to the Chief of Engineers and the Secretary of War, and subject to their approval, or on such modified plans as may be approved by the Chief of Engineers and the Secretary of War: *Provided further*, That the waterway shall be completed and open for navigation before any of the water now being, or hereafter to be, diverted from Lake Michigan shall be used for the development of power: *Provided further*, That the navigation features of the waterway and its appurtenances shall be operated and maintained in a manner satisfactory to the Chief of Engineers and the Secretary of War, and any repairs or maintenance work that may be directed by the Secretary of War on the recommendation of the Chief of Engineers shall be made within the time specified by him: *Provided further*, That when, under the terms of the act of the State of Illinois, the waterway shall be transferred to the United States for navigation purposes, the United States shall be given a clear title to such land as may be occupied by or used in connection with the locks and various appurtenances necessary for the operation of the waterway for navigation, together with all structures thereon: *Provided further*, That the amount of water to be diverted from Lake Michigan through this system of waterways shall never exceed the rate of 250,000 cubic feet per minute: *And provided further*, That nothing herein contained shall be held to prejudice or affect any rights the United States may have in the Illinois and Michigan Canal, or lands appurtenant thereto, or in any claims against the State of Illinois arising out of any failure upon the part of the State to maintain said canal as a navigable waterway."

The PRESIDING OFFICER. The question is upon the amendment offered by the Senator from Wisconsin [Mr. LA FOLLETTE].

The amendment was agreed to.

The PRESIDING OFFICER. The bill is still as in Committee of the Whole and——

Mr. CLARKE of Arkansas. The amendment as amended has never been adopted.

The PRESIDING OFFICER. It was all treated as one amendment.

Mr. CLARKE of Arkansas. Just so the record shows that the amendment as amended has been adopted, it is immaterial whether there is one vote or two.

The PRESIDING OFFICER. The Chair understands that the amendment was offered by the Senator from Wisconsin in lieu of the entire amendment.

Mr. CLARKE of Arkansas. No; it must include the committee amendment. It would be unintelligible without the committee amendment. I think the amendment as amended should be adopted.

The PRESIDING OFFICER. The question recurs on the amendment as amended.

The amendment as amended was agreed to.

The PRESIDING OFFICER. If there are no further amendments as in Committee of the Whole, the bill will be reported to the Senate.

Mr. GALLINGER. I wish to reserve the amendment submitted by the Senator from Nevada [Mr. NEWLANDS] for a separate vote.

The VICE PRESIDENT. That reservation will be made.

The bill was reported to the Senate as amended.

Mr. GALLINGER. Against the amendment submitted by the Senator from Nevada [Mr. NEWLANDS], which has been reserved, I make a point of order that it is general legislation and that it provides an appropriation not estimated for.

I will state that when I withdrew the point of order on that amendment—and the point of order had been sustained—I withdrew it with the understanding that certain other amendments, and particularly one to be offered by the Senator from Iowa [Mr. KENYON], would likewise be permitted to go on the bill, notwithstanding they were subject to a point of order. A point of order was made against the amendment submitted by the Senator from Iowa, and for that reason, in part, I make the point of order now against the amendment submitted by the Senator from Nevada.

The PRESIDING OFFICER. The Chair is disposed to believe that the point of order is well taken. The point of order is sustained.

Mr. CLARKE of Arkansas. The question now is on concurring in the amendments made as in Committee of the Whole.

The PRESIDING OFFICER. The question is on concurring in the amendments made as in Committee of the Whole.

The amendments were concurred in.

The PRESIDING OFFICER. Shall the amendments be ordered to be engrossed and the bill be read a third time?

Mr. SMOOT. Mr. President, I offer the following motion.

The PRESIDING OFFICER. It will be read.

The Secretary read as follows:

That the pending bill, H. R. 12193, be recommitted to the Committee on Commerce with instruction to report a substitute therefor appropriating an amount not in excess of $30,000,000 for the maintenance of the river and harbor projects necessary for commercial and military needs and for the further prosecution of work on rivers and harbors heretofore adopted by Congress: *Provided*, That the amount for such maintenance and prosecution shall be appropriated by the Chief of Engineers under the direction of the Secretary of War.

Mr. CLARKE of Arkansas. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Broussard	Curtis	Gore
Bankhead	Chamberlain	Dillingham	Harding
Borah	Clark, Wyo.	Fall	Hardwick
Brady	Clarke, Ark.	Fletcher	Hollis
Brandegee	Culberson	Gallinger	Husting

James	Nelson	Simmons	Townsend
Jones	Norris	Smith, Ariz.	Underwood
Kenyon	Overman	Smith, Ga.	Vardaman
La Follette	Page	Smith, Md.	Wadsworth
Lane	Pittman	Smith, Mich.	Walsh
Lea, Tenn.	Poindexter	Smoot	Warren
Lee, Md.	Ransdell	Sterling	Weeks
Lippitt	Reed	Swanson	Williams
Martin, Va.	Sheppard	Thomas	Works
Myers	Shields	Tillman	

The VICE PRESIDENT. Fifty-nine Senators have answered to the roll call. There is a quorum present. The pending question is on the motion made by the Senator from Utah [Mr. SMOOT].

Mr. KENYON. On that I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. OVERMAN. Please have the motion stated.

The PRESIDING OFFICER. The Secretary will read the motion.

The Secretary again read Mr. SMOOT's motion.

Mr. SMOOT Mr. President, I intended to occupy a few moments this afternoon in calling the attention of the Senate to my motion to recommit the bill, but I know it is the desire of Senators that the vote shall be taken at once upon the motion and to immediately follow it with a vote upon the bill. I am informed that there are a number of Senators who wish to leave shortly, and they also have expressed a desire to vote upon my motion to recommit and upon the bill before they leave. I shall therefore content myself by simply saying, in my opinion, there is no question but that the $30,000,000 provided for in my motion will cover all the legitimate projects and that none such will suffer if my motion prevails.

Mr. President, I shall say no more at this time, except to ask for the yeas and nays.

The VICE PRESIDENT. They have been ordered.

Mr. SMOOT. Very well.

The VICE PRESIDENT. The Secretary will call the roll on agreeing to the motion of the Senator from Utah [Mr. SMOOT].

The Secretary proceeded to call the roll.

Mr. CURTIS (when his name was called). I am paired with the junior Senator from New Jersey [Mr. HUGHES] and therefore withhold my vote. If at liberty to vote, I should vote "yea."

Mr. SAULSBURY (when his name was called). I transfer my pair with the Senator from Rhode Island [Mr. COLT] to the senior Senator from New Jersey [Mr. MARTINE] and vote "nay."

Mr. SIMMONS (when his name was called). Making the same announcement to my pair and its transfer as heretofore made, I vote "nay."

Mr. THOMAS (when his name was called). Announcing the same pair and transfer as heretofore, I vote "yea."

Mr. THOMPSON (when his name was called). I am paired with the senior Senator from Illinois [Mr. SHERMAN], but on this vote I understand, if present, the Senator from Illinois would vote as I am about to vote. I therefore vote. I vote "yea."

Mr. TOWNSEND (when his name was called). I have a pair with the junior Senator from Florida [Mr. BRYAN], but I feel at liberty to vote on this question, and I do vote. I vote "yea."

The roll call was concluded.

Mr. CURTIS. I transfer my pair with the junior Senator from New Jersey [Mr. HUGHES] to the senior Senator from Illinois [Mr. SHERMAN] and vote "yea."

Mr. TILLMAN. I am paired with the Senator from West Virginia [Mr. GOFF] and therefore withhold my vote. If at liberty to vote, I should vote "yea." I wish this announcement of my pair to stand for the day.

Mr. CURTIS. Mr. President, I am requested to announce the following pairs:

The Senator from Maine [Mr. BURLEIGH] with the Senator from Arkansas [Mr. ROBINSON];

The Senator from New Mexico [Mr. CATRON] with the Senator from Oklahoma [Mr. OWEN];

The Senator from Minnesota [Mr. CLAPP] with the Senator from North Carolina [Mr. SIMMONS];

The Senator from Delaware [Mr. DU PONT] with the Senator from Kentucky [Mr. BECKHAM];

The Senator from North Dakota [Mr. GRONNA] with the Senator from Maine [Mr. JOHNSON];

The Senator from Nebraska [Mr. HITCHCOCK] with the Senator from New York [Mr. O'GORMAN]; and

The Senator from Illinois [Mr. LEWIS] with the Senator from South Dakota [Mr. JOHNSON].

The result was announced—yeas 34, nays 35, as follows:

YEAS—34.

Ashurst	Brandegee	Curtis	Gallinger
Borah	Clark, Wyo.	Dillingham	Gore
Brady	Cummins	Fall	Harding
Hollis	Lodge	Smoot	Wadsworth
Husting	Newlands	Sutherland	Warren
Kenyon	Norris	Taggart	Weeks
La Follette	Page	Thomas	Works
Lane	Pittman	Thompson	
Lippitt	Pomerene	Townsend	

NAYS—35.

Bankhead	Jones	Ransdell	Smith, Mich.
Broussard	Lea, Tenn.	Reed	Sterling
Chamberlain	Lee, Md.	Saulsbury	Stone
Chilton	Martin, Va.	Sheppard	Swanson
Clarke, Ark.	Myers	Shields	Underwood
Culberson	Nelson	Simmons	Vardaman
Fletcher	Oliver	Smith, Ariz.	Walsh
Hardwick	Overman	Smith, Ga.	Williams
James	Poindexter	Smith, Md.	

NOT VOTING—27.

Beckham	Goff	Lewis	Phelan
Bryan	Gronna	McCumber	Robinson
Burleigh	Hitchcock	McLean	Shafroth
Catron	Hughes	Martine, N. J.	Sherman
Clapp	Johnson, Me.	O'Gorman	Smith, S. C.
Colt	Johnson, S. Dak.	Owen	Tillman
du Pont	Kern	Penrose	

So Mr. SMOOT's motion was rejected.

Mr. LA FOLLETTE. Mr. President, I wish to add to the amendment which I heretofore offered, and which was adopted, to the provision regarding the improvement of the Illinois River, an amendment which I send to the Secretary's desk.

Mr. CLARKE of Arkansas. That amendment has been submitted to the chairman of the Committee on Commerce and he finds no objection to it. It takes the form of an additional proviso to the amendment heretofore adopted.

The VICE PRESIDENT. A peculiar parliamentary situation has arisen, the Chair should say.

Mr. CLARKE of Arkansas. Mr. President, it is proposed to add this amendment as a new provision. As I understand, a new amendment may be added.

Mr. LA FOLLETTE. I offer the amendment as a new provision, to follow the amendment heretofore adopted.

The VICE PRESIDENT. The amendment proposed by the Senator from Wisconsin will be stated.

The SECRETARY. At the end of the amendment heretofore adopted relative to the Illinois River, on page 32, it is proposed to add the following:

Provided further, That the water power developed through said waterway shall be subject to the limitations and regulations which may at any time be generally imposed by acts of Congress upon water powers located upon navigable streams.

The VICE PRESIDENT. The Chair will assume that this is a new amendment; and, without objection, it is agreed to.

The bill is before the Senate and open to further amendment. If there be no further amendments, the amendments will be ordered to be engrossed and the bill to be read a third time.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time.

The VICE PRESIDENT. The question is, Shall the bill pass?

Mr. POINDEXTER. Mr. President, I offer the amendment which I send to the desk.

The VICE PRESIDENT. An amendment can now only be offered to the bill by unanimous consent. Is there unanimous consent to the submission of the amendment?

Mr. GALLINGER. I object.

Mr. CLARKE of Arkansas. Let us hear what it is.

Mr. LODGE. The bill has been read the third time, Mr. President.

Mr. POINDEXTER. I should like to have the amendment printed in the RECORD, Mr. President.

The VICE PRESIDENT. If there be no objection, that order will be made. The Chair hears none.

The amendment referred to was to add to the bill the following:

The expenditure of the appropriations herein made shall be supervised by Congress as follows:

"There shall be appointed by the chairmen of the Committee on Rivers and Harbors of the House of Representatives and the Commerce Committee of the Senate, an inspector of river and harbor work. He shall be a trained and experienced civil engineer, not connected in any way with the Army. It shall be the duty of said inspector to thoroughly examine the several river and harbor projects which have been adopted by Congress, with special regard to the question of whether the moneys appropriated by Congress for these works are being expended to the best advantage from a standpoint both of economy and efficiency. In making said examination said inspector shall inquire whether the best methods are being used in the prosecution of said works to accomplish the improvement contemplated thereby. Said inspector shall also examine into the question of the needs of commerce for said improvements, and the probable or prospective uses thereof in commerce, and the probable or prospective results thereof on freight rates on railroads through the competition of such waterways; and for that purpose said inspector may ascertain the effect upon such rates of waterways heretofore improved, and the uses that have been made of the same for purposes of transportation. Said inspector shall make, in

writing to Congress a full semiannual report of his observations and conclusions in the foregoing matters. He shall hold office at the pleasure of the committees above mentioned, and his successor shall be appointed as provided above. He shall be paid a salary of $12,000 a year, and his necessary, actual expenses, and shall have such clerical and other assistance as may be necessary, to be approved by the chairmen of said committees."

The VICE PRESIDENT. The question is, Shall the bill pass?

Mr. KENYON. Mr. President, I want to take just about three minutes, and then I shall desire to have the yeas and nays on the passage of the bill.

This Senate is about to pass a bill that few Senators have had the temerity to defend.

This Senate is appropriating hundreds of thousands of dollars for streams where Congress has ordered a reexamination and no report has as yet been filed by the engineers.

You are so anxious to get rid of public money that you will not even wait for the Army engineers to report. You are dumping hundreds of thousands of dollars into streams where commerce is constantly growing less and in some cases is practically nothing. You are making appropriations for streams, some of them not over 1 foot in depth, and others where we are solemnly told by witnesses that they could navigate the streams if they could get the river in shape so that the stern would follow the bow of the boat.

You are appropriating for others where the testimony before the House committee was to the effect that you could not tell when you crossed the river.

You are appropriating hundreds of thousands of dollars on projects which the Army engineers have condemned. You have appropriated money running into hundreds of thousands for ridiculous propositions, for which no man conducting his own business would permit the money to be used.

You are about to vote from the Treasury, in a time of great national stress and strain, at least $20,000,000 in unjustifiable projects.

You have had an opportunity to correct them. You would not even correct the worst of them. This bill is to go through. Your motto is "Let the people squeal."

A few days ago the leader upon the Democratic side announced that the appropriations in this Congress would be $200,000,000 more than in the last Congress. Other leaders said, "We must practice economy." We are always willing to practice economy on those things which do not concern us.

We have tried to fight this bill in no partisan way. There is enthusiasm for it on this side of the Chamber. It could not pass without votes from this side of the Chamber.

The fight against this method of appropriating public money is going on. The rising tide of sentiment; the awakened public conscience is against it. Gentlemen may stand here and send out word to the country to talk more about progress and less about "pork," but the country will keep on talking about "pork" as long as bills of this character are passed by Congress. Cloakroom sneers or floor jeers will not stop the fight. The men who are voting for these extravagances will find out that the people do not intend to do all of the squealing, and that they have some notions as to the duty of Representatives in Congress toward the Public Treasury.

Some constituents take a different view. I have received many letters from the people along the Mississippi and the Missouri Rivers, one of which flows the entire length of my State, and the other along a portion thereof, condemning my attitude on this river and harbor bill, and telling what will be done to me at the next election.

Mr. President, if the price of holding my seat in this body is to vote for bills of this kind, the seat may go. If getting appropriations for my State is considered the essential thing by my people, then my usefulness to them in this body is ended.

I am not the seventh son of a seventh son, but I risk a prophecy, and that is that this is the last river and harbor bill, framed along the lines of the present bill, that will ever pass this Congress. New faces will be in the next Congress, fresh from the people, and they will pay some attention to the question of expenditures.

Some day a Congress will be here that will not consider those the greatest statesmen who can get the most out of the National Treasury. Some day a Congress will think along national lines and not State and district lines. And that day is coming just as certain as that to-morrow's sun will rise.

It is a pity that the whole Democratic Party must be held responsible for these expenditures, for this bill could not be passed by Democratic votes alone. There are men on this side of the Chamber who have and will give enthusiastic support to the bill and defend every item in it, and make possible its passage. There are men on the other side of the Chamber who have fought hard for economy.

The Senator from Colorado [Mr. THOMAS] has been one of the most consistent advocates of economy in this body. He is a credit to his State and an honor to the Nation. The Senator from Wisconsin [Mr. HUSTING] has fought hard to eliminate useless expenditures. Likewise the Senator from Ohio [Mr. POMERENE] and others who might be named, all of whom are entitled to the thanks of their constituents. The clarion voice of the Senator from South Carolina [Mr. TILLMAN] has rung out in warning, and the courageous stand of the junior Senator from Indiana [Mr. TAGGART] has been inspiring.

The people may be a little slow in getting at what is going on in Congress, but they are awakening to the fact that votes are cast for certain appropriations in order that reciprocity may follow fawning.

Mr. President, we are beaten perhaps in this preliminary fight, but this is not the end of the fight. We appeal our case from a Congress drunk with extravagance to a people sober, meditative, and very discriminating.

Mr. President, I ask for the yeas and nays on the passage of the bill.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. CURTIS (when his name was called). I transfer my pair with the junior Senator from New Jersey [Mr. HUGHES] to the Senator from Illinois [Mr. SHERMAN] and vote "nay."

Mr. OWEN (when his name was called). I ask if the Senator from New Mexico [Mr. CATRON] has voted?

The VICE PRESIDENT. He has not.

Mr. OWEN. I am paired with that Senator, and therefore withhold my vote.

Mr. SAULSBURY (when his name was called). Making the same transfer of my pair as heretofore, I vote "yea."

Mr. SIMMONS (when his name was called). Making the same transfer of my pair as heretofore to-day, I vote "yea."

Mr. THOMAS (when his name was called). I have a general pair with the senior Senator from North Dakota [Mr. MCCUMBER]. In his absence I withhold my vote. If at liberty to vote I should vote "nay."

Mr. THOMPSON (when his name was called). Making the same announcement as before as to being at liberty to vote, I vote "nay."

The roll call was concluded.

Mr. CHAMBERLAIN. I have been requested to announce that the Senator from Illinois [Mr. LEWIS] is paired with the Senator from South Dakota [Mr. JOHNSON]. The Senator from Illinois would vote "yea" and the Senator from South Dakota "nay" if present and not paired.

Mr. CURTIS. I am requested to announce the following pairs:

The Senator from Maine [Mr. BURLEIGH] with the Senator from Arkansas [Mr. ROBINSON];

The Senator from Delaware [Mr. DU PONT] with the Senator from Kentucky [Mr. BECKHAM];

The Senator from West Virginia [Mr. GOFF] with the Senator from South Carolina [Mr. TILLMAN];

The Senator from North Dakota [Mr. GRONNA] with the Senator from Maine [Mr. JOHNSON]; and

The Senator from Pennsylvania [Mr. PENROSE] with the Senator from Mississippi [Mr. WILLIAMS].

The result was announced—yeas 35, nays 32, as follows:

YEAS—35.

Bankhead	Lane	Poindexter	Smith, Md.
Brandegee	Lea, Tenn.	Ransdell	Smith, Mich.
Broussard	Lee, Md.	Reed	Sterling
Chamberlain	McLean	Saulsbury	Stone
Clarke, Ark.	Martin, Va.	Sheppard	Swanson
Culberson	Myers	Shields	Underwood
Fletcher	Nelson	Simmons	Vardaman
Hardwick	Oliver	Smith, Ariz.	Walsh
James	Overman	Smith, Ga.	

NAYS—32.

Ashurst	Gallinger	Lippitt	Sutherland
Borah	Gore	Lodge	Taggart
Brady	Harding	Newlands	Thompson
Clark, Wyo.	Hollis	Norris	Townsend
Cummins	Husting	Page	Wadsworth
Curtis	Jones	Pomerene	Warren
Dillingham	Kenyon	Shafroth	Weeks
Fall	La Follette	Smoot	Works

NOT VOTING—29.

Beckham	Goff	McCumber	Sherman
Bryan	Gronna	Martine, N. J.	Smith, S. C.
Burleigh	Hitchcock	O'Gorman	Thomas
Catron	Hughes	Owen	Tillman
Chilton	Johnson, Me.	Penrose	Williams
Clapp	Johnson, S. Dak.	Phelan	
Colt	Kern	Pittman	
du Pont	Lewis	Robinson	

So the bill was passed.

Mr. CLARKE of Arkansas. I move that the Senate request a conference with the House on the bill and the amendments, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to.

The VICE PRESIDENT. The Chair will later announce the conferees on the part of the Senate.

ADJOURNMENT OVER MEMORIAL DAY.

Mr. MARTIN of Virginia. Mr. President, to-morrow will be Decoration or Memorial Day, and there will be, as usual, some ceremonies at the Arlington National Cemetery. In order that there may be the fullest opportunity for all to attend and participate in the ceremonies, and that the Senate itself may pay proper tribute to the occasion, I move that when the Senate adjourns to-day it adjourn to meet at 12 o'clock on Wednesday next.

The motion was agreed to.

NATIONAL CONVENTIONS.

Mr. MARTIN of Virginia. I ask unanimous consent for the adoption of the order which I send to the desk. I will say that I believe it is agreeable to Senators on both sides of the Chamber, and it is intended to enable Senators to attend the two national conventions.

The VICE PRESIDENT. The Secretary will read the proposed unanimous-consent agreement.

The SECRETARY. The Senator from Virginia submits the following unanimous-consent agreement:

It is agreed, by unanimous consent, that on the 3d day of June, 1916, at not later than 6 o'clock p. m., the Senate shall adjourn until the following Thursday, on which day there shall be an adjournment until the following Saturday, and that adjournments every third day shall follow until Monday, the 19th day of June, 1916.

That between the said dates of June 3 and June 19 there shall be no action of the Senate on any pending measure, nor shall business of any kind be transacted other than the introduction of bills and resolutions, the presentation of petitions, and the reception of communications from the President and House of Representatives.

Mr. SUTHERLAND. Mr. President, let me ask the Senator does he mean by that to include the 19th of June as well?

Mr. MARTIN of Virginia. Until the 19th; it does not include that date.

Mr. SUTHERLAND. It excludes the 19th?

Mr. MARTIN of Virginia. It does; that is my understanding of the unanimous-consent order, and that is the purpose of it.

Mr. CHAMBERLAIN. Mr. President, I should be very reluctant to object to that request for unanimous consent, but I am peculiarly situated with respect to a bill affecting my own State. It is local in its nature, but it has some features which are national in their importance. I refer to the measure known as the Oregon and California land-grant bill. The decision of the Supreme Court of the United States, which was rendered on the 21st day of June last, and which was entered of record in the lower court in my State December 9, 1915, practically requires the Congress of the United States to legislate on the subject of this grant within six months from the entry of the decree. That six months expires on the 9th day of June, and if Congress does not act it throws the matter into great confusion and probably might open it up to further litigation. If we can dispose of that bill the day after to-morrow, and I think we can do so easily in an afternoon, I shall be very glad to have the unanimous-consent agreement entered into.

Mr. GALLINGER. We would have Wednesday, Thursday, Friday, and Saturday on which to legislate—four days. The proposed unanimous-consent agreement will not become operative until Saturday.

Mr. MARTIN of Virginia. The proposed unanimous-consent agreement will not commence until the 3d day of June.

Mr. CHAMBERLAIN. Mr. President, may I have an implied understanding with the Senate that they will permit me to take up the bill to which I have referred Wednesday or Thursday? The Senate can see the importance of it, because, unless it is disposed of by the 9th of June, the whole subject may be again opened up.

Mr. MARTIN of Virginia. Mr. President, I will say to the Senator from Oregon that there will be ample time for the legislation to which he refers to be considered by the Senate. I am sure that the importance of the matter to which he now refers is such that, when presented fully to the Senate, it will meet with such reception as he desires.

Mr. BRANDEGEE. Mr. President, I should like to inquire whether the bill to which the Senator from Oregon refers has passed the House of Representatives?

Mr. CHAMBERLAIN. The bill has passed the House of Representatives, and I am ready to report on it this afternoon, with some amendments, from the Committee on Public Lands.

Mr. MARTIN of Virginia. There will be no trouble whatever in regard to it. There will be ample time for the Senator to have his bill considered.

Mr. CHAMBERLAIN. I may later ask that it be taken up and made the unfinished business for day after to-morrow.

Mr. MARTIN of Virginia. I have no objection to that, but I really do not think the Senator ought to ask for what amounts to putting the Senate on terms about this matter of his. I think the proposed unanimous-consent agreement is necessary for the convenience of the entire Senate, and I do not believe it will interfere with the matter which the Senator has in mind.

The VICE PRESIDENT. The Senate can not make a bill the unfinished business by agreement.

Mr. CHAMBERLAIN. The Senate can do almost anything it wants to do, if the President please.

The VICE PRESIDENT. That is one thing it can not do, unless all the rules are abolished.

Mr. CHAMBERLAIN. I can ask that it be done, whether the President agrees with me or not. I am not going to attempt to impose any conditions upon the Senate; I would not do that, even if I could, but I do want to let the Senate know that I shall ask for the disposition of this bill before we adjourn on June 3, and I shall trust the Senate to help me have it done.

Mr. MARTIN of Virginia. I will be glad to aid the Senator, so far as I am concerned.

The VICE PRESIDENT. Is there objection to the request for unanimous consent made by the Senator from Virginia [Mr. MARTIN]? The Chair hears none, and the order is made.

MEMORIAL ADDRESSES ON THE LATE SENATOR BRADLEY.

Mr. SHAFROTH. I move that the Senate proceed to the consideration of the amendments of the House to what is known as the Philippine bill.

Mr. JAMES. I ask the Senator from Colorado if he will yield to me to give a notice?

Mr. SHAFROTH. Let us take up the Philippine bill for consideration, and then I will yield.

Mr. JAMES. I merely desire to give a notice, to which I am sure the Senator will not object.

Mr. SHAFROTH. Very well.

Mr. JAMES. I desire to give the following notice, which I send to the desk and ask to have read.

The VICE PRESIDENT. The Secretary will read the notice.

The SECRETARY. The Senator from Kentucky gives the following notice:

That on Saturday, June 24, 1916, immediately upon the conclusion of the routine morning business, he will ask that the business of the Senate may be suspended that fitting tribute may be paid to the life and character of the Hon. WILLIAM O. BRADLEY, late a Senator from the State of Kentucky.

ADDRESS BY PRESIDENT WILSON.

Mr. THOMPSON. Mr. President, I have here the very able address delivered by the President of the United States last Saturday evening, May 27, 1916, at the banquet given by the League to Enforce Peace, and ask that it be printed in the RECORD and also that it be made a public document. This is one of the ablest addresses yet delivered by President Wilson, and is of very great interest to the public at this particular time.

Mr. SMOOT. Mr. President, I could not hear a word the Senator said.

The VICE PRESIDENT. Nor could anybody else.

Mr. SMOOT. I should like the Senator to repeat his request, as I did not hear a word of it.

Mr. THOMPSON. It was simply a request to have printed in the RECORD the speech of the President of the United States, delivered before the League to Enforce Peace, and also to have it printed as a public document.

Mr. SMOOT. The Senator can either have it printed as a public document or he can have it printed in the RECORD, I do not care which.

Mr. THOMPSON. I should like to have it printed in the RECORD and also made a public document.

Mr. SMOOT. No; I do not want it made a public document if it is printed in the RECORD.

Mr. THOMPSON. I hope the Senator from Utah will withdraw his objection, owing to the importance of this address and the fact that it was made by the President of the United States.

Mr. SMOOT. I do object. I have no objection to it being printed in the RECORD, nor have I any objection to it being printed as a public document; but the rule is not to print anything in both forms. The Senator can take his choice of one or the other.

Mr. THOMPSON. Then, Mr. President, I will be satisfied to have it printed in the RECORD.

The VICE PRESIDENT. Without objection, it is so ordered. The matter referred to is as follows:

THE PRESIDENT'S ADDRESS.

"When the invitation to be here to-night came to me I was glad to accept it—not because it offered me an opportunity to discuss the program of the league—that you will, I am sure, not expect of me—but because the desire of the whole world now turns eagerly, more and more eagerly, toward the hope of peace; and there is just reason why we should take our part in counsel upon this great theme. It is right that I, as spokesman of our Government, should attempt to give expression to what I believe to be the thought and purpose of the people of the United States in this vital matter.

"This great war that broke so suddenly upon the world two years ago, and which has swept within its flame so great a part of the civilized world, has affected us very profoundly, and we are not only at liberty, it is perhaps our duty, to speak very frankly of it and of the great interests of civilization which it affects.

RIGHTS OF NATION AFFECTED.

"With its causes and its objects we are not concerned. The obscure fountains from which its stupendous flood has burst forth we are not interested to search for or explore. But so great a flood, spread far and wide to every quarter of the globe, has of necessity engulfed many a fair province of right that lies very near to us.

"Our own rights as a nation, the liberties, the privileges, and the property of our people have been profoundly affected. We are not mere disconnected lookers-on.

"The longer the war lasts the more deeply do we become concerned that it should be brought to an end and the world be permitted to resume its normal life and course again. And when it does come to an end we shall be as much concerned as the nations at war to see peace assume an aspect of permanence, give promise of days from which the anxiety of uncertainty shall be lifted, bring some assurance that peace and war shall always hereafter be reckoned part of the common interest of mankind.

"We are participants, whether we would or not, in the life of the world. The interests of all nations are our own also. We are partners with the rest. What affects mankind is inevitably our affair as well as the affair of the nations of Europe and of Asia.

"One observation on the causes of the present war we are at liberty to make, and to make it may throw some light forward upon the future as well as backward upon the past. It is plain that this war could have come only as it did, suddenly and out of secret counsels, without warning to the world, without discussion, without any of the deliberate movements of counsel with which it would seem natural to approach so stupendous a contest.

"It is probable that if it had been foreseen just what would happen, just what alliances would be formed, just what forces arrayed against one another, those who brought the great contest on would have been glad to substitute conference for force.

"If we ourselves had been afforded some opportunity to apprise the belligerents of the attitude which it would be our duty to take, of the policies and practices against which we would feel bound to use all our moral and economic strength, and in certain circumstances even our physical strength also, our own contribution to the counsel which might have averted the struggle would have been considered worth weighing and regarding.

"And the lesson which the shock of being taken by surprise in a matter so deeply vital to all the nations of the world has made poignantly clear is, that the peace of the world must henceforth depend upon a new and more wholesome diplomacy.

"Only when the great nations of the world have reached some sort of agreement as to what they hold to be fundamental to their common interest, and as to some feasible method of acting in concert when any nation or group of nations seeks to disturb those fundamental things, can we feel that civilization is at last in a way of justifying its existence and claiming to be finally established.

"It is clear that nations must in the future be governed by the same high code of honor that we demand of individuals.

"We must, indeed, in the very same breath with which we avow this conviction admit that we have ourselves upon occasion in the past been offenders against the law of diplomacy which we thus forecast; but our conviction is not the less clear, but rather the more clear on that account.

"If this war has accomplished nothing else for the benefit of the world, it has at least disclosed a great moral necessity and set forward the thinking of the statesmen of the world by a whole age.

"Repeated utterances of the leading statesmen of most of the great nations now engaged in war have made it plain that their thought has come to this, that the principle of public right must henceforth take precedence over the individual interests of particular nations, and that the nations of the world must in some way band themselves together to see that that right prevails as against any sort of selfish aggression; that henceforth alliance must not be set up against alliance, understanding against understanding, but that there must be a common agreement for a common object, and that at the heart of that common object must lie the inviolable rights of peoples and of mankind.

"The nations of the world have become each other's neighbors. It is to their interest that they should understand each other. In order that they may understand each other, it is imperative that they should agree to cooperate in a common cause, and that they should so act that the guiding principle of that common cause shall be even-handed and impartial justice.

"This is undoubtedly the thought of America. This is what we ourselves will say when there comes proper occasion to say it. In the dealings of nations with one another arbitrary force must be rejected, and we must move forward to the thought of the modern world, the thought of which peace is the very atmosphere. That thought constitutes a chief part of the passionate conviction of America.

"We believe these fundamental things: First, that every people has a right to choose the sovereignty under which they shall live. Like other nations, we have ourselves no doubt once and again offended against that principle when for a little while controlled by selfish passion, as our franker historians have been honorable enough to admit; but it has become more and more our rule of life and action. Second, that the small States of the world have a right to enjoy the same respect for their sovereignty and for their territorial integrity that great and powerful nations expect and insist upon. And, third, that the world has a right to be free from every disturbance of its peace that has its origin in aggression and disregard of the rights of peoples and nations.

"So sincerely do we believe in these things that I am sure that I speak the mind and wish of the people of America when I say that the United States is willing to become a partner in any feasible association of nations formed in order to realize these objects and make them secure against violation.

"There is nothing that the United States wants for itself that any other nation has. We are willing, on the contrary, to limit ourselves along with them to a prescribed course of duty and respect for the rights of others which will check any selfish passion of our own, as it will check any aggressive impulse of theirs.

"If it should ever be our privilege to suggest or initiate a movement for peace among the nations now at war, I am sure that the people of the United States would wish their Government to move along these lines:

"First, such a settlement with regard to their own immediate interests as the belligerents may agree upon. We have nothing material of any kind to ask for ourselves, and are quite aware that we are in no sense or degree parties to the present quarrel. Our interest is only in peace and its future guarantees.

"Second, an universal association of the nations to maintain the inviolate security of the highway of the seas for the common and unhindered use of all the nations of the world, and to prevent any war begun either contrary to treaty covenants or without warning and full submission of the causes to the opinion of the world—a virtual guarantee of territorial integrity and political independence.

"But I did not come here, let me repeat, to discuss a program. I came only to avow a creed and give expression to the confidence I feel that the world is even now upon the eve of a great consummation, when some common force will be brought into existence which shall safeguard right as the first and most fundamental interest of all peoples and all Governments, when coercion shall be summoned not to the service of political ambition or selfish hostility, but to the service of a common order, a common justice, and a common peace.

"God grant that the dawn of that day of frank dealing and of settled peace, concord, and cooperation may be near at hand!"

Mr. CHAMBERLAIN. from the Committee on Public Lands I report back with amendments the bill (H. R. 14864) to alter and amend an act entitled "An act granting lands to aid in the construction of a railroad and telegraph line from the Central Pacific Railroad, in California, to Portland, in Oregon," approved July 25, 1866, as amended by the acts of 1868 and 1869, and to alter and amend an act entitled "An act granting lands to aid in the construction of a railroad and telegraph line from Portland to Astoria and McMinnville, in the State of Oregon," ap-

proved May 4, 1870, and for other purposes, and I submit a report (No. 494) thereon.

The VICE PRESIDENT. The bill will be placed on the calendar.

GOVERNMENT OF THE PHILIPPINES.

Mr. SHAFROTH. Mr. President, my motion is that the Senate proceed to the consideration of the amendment of the House to Senate bill 381, known as the Philippine bill.

Mr. BANKHEAD. Mr. President, this is the conference report, is it?

Mr. SHAFROTH. No; it is a motion for concurrence in the amendment of the House of Representatives.

Mr. BANKHEAD. I should like to ask the Senator from Colorado how much time he expects will be consumed in the consideration of his motion?

Mr. SHAFROTH. I will state that so far as I am concerned I shall not speak five minutes. In fact, I am perfectly willing to have a vote taken at this time. It is simply a motion for concurrence in the House amendment, and it seems to me it ought to be disposed of very soon.

Mr. LODGE. Mr. President, it will take some time to dispose of the House amendment to the Philippines bill. It is not the Senate bill. It is a new bill. I can assure the Senator from Colorado that it will lead to a good deal of debate, and it ought to have a good deal of debate.

Mr. WILLIAMS. Mr. President——

The VICE PRESIDENT. Does the Senator from Colorado yield to the Senator from Mississippi?

Mr. SHAFROTH. I yield to the Senator from Mississippi.

Mr. WILLIAMS. I suggest to the Senator from Colorado that he accompany his motion with a statement to the Senate that he will agree temporarily to withhold consideration of his bill while the bill that has just formed the basis of a unanimous consent of the Senate, in which the Senator from Oregon is interested, shall be considered and passed upon.

Mr. SHAFROTH. I will, if it does not lead to considerable debate.

Mr. BRANDEGEE. Mr. President, a parliamentary inquiry. Is this motion debatable?

The VICE PRESIDENT. It is after 2 o'clock.

Mr. LODGE. There can be no unanimous consent, Mr. President.

Mr. WILLIAMS. Then I suggest to the Senator from Colorado that he make the same request as the Senator from Alabama has made. If the Philippine bill is going to lead to a great deal of debate—and it seems that it will—then the time of the Senate will not be as much consumed by temporarily laying it aside, first, for the consideration of the bill in which the Senator from Oregon [Mr. CHAMBERLAIN] is interested, and secondly, for the consideration of the bill in which the Senator from Alabama [Mr. BANKHEAD] is interested.

Mr. SHAFROTH. I will do so if the bill does not lead to enormous debate.

Mr. LODGE. Mr. President——

Mr. BANKHEAD. Mr. President, I want to suggest again to the Senator from Colorado that these appropriation bills are entitled to consideration, and ought to be considered as speedily as possible. The Post Office appropriation bill is perhaps the largest that will be presented during this session of Congress and is perhaps of more importance to the whole country than any other bill that will be presented. I suggest to the Senator from Colorado that if he will consent to take up this bill I will then move to lay it aside temporarily in order that my friend the Senator from Oregon may temporarily take up his bill, if it does not promise to consume too much time in debate.

Mr. SHAFROTH. Mr. President, I will make exactly the same proposition to the Senator that he presents here.

Mr. BANKHEAD. Then, Mr. President, let the Senate decide it.

Mr. SHAFROTH. Mr. President, this question of the Philippines has been discussed here for four or five weeks. All phases of the question have been presented, and all phases of the bill as it is now have been presented, because these bills were almost word for word the same when they were introduced. Therefore it seems to me that no unnecessarily long debate can take place on the Philippine bill, unless a filibuster is undertaken.

Mr. LODGE. Mr. President, the bill now presented to the Senate from the House has not been before the Senate for weeks. It is the old House bill, which was set aside by our committee. I consider it of very great importance. I do not mean to delay it unnecessarily, but there will be more or less debate upon that bill—a good deal of debate, I think; and there ought to be debate. I do not think it ought to be allowed to stand in the way of one of the great appropriation bills which is now ready for consideration.

Mr. SHAFROTH. Mr. President, does not the Senator from Massachusetts recognize that these bills were practically the same as introduced, and that the discussion on them was principally with relation to the Clarke amendment, as contrasted with the preamble that is contained in the House bill?

Mr. LODGE. I realize that they are very different. This is the old House bill, and the bill that came before us was a Senate bill.

Mr. SHAFROTH. It was practically the same bill as the House bill.

Mr. LODGE. The Senate committee did not amend the House bill. The Senate committee brought in a bill of their own, and this bill as a whole has never been before the Senate.

Mr. SHAFROTH. The bills contained practically the same provisions.

Mr. VARDAMAN. Mr. President, if they were the same, and if they had been discussed, that would be no guaranty that they would not be talked about to an illimitable extent.

Mr. SMOOT. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator from Utah will state his inquiry.

Mr. SMOOT. I ask whether the bill referred to by the Senator from Colorado has ever been laid before the Senate?

The VICE PRESIDENT. There is no such bill before the Senate.

Mr. SMOOT. Then I make the point of order that the motion of the Senator from Colorado is out of order.

Mr. SHAFROTH. On what ground?

Mr. SMOOT. Upon the ground that there is no such bill before the Senate. It has not been laid before the Senate as yet, and the Senator can not make that motion.

Mr. SHAFROTH. It has been laid before the Senate. The motion of the Senator from Nebraska [Mr. HITCHCOCK] was to concur in the House amendment. That was the proceeding of about a month ago, and discussion was started on it.

Mr. SMOOT. The Senator from Nebraska, however, had no power to lay the message of the House before the Senate. The President of the Senate has not yet laid it before the Senate, and therefore the motion made by the Senator from Colorado is not in order. I make that point of order.

Mr. SHAFROTH. Well, Mr. President——

The VICE PRESIDENT. We shall have to see what the RECORD shows about that matter. The Chair recalls that when the message came over from the House of Representatives the Chair was requested to hold the message until the return of the Senator from Nebraska. Subsequently the Chair was requested to hold the message until both the Senator from Nebraska and the Senator from Colorado were in the Chamber at the same time, and whether or not it was ever handed down the Chair does not know. The RECORD must be examined. But it has been on the Presiding Officer's desk all the while.

Mr. SHAFROTH. Mr. President, on the 8th day of May the Senator from Nebraska [Mr. HITCHCOCK] rose and moved to concur in the House amendment. That motion was discussed to a limited extent, and it was laid aside on a proposition from the Senator from Rhode Island.

The VICE PRESIDENT. There is not any doubt about that having taken place, but whether or not the message was ever formally laid before the Senate the RECORD will have to show. The Chair has no recollection on the subject. The Chair will request the Secretary to look up the RECORD of the 8th of May and see.

Mr. SHAFROTH. If it was not laid before the Senate, I ask that it be laid before the Senate now.

The VICE PRESIDENT. It will be.

Mr. STONE. Let us first find out whether or not it has been laid before the Senate.

Mr. SHAFROTH. I will. The Secretary is looking that up right now.

Mr. LIPPITT. Mr. President, while the Secretary is looking up the RECORD in regard to that question, I think it is only reasonable for me to state to the Senate that I think the Senator from Colorado is in error in saying that this bill, or anything like it, has ever been reported to the Senate by any committee, or discussed by the Senate. As a matter of fact, the Philippine bill which was laid before the Senate, and was discussed and passed by the Senate and sent to the House, contained something like 20 amendments. There were something like 20 points in which that bill was very different from the bill that has now been returned here by the House. Many of those points go to the vital interests of the management of the Philippine Islands. They refer to provisions that have been

condemned by many of the responsible witnesses before the committee, and condemned in such a manner that the members of the Philippine Committee of the Senate unanimously agreed that there should be changes made in them.

Under these circumstances I think it is manifestly proper and, in fact, inevitable that the bill as now presented will lead to a very considerable discussion. Of course, it is within the power of the majority side of the Senate to decide which subject they wish to consider first. That is not the duty nor the privilege of this side of the Chamber. But inasmuch as the statement has been made here that this bill is something that has already been discussed and that it will take but a very short time to consider it, I think it is proper that I should state the conditions in the way I see them.

Mr. HARDWICK. Mr. President——

The VICE PRESIDENT. The Chair will state, for the information of the Senator from Colorado, that the Senator's recollection is correct. The message was laid down on the 8th of May—legislative day of the 5th.

Mr. HARDWICK. Mr. President, I rise to a question of order.

The VICE PRESIDENT. The Senator will state it.

Mr. HARDWICK. Under Rule IX, first in order and first to be entertained by the Senate is a motion to proceed to the consideration of an appropriation or revenue bill. Outside of the consideration of conference reports, that is a preferential motion in the Senate; and under that rule the Senator from Alabama was entitled to priority of recognition.

The VICE PRESIDENT. The Chair does not so believe. That rule is as follows:

> Immediately after the consideration of cases not objected to upon the calendar is completed, and not later than 2 o'clock, if there shall be no special orders for that time, the Calendar of General Orders shall be taken up and proceeded with in its order, beginning with the first subject on the calendar next after the last subject disposed of in proceeding with the calendar, and in such case the following motions shall be in order at any time as privileged motions, save as against a motion to adjourn, or to proceed to the consideration of executive business, or questions of privilege, to wit:
>
> First. A motion to proceed to the consideration of an appropriation or revenue bill.
>
> Second. A motion to proceed to the consideration of any other bill on the calendar, which motion shall not be open to amendment.
>
> Third. A motion to pass over the pending subject, which, if carried, shall have the effect to leave such subject without prejudice in its place on the calendar.
>
> Fourth. A motion to place such subject at the foot of the calendar.
>
> Each of the foregoing motions shall be decided without debate and shall have precedence in the order above named, and may be submitted as in the nature and with all the rights of questions of order.

Does the Senator from Georgia contend that that rule has anything to do with the procedure after 2 o'clock?

Mr. HARDWICK. Undoubtedly. That is the way I construe it. I do not want to add to the confusion, though, by arguing it. I believe that at any time after 2 o'clock this procedure applies as I have suggested, just the same as before 2 o'clock.

The VICE PRESIDENT. The Chair does not read it that way. This is an off-hand guess, and the Chair does not know whether he is right or wrong; but the Chair does not so read it. That rule is applicable to procedure before 2 o'clock.

Mr. BANKHEAD. Mr. President, has the Philippine bill now been laid before the Senate?

The VICE PRESIDENT. It was before the Senate. There was an error about it. It has been before the Senate since the 8th day of May; and the motion of the Senator from Colorado, as the Chair understands, is to take it up and to agree to the House amendments. The Chair supposes the first question is whether the Senate will or will not consent to take it up.

Mr. BANKHEAD. Mr. President, I understand that under the rule the motion made by the Senator from Colorado can not be amended. In other words, I could not substitute another motion for it. Therefore my only remedy, in order to get the Post Office appropriation bill before the Senate, is to ask the Senate to vote down the motion of the Senator from Colorado; and if that motion is voted down then I shall ask the Senate to proceed to the consideration of the Post Office appropriation bill. When I get the bill before the Senate as the unfinished business I will be willing to have it laid aside temporarily for certain emergencies. That includes the understanding with the Senator from Oregon [Mr. CHAMBERLAIN].

Mr. SHAFROTH. Mr. President, the notice of motion of the Senator from Nebraska [Mr. HITCHCOCK] has been on the calendar for days and days to the effect that the Philippine bill be taken up. We thought that an agreement of some kind was reached as to this bill when the river and harbor bill came up, but it was not. It seems to me that this bill, which has passed practically both Houses, ought to be taken up and considered now. I am willing to yield temporarily to the Senator from Oregon, and also for the Post Office bill, if it is taken up.

The VICE PRESIDENT. The question is on the motion of the Senator from Colorado that the Senate proceed to the consideration of the House amendments to what is known as the Philippine bill.

The motion was rejected.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had passed a bill (H. R. 15774) making appropriations to provide for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1917, and for other purposes, in which it requested the concurrence of the Senate.

ENROLLED BILL SIGNED.

The message also announced that the Speaker of the House had signed the enrolled bill (S. 4856) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors, and it was thereupon signed by the Vice President.

PETITIONS AND MEMORIALS.

Mr. POINDEXTER presented the memorial of Mrs. S. J. Pettit and sundry other citizens of Vancouver, Wash., remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which was ordered to lie on the table.

He also presented a petition of the Chamber of Commerce of Seattle, Wash., praying for the establishment of the Mount McKinley National Park in Alaska, which was referred to the Committee on Public Lands.

He also presented a petition of the Chamber of Commerce of Seattle, Wash., praying for the enactment of legislation to provide for the development of the Alaska oil lands, which was referred to the Committee on Public Lands.

He also presented a petition of the Chamber of Commerce of Seattle, Wash., praying for an appropriation for the establishment of a radio station at Seward, Alaska, which was referred to the Committee on Appropriations.

Mr. McLEAN presented a petition of the Pattern Makers' Association of Hartford, Conn., praying for the granting of an additional 15 days' leave of absence to employees of navy yards and arsenals, which was referred to the Committee on Naval Affairs.

He also presented a petition of Lodge Framat, No. 51, International Order of Good Templars, of Ansonia, Conn, and a petition of sundry citizens of Waterbury, Conn., praying that the United States remain at peace, which were referred to the Committee on Foreign Relations.

He also presented a petition of the Common Council of Stamford, Conn., praying for the enactment of legislation to grant pensions to certain employees of the postal service, which was referred to the Committee on Post Offices and Post Roads.

He also presented a petition of sundry citizens of Somers, Conn., praying for national prohibition, which was referred to the Committee on the Judiciary.

He also presented a petition of the Mothers' Club of Bridgeport, Conn., praying for the enactment of legislation to prohibit interstate commerce in the products of child labor, which was ordered to lie on the table.

Mr. HUSTING presented petitions of sundry citizens of Wisconsin, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented memorials of sundry citizens of Wisconsin, remonstrating against prohibition in the District of Columbia, which were ordered to lie on the table.

He also presented petitions of sundry citizens of Wisconsin, praying for the enactment of legislation to further restrict immigration, which were ordered to lie on the table.

He also presented memorials of sundry citizens of Wisconsin, remonstrating against the enactment of legislation to limit the freedom of the press, which were referred to the Committee on Post Offices and Post Roads.

He also presented memorials of sundry citizens of Wisconsin, remonstrating against national prohibition, which were referred to the Committee on the Judiciary.

He also presented petitions of sundry citizens of Wisconsin, praying for the enactment of legislation to prohibit appropriations for sectarian purposes, which were ordered to lie on the table.

He also presented petitions of sundry citizens of Wisconsin, praying for the enactment of legislation to prohibit interstate commerce in the products of child labor, which were ordered to lie on the table.

He also presented petitions of sundry citizens of Wisconsin, praying for the enactment of legislation to grant pensions to cer-

tain employees of the Postal Service, which were referred to the Committee on Post Offices and Post Roads.

He also presented memorials of sundry citizens of Wisconsin, remonstrating against the enactment of legislation to make the Star-Spangled Banner the national anthem, which were referred to the Committee on the Judiciary.

He also presented memorials of sundry citizens of Wisconsin, remonstrating against the enactment of legislation to prohibit interstate commerce in convict-made goods, which were ordered to lie on the table.

He also presented petitions of sundry citizens of Wisconsin, praying for the enactment of legislation to grant pensions to widows and orphans of veterans of the Spanish-American War, which were ordered to lie on the table.

Mr. LODGE presented petitions of sundry citizens of Massachusetts, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. MYERS presented memorials of sundry citizens of Sanders County, Mont., remonstrating against the enactment of legislation to limit the freedom of the press, which were referred to the Committee on Post Offices and Post Roads.

Mr. LIPPITT. I present a petition of the National Association of Woolen and Worsted Overseers, urging industrial preparedness for an early increase of tariff duties on imports. I ask that the petition be printed in the RECORD and referred to the Committee on Finance.

There being no objection, the petition was referred to the Committee on Finance and ordered to be printed in the RECORD, as follows:

INDUSTRIAL PREPAREDNESS.

PROVIDENCE, R. I., *May 20, 1916.*

The National Association of Woolen and Worsted Overseers is an industrial organization engaged in textile manufacturing and is nonpartisan in their attitude but thoroughly American in their patriotism and devotion to the best interests of these United States, and being desirous of expressing their opinions upon the great public questions of to-day, the most important of which, from their point of view, being the need of "industrial preparedness" against the evils resulting from the war in Europe and sure to follow its termination, appointed this committee of five members at their last annual meeting at Boston, Mass., in November, 1915, to prepare such resolutions for action at the next semiannual meeting at Providence, R. I., May 20, 1916, and we beg leave to submit the following as our report:

"Whereas the results of this great war in Europe as an industrial factor from an economic and competitive point of view, as applied to this country in a business way, is an unknown quantity, baffling the efforts of our keenest statisticians and ablest business men to form some safe conception of our national ability under present abnormal labor and wage conditions, with enormously increased overhead costs for everything entering into the manufacturing of goods of all kinds for sale here or abroad after the war ceases, when all the belligerent nations will of necessity have to immediately return to the pursuits of peace and industry, in order to provide for the payment in future of principal and interest upon their tremendously increased national debts; and

"Whereas the best interests of the 100,000,000 people living in these United States must be safeguarded without any further delay by our National Government at Washington, through the legislative functions of the Congress of the United States (our direct representatives), by the passage of such laws, or by changes in existing laws when found inadequate to provide us with proper protection, so as to prevent a threatened industrial or national disaster, through lack of industrial preparedness, which is as paramount as the strengthening of our Army and Navy for our common welfare, with which idea we are also in hearty accord; and

"Whereas we must collect many more millions of dollars to meet the greatly increased cost of a larger Army and Navy in some way not yet provided for, and our past experience has proved that the best way and the least expensive method for us is by the increase of duties on imports through out customhouses on goods entering into keen and close competition with the products of home industry and labor, as well as to reimpose duties again upon a larger percentage of goods imported than is now the rule (as 68 per cent of all the goods now imported are duty free), and the American people are not favorably disposed to a direct and unjust taxation as a means of collecting national revenues for our Government: Therefore be it

"*Resolved*, That we respectfully direct the attention of Congress to these patriotic recommendations, based upon past practical experience, and we urge an early increase of the tariff duties sufficient in its advance to insure us from an industrial invasion of the products of foreign countries, making this market their dumping ground for the sale of cheaper goods than we can possibly produce under present abnormal conditions here, which conditions may remain for some time to come, owing to high costs of living here and to other economic reasons, which threaten us with disaster unless the present tariff duties are raised beyond the danger line to prevent our exploitation by foreign manufacturers, and the recovery by their nations of the gold sent here during the past 21 months for war munitions and supplies, and we appeal to the Congress to substitute patriotism and true Americanism for partisanship, and not to apply theory against practical business experience, in order that our Government of the people and for the people may still endure and continue to prosper."

M. J. SHAUGHNESSY, *Worcester, Mass.*
J. G. BURNES, *Providence, R. I.*
F. W. PHELPS, *Oldtown, Me.*
WM. F. SCOTT, *Madison, Me.*
JOHN F. BOLGER, *Chairman, Germantown, Philadelphia.*

Mr. THOMPSON. I present a petition of the Colonial Dames of America, praying for the immediate adoption of such measures for national defense as shall enable the country to defend itself from invasion and attack. I ask that the petition be printed in the RECORD.

There being no objection, the petition was ordered to lie on the table and to be printed in the RECORD, as follows:

THE COLONIAL DAMES OF AMERICA,
167 East Thirty-fifth Street, New York City.

Whereas the Society of The Colonial Dames of America was created for the twofold purpose of holding in reverent remembrance those wise and valiant men who first established our free institutions and of helping to maintain and to perpetuate their ideals of liberty and justice; and

Whereas those ideals can flourish only under the conditions of honorable peace; and

Whereas to enjoy that peace we must be able to defend our liberties; and

Whereas it has lately become increasingly evident that we are not in any way prepared for such defense: Now, therefore, be it

Resolved, That this society advocates the immediate adoption, by the Government of the United States, of such measures for national defense as shall enable us, if need be, to resist aggression, and shall insure the security and independence of our country, and thereby make it possible for us to maintain our ideals and to fulfill those obligations and responsibilities which, as a Nation, we have assumed: And be it further

Resolved, That copies of these resolutions be sent to the President and Congress of the United States.

CLARA L. CHEESMAN, *President.*
E. B. BARROWE, *Secretary.*

REPORTS OF COMMITTEES.

Mr. CHAMBERLAIN, from the Committee on Military Affairs, to which was referred the bill (S. 4550) granting to the Portland, Vancouver & Northern Railway Co. a license to cross the Vancouver Barracks Military Reservation at Vancouver, Wash., reported it with amendments and submitted a report (No. 496) thereon.

He also, from the same committee, to which was referred the bill (S. 708) to make immediately available for the use of the State of Georgia in paying expenses incurred by said State in connection with the joint encampment held at Augusta, Ga., July 22 to 31, 1914, certain sums appropriated for arming and equipping the militia of said State, reported it without amendment and submitted a report (No. 497) thereon.

He also, from the same committee, to which was referred the bill (S. 5441) for the relief of the heirs of Albert Sidney Johnston, asked to be discharged from its further consideration and that it be referred to the Committee on Claims, which was agreed to.

He also, from the Committee on Commerce, to which was referred the bill (S. 21) to authorize aids to navigation, and other works in the Lighthouse Service, and for other purposes, reported it with amendments and submitted a report (No. 495) thereon.

Mr. WARREN, from the Committee on Agriculture and Forestry, to which was referred the bill (S. 5751) authorizing the addition of certain lands to the Wyoming National Forest, Wyo., reported it with an amendment.

Mr. THOMPSON, from the Committee on Privileges and Elections, to which was referred the bill (S. 5437) to further amend the act of Congress entitled "An act providing for publicity of contributions made for the purpose of influencing elections at which Representatives in Congress are elected," approved June 25, 1910, to extend the same to elections for United States Senators and for presidential electors, and to regulate, control, and limit campaign and other contributions and expenditures in connection with such elections, and to define corrupt practices in connection therewith, and for other purposes, reported it with amendments and submitted a report (No. 498) thereon.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. WEEKS:

A bill (S. 6212) authorizing the Secretary of War to sell certain magazine rifles; to the Committee on Military Affairs.

By Mr. McLEAN:

A bill (S. 6213) granting a pension to Esteller Barrows (with accompanying papers); to the Committee on Pensions.

By Mr. TAGGART:

A bill (S. 6214) granting a pension to Duncan F. Edwards (with accompanying papers);

A bill (S. 6215) granting an increase of pension to John Goldsmith (with accompanying papers); and

A bill (S. 6216) granting an increase of pension to John W. Bash; to the Committee on Pensions.

By Mr. MARTIN of Virginia:

A bill (S. 6217) to adequately compensate commissioned officers of the United States Navy for length of service, and to grant to warrant officers allowances and privileges allowed other

officers of the United States Navy; to the Committee on Naval Affairs.

By Mr. OVERMAN:

A bill (S. 6218) increasing the limit of cost for the purchase of a site for the erection of a public building at Rockingham, N. C.; to the Committee on Public Buildings and Grounds.

By Mr. LODGE:

A bill (S. 6219) providing for the appointment of civilian clerks in the Quartermaster Corps of the Army as pay clerks; to the Committee on Military Affairs.

By Mr. REED:

A bill (S. 6220) granting an increase of pension to Tillie E. Reeves (with accompanying paper); to the Committee on Pensions.

By Mr. WALSH:

A bill (S. 6221) amending section 140 of the act approved March 4, 1909, entitled "An act to codify, revise, and amend the penal laws of the United States"; to the Committee on the Judiciary.

By Mr. SMITH of Maryland:

A bill (S. 6222) to provide for admissions to the Government Hospital for the Insane, and for other purposes; to the Committee on the District of Columbia.

AMENDMENTS TO APPROPRIATION BILLS.

Mr. FLETCHER submitted an amendment proposing to appropriate $10,000 for pursuing such experiments and investigations to determine the most practical means of extending the operations of the parcel post in the direction of promoting the marketing of farm products and furthering direct transaction between producers and consumers, intended to be proposed by him to the Post Office appropriation bill (H. R. 10484), which was ordered to lie on the table and be printed.

Mr. VARDAMAN submitted an amendment proposing to appropriate $5,000 for a national library for the blind in the District of Columbia, intended to be proposed by him to the District of Columbia appropriation bill (H. R. 15774), which was referred to the Committee on Appropriations and ordered to be printed.

Mr. LODGE submitted an amendment providing that no officer shall be promoted to a higher grade on the active list of the Navy and Marine Corps except in the case provided in the next section until he has been examined by a board of naval surgeons and pronounced physically qualified to perform all his duties at sea, intended to be proposed by him to the naval appropriation bill (H. R. 15947), which was referred to the Committee on Naval Affairs and ordered to be printed.

Mr. OVERMAN submitted an amendment proposing to appropriate $12,500 for the purchase of a site and the commencement of a post-office building at Rockingham, N. C., intended to be proposed by him to the sundry civil appropriation bill (H. R. 15836), which was referred to the Committee on Appropriations and ordered to be printed.

THE JUDICIAL CODE.

Mr. SMITH of Maryland submitted an amendment intended to be proposed by him to the bill (S. 1412) further to codify, revise, and amend the laws relating to the judiciary, which was referred to the Committee on the Judiciary and ordered to be printed.

TREATMENT OF TUBERCULOSIS.

Mr. OVERMAN submitted the following resolution (S. Res. 206), which was referred to the Committee on Printing:

Resolved, That the manuscript submitted by the Senator from North Carolina [Mr. OVERMAN] entitled, "Animal Experiments upon the Acquirement of Active Immunity by Treatment with Von Ruck's Vaccine against Tuberculosis," by Frank J. Clemenger, M. D., Asheville, N. C., and Dr. F. C. Martley, M. A., M. D., Cambridge, England, be printed as a Senate document.

HOUSE BILL REFERRED.

H. R. 15774. An act making appropriations to provide for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1917, and for other purposes, was read twice by its title and referred to the Committee on Appropriations.

POST OFFICE APPROPRIATIONS.

Mr. BANKHEAD. I move that the Senate proceed to the consideration of House bill 10484, making appropriations for the Post Office Department.

The motion was agreed to; and the Senate, as in Committee of the Whole, proceeded to consider the bill (H. R. 10484) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1917, and for other purposes, which had been reported from the Committee on Post Offices and Post Roads with amendments.

Mr. BANKHEAD. Mr. President, I ask unanimous consent that the bill may be temporarily laid aside.

The VICE PRESIDENT. Is there objection?

Mr. CHAMBERLAIN. I am not going to object to that, of course. So far as I am personally concerned, I would be ready to take up the Oregon-California bill; but I hardly think it would be fair to the Senate, because the report has not been printed. It will be printed, though, by to-morrow morning, and I should like to take it up on Wednesday morning, when the Senate next convenes.

The VICE PRESIDENT. Is there any objection to laying aside temporarily the Post Office bill?

Mr. LIPPITT. I object, Mr. President.

The VICE PRESIDENT. There is an objection to laying it aside temporarily.

Mr. BANKHEAD. Mr. President, as the Senator from Oregon is not ready to proceed with the Oregon land-grant bill, I shall ask the Senate to proceed with the consideration of the Post Office bill. I ask that the formal reading of the bill be dispensed with and that the Senate proceed to the consideration of Senate committee amendments.

The VICE PRESIDENT. The Senator from Alabama asks that the bill be read first for Senate committee amendments, and that the formal reading of the bill be dispensed with. Is there any objection? The Chair hears none, and it is so ordered.

The Secretary proceeded to read the bill.

The first amendment of the Committee on Post Offices and Post Roads was, under the subhead "Office of the Postmaster General," at the top of page 2, to insert:

The Postmaster General is hereby authorized to have prepared the necessary plans and specifications and to enter into a contract or contracts for the construction of a reinforced concrete and all-glass, factory-type, fireproof building for the use of the Post Office Department equipment shops, such building to contain approximately 70,000 square feet of floor space; and sufficient land in the city of Washington, D. C., may be acquired, if necessary, by the Postmaster General, by purchase or condemnation, upon which to erect such building; and for the purpose of the purchase of said land and the construction of said building $200,000 is hereby appropriated and made available, out of any money in the Treasury of the United States not otherwise appropriated.

Mr. BANKHEAD. Mr. President, if any Senator desires information with reference to this amendment, I shall be glad to give it.

Mr. SMOOT. I should like to have whatever information the Senator has in regard to it.

Mr. BANKHEAD. I will ask the Secretary to read a letter from the Postmaster General in relation to this amendment. It gives the information in more precise form than I could.

The VICE PRESIDENT. In the absence of objection, the Secretary will read as requested.

The Secretary read as follows:

POST OFFICE DEPARTMENT,
OFFICE OF THE POSTMASTER GENERAL,
March 24, 1916.

I wish to call your attention to the inclosed House Document No. 103, containing copy of a letter I addressed to the Secretary of the Treasury in regard to an estimate for $200,000 for the construction of an equipment-shop building for the Post Office Department, which estimate was transmitted to the Speaker of the House of Representatives. Your attention is also called to bill H. R. 6827, introduced by the chairman of the Committee on Public Buildings and Grounds, which would authorize the Postmaster General to construct such building.

I understand that the Committee on Public Buildings and Grounds will make a favorable report on the bill, but that as yet the committee is undecided as to whether or not there will be a public buildings bill at this session of Congress. The need of the enactment of such legislation at this session is very urgent, and I do not want the possibility of there being no public buildings bill to interfere with the construction of a shop building by the department. I therefore have to request that you insert bill H. R. 6827 as a proviso in the Post Office appropriation bill, on page 1, after line 10, as introduced into the Senate, so that the paragraph as amended will read as follows, beginning at line 8:

"For rent of suitable buildings for the use of the Post Office Department, including the mail-bag repair shop, lock repair shop, and the Division of Equipment, $32,000: *Provided*, That the Postmaster General is authorized to have prepared the necessary plans and specifications and to enter into a contract or contracts for the construction of a reinforced-concrete and all-glass factory-type fireproof building for the use of the Post Office Department equipment shops, such building to contain approximately 70,000 square feet of floor space; and sufficient land in the city of Washington, D. C., may be acquired, if necessary, by the Postmaster General, by purchase or condemnation, upon which to erect such building; and for the purposes of the purchase of said land and the construction of said building $200,000 is hereby appropriated and made available, out of any money in the Treasury of the United States not otherwise appropriated."

Inasmuch as the office of the Supervising Architect will be unable to prepare plans and specifications for such building, the Secretary of the Treasury has suggested that this department request legislation in the above form, so as to authorize the construction by the Postmaster General.

Hearings were held by the Committee on Public Buildings and Grounds, at which time the chief clerk for the Post Office Department appeared in behalf of the bill. A copy of the hearings is inclosed.

A. S. BURLESON,
Postmaster General.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

The next amendment was, on page 5, line 11, after the words "civil-service employee in," to strike out "the Postal Service" and insert "post offices of the first and second classes," so as to make the clause read:

That hereafter the Postmaster General shall have authority to employ acting employees in place of all employees or substitutes hereinafter mentioned who are injured while on duty, who shall be granted leave of absence with full pay during the period of disability, but not exceeding 1 year, then at the rate of 50 per cent of the employee's salary for the period of disability exceeding 1 year, but not exceeding 12 months additional, and the Postmaster General is authorized to pay the sum of $2,000, which shall be exempt from payment of debts of the deceased, to the legal representatives, for the benefit of wife, children, or dependent relatives, of any railway postal clerk, substitute railway postal clerk, supervisory official of the Railway Mail Service, post-office inspector, letter carrier in the City Delivery Service, rural letter carrier, post-office clerk, special-delivery messenger, post-office laborer, or any classified civil-service employee in post offices of the first and second classes who shall be killed while on duty, or who, being injured while on duty, shall die within one year thereafter as the result of such injury: *Provided*, That no compensation shall be paid any such employee for any injury occasioned by his own negligence. To enable the Postmaster General to carry out the provisions of the above, $234,000.

The amendment was agreed to.

The next amendment was, on page 5, after line 19, to insert:

For compensation of a special assistant to the Attorney General to assist in the defense of cases against the United States arising out of the transportation of the mails, and in other cases and matters affecting the postal revenues, $6,000.

Mr. SMOOT. Mr. President, in the first place, I do not think this amendment ought to be in this bill. In the second place, I notice that it carries a compensation of $6,000 for a special assistant to the Attorney General. The Solicitor for the Interior Department, under the Department of Justice, receives a salary of $5,000. The Solicitor for the Post Office Department receives only $5,000. The Solicitor of Internal Revenue receives $5,000. The Solicitor for the Department of State receives $5,000. This provision authorizes the appointment of a special assistant to the Attorney General at a salary of $6,000, $1,000 more than the solicitors for any of the departments receive. The item should rightfully come in an appropriation bill where all the salaries of all the other employees in the departments are provided for.

I will ask the Senator if he will not allow the amendment to be disagreed to and let the provision come in a regular appropriation bill. Not only that; whoever may be selected certainly should not receive a greater salary than the Solicitor General of the State Department or of any of the other departments of the Government.

I want to say to the Senator and to the Senate that just as sure as this item becomes a part of the bill for this particular position carrying $6,000 there will be a demand upon the Committee on Appropriations next year to increase the salary of every solicitor of every department of the Government, and what excuse can be given for denying it? How can we say that the Solicitor of the State Department should have only $5,000 and then provide for paying $6,000 to a man acting virtually as an assistant?

Mr. BANKHEAD. Mr. President, I should like to have the Secretary read a letter from the Postmaster General, which furnishes perhaps the best explanation that can be given as to why this position should be filled at this salary. It is not a new position; it is not a new salary provided. The Assistant Attorney General now has a salary of $6,000 a year. The only purpose of this amendment is to transfer this Assistant Attorney General at $6,000 to the service of the Post Office Department to act especially in the Court of Claims and Supreme Court. The only purpose of the amendment is to provide that the salary shall be paid from the Post Office appropriations instead of being paid out of the appropriations for the Department of Justice.

I should like to have the letter from the Postmaster General read, if the Senator from Utah will yield long enough for that purpose.

Mr. SMOOT. I will wait until the letter has been read.

The VICE PRESIDENT. The letter will be read.

The Secretary read as follows:

OFFICE OF THE POSTMASTER GENERAL,
Washington, D. C., March 11, 1916.

Hon. J. H. BANKHEAD,
Chairman Committee on Post Offices and Post Roads,
United States Senate.

MY DEAR SENATOR BANKHEAD: The large number of important suits filed against the United States by railroad companies and other engaged in the transportation of the mails made advisable the appointment of a special assistant to the Attorney General, who should be specially qualified, by reason of administrative knowledge of the service of the Post Office Department, as well as otherwise, to assist in the defense of the United States in such cases. Accordingly, on the 1st of September, 1915, such an appointment was made by the Attorney General at a salary of $6,000 per annum, payable out of the appropriation for "Pay of special assistant attorneys" under the Department of Justice.

Inasmuch as the work of this officer of the Department of Justice is concerned with suits arising out of the Postal Service, and as his duties make him an adviser of the Postmaster General in regard to the questions involved in these actions, it would seem appropriate that his compensation be provided for in the bill for the service of the Post Office Department. I therefore have the honor to suggest that the following provision be inserted in H. R. 10484, after line 6, on page 22, of the first Senate committee print, namely:

"For compensation of a special assistant to the Attorney General to assist in the defense of cases against the United States arising out of transportation of the mails, and in other cases affecting the postal revenues, $6,000."

Sincerely, yours,

A. S. BURLESON,
Postmaster General.

Mr. SMOOT. Mr. President, I wish to say to the Senator from Alabama having the bill in charge that we might just as well appropriate money for the payment of the salary of the Solicitor for the State Department, the salary of the Solicitor for the Department of the Interior, the salary of the Solicitor for the Internal Revenue Bureau out of the funds of the departments named as to have this particular employee paid from the funds of the Post Office Department. It has always been the practice of the Government to pay the solicitors out of the funds appropriated for the Department of Justice. They have always been under the charge of the Attorney General and all appropriations that have been made have been paid from appropriations made to the Department of Justice.

It seems to me, if the letter of the Postmaster General is correct, we are making a duplicate appropriation. If the position has been appropriated for it must have been in the legislative, executive, and judicial appropriation bill, which has already become a law.

Mr. BANKHEAD. There never has been any specific appropriation for this purpose. It is simply paid out of a lump sum.

Mr. SMOOT. That is one of the evils of the lump-sum appropriations that I have spoken of so often.

Mr. BANKHEAD. I am just trying to keep the record straight.

Mr. SMOOT. I am quite sure the Senator does not believe that this position ought to carry a higher salary than the position of Solicitor for the State Department.

Mr. HARDWICK. I think we can give good reasons why.

Mr. SMOOT. I should like to hear the reasons.

Mr. HARDWICK. If the Senator will permit me, I will state them now.

Mr. SMOOT. I will yield to the Senator. I would prefer that he should state now what the reasons are.

Mr. HARDWICK. I think there is a reasonable explanation for this proposition. Let us get the facts plainly before us. In the first place this office is now held by the former Second Assistant Postmaster General, Mr. Stewart. He is paid, as the Postmaster General says, out of an appropriation for the pay of special assistant attorneys in the Department of Justice and is assigned by that department to the Post Office Department for certain work described by the Postmaster General in his letter.

The facts are these: Mr. Stewart is the greatest expert in the employ of the Government in that particular kind of cases. He is a very great expert about this class of cases, in which he has dealt for so many years.

The business of the Post Office Department, of the character described in the letter referred to, is very heavy, and it is especially heavy now, and has been especially heavy recently, in view of pending questions connected with the adjustment of railway mail pay. The railroad companies of this country have had the most brilliant talent that unlimited funds could employ, and we feel that probably a salary of $6,000 should be allowed Mr. Stewart in this case. We believe that the talent and industry with which this gentleman has served the Government fully warrant and justify it.

I think it required that sort of an explanation to let the Senator understand why we insist on it, or why we agreed to the departmental recommendation with respect to it. We believe that it is real economy to allow the department to employ the very best expert within the reach of the Government and within its means. For that reason and because of the especial service rendered necessary at this time we thought the recommendation of the department should be granted.

Mr. SMOOT. I still state that this is a duplicate appropriation.

Mr. HARDWICK. Will the Senator yield to me just there? Probably I did not cover all the ground. Undoubtedly if this amendment is retained in the Post Office appropriation bill that much more money will be available for the Department of Justice and they may employ another man. But the Post Office Department contends, and I think correctly, and I believe the Senator will agree with me that this man has devoted himself to this particular kind of work exclusively in the employment of that department and it is proper his salary should be paid out of the postal funds. If on that account $5,000 or $6,000 per annum is left unexpended in the Department of Justice, of

course, there will be no duplication in the expenditure. Whether or not the Department of Justice will try to appoint another man I do not know; the committee can not deal with that. It seems that the committee that handles the sundry civil appropriation bill or the legislative, executive, and judicial appropriation bill ought to look after that.

Mr. SMOOT. I will assure the Senator right now that every cent of the lump appropriation provided for in the legislative, executive, and judicial appropriation bill will be spent before June 30, 1917.

Mr. HARDWICK. Of course, the Senator understands——

Mr. SMOOT. I say that, Mr. President, from the past experience I have had in the appropriation of money for any of the departments of the Government in lump sums.

Mr. HARDWICK. I quite agree with the Senator on that general proposition, but owing to the fact that this great expert is devoting himself to the Postal Service, in this particular kind of work, where there is a special need for his services now, he ought to be paid out of this appropriation and in connection with this bill I do not believe can very well be denied by the Senator.

Mr. SMOOT. I think that in the past he has been paid out of the lump-sum appropriation for doing exactly the same work and I see no reason why he can not continue to be paid in that way. I say frankly to the Senator that when the Committee on Appropriations were considering the legislative appropriation bill they knew nothing of this special position. I know Gen. Stewart very well. I know his ability as an attorney and his familiarity with these questions.

There is no question but that we have in the department men of the highest attainment, not only in the law but in the business affairs of the land that draw salaries not exceeding $5,000 per annum. No doubt the Senator remembers of my referring to some of them at different times. I called attention to such men as the Commissioner of Indian Affairs receiving a salary of only $5,000. The result of a direct appropriation of this kind for this particular work will be that when the next appropriation bill comes before the Appropriations Committee the heads of the departments will insist upon an increase in the salaries of the solicitors for their departments. They will insist that they receive $6,000 a year and will point to this very case as a justification.

Mr. GALLINGER. Mr. President, I will ask the Senator if he knows an exception to the rule that when a larger salary is given to a person who occupies a position similar to that of several others the others immediately ask that they shall have their salaries increased to the maximum, giving as a reason that they are entitled to it quite as much as the man who receives it.

Mr. SMOOT. I can not remember of a case in any of the departments where that has not happened; and to be frank, Mr. President, I have always felt like there was justice in their demands.

Mr. GALLINGER. That is true.

Mr. THOMAS. That is human nature.

Mr. SMOOT. There have been a few cases where a position has been hold at a salary larger than perhaps would be ordinarily paid, but it was specifically stated in the bill that it should only apply as long as the present incumbent lived. That only happens where a man has been faithful in a certain position of great responsibility for 20 or 30 years. At present I do not know of a case that is thus provided for in our appropriation bills. I think the late financial clerk of the Senate was the last one who was so mentioned.

I really believe, Mr. President, that this is a bad precedent to establish. By all odds I would prefer to allow it to go on the way it is going and pay Gen. Stewart $6,000 from the lump sum. We have already appropriated the money for the position and it has been paid from a lump-sum appropriation in the past. It would not make any difference to the department if continued, but it will make a great difference to the Committee on Appropriations when they are called upon to consider the next legislative, executive, and judicial appropriation bill.

I appeal to the Senator having the bill in charge to allow this amendment to be disagreed to. I would not ask it if it was going to affect Gen. Stewart. I can testify as to his ability and recognize his faithful services as any Senator in the Chamber. I know what work he has been doing, and I know he will continue to do it; but this amendment will come back to plague us in the future, and I ask that it be disagreed to.

Mr. HARDWICK. Mr. President, I want to say only a word or two more in justice to the committee. I think I ought to reiterate the committee's position that this is an exceptional case. We are not always readjusting a great system of pay for the railroads of the country for hauling the mails. When the pay is once readjusted, it will stay readjusted. We do not expect this thing to recur. We do think that just at this time, when the railroad companies are represented by the most brilliant legal talent that limitless funds can hire, and they are urging with skill and force and tremendous ability their contention on questions relating to railway mail pay, there is a special and exceptional reason why this exceptional thing, if it is exceptional, ought to be done now, during the pendency of that controversy and only during its pendency. It seems to me it ought to cease immediately with the settlement of this question.

Mr. SMOOT. Does the Senator claim that it will in any way interfere with the work of Gen. Stewart if this amendment is stricken from the bill?

Mr. HARDWICK. I will answer the Senator in this way about it. The Post Office Department, I think, has had the services of Gen. Stewart in his present capacity for only a few months, since the resignation of Mr. Otto Praeger. It is not an old thing; it is a very recent thing. The Department of Justice agreed to let them have one of these special attorneys, although they had already an Assistant Attorney General for the Post Office Department. The Department of Justice is under no obligations to continue this. For some reason the Postmaster General seems to think that he could not provide for Gen. Stewart otherwise except by the adoption of this amendment, and we really felt that it would be a calamity to the Government and to the department not to keep him, and unless this amendment is agreed to we were afraid it could not be done.

Mr. SMOOT. I will say to the Senator the appropriation has been made in a lump sum to take care of every one who is in the employ of the Department of Justice, and we gave the Department of Justice every cent that they asked. The Committee on Appropriations did not restrict that department in any way. If the Senator will look up the bill he will find we gave an increase in numbers of employees and appropriations.

Mr. HARDWICK. If the Senator will pardon me, I will suggest this possibility about it. If the Attorney General and the Postmaster General have an understanding that the Postmaster General will take care of this salary for Gen. Stewart and it is not included in this bill and we cut this amendment out, then we may lose the services of this man, and we can not afford to do it.

Mr. SMOOT. We can not afford to do it, and I would not do it.

Mr. HARDWICK. That is the reason why we urge it.

Mr. SMOOT. But I assure the Senator with all the assurance I can give, and it would almost go to a promise, that if the Government of the United States did not pay him I would. If this amendment is disagreed to Gen. Stewart will be employed just as he is employed to-day, and he will be paid out of the lump-sum appropriation.

Mr. HARDWICK. I merely wish to suggest to the Senator that Gen. Stewart is now trying a case for the department in the Court of Claims which involves $40,000,000. We can not afford to run any risk on that. If the Senator could be absolutely positive from his knowledge of the other bill that came from his committee that Gen. Stewart is already provided for and we were going to retain his services whether the amendment was adopted or rejected, I would not care whether he was paid out of this fund or not, but we think otherwise; at least we fear it.

Mr. SMOOT. That will never happen.

Mr. HARDWICK. We would have no assurance of it, and we do not want to run any risk. I do not think the Senator ought to insist upon his opposition to the amendment, because we can not afford to run any risk just at the present time of losing the invaluable services of Gen. Stewart in connection with these cases and with the particular work upon which he is engaged, as set out in the letter of the Postmaster General.

Mr. VARDAMAN. If the Senator will pardon the suggestion, if the facts stated by the Senator from Utah can be established before the conference committee——

Mr. HARDWICK. We will strike it out.

Mr. VARDAMAN. There will be no trouble in striking it out.

Mr. HARDWICK. I think that is a very good solution.

Mr. VARDAMAN. This is an office created for the man, not a man for the office. This man's services are especially needed, and it was agreed by the committee that he ought to be retained in the service, and that this was the most direct and satisfactory way of doing it. If the Members of the other House are in possession of the facts, which the Senator has just suggested may exist, there will be no trouble about eliminating the provision.

Mr. SMOOT. Mr. President, I will say to the Senator that this is not an exceptional case in the sense that we have already admitted that it was, for there are hundreds of appropriations which have been made, just as this is made, to fit a certain condition.

Mr. VARDAMAN. If that certain man is to perform a certain duty or a certain function, the Government makes a very good investment by taking that man.

Mr. SMOOT. Yes; but in this case the Government is already employing him, and the Government will continue that employment. He will do the exact work under the law as it now stands.

Mr. VARDAMAN. If the Senator from Utah were absolutely sure about that, I should agree with the Senator that the provision ought not to remain in the bill, but the Senator is not absolutely certain about it.

Mr. SMOOT. Mr. President, I can not say any more than I have said, but I am positive of it; there is no question of it in my mind.

Mr. HARDWICK. Mr. President, I do not think I need take up the time of the Senate any longer. Permit us to have the amendment agreed to, and if we find that the Senator from Utah is right we will strike it out in conference.

Mr. REED. Mr. President, I am willing to leave the form that this matter shall take to the Post Office Committee, but I can not refrain from saying just a word.

I do not believe in jobs that only one man can perform. I heard an Irishman say one time with reference to a situation of that sort, when it was urged that only one man could fill a position, that, if that were the case, we must immediately abolish the job, because some day that man would die and the country would be in a terrible condition.

I am not impressed with the wonderful ability of the so-called Gen. Stewart, a title that he gets by courtesy because he was for a long time Fourth Assistant Postmaster General.

Mr. HARDWICK. Second Assistant Postmaster General.

Mr. REED. I believe he has gravitated from Fourth Assistant Postmaster General to Second Assistant Postmaster General, and then perhaps to some other position. I believe that this gentleman has been kept in the Government service through some extraordinary favoritism. He used to practice law in my town, just across the hall from me; and if he possessed any remarkable ability or any latent germs that might bud and blossom and bring forth the fruitage of extraordinary talent, then the fact was entirely concealed from the members of the profession to to which he belonged.

Mr. HARDWICK. Will the Senator from Missouri pardon me for just a moment?

Mr. REED. Yes.

Mr. HARDWICK. What I meant to say was—I may have been extravagant in the compliments I have paid to Mr. Stewart—that Mr. Stewart had great familiarity with these questions, in which the Government is obliged to have an expert. There is no doubt about that, I will say to the Senator, whatever may be the fact as to his natural ability.

Mr. REED. I think Mr. Stewart has had a good deal to do with a good many things. I remember one of the first tasks I had to perform after arriving here in Washington was to listen to the complaints of the editors of certain great agricultural newspapers who had been summoned or who had had issued against them orders to show cause why their papers should not be denied the privileges of the second-class mail. I am sorry that both the chairman of the committee and his able assistant have vanished from the Chamber. When I got through hearing the evidence which these gentlemen had to produce I made up my mind that the solitary offense of which these editors of agricultural papers had been guilty was not a violation of the postal laws, but the fact that they had printed a Democratic article in their papers shortly before the election. I remember that a large number of Representatives and several Senators went down to attempt to right that wrong, and found that it was based upon a construction of the law which was so arbitrary and so unjust that after some discussion it was hastily abandoned.

It may be that this indispensable gentleman, this man who manages to hold through all administrations and in all positions, is so essential to the Government that we can not get along without him. If it is necessary to appropriate this $6,000, I am willing to have it appropriated; but not upon the theory that Mr. Stewart is the only man in the United States who can do this work, for I undertake to say that any good lawyer can master every question that has to be presented and can put forward the Government's side in a forceful and complete manner, and that none of these alleged great experts employed by the railroads will have any advantage over a lawyer who is devoting his entire time to the preparation of these particular questions.

Mr. HARDWICK. Mr. President, if the Senator from Missouri will yield for just a moment—I do not want to disturb him, because I surely do not want to prolong the debate—I will say that I think the Senator would be right, probably, if the man had anything like the preparation and training that Mr. Stewart has had; but I will say to the Senator that the particular work upon which Mr. Stewart is engaged is of such a character that, after some little examination of the questions myself—questions so intricate and so involved, with so many angles to them—I am of the opinion that a first-class lawyer could not do this work without a good many years of preparation.

Mr. REED. Of course, I do not want to prolong the discussion. Indeed, I should have been through before now if I had been allowed to drift along in my own mild way. The railroad lawyers who will be here to argue this proposition are lawyers in active practice, having hundreds of different propositions to handle. The man who represents the Government, if he be employed on this business alone, can speedily place himself in a position to meet whatever demands the railroads bring.

It may be that Gen. Stewart has great familiarity with the subject; but I have seen many men possessing great familiarity with a subject who could not handle it half so well as some man of superior talents who had been on the ground only a few hours. So I am not in favor of this proposition because it is going to take care of Gen. Stewart. If it is necessary to have the money, well and good; but I hope that the Senate of the United States will not commit itself to the doctrine that Gen. Stewart is indispensable to the welfare of the American Republic.

Mr. OVERMAN. I have just come in, and I desire to ask, Is the proposition to pay Mr. Stewart $6,000?

Mr. BANKHEAD. Yes.

Mr. OVERMAN. I doubt whether, if we pay him at all, we should pay him more than we are paying the Solicitor of the Post Office Department, the Solicitor of the Treasury Department, or the Solicitor of the Agricultural Department.

Mr. HARDWICK. He is getting that salary already, because he is doing the work of a special attorney.

Mr. OVERMAN. I understand he is being paid out of a lump-sum appropriation, and I am opposed to lump-sum appropriations. It is now proposed to fix his salary; but we ought not to fix it at an amount greater than is paid Assistant Attorneys General.

Mr. HARDWICK. I am sorry the Senator was not here when I tried to give the reasons for the amendment.

Mr. THOMAS. Did I understand the Senator to say that Gen. Stewart received pay in addition to the $6,000?

Mr. HARDWICK. No; the Senator did not understand me to say that. He is being paid by the Department of Justice from a lump sum, $6,000.

Mr. THOMAS. The same amount which he will get under this provision?

Mr. HARDWICK. Yes; but he will be paid through the Post Office Department.

For the benefit of the Senator from North Carolina, I am glad to state for the committee that Mr. Stewart is in charge of all the Government's contentions with respect to important questions that are now acute relating to railway mail pay. He has in charge one case before the Court of Claims growing out of that matter, and involving, I think, $40,000,000, in connection with what is called the divisor question. Just at present that question is before Congress, and it involves immense sums to the Government, to the railroads, and to the public; and so, as to this man, with years of experience and years of training in connection with this question, there are reasons why the compensation is not at all too great.

Mr. OVERMAN. What salary did he get as Second Assistant Postmaster General?

Mr. HARDWICK. I think the Senator probably knows as much concerning the salaries of Government officials as I do. I presume he got $5,000.

Mr. OVERMAN. He got the same salary as the other Assistant Postmasters General of the department got. He did every particle of the work which it is said he is doing now for $5,000 and had a more responsible position; and it is proposed to pay him now more than is paid the First Assistant Postmaster General, the Second Assistant Postmaster General, or the Third Assistant Postmaster General.

Mr. HARDWICK. If the Senator will pardon me, during the time when Gen. Stewart was Second Assistant Postmaster General, this question was not acute in the form it is now.

Mr. OVERMAN. I understand the reason why Gen. Stewart was retained in office was because he knew more about this matter than anybody else.

Mr. HARDWICK. I understand that there are other things of moment which the Second Assistant Postmaster General attends to besides the question of railway-mail pay.

Mr. OVERMAN. If we increase his salary, does not the Senator think we ought to increase the salary of the Assistant Postmasters General?

Mr. HARDWICK. No, sir. In the first place, we do not increase his salary at all.

Mr. OVERMAN. Yes; it is proposed to promote him to $6,000 instead of $5,000.

Mr. HARDWICK. If we should strike this amendment from the bill, he would get $6,000 anyhow.

Mr. OVERMAN. How?

Mr. HARDWICK. From the Department of Justice.

Mr. OVERMAN. He can only get it because he is paid from a lump-sum appropriation.

Mr. HARDWICK. That is how he does get it.

Mr. OVERMAN. Then, he is on an annual basis. Such appropriations are made from the 1st of July of one year to the 1st of July of the next year.

Mr. HARDWICK. That is all the time this appropriation continues in force.

Mr. OVERMAN. The departments can pay salaries of $10,000 out of lump-sum appropriations. They sometimes take lump sums and pay an employee $3,000 whose salary has been fixed at $2,000. I am opposed to paying the salaries of men out of lump-sum appropriations.

Mr. HARDWICK. Six thousand dollars is the amount of salary Congress has provided for in this particular case, and it is now being paid from a lump-sum appropriation by the Department of Justice.

Mr. OVERMAN. When it comes to fixing salaries, I will say to the Senator, if he will pardon me, that we ought not to fix them greater in this bill than we do in the legislative appropriation bill.

Mr. VARDAMAN. That is just what this does. It is not a lump sum and the salary is fixed.

Mr. OVERMAN. That is what I am protesting against.

Mr. VARDAMAN. It fixes his salary at just what he is receiving now.

Mr. OVERMAN. That is what I am protesting against. We have a legislative bill to fix the salaries of all the officers of departments, but in this case they had a lump-sum appropriation, and from the lump-sum appropriation they employ this man and pay him more money than he was getting before for doing the same work; and here comes in another appropriation bill proposing to fix his salary at $6,000.

Mr. HARDWICK. If the Senator will pardon me, I do not want to go over the ground again.

Mr. OVERMAN. I am sorry I was not here, and I beg the Senator's pardon.

Mr. HARDWICK. I am willing, however, to do it for the Senator's benefit. The situation is different from what the Senator imagines. Gen. Stewart is not doing the same work. The question of railway mail pay has become acute. Congress is about to enact legislation one way or another concerning this matter in this bill. Before we get through the committee will submit a proposition looking to a thorough investigation of that question by the Interstate Commerce Commission. The railroads will be represented by lawyers of skill and ability and experience in these questions. They have unlimited funds, or practically so, I presume, with which to pay those attorneys. Mr. Stewart has had years of experience, and he seems to have, so far as the committee can judge, exceptional ability and knowledge of this question, and we thought that for the present it was well to make this provision. I will say to the Senator frankly that as soon as we can get through with this question of railway mail pay, and that matter has been adjusted, I will agree with him thoroughly. I agree with every sentiment that he has uttered in regard to general rules of this kind; but it does seem to me, as it seemed to all the members of the committee, that this was an exceptional case because of the conditions surrounding the question of railway mail pay and railway mail transportation, at this particular time, and the great controversy that is now raging about them.

Mr. OVERMAN. I will ask the Senator if the question of space has been passed upon by the committee?

Mr. HARDWICK. The committee has recommended that the whole matter be investigated by the Interstate Commerce Commission—

Mr. OVERMAN. That is under consideration now?

Mr. HARDWICK. And that the department and the railroads go there to argue the question out. Of course, we will come to that later.

Mr. OVERMAN. I am not going to take any time on this question now, because there are very few Senators present, and I want this bill to proceed; but I did want to protest against this kind of legislation, for if you provide for a man in one bill and for another man in the same department in another bill, what is the use of having a legislative appropriation bill?

Mr. HARDWICK. Abstractly I quite agree with the Senator. He is absolutely right—unequivocally right—and yet I say to him, after a careful study of this question, that I think this is such an exceptional case and the circumstances are so exceptional that the interests of the Government require that the action recommended by the committee be taken in this instance. That is all.

Mr. BANKHEAD. Mr. President, I think perhaps the Senator from North Carolina does not quite understand this particular case. Gen. Stewart was Second Assistant Postmaster General and during that time for 15 years he dealt largely with railway mail pay questions. In his present position, however, he has nothing to do with the Second Assistant Postmaster General's office, but represents the Post Office Department in the Court of Claims and other courts, and recently he appeared in the Supreme Court of the United States.

Mr. OVERMAN. You do not need an Assistant Attorney General, then, for that purpose?

Mr. BANKHEAD. I do not care what you may call him.

Mr. OVERMAN. We have an Assistant Attorney General, as the Senator knows, who does all that.

Mr. BANKHEAD. But he does not do it as to this particular question. He, like many other great lawyers, does not understand all questions, and it seemed to the committee that it would be well to make this provision. This is an annual appropriation, it is true, but whether it stays in this bill or goes out, the salary of the office will be the same and the amount of money received will be the same. The committee thought—and it seems to me that that is a reasonable conclusion—that if he was under the control and jurisdiction of the Post Office Department representing alone the Post Office Department in the courts of the United States, including the Court of Claims and the Supreme Court of the United States, his salary ought to be paid from the Post Office appropriation bill. That is the only purpose of this item, and it seems to me there should be no objection to it.

The VICE PRESIDENT. The question is on agreeing to the amendment reported by the committee.

The amendment was agreed to.

Mr. SMOOT. Mr. President, I should like to ask the Senator having the bill in charge if he will not consent to adjourn at this time. We have been meeting at 11 o'clock every day; this is the eve of Decoration Day, and there are very few Senators present.

Mr. BANKHEAD. I am very glad, indeed, to agree to the suggestion of the Senator from Utah, and I move that the Senate adjourn.

The motion was agreed to; and (at 4 o'clock and 38 minutes p. m., Monday, May 29, 1916) the Senate, under the previous order, adjourned until Wednesday, May 31, 1916, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES.

MONDAY, *May 29, 1916.*

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

We bless Thee, Infinite Spirit, for the sublime faith which enables us to see back of all that we perceive with our physical senses a supreme Intelligence, a moral order, a spiritual realm, the kingdom of heaven. Help us to enter in and possess that realm that we may live in Thee, through Thee, to the larger life and render to our fellow men a truer, nobler service, after the manner of the Christ. For Thine is the kingdom and the power and the glory forever. Amen.

The Journal of the proceedings of Saturday, May 27, was read and approved.

JEFFERSON DAVIS.

Mr. ASWELL. Mr. Speaker, I ask unanimous consent that on next Saturday, June 3, I be permitted to address the House for 15 minutes, the occasion being the anniversary of the birthday of Mr. Jefferson Davis.

The SPEAKER. The gentleman from Louisiana [Mr. ASWELL] asks unanimous consent that on next Saturday, after the reading of the Journal and the clearing up of the business on the Speaker's table, he be allowed to address the House to not exceed 15 minutes, it being the anniversary of the birthday of Jefferson Davis. Is there objection?

There was no objection.

ORDER OF BUSINESS.

Mr. MANN. Mr. Speaker, I ask unanimous consent to modify the order under which we are operating, to the extent of allowing general debate to proceed so that the gentleman from Tennessee [Mr. PADGETT] shall have 1 hour and 20 minutes and the

gentleman from Pennsylvania [Mr. BUTLER] 1 hour and 20 minutes to-day, and that general debate shall close at the end of that time.

The SPEAKER. Does that mean at the end of this general debate or at the end of the whole thing?

Mr. MANN. It means now. It will extend it a little time beyond the time fixed by the rule.

The SPEAKER. The gentleman from Illinois asks unanimous consent that the order heretofore agreed to shall be modified to such an extent as to allow the gentleman from Tennessee [Mr. PADGETT] 1 hour and 20 minutes and the gentleman from Pennsylvania [Mr. BUTLER] 1 hour and 20 minutes. Is there objection? [After a pause.] The Chair hears none.

SENATE BILL REFERRED.

Under clause 2 of Rule XXIV, Senate bill of the following title was taken from the Speaker's table and referred to its appropriate committee, as indicated below:

S. 3606. An act for the relief of contributors of the Ellen M. Stone ransom fund; to the Committee on Claims.

JEFFERSON DAVIS.

Mr. KINCHELOE. Mr. Speaker, next Saturday, as we know, is the anniversary of the birth of Jefferson Davis, who was born in my district. I ask unanimous consent that immediately after the reading of the Journal and immediately after the address of the gentleman from Louisiana [Mr. ASWELL] I be permitted to address the House on the life and character of Jefferson Davis and make some observations as to the Southern Confederacy.

The SPEAKER. How much time does the gentleman desire?

Mr. KINCHELOE. It will not take long; 20 minutes.

The SPEAKER. The gentleman from Kentucky [Mr. KINCHELOE] asks unanimous consent that on next Saturday, after the conclusion of the remarks of the gentleman from Louisiana [Mr ASWELL], he be allowed to address the House for 20 minutes on the life and character of Jefferson Davis, who was born in his district. Is there objection? [After a pause.] The Chair hears none.

ADDRESS OF PRESIDENT WILSON.

Mr. COX. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing a speech of the President delivered Saturday night at the peace meeting in Washington.

The SPEAKER. The gentleman from Indiana [Mr. Cox] asks unanimous consent to extend his remarks in the RECORD by printing a speech by the President of the United States delivered last Saturday evening at the peace meeting. Is there objection?

Mr. STAFFORD. Reserving the right to object, would the gentleman have any objection to adding to his request that there be printed as a document all the speeches delivered at the recent peace conference?

Mr. COX. None whatever. I would like very much to get hold of President Taft's speech also. The papers did not carry it.

Mr. STAFFORD. Mr. Speaker, I ask unanimous consent that they be printed as a House document.

The SPEAKER. Is there objection to the request of the gentleman from Indiana [Mr. Cox]. [After a pause.] The Chair hears none.

Mr. STAFFORD. Mr. Speaker, I ask unanimous consent that there be printed as a House document the proceedings of the recent meeting of the League for the Enforcement of Peace, held in this city last week.

The SPEAKER. The gentleman from Wisconsin asks unanimous consent that the proceedings of the Peace League, held here last week, be published as a House document. Is there objection?

Mr. DIES. Reserving the right to object, how much of this stuff is there? Will the gentleman tell me?

Mr. STAFFORD. It will not be a very large document. Under the rules of the House, as the gentleman knows, there can be only so many documents printed within the certain amount allowed by law. They would amount to about 500. We are all interested in having all those very noteworthy speeches delivered at that league last week, among others the speech of ex-President Taft, and President Lowell, of Harvard, and other distinguished publicists. The public expense will not be great.

Mr. DIES. It occurs to me that if you print the speech of ex-President Taft and a few others in the RECORD it would be better than to print the whole flabdab——

Mr. STAFFORD. The gentleman refers to it as "flabdab." The gentleman does not know the character of the speeches.

Mr. DIES. I am not talking about the speeches. I am talking about the proceedings of the meeting.

Mr. STAFFORD. The proceedings virtually consisted of the addresses.

Mr. DIES. I mean to insert the addresses and leave the proceedings out.

Mr. MANN. Mr. Speaker, a wholesale matter of this sort should come through the Committee on Printing. Why not introduce a resolution?

Mr. STAFFORD. There have been many times when such things have been done without a committee resolution.

The SPEAKER. The gentleman from Illinois objects.

NAVAL APPROPRIATION BILL.

The SPEAKER. The House automatically resolves itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill (H. R. 15947) making appropriations for the Naval Service for the fiscal year ending June 30, 1917, and for other purposes. And the Chair will ask the gentleman from Indiana [Mr. Cox] to preside temporarily until the gentleman from New York [Mr. FITZGERALD] arrives.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 15947, the naval appropriation bill, with Mr. Cox in the chair.

The CHAIRMAN. The House is now in Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 15947, the naval appropriation bill, which the Clerk will report by title.

The Clerk read as follows:

A bill (H. R. 15947) making appropriations for the naval service for the fiscal year ending June 30, 1917, and for other purposes.

Mr. PADGETT. Mr. Chairman, I yield to the gentleman from Indiana [Mr. CLINE].

The CHAIRMAN. The gentleman from Indiana [Mr. CLINE] is recognized.

Mr. CLINE. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD on the naval appropriation bill.

The CHAIRMAN. The gentleman from Indiana [Mr. CLINE] asks unanimous consent to extend his remarks in the RECORD on the bill H. R. 15947, the naval appropriation bill. Is there objection?

There was no objection.

Mr. BAILEY. Mr. Chairman, I make the same request.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. PADGETT. Mr. Chairman, I yield 10 minutes to the gentleman from Louisiana [Mr. ESTOPINAL].

The CHAIRMAN. The gentleman from Louisiana [Mr. ESTOPINAL] is recognized for 10 minutes.

Mr. ESTOPINAL. Mr. Chairman, we recall that only two or three years ago the opponents of armed preparedness—or readiness, which is probably a better designation—were voicing, in the pulpit, on the stump, in lectures, in the press, and in the halls of Congress, the theory that the nations of Europe were heading toward bankruptcy on account of their military expenditures, and it was applied to our country in combatting the comparatively small annual increases which our Naval Affairs and Military Committees were wresting, so to speak, from the "watchdogs" of the Treasury and in contest with a strong opposition sentiment in the committees, in the House, and in the country.

In advocating the passage of one of our annual appropriation bills for the Navy I discussed this phase of the question, and showed by reliable statistics the comparatively small effect of these military expenditures even in Europe on the progressive development of commerce, trade, and industry in those countries, and as to the United States that the effect of our expenditures for these purposes was almost negligible in the march of our rapid progress in wealth production, industry, and commerce.

But, Mr. Chairman, were we to concede that even this showing—these comparisons of relatively small military expenditure with the financial, commercial, and industrial expansion of these European countries of the first class—may have left some slight grounds for difference of opinion as to the effect of this burden of "militarism" on their financial status, the unprecedented costs of the great upheaval which has been going on for the last 22 months with no sign of financial collapse make these claims absurd, for these first-class powers are spending more, probably, in two weeks of warfare than their total annual military and naval expenditures prior to the opening of hostilities. These nations certainly must have already expended in this war almost as much as the total amounts spent on their

army and navy for the past half century, including the cost of their wars. And it is equally absurd, Mr. Chairman, to claim that the state of military preparedness of these countries was the cause of the war, for the belief rests on rather conclusive evidence that if Great Britain had been as well prepared with her army as she was with her navy, there would have been no war.

And it is well to note that that country on the Continent which was best prepared has been able to keep its own soil almost free from invasion and to confine the hostilities to that of its enemies.

Now, the lesson in this for us, Mr. Chairman, is that preparation, with the expenditure of hundreds of millions annually, is far cheaper than war with the resultant costs in billions of dollars, in the red riot of death and permanent disability to perhaps millions of our bravest and best, and in widows and orphans and dependent mothers left to mourn in tears and suffer in poverty. For it is one of the surest of things that, with our national spirit and our growing world status, we shall be embroiled in warfare unless our state of readiness makes attack upon us too great a hazard to be ventured.

Mr. Chairman, the Navy Department has submitted a five-year building program and has recommended an appropriation for the next fiscal year for the construction of a certain number of vessels included in this program.

The General Board of the Navy, in its reports to the Secretary of the Navy as published by him, has recommended larger programs, especially in the number of ships to be authorized now. And many individual officers, the president of the War College, the commander-in-chief of the Pacific Fleet, and others, have recommended more extensive programs.

These differences do not indicate a divergence of opinion between the Secretary of the Navy and the General Board and these officers of experience in regard to the number of vessels which may be needed to insure an efficient first-class line of defense for the country. This can be clearly seen by reference to the statements of the Secretary of the Navy to our committee, that, if he thought the money was available, he would recommend accelerating the program. This, of course, meant appropriating for a larger number of ships in the present bill. We have in some ways enlarged the recommendation for the fiscal year, but the balance of the five-year program we have left in abeyance. In this situation the House is, after all, the court of last resort so far as action at this end of the Capitol is concerned.

This question of funds available is a matter which is definitely up to Congress, and in view of the recommendation of the General Board and of the Secretary's statement that he would favor an accelerated program if money were available, we can not evade the responsibility of making the adjustment between the defensive needs of the country and the financial resources at the present time; and to enlarge our resources, or otherwise supplement them, to fit these needs.

The defensive needs of the country can not be based upon any absolute standard. The minimum number of ships required must be arrived at by a comparison with the fleets of the other great naval powers. All authorities agree that in the middle of the year 1914 Great Britain occupied first place and Germany second. The official records of our own Navy Department place the United States third, with a narrow margin over France in the fourth place. This margin, however, is so narrow that some authorities place France in the third place.

If none of the belligerents in the present war has laid down up to the present time, and does not lay down in the future, any additional ships, the five-year program recommended by the department would, in 1925, place the United States in second position in naval strength.

There is as yet nothing in the progress of this war to indicate that it will not end without a great naval battle. Indeed, it appears entirely possible, and many commentators believe probable, that no such battle will be fought; that peace will find all belligerents with their battle fleets as they existed at the beginning of the war, practically intact, and with great additions to their strength, due to the construction work which has been undertaken since the beginning of the war and pushed to completion with the utmost dispatch under the pressure of emergency conditions. For this year at least this would appear to be the only safe hypothesis for this country to proceed on in determining its naval program. If, at the next session, it is found that one or more of the European fleets have actually suffered great losses, the naval program for those years can be reduced. This would result in no greater expenditure over the next three years than would be involved by the authorization of the same total number of ships, but authorized piecemeal; that is, one-third each year. It seems to me that no one can question that this would be the safest course to pursue, in view of the extremely uncertain and unsettled international outlook.

Mr. Chairman, we have not been permitted to peer behind the curtain to see the extent of naval building of the belligerent nations. Therefore very little is known definitely of the amount of construction laid down by the various belligerents since the beginning of the war. Some facts are available, however, upon which a shrewd estimate may be based. It is known that the shipbuilding capacity, both of Great Britain and Germany, is far in excess of that of the United States. As an illustration of the shipbuilding capacity of Great Britain we may cite the statement of the First Lord of the Admiralty before Parliament, in November, 1914, in which he stated that between August, 1914, and December, 1915, there would be added to the British Fleet 15 dreadnaughts and battle cruisers. This number represented only vessels which had been laid down prior to the war in accordance with their ordinary peace-time program, and the construction of which had been carried along with the usual huge output of merchant tonnage.

One naval writer has estimated that the German yards are capable of carrying along the construction of about 25 capital ships at one time; and that there are enough smaller yards, not able to construct capital ships, to supply the needed auxiliaries without interfering with the construction of these capital ships. It is further known that men in the shipbuilding trades have been exempted from military services as they are being utilized to better national purposes in their usual pursuits. It is also known that every effort is being made to increase the output of shipbuilding establishments by resorting to overtime work, work in shifts, and a close supervision of all men to insure good timekeeping; and by Germany, the utilization of establishments in captured territory and the employment of alien civilian workers and prisoners. These facts lead to the inevitable conclusion that a huge amount of naval-construction work is being done in these countries. As supporting this presumption, there can be cited the recent speech, in the British Parliament, of Mr. Winston Churchill, formerly First Lord of the Admiralty, in which he warned the Government of the probability that Germany was adding a large number of capital ships to her fleet, with the consequence that it was of the highest importance that Great Britain should press, with the utmost speed, the construction of similar vessels; this despite the almost 2 to 1 margin of strength which she possessed at the outbreak of the war.

Summarizing the foregoing, it is believed that the statement of the Secretary of the Navy, that his recommendations for new construction were limited only by the question of funds available; the recommendations of the General Board of the Navy, and of individual officers of experience; the present uncertain position of the United States Navy in comparison with great foreign navies; the almost inevitable conclusion that at least some of the belligerents in the present war are adding to their fleets at an unprecedented rate; the probability that these navies will emerge from the present conflict far stronger, both as regards numbers and more experience, than they were at the beginning of hostilities, all place upon Congress the heavy responsibility of determining the extent of the program which should be laid down this year, taking into account the international, political, financial, and military factors of the present situation, some of which are ominous in the extreme, with but small room for any clarity of vision for us.

Mr. Chairman, in my remarks on at least two former naval appropriation bills I expressed the belief that science would finally dispose of warfare by making it impossible on account of wholesale destruction. The present conflict in the war zone of Europe seems to point to a realization of that prediction, with this amendment: That in addition to making it destructive in intensity and duration, science is making warfare futile, as well. When nations realize that, notwithstanding the cost of millions of lives and billions of treasure, a deadlock in operations is inevitable, the glamour of war will depart and self-preservation will dictate international agreement. But until international agreement shall give us security from attack we must be prepared spiritually and economically, as well as with armaments, for the preliminaries of larger military preparation, the passing of laws to increase the strength of our arms of service—especially to only the extent which we are preparing to go—is not sufficient to give us immunity from attack from any nation or nations of the first class which may seek that kind of an adventure with us. Behind these moderate military preparations we must come to a state of industrial manhood and spiritual completeness, with the labor forces of the country forming an integral part. Without these under-

lying conditions, it matters not to what conservative extent we finally plan our defense laws, we shall have but a shell inclosing a molluscous mass of weakness.

Patriotism, Mr. Chairman, is a soul quality, a habit of thought, the spirit of communion, the joy of living, which can not force itself up through the dead lava and ashes of ignorance, poverty, weakness, class divisions, religious prejudice, racial animosities, and grow and bloom in full perfection even in the free atmosphere of America. This country should lead the world in a new spiritual advance that will make these qualities predominant in its life.

Mr. Chairman, it is wholly compatible with the genius of our institutions for us to take the lead in this social evolution, notwithstanding that we are now far from first in organized action, for we have all the components, though yet uncoordinated, to produce the powers we need.

It has been said that it is difficult to mold the character of a people. But in this age of progress in inventions and discoveries of such astonishing character which contribute to the convenience of mankind we may see a sequel in an astonishing progress in social matters for the rapid advancement of mankind. We have only to find the way. We are leaping forward now in decades far more than the world first crept along in millennials.

Mr. Chairman, this is almost ultra vires so far as Government action is concerned, if we may thus distort that legal phrase. It is not a problem which government can solve, though wise laws may aid. It is one for the ingenuity of the educational forces and developing powers of this country to solve. Why should not these forces and these powers integrate America for a glorious consummation of the social ideal?

Mr. Chairman, there is provision in this bill authorizing the President of the United States to invite, after peace is concluded, all the great Governments of the world to a conference in the interest of an agreement for permanent peace. It seemed to us that such an invitation would be generally accepted and that some permanent plan may be the outcome, for this most heartless holocaust of war is shocking the civilized world, and its terms seem too hard, in suffering and desolation and death, for humanity to ever contemplate another. The world may be ready and eager to abolish the savagery of such wholesale wantonness and destruction. I shall not take up the time of the committee to read the clause, but will incorporate it in my remarks, if there is no objection. It is thus:

Upon the conclusion of the war in Europe, or as soon thereafter as it may be done, the President of the United States is authorized to invite all the great Governments of the world to send representatives to a conference which shall be charged with the duty of suggesting an organization, court of arbitration, or other body, to which disputed questions between nations shall be referred for adjudication and peaceful settlement, and to consider the question of disarmament and submit their recommendation to their respective Governments for approval. The President is hereby authorized to appoint nine citizens of the United States, who shall be qualified for the mission by eminence in the law and by devotion to the cause of peace, to be representatives of the United States in such a conference. The President shall fix the compensation of said representatives, and such secretaries and other employees as may be needed. Two hundred thousand dollars, or so much thereof as may be necessary, is hereby appropriated and set aside and placed at the disposal of the President to carry into effect the provisions of this paragraph.

[Applause.]

The CHAIRMAN. The time of the gentleman from Louisiana has expired.

Mr. ESTOPINAL. Mr. Chairman, I ask unanimous consent to extend my remarks.

The CHAIRMAN. Is there objection to the request of the gentleman from Louisiana? Without objection, it is so ordered.

There was no objection.

Mr. BUTLER. Mr. Chairman, I yield 15 minutes to the gentleman from Pennsylvania [Mr. FARR], a member of the Committee on Naval Affairs.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. FARR] is recognized for 15 minutes.

Mr. FARR. Mr Chairman, I do not like to be in the position of belittling our Navy or of minimizing its power, but candor compels me to say, in view of what I have learned as a member of the Committee on Naval Affairs, that while our Navy is the best Navy this country ever had, relatively it is the weakest, and we are not in any position to defend ourselves against the attack of any formidable nation.

The President in his speeches to the country some little while ago spoke about the world, or half the world, being on fire, and said that a spark might ignite the flames that would include us in that great conflagration, and that a navy, not second in size but the greatest navy in the world, ought to be under our flag. The President in his addresses said we were fourth in naval strength.

Now, what caused the President to change from the position that the General Board occupied some time ago as to second place for this country? The information that he was getting through secret sources from foreign countries. The General Board had that information. Our committee had that information that the danger was not from an attack of one nation but from a combination of nations, and that two nations now actually in belligerency, one against the other, were coquetting with a view to getting a stronger position in the future. I can not harmonize the statement of the President with the program that was presented to the committee for its consideration, namely, 16 battleships in five years.

The President declared himself in favor of our having the greatest Navy on earth, and the Secretary of the Navy presented to our committee a program asking for 16 ships, which would not make any change in our position at its consummation. In other words, we are fourth to-day, and we are a poor fourth—that was demonstrated fully and conclusively to the committee when, under the authority of the Secretary of the Navy, Lieut. McCandless appeared before us and presented in miniature the strength of the different navies of the world. First, Great Britain, with a navy twice as large as that of Germany; next, Germany, twice as great in strength as the American Navy; next, France, 15 to 25 per cent stronger than the American Navy; and I will venture this statement, that France is nearer 50 per cent than 15 or 25 per cent stronger.

Experts admitted that if we carried out the program of 16 ships in five years it would not change our position relatively. France would still be third and we fourth, and that it would not advance our position materially as a Navy.

Not only that, my friends, but I contend that if we carried out the 5-year program of 16 ships, which was given such publicity all over the country, with the claim of making our Navy wonderfully strong, Japan with her present shipbuilding operations at the end of five years would be fourth, and we would be fifth. That would be the result if those countries carried out their programs as in times of peace.

Now, what have those countries done? Great Britain has put a fleet on the ocean since the beginning of the war as great as our entire tonnage and so has Germany. Germany has 25 yards, in which it can build simultaneously 25 dreadnaughts, and other facilities for the construction of hundreds of the smaller craft. Great Britain can build that many dreadnaughts, and those two countries have been utilizing their yards to their full capacity in building ships.

One very comforting thing to me from the information that I have learned from these experts is that we can, by the utilization of the Government yards and encouraging the private interests to enlarge their yards, build at one and the same time 25 dreadnaughts, but we are not doing it. We are not spending the money that is needful to get these yards equipped. We have spent a little additional at the New York yard and some for the yard on the Pacific coast, and yet what have we on the Pacific coast?

Admiral Winslow makes the statement to us that one good dreadnaught would be able to destroy the entire Pacific Fleet. That is the statement of an expert who appeared before us. Another one told us that we are not equipped to protect and maintain control of the Panama Canal, in which we have put $400,000,000; that as against a nation the size of Germany we could not retain control of that canal; and, despite all our means of defense—our land fortifications, our submarines, and so forth—Capt. Sims told us that there are 116 places on our coast that the enemy could invade without coming in contact with those parts of the coast that are fortified.

The pacifists talk about furnishing submarines and providing mines. Admiral Grant, who is in charge of submarines, asked that we authorize appropriations for 111 submarines within one year. Only 20 are provided in this bill. All we have now are 27 efficient submarines. Others are contending for aerial fleets. Some Members say all we want is submarines, mines, fortifications, and airships. We have no airships worth mentioning. We need thousands of them in order to patrol our great coasts and to give us warning as to the oncoming of the enemy. According to the evidence presented to our committee, we are not now one bit stronger or more efficient in our ability to tell when the enemy is approaching us than we were in the War of 1812; and we who sit here within these walls are as vulnerable and defenseless as we were during that war when the British invaded Washington and burned the Capitol. Boston is defenseless and New York is defenseless against such attacks as could be waged against them. Those cities and many others could be destroyed with comparative ease.

Mr. CALLAWAY. Will the gentleman yield?

Mr. FARR. I yield to the gentleman from Texas.

Mr. CALLAWAY. Do you remember that Admiral Fletcher stated that they could not attack New York?

Mr. FARR. No, I do not; and all the other gentlemen who appeared before our committee said that they could attack New York, and it is simply a matter of common sense to determine that they could. We have some fortifications there, but the guns are short ranged and the enemy ships could strike it, also land its forces at points near New York, and could enter there without any difficulty. The information before us is that they could easily shut off the water supply of that great city.

Mr. CALLAWAY. Will the gentleman let me read what Admiral Fletcher says?

Mr. FARR. I am not going to yield any further. The gentleman may do it in his own time.

My friends, the matter of cost ought not to disturb us when it concerns the question of safety. If we have a war, we will spend $25,000,000 a day, just as Great Britain is spending it to-day in that great war, and it is for us now to meet the wishes of our constituents and give them the adequate protection that our tremendous interests demand, the interests of a hundred million people, and all the great purposes of this Government. We ought to protect our liberties, which will be endangered in any great conflict with one of those big, formidable nations across the ocean.

They say we are not going to have any difficulty with Japan. I trust we shall have no difficulty; but the people of Japan must change their nature before ever they forgive us for the discrimination that California has shown against their people; and from what I have seen of the representatives from the Pacific coast on this floor, they will also have to change their natures before they recede from the position they have taken. We have this great question of the Monroe doctrine. My friends, we are not going to permit any foreign nation to establish itself in Central America or South America; but in the days to come, with the great rivalry for commerce, and for the reason that some of these nations must burst their boundaries, they are going to take possession in Central and South America, and we are going to have to fight to put them out. We are not ready to do it.

Mr. HARDY. Will the gentleman yield?

Mr. FARR. I yield to the gentleman from Texas.

Mr. HARDY. Do I understand the gentleman to be in favor of our building in this fiscal year 25 battleships?

Mr. FARR. I would vote for 16 ships this minute. I would vote for 25 ships, because I believe that the country needs 25 ships for proper and adequate defense.

Mr. HARDY. I did not finish my question.

Mr. FARR. I believe in having an adequate Navy; and to my mind an adequate Navy is one that will defeat any navy that comes to invade our shores. [Applause.]

Mr. HARDY. Does the gentleman also favor the 111 submarines?

Mr. FARR. I am in favor of 250 submarines, just as Admiral Grant advocated. He said we needed that number and more if we had trouble. I am in favor of thousands of airships, just as every one who appeared before us advocated.

Mr. HARDY. Does the gentleman realize that his battleship and submarine program alone for this year would cost $625,000,000?

Mr. FARR. If we want to give this country adequate protection, we ought to spend this year $500,000,000.

Mr. HARDY. With that program for new construction just now urged by him and the program for maintenance, what size does the gentleman think our naval bill would be at this session?

Mr. FARR. I am willing to vote for $500,000,000 for naval appropriations at this session, because I believe that would be the means of giving us peace. If we have war, as I said before, we will spend $25,000,000 a day. Now, take 60 days of that war or 30 days of that war and see how much that will total. I want to spend that money now to prevent war. I do not want to wait until one of these nations attacks us, and invades our shores and destroys our liberties. [Applause.]

Mr. HARDY. Will the gentleman yield for just one suggestion?

Mr. FARR. Yes.

Mr. HARDY. The gentleman has already stated that he is in favor of a building program of $625,000,000 for dreadnaughts and submarines, and then the maintenance has got to be added to that.

Mr. FARR. All right. I am for adequate protection.

Mr. HARDY. But the gentleman says he is only willing to vote $500,000,000 all told, after demanding a program in excess of that sum for new building alone.

Mr. FARR. I am willing to vote $500,000,000. I am willing to vote for what the experts tell us we ought to have for the adequate protection of our great country. I want to protect that flag in all its glory. [Applause.] I want to perpetuate what it stands for. I am in a sense what might be termed a hyphenated American. My father was born across the ocean, and I have so deep an appreciation of what that flag meant to my father, and of the opportunities it gave to him and to me, that I want to see it protected in every star and every stripe, so that the millions to come may enjoy its blessings. I want it to float free in the breezes of heaven. I do not want it to come down in dishonor. [Applause.] And when I recall the things our country has gone through in my brief experience in this Congress, our visits to Mexico, the unpreparedness in which we found ourselves in Columbus, the killing of our poor people there, with no machine gun in readiness; when I recall the defiance by Huerta, whom we could not even compel to salute our flag——

Mr. DAVIS of Texas. Does the gentleman recall that at Columbus we are supposed to have about 19,000 men around there?

Mr. FARR. We did not have them.

Mr. DAVIS of Texas. If we had had a million there, we would have been in bad shape.

Mr. FARR. If we had had the soldiers there, those invaders never would have dared to come.

Mr. DAVIS of Texas. Does the gentleman recollect that the machine gun was about a mile and a half from headquarters?

Mr. FARR. That is unpreparedness. [Applause.]

Mr. DAVIS of Texas. And that the newspapers tell us that the Mexicans picketed the colonel's tent while he was asleep.

Mr. FARR. And I know they stole our horses. I want to ask if that is not pretty serious evidence to the gentleman from Texas that this country ought to wake up, and that Congress ought to be willing to do something to protect our border and our people.

Mr. CANNON. Who is the Commander in Chief of the Army and Navy?

Mr. FARR. The President; and he asked for the largest navy on earth, and yet he approves of a program that will leave us fourth five years from to-day. That is the program. It does not advance us one whit; as the chairman of the committee frankly admitted on Saturday, it is a filler-in, to balance our fleet, to help utilize the strength of the present Navy, to make what we have effective. Five battle cruisers do not add such strength that they will be able to go out and destroy the enemy; they will get information and kill off the little scouts. The five battle cruisers will be helpful to our present state of efficiency, but do not take the place of dreadnaughts. We ask you to vote for 6 battle cruisers and 2 dreadnaughts. We ask you to give us 50 submarines; we ask you to enlarge the program of scout cruisers and destroyers; and ask a number of things that will give our people some chance to defend their lives and protect that flag. [Applause.]

MESSAGE FROM THE PRESIDENT OF THE UNITED STATES.

The committee informally rose; and Mr. OLDFIELD having taken the chair as Speaker pro tempore, a message from the President of the United States, by Mr. Sharkey, one of his secretaries, announced that the President had approved and signed bills of the following titles:

H. R. 8068. An act for the relief of E. C. Hornor;

H. R. 10490. An act to prevent fraudulent advertising in the District of Columbia;

H. R. 12027. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war; and

H. R. 14771. An act granting the consent of Congress to commissioners of Charlton County, Ga., and Nassau County, Fla., to construct a bridge across the St. Marys River.

NAVAL APPROPRIATION BILL.

The committee resumed its session.

Mr. PADGETT. Mr. Chairman, I yield 22 minutes to the gentleman from Texas [Mr. CALLAWAY].

Mr. CALLAWAY. Mr. Chairman, the peace of mind that the gentleman from Pennsylvania [Mr. FARR] wants is the peace of mind that the steel concerns of Pennsylvania would like to have. [Applause on the Democratic side.] The Navy General Board recommended that we authorize all the facilities of the country in building. That would give peace of mind to the ordnance and ship manufacturers, and nothing short of that will. When the steel, shipbuilding, and ordnance manufacturers have peace of mind, when they are satisfied, the gentleman from Pennsylvania will have peace of mind. That is the peace of mind that will satisfy New York, New Jersey, Delaware, and Massachusetts, and the coast country where the steel concerns do business,

where the stocks are held, where the navy yards are, and where admirals parade. That is the peace of mind they want—an assured market for all the product they can turn out.

PREPAREDNESS.

If we could rid this preparedness question of promotions, profits, and politics it would not be difficult to reach a sane and sound conclusion as to what we ought to have, nor as to what the danger of invasion is. I know better than to argue with the man who has a personal interest or the man who takes orders.

I do not expect to give peace of mind to either, nor convince those who have a different idea of the relation of the masses to the Government, nor to convince those who want a military establishment to change the traditional policies and purposes of this Republic. Many do not agree with my confidence in the willingness and readiness of the masses to defend their country in time of danger. They look at the military establishment as our sole defense should the unforeseen happen. I look to the American citizen in such case who has always been our defense and will necessarily always constitute our Army in times of war. They think a regular soldier, paid to fight, can alone be depended on. We are not going to maintain a sufficient number in times of peace to constitute the needed force in times of war; besides, I had rather depend upon a citizen defending his country and his home in time of supreme test than paid soldiers fighting for pay or fear.

If the Government were an entity which called the citizens when it felt the need instead of the machinery of the citizens through which they call themselves when they think there is need, the entity might call them many times to defend its imaginary ills and have no response. When the masses no longer regard this Government as their institution serving their interests and refuse to defend it, the Government will not be worth defending. When it has to maintain a military force subject to its call, which can be ordered to do its bidding irrespective of what the masses think of the cause, it will have ceased to be a truly representative Republic.

We want sufficient military establishments to protect us against every danger of invasion to be reasonably expected. We do not consider all the dangers possible to conceive of. Many dangers might be imagined. What are the probable dangers? That is the question. That is tangible. We can discuss the dangers reasonably to be apprehended. I have too much confidence in the sober judgment and sound common sense of the people to believe they are willing to spend real money to maintain a military establishment to protect us against imaginary dangers.

YOU CAN NOT BY FALSE GUISE MAKE A CAT'S-PAW OF PEOPLE.

I deny the right of profit seekers to disguise their real purpose and march under the banner of patriotism. If each of their leaders will disclose his exact connection with the concerns expecting profit, a great light will fall on their patriotism. If they will state definitely what they want as preparedness, what they want it for, and how they want and ultimately expect to obtain it, they will be entitled to more confidence.

We do not want a military establishment for conquest nor aggrandizement. We do not want to grind the faces of the masses to build up an army and navy to protect one class against another. We should not build up an army and navy at the expense of the whole people for the benefit of a preferred few.

Some contend that we should extend our trade by force. Bismarck said:

Commerce obtained and maintained by force always costs the Government more than it is worth.

He said:

A nation which can not obtain and maintain commerce with the price mark and diplomacy should strengthen its diplomacy and work on its price mark instead of attempting to force it with a military establishment.

He said that—

Commerce obtained by the price mark and diplomacy was the only commerce worth while.

THE NEED MUST BE REAL.

I can not agree with those who desire a military establishment to "protect and further some imaginary destiny of this Republic not to be seen with the physical eye; some intangible and visionary thing written in the lines of poets." When we vote money for an army and navy, when we vote to put citizens on the battle line, when we call on women to surrender their husbands, sons, and brothers, it should not be for some intangible, visionary destiny that you can not see; it should be real, practical, substantial danger. When we vote to send the taxgatherer to every home to support a military establishment on land and sea, it should not be to carry out some visionary destiny of America which lies written in the lines of poets; it should be for some real purpose that is tangible.

Mr. Chairman, with the people who want a military force to protect us from invasion, to protect our country, to protect our homes from every real danger to be reasonably apprehended, to protect our institutions, I join hands and so do the earnest, honest citizens of the land from sea to sea. We are willing and ready to protect our homes and to protect our Government, but we are not willing to support a military establishment for conquest, nor to fight our own people, nor to force commerce, nor to further some intangible and visionary destiny of America which lies written in the lines of poets.

WE HAVE AN ADEQUATE MILITARY FORCE.

We have a military force at the present time ample to protect us against every danger which may be reasonably expected. Our ships, ship for ship, and our guns, gun for gun, at the time they were made are as good as any in the world. We excel in the weight of a broadside from our major guns every nation except England. The weight of a broadside from our major guns is, according to Admiral Badger (hearings, p. 1962), 289,430 pounds. The weight of a broadside from the German guns, same class, is 284,610 pounds. We exceed the Germans by 4,820 pounds.

"Our Navy is in good condition," said all the experts before the committee. Some thought it could be improved by this and others by that, but all were agreed that it was in good shape. All of them wanted more navy; they wanted all they could get. They do not consider the cost of it. They said the expense of it was a matter of policy for Congress and the taxpayers to consider and not for them to take cognizance of.

We have 42 battleships, 75 submarines, 74 torpedo boats, 22 gunboats, and "more auxiliary craft," says Admiral Blue, "than any other nation maintains in time of peace."

We have—

Says Gen. Weaver, Chief of Coast Artillery—

the best coast defenses in the world. The guns now mounted and those contemplated will give us an entirely satisfactory defense.

Gen. Miles said:

During the last 30 years the Government has spent approximately $200,000,000 for our coast defense. I am prepared to say that our coasts are as well defended as the coasts of any country and with the same class of high-power guns and heavy projectiles. They are better in some respects than the guns that are mounted at the Dardanelles, which have resisted the most powerful ships of war of the British and French Navies.

We have back of that—

Says Gen. Miles—

10,000,000 men capable of doing effective military service should the demand come; more than a million men, considering those of military age who were in the Spanish-American War, those who have passed through the Army and the National Guard, who have received military instruction; 136,000 graduates from our agricultural colleges, drilled and instructed under Regular Army officers.

If we have in our Navy, in our fortifications, in our Army, and in 10,000,000 men capable of doing effective military service sufficient force, as it is to-day, to protect us, why further grind the faces of the people to maintain a more expensive organization and one that is a menace to our institutions?

THE DIFFICULTIES OF WAGING WAR ACROSS SEAS.

It is next to impossible to wage war across a great expanse of water. It has never in the history of mankind been successfully done against a Nation of anything like equal size.

Admiral Knight, president of the War College and member of the Navy General Board, said:

It would take me a very long time to go into that subject at all satisfactorily, Mr. CALLAWAY, and show you the difficulties under which a fleet 7,000 miles from its home ports would labor. Ships break down. Out of a large number of ships a certain number are bound to be crippled in one way or another. The supplies needed to maintain the fleet would be very extensive. Five or six hundred thousand tons of coal would be needed as a minimum for a very short campaign there. That coal must be delivered and transferred from colliers to ships. It can not be done at sea except under the most favorable possible conditions. It must be done in sheltered waters. The bottoms of the ships would gradually get foul. They ought to have docks where the bottoms can be cleaned. They are subject in their progress over that 7,000 miles, throughout a large part of the time, to the possibilities of attack from the enemy's torpedo craft and other craft of that kind. Their lines of communication, after they get to the point 7,000 miles away, are constantly liable to interruption and would inevitably be interrupted; and yet they depend on those long lines, stretching away back to the home ports, for the very vital things necessary to their life—for coal and supplies and reinforcements, if reinforcements become necessary, and all sorts of things. A fleet going out there would be accompanied, necessarily, by a tremendous attendant fleet, a train, as we call it, of auxiliary ammunition ships, hospital ships, and so forth. The problem of conducting such a train as that in going thousands of miles through hostile waters is probably the most serious problem that could possibly be put up to a commander in chief.

The personnel, the officers and men, of a fleet moving under those conditions would be subject to conditions which are so trying that it is very difficult to picture them without some little experience. Constantly on the watch, constantly threatened, constantly on the alert to guard against some danger which may come out of the darkness or out of the

fog at any moment upon them, after moving that distance they would be broken down, they would be tired, they would need rest. They would have no secure place to rest. Your fleet would get out there with its material in very bad condition, its personnel in perhaps worse condition, and when it got there it would have no place to go for refitting or for any purpose whatever. It would be not unlike the proposition which confronted Admiral Rojestvensky when he went out to the east and met the Japanese fleet, and you know what happened to him. He had a larger fleet than the enemy had, distinctly.

I would not like to be considered as attempting anything like a complete answer to your question, nor could I give such an answer without talking here all day.

If it is well-nigh impossible for this country to wage war against Japan because of the ocean, why fear Japan?

NO DANGER FROM GERMANY.

The German Imperial Chancellor, Von Bethman-Holweg, and Von Jagow, head of the German Navy, say the idea of Germany having any thought of war against the United States is preposterous. Germany can not even get milk from outside for her babies; we can not get analine dyes from her to color our Easter eggs. No danger from that quarter now. After the war is over, is she going to brave 4,000 miles of the deep, the perils of which have been infinitely multiplied by submarine and torpedo, in an effort to levy tribute on us? Germany, bankrupt and a cripple, with a navy, measured by the weight of a broadside from her guns, smaller than ours?

She has lost in this war in killed, wounded, and imprisoned more than 2,000,000 of her sons. There is crêpe on every door. There is a cripple in every home. She is bankrupt. Her mothers, sisters, daughters, and fathers are horrified by the grim specter of war. Is she going to cross 4,000 miles of ocean, with an enemy at her back, and attack the United States?

All the nations engaged in this war have incidentally injured us during its progress. We have been patient. We have sent them supplies, from bread and meat to Christmas presents. We have done what we could to alleviate their sufferings. Are they for that and in their condition at the close of the war going to arrange their differences, bury their hatreds, grudges, and suspicions and combine against us? Will the others of them forget their jealousies and allow one, if one of them could, to attack us for the purpose of recouping its bankrupt treasury? No; and no sane man thinks they are.

I will tell you the danger. It is not from any foreign power. It is that powder stocks, ordnance stocks, steel stocks, shipbuilding stocks, General Electric stocks, and International Nickel stocks will slump at the close of this war unless a new market is developed for their products. The stockholders, knowing full well the value of advertising, are working up a new customer. When the market abroad ceases they hope to have one developed here that will buy "all they can construct."

Admiral Knight said:

The dangers of transporting a fleet across a great expanse of water and maintaining it are almost insuperable. (Hearings, p. 2084.)

Admiral Fletcher said:

It has been recently forcibly demonstrated that ship attack on forts are futile. This war has conclusively demonstrated what every military strategist knew before—that it is impossible for sea craft to successfully attack land fortifications.

Gen. Miles said:

The results at Alexandria, Port Arthur, and at the Dardanelles furnish sufficient evidence that guns on board ship are no match for coast fortifications and submarine guns.

Germany would have 4,000 miles of ocean to cross, a navy, in weight of shells greater than her own, to put out of the way, the perils of the deep, which Admiral Knight says are almost insuperable, to brave, and then the forts to pass, which Admiral Fletcher and Gen. Miles say this war has demonstrated can not be done, before they could invade this country.

But that is not all. If a foreign country, bankrupt and on crutches, should leave homes that have crêpe on every door, horrified by the grim specter of war, brave the perils of the deep, and with an enemy at her back, sweep our fleet from the ocean, and pass our fort guns and mines, have they any chance still to imperil this country? We can live indefinitely and build almost without limit whatever we need for defense or offense without having access to the seas. When some country has braved the perils of the deep, annihilated or bottled up our Navy, and passed our land fortifications, they have still, said Gen. Miles—

to meet the physical strength of this Nation—10,000,000 men capable of doing effective military service, 1,000,000 who have received military instructions under Regular Army officers, and 136,000 graduates from our agricultural colleges to officer them.

Gen. Miles has a right to know what the American citizen is when called to arms. He had service with the Volunteers fighting by his side against volunteers during the Civil War. They were Americans meeting Americans. He went through four years of it. He is able to speak with authority on the citizen soldiers of the United States:

Mr. KAHN. You think the German conscript is a pretty good soldier, do you not?

Gen. MILES. Yes, sir. However, I would match a volunteer American, defending his liberties and his Government, against any German soldier.

Again, he says about landing troops on our shores:

I will suppose an unsupposable case. Suppose they could put an army on a fleet of 500 ships and move it across the Atlantic without being disturbed by any naval power and they could land. They certainly could not go into any port. They could not go into our ports any more than they could go through the Dardanelles. That has been demonstrated. Our forts are equipped and fortified as well as the Dardanelles. Suppose they got that far—as to land at some remote point—if we could not gather enough men in the Army and militia and by other means to destroy that army before they could send their ships back and get another load, I would want to move to some other country.

APPLY SOME COMMON SENSE.

Preparedness advocates contend that nothing but the experts should be heard. We have heard the experts. A civilian ought to be able to reason. If he has munitions to sell or stocks affected by "preparedness," I do not expect him to reason, and I hope the American people know better than to expect him to reason or to be just. He can talk, he can advertise, he can shout, he can villify, he can complain, he can march in a parade and write a book, but never delude yourself into the belief that he can reason. The matter hits him at the pocket, below the reasoning faculty. It strikes him at the place to make him active, but not logical.

One of the ridiculous phases of this preparedness agitation is the attitude of the New Yorkers, Bostonians, and Philadelphians. They are all for preparedness; and what they mean by preparedness is what the Army and Navy bluntly ask, "all they can get." The money is poured out along the Atlantic seaboard. It goes straight into the pockets of the Bostonians, New Yorkers, and Philadelphians, and other places along the Atlantic coast. Of course, they are for preparedness. It is money to their locality. They have had books written, moving-picture shows staged showing New York, Boston, and Philadelphia taken without the firing of a gun or the loss of a life; but when the question of turning loose the Philippine Islands—the most dangerous military liability the United States Government has—came up every mother's son of them voted against it. They are not only a liability from a military and naval standpoint—they cost this Government a hundred million dollars a year—but there is some trade to New York, Boston, and Philadelphia in them, and some citizens of those places have investments there. It has cost us since we have had them more than a billion dollars, yet these scared ones from Massachusetts, New York, New Jersey, and Pennsylvania fought desperately against turning this scarecrow loose. Are they scared? Their wail to me has the sound of self-interest and hypocrisy.

REASON FOR NAVAL BOARD'S REPORT.

I think the public generally ought to know what led the Navy General Board to prepare the report which changed the program they had been following since 1903. They did not voluntarily change the policy and present a new program. They did not do it because of an emergency. They did not do it because of any apparent danger. They did it in obedience to an order.

Admiral Badger said:

Yes; the July program was only for one year, and the order by which that program was drawn up was stated as follows [reading]: "In July last the General Board was called upon to express its opinion to the department 'as to what the Navy must be in the future in order to stand upon an equality with the most efficient and practically serviceable,' and to submit 'a program * * * formulated in the most definite terms.'"

It was on that order that the July program was drawn up, based on utilizing all the facilities for building that could be obtained.

THE FIVE-YEAR PROGRAM.

Admiral Badger says, page 1967, hearings, that recommendation was not approved, and—

The board was instructed to get up a five-year program, to cost for new construction $500,000,000, or about a hundred million dollars a year, and the October recommendation was made in view of that instruction and to comply with it.

Mr. CALLAWAY. Then the board submitted, in accordance with that request, a five-year plan?

Admiral BADGER. Yes, sir.

Mr. CALLAWAY. And submitted it in accordance with that request to submit a five-year plan that would cost so much?

Admiral BADGER. Yes, sir.

Mr. CALLAWAY. This five-year program did not have in contemplation any emergency, did it, Admiral?

Admiral BADGER. No, sir. That program was made according to order.

Now let us review this program and the reason for it. The Navy General Board was called on in July by the Secretary of the Navy "to express its opinion to the department as to what

the Navy must be in the future in order to stand upon an equality with the most efficient and practically serviceable." The board, encouraged by that request, submitted a plan which would "utilize all the facilities for building until our Navy reached the first place." What was the reason for the change from a normal and regular growth in 1914 to "the most adequate in the world" in 1915? Had any new dangers suddenly loomed up? Had there been any sudden change in our national or international policies? Had there been any sudden change in the relative size of the navies of the world?

The President in his annual message, December 7, 1915, said:

I have had in mind no thought of any immediate or particular danger arising out of our relations with other nations. We are at peace with all the nations of the world. I am sorry to say that the gravest threats against our national peace and safety have been uttered within our own borders.

No witness pointed out any emergency, nor any new danger, nor any new-developed reason for changing the policy of normal, regular growth. The President said there was none. Then why the call for a change?

The Secretary himself was before the committee. He did not give a reason. He sent the first order. The July program was furnished, based on what could be built by all the shipyards and ordnance factories working to the limit. Then a specific five-year program, costing $500,000,000, was called for. It was furnished in October. What reason for the first call? What reason for the second call? No danger is pointed out. The only reason I have heard was given in the News and Observer, Secretary Daniels's paper at Raleigh, N. C., under a Washington date line of October 20, as follows:

The plan of Secretary Daniels to increase the Navy for five years, until it is able to compete with that of any other nation, with one exception, has taken the wind out of the sails of the critics who say that the Wilson administration is neglecting national defense.

The President approves Mr. Daniels's plan and will urge Congress to adopt it. President Wilson and Secretaries Daniels and Garrison have virtually destroyed the "issue" of "preparedness" thrust upon the United States by the European war and seized by certain desperate Republicans for the political capital they could make out of it. Leading Republicans must now work and vote for the Daniels program or eat their words.

Five hundred million dollars to take the wind out of the sails of the critics! I can not agree to such a scheme to take the wind out of their sails. It is too expensive.

NAVAL BOARD AND MUNITION MEN IN HARMONY.

Mr. Chairman, what the Navy General Board wants is all the building facilities of the country can accommodate. They bluntly state it. I am going to read from the testimony of the president of the War College and a distinguished naval officer, Admiral Knight:

Mr. BUTLER. Admiral Knight, do you think that the number of ships you have recommended here at this time would enable us to catch up with the other fleets if they would continue to build as they have done?

Admiral KNIGHT. I do not. May I enlarge?

Mr. BUTLER. You may. It will be a pleasure to have you do it.

Admiral KNIGHT. I took some care this morning to make it clear that the program which I suggested to you was the program which I believed could be laid down at once. I also urged that a committee be appointed to investigate, organize, and mobilize the shipbuilding reserve of this country, so that next year we might be ready to do a tremendously greater amount than we can do now. If Mr. Browning is right in believing that the establishments of this country can this year lay down a larger number of capital ships than I have recommended, please understand me as recommending them with all possible emphasis. In general terms, I think that this year's program should provide for every ship that can possibly be laid down this year.

Mr. BUTLER. When would you have it in your own mind that it would be advisable for us to have on hand, ready for operation, the largest fleet in the world?

Admiral KNIGHT. To-morrow.

Mr. BUTLER. Would you advise calling upon all the industrial facilities of the United States to assist us in constructing a great fleet?

Admiral KNIGHT. I should. That is what I have already advised.

Mr. BUTLER. Let me ask you—I want to ease my own mind, if the committee will permit me—why should we prepare any defense if it is not one that will succeed? Anything short of actual defense means defeat, does it not?

Admiral KNIGHT. Yes. The General Board, in studying this subject, had before it two sides to the shield. First, what do we want and when do we want it? We want a Navy equal to the largest maintained by any nation in the world, and we want it now. That is one side of the shield. The other side of the shield is, When can we get it? We questioned them as to the present facilities of the shipbuilding yards of this country, including the navy yards, the facilities of the armor plants, etc. We then said in substance this: We are limited this year with regard to the amount of work that can be done, apparently. Let us provide for the doing of that amount of work this year. Let us at the same time encourage Congress and the Navy Department to get very busy to see if they are by any happy chance larger than we think they are, getting the shipbuilders together. Let us try to get everybody working together, in the hope that very soon we may be able to develop facilities which will enable us to enter upon an accelerated program.

* * * * * * *

We can go on from year to year, each year taking advantage of the best that we know at that time. Build all we can this year with what we know now. Build all we can next year with what we know next year.

Mr. KELLEY. And in view of the uncertainty of our needs, and the long time it would take to reach the point where you say we ought to be, don't you think this would be a good time to stick to the original plan we have followed for 20 years and just try to get into second place as quickly as we can?

Admiral KNIGHT. I do not think we ought to stop there. I think the situation is such that we ought to try to get everything that can possibly be built this year. I think it ought to be provided for. We will not make any mistake. It will not carry us too far.

Mr. KELLEY. Do you think the plan for building, for five years, a certain number, such as the General Board worked out, at the request of the department, is a better arrangement than the second-place plan which we have held to for so long?

Admiral KNIGHT. I think the plan which the General Board had in mind, of building every ship that it is possible to build this year and every ship that it is possible to build next year, and to keep on building as fast as possible, is the most rational plan.

I will also quote Admiral Blue, head of the personal bureau:

Mr. HENSLEY. Do you mean to tell me that you shape your views, your views as expressed here before the committee with reference to the needs of the Navy, upon what you glean to be the sentiment of the people of the country?

Admiral BLUE. To some extent; yes, sir. It has always been an axiom that we have to cut the cloth according to what we are likely to get. That is the principle upon which the Navy has been run ever since I have known it.

That is all the steel and ordnance manufacturers and ship yards want. They do not ask for more orders than they can take care of. The munition manufacturers seem to be in perfect accord. The Raleigh News and Observer said the five-year program would "take the wind out of the sails of the defense."

IT COSTS NOTHING.

That five-year program did not "take the wind out of the sails of the critics." The critics continued to demand a market for all the war materials the munition manufacturers could turn out, all they could furnish, and the naval officers are with them and argue that it costs nothing. That is the consolation they give the public. That is the sugar coating over the pill.

The Army and Navy News, published at San Francisco, Cal., December, 1915, in the discussion of the same subject, says:

The second alleged reason is utterly without foundation. Military preparedness costs us nothing. The few hundred dollars we spend for imported drugs for the medical departments of the Army and Navy is an entirely negligible item. Everything else we get right in the United States, and the money is kept right at home. We construct our own ships and guns in our own yards and factories from materials that come from our own mines. The wool and cotton for clothing come from our own fields; the provisions come from our own farms and ranches. No money leaves the country. It stays right at home, making our shipyards and factories hum with activity, and providing employment for thousands of good Americans. Instead of being hoarded, the money is kept in circulation and everybody is benefited.

But for fear somebody would say these were not up to the standard, I want to quote from an admiral who is regarded as one of the biggest in the Navy, Admiral Grant. I quote from his testimony before the Committee on Naval Affairs:

Mr. CALLAWAY. If one has to have his bigger than the other, and the other has got to have his bigger than the one, then what?

Admiral GRANT. You may not know, Mr. CALLAWAY, but I do not see that we are running ourselves to death by building a battleship. Some people consider that money thrown away. I do not, because of every cent that goes into a battleship half of it goes into the labor product and the other half for material goes originally for the labor and material to produce that material. It is not money wasted, in my opinion. You will find it universally stated—that is, a great many men state it—that this $18,000,000 for this battleship is money wasted and thrown away. I do not consider it so. That is my opinion only.

Mr. CALLAWAY. Your opinion is that the money is still among us?

Admiral GRANT. Yes, sir.

Mr. CALLAWAY. And that the $18,000,000 put into labor and put into material is still with us, and that money is laid out here and there has been no waste at all?

Admiral GRANT. That is my opinion. That is the way I look at it.

Mr. HENSLEY. On the same theory, why should we not tear down these magnificent buildings and reconstruct them again?

Admiral GRANT. I do not think that is on the same line at all.

Mr. BRITTEN. We are using the buildings.

Admiral GRANT. I have known in the West, in the early days, of men who furnished money to laboring men to move sand from one side of a lot to the other to give them employment.

Mr. HENSLEY. Do you regard that as a necessity?

Admiral GRANT. Very philanthropic.

Mr. HENSLEY. A good investment?

Admiral GRANT. Good charity.

Hudson Maxim, in his book, Defenseless America, either an economic fool himself or taking the public for such, says:

The result is that the Nation as a whole is not impoverished in the least by the burden of armaments, but is rather benefited by their support. * * *

The money spent by the Government in building fighting ships could not be esteemed so much money lost, even if the ships were useless. The Government taxes the people for the money to build the ships, and then pays the money back to the people again for the ships. The people get their money all back, and the Government gets the ships. The people lose nothing, and the Government is the gainer to the value of the ships. The result is that the fighting ships have cost nothing. On the contrary, their production has benefited all. Everybody is made better and richer through the building of them. When we have looked upon our Navy, remembering what the pacifists have told us about its enormous cost, we are strongly impressed with the colossal expenditure, not realizing that the Navy has actually cost nothing. Its production has been a source of profit and benefit to the people.

If Maxim, Grant, and the Army and Navy News be correct, then why not stimulate all the industries of the country by feeding them from the Treasury. When all industries are fed from the Treasury, then pension all individuals and we will all live fat and easy.

The President said in his message of December 7, 1915, "These are the essential first steps." Was he at St. Louis indicating a second step when he said, "I want incomparably the most adequate navy in the world"?

Secretary Daniels said, according to newspaper reports on the naval appropriation bill, that his five-year program was considered by him the minimum that should be provided, not the maximum. The Secretary made a speech at Philadelphia on April 28 before the American Academy of Social and Political Science. He said:

My prediction is that Congress will authorize as many battleships, submarines, and destroyers as public and private yards can construct. We are beginning to take an inventory of every factory in America to see what it can do for preparedness. We must spend billions for munitions.

Take that statement with the President's statement at St. Louis February 3, "The American Navy ought, in my judgment, to be incomparably the most adequate navy in the world," and that ought to "take the wind out of the sails of the critics." Munition manufacturers and naval officers have not asked for more than that. They do not want any building to go abroad. They want it all done in this country and by themselves.

The paid and interested critics do not disturb me. I can not follow the President nor the Secretary nor the naval officers; neither do I have any sympathy nor tolerance for the munition manufacturers' demands that we furnish them a market for their wares when the foreign war closes. What the American people want and all they ought to have of militarism is enough to protect their country. More than that is more than the faces of the people should be ground to maintain; more than that is more power than should be concentrated in the Commander in Chief; more than that is more tax on the resources of the country in money and men than is justified; more than that is an unnecessary development of militarism, the thing that has destroyed every free government that has gone down; more than that is an unnecessary menace to our democratic institutions.

We buried the five-year program. The only reason I have ever heard for it was given in the Raleigh News and Observer:

The plan of Secretary Daniels to increase the Navy for five years has taken the wind out of the sails of the critics who say the Wilson administration is neglecting national defense.

The experts who testified before our committee state that the size of a navy is a relative matter and that no man can tell what the relative size of the navies of the world will be when this war is over. They said that in all human probability the war would close within a year. Secretary Daniels said the conclusion of the war would likely be the best time in the history of the world to bring about a general agreement for disarmament. All were agreed "that was a consummation devoutly to be wished." Admiral Badger said:

No man could tell how soon this war abroad would end; no man could tell what the relative size of our Navy and the other navies of the world would be at the conclusion of it.

That is the statement of Admiral Badger, ex-commander in chief of the Atlantic Fleet and member of the board, and regarded as one of the ablest men in the Navy. He says the five-year program was made up on an order.

Mr. CALLAWAY. This five-year program did not have in contemplation any emergency, did it, Admiral?

Admiral BADGER. No, sir. That program was made according to order, without the General Board having under consideration anything outside, but being a direct order to produce such a program with those limitations.

There is no testimony in the hearings showing any reason whatever for a five-year program. On the contrary, the hearings are replete with testimony like Admiral Badger's, which shows that no man can tell what the navies of the world will be at the conclusion of the foreign war; that at its conclusion will be the best time to bring about a general agreement for disarmament; that none of the building authorized by the five-year program can, in all human probability, be completed for use either during or immediately on the conclusion of the war; and that the relative fighting value of ships now built may be shown by the lessons of this war to be obsolete altogether; that all building material is 50 to 100 per cent higher now than ever before. Then, why a five-year program? The only reason is that given in the Raleigh News and Observer, that it would "take the wind out of the sails of the critics." It did not even do that. The Secretary said on April 29:

Congress will authorize, in my judgment, all public and private yards can construct.

The President said at St. Louis, February 3:

I want, incomparably, the most adequate Navy in the world.

Secretary Daniels said, Washington Post, May 19:

The program I presented to Congress represented a minimum and not a maximum of each type.

The war was going on December 10, 1914. At that time the Secretary of the Navy recommended two battleships and said:

I think the war in Europe is going to exhaust the resources of the countries engaged in it, and I think there is less likelihood—I do not think there was much likelihood before—of our country in the future having trouble with these nations.

A YEAR AGO AND NOW.

With our policies and our American ideas, I think the policy recommended in my report and adopted by the last session of Congress is the steady development that is needed.

Two capital ships the year before and two capital ships that year. What has wrought the change?

The President said on December 8, 1914, speaking of our military needs:

There is no new need to discuss it. We shall not alter our attitude toward it because some amongst us are nervous and excited. The question has not changed its aspects, because the times are not normal. Our policy will not be for an occasion.

What is the difference in conditions now and then that made a two-battleship program sufficient and proper then and wholly inadequate at this time? The President has spoken; the Secretary of the Navy has spoken; the sea captains have spoken. What is the difference in conditions now and then? None of them have pointed it out. I have looked, listened, and asked for reasons for the change, but no reason has come from any source except the Raleigh News and Observer and that does not appeal to me.

Last year the R. M. Thompsons and S. Stanwood Menkens, the Gardners, and the Roosevelts, with their Navy League and their American Defense League, the officers of the Army and Navy, always "prepared" for promotions, were clamoring to Congress for additions to the Military Establishment, but they had not attempted to arouse the electorate, to frighten the people. It was not election year. The only place they could work then was on Congress. The arguments of the R. M. Thompsons, the S. Stanwood Menkens, the Gardners, the Roosevelts, the Navy Leagues, the American Defense Leagues disturbed it not. But, oh, what a difference on election year, when those same forces, with the same motives, have gone to the country with J. Bernard Walker's book, America Fallen, Hudson Maxim's book, Defenseless America, and the powder manufacturers' moving-picture show, The Battle Cry of Peace, shouting patriotism! It is not patriotism; it is promotions, profits, and politics.

The President said on his western trip that the peace which followed this war would be a prolonged peace; that the world would not endure another war like this. Secretary Daniels said before the Naval Affairs Committee:

The conclusion of this war would be the best time in the world's history to bring about a general agreement for disarmament.

Admiral Fletcher said before the committee that the conclusion of this war would be the best time in the world's history to bring about an agreement for disarmament. All the sea captains said that the lessons as to the fighting value of the different types of vessels, learned from this war, are not yet to be obtained and will not be until war is over. All are agreed that the developments of this war may make obsolete our fighting ships. No man can tell what the relative strength of the world's navies will be at the conclusion of this war. All are agreed that in all human probability it will close within a year. None of the ships we are now authorizing will be ready for service within that time. Then why lay out a program and make authorizations for continuing contracts for five years in the future?

FEAR OF STOCK SLUMP AFTER WAR.

Mr. Grace, president of the Bethlehem Steel Co., and Mr. Barba, vice president of the Midvale Steel Co., stated that the question with the steel, shipbuilding, ordnance, and powder concerns was how they would utilize their extra forces, their extra equipment, and their extra men that had been added to meet the war's demands when the war stopped. Mr. Grace testified that Bethlehem Steel stock had gone from $30 a share to $530 a share, and like conditions prevailed throughout the entire steel, shipbuilding, ordnance, and powder industries. The board's program would utilize the entire building facilities of the steel concerns, the shipbuilding concerns, the ordnance concerns, and the powder concerns. The Secretary's prediction of what Congress would do and the board's program would solve the question for the munition manufacturers. Will you solve the problem for them? Then to them you are a patriot. I refuse to rake their chestnuts out of the fire at the expense

of those who produce and at the expense of our representative Government.

"Billions for munitions!" Of course, to the ordinary mind, billions is meaningless. Analyze it. See how many thousand dollar homes billions of dollars would buy. "We must spend billions for munitions!" says Secretary Daniels. When I think of the underfed, the poorly clad, the badly housed, and the overworked producers that must in the end pay that bill I balk—I can not stand for it. I will not stand for it. The paid newspapers may criticize, abuse, ridicule, and malign me. The representatives of the steel, shipbuilding, ordnance, and powder concerns belittle and belie me; the coat-tail riding politicians may denounce me, but I will not, if I can help it, permit such a bill to be presented to those who commissioned me to represent them.

BUILD FOR POLITICS.

You tell me that it is politics, and we must do it to carry New York, Massachusetts, New Jersey, and Delaware? I am not playing politics. I am representing 250,000 citizens who want their Government to do even-handed justice and not play politics.

A billion dollars—just one billion—would buy a million thousand-dollar homes. There are 219,575 tenant farmers in Texas. It would buy a thousand-dollar home for every tenant farmer in Texas and leave $780,425,000, or more than three times as much, unspent. There are 2,354,676 tenant farmers in the United States. Three billion, the amount Admiral Fletcher said it would take to build the largest navy in the world and maintain it for two years, would buy every farm tenant in the United States a thousand-dollar home and stock it.

Do you get any idea of what these munition makers are trying to obtain? More than the annual cotton crop for the Navy alone. Unselfish patriots! These patriots held a meeting in New York on the night of June 10, 1915, and at this one meeting raised thirty-odd thousand dollars in less time than it takes to tell it to push this propaganda.

BANKRUPTCY OR WAR.

The biggest Navy in the world? Admiral Fletcher says it will cost a billion and a half dollars to build it and $750,000,000 a year to maintain it, provided other nations do not go on building. If they go on building there is no telling what it will cost. Will they go on building? Admiral Fiske said in the North American Review of February:

It is vital to Great Britain, whose major policy is that she must be mistress of the seas, that she should be.

Admiral Badger said (hearings, p. 1974) that—

England's very existence depends on her supremacy on the seas.

Lord Roseberry said:

I know nothing more disheartening than the announcement made that the United States, the only great country left in the world free from the hideous, bloody burden of war, is about to embark upon the building of a huge armada. It means that the burden will continue upon the other nations and be increased exactly in proportion to the fleets of the United States.

Will the other nations go on building? If "England's very existence depends on her supremacy on the seas," if "it is vital that she be mistress of the seas," if "it means that the burden will continue in proportion to the fleet of the United States," and we must have "incomparably the most adequate Navy in the world," Admiral Fletcher's estimate is no guide.

Where does such a policy lead to? Admirals Fletcher and Badger testified:

Mr. CALLAWAY. If we start to build against them and they build against us, where will the end be?

Admiral FLETCHER. That is simply repeating the history of the world.

Mr. CALLAWAY. You stated the other day that it meant bankruptcy for the weaker nation, and since we were the most wealthy we would be able to bankrupt all of them.

Admiral FLETCHER. That is one phase it might take.

Mr. CALLAWAY. What is the other phase it might take?

Admiral FLETCHER. That one side would force the issue.

Mr. CALLAWAY. Is it your only hope that we are wealthier than any other nation in the world?

Admiral FLETCHER. That is the only hope of any nation.

Mr. CALLAWAY. Admiral Fiske states in the North American Review for this month that military and naval men have seen for years that these competing nations—that is, England and Germany, competing in naval strength and for commerce—would have to go to war some day in self-defense. Do you agree with that statement?

Admiral FLETCHER. Yes, sir. That has been regarded by many experts as the inevitable outcome of conflicting interests and the expansion of Germany upon the sea.

Mr. CALLAWAY. And as soon as they began to build against each other that became apparent to military and naval men, did it not?

Admiral FLETCHER. Yes, sir.

Mr. CALLAWAY. If they entertain the same general views that you entertain with reference to it, would it be possible for us to ever equal their navy, with the start they have?

Admiral BADGER. I think that the financing burden of greater expansion would hamper them, and that if we adopted such a policy we certainly have the money in this country to carry it out. When we come near equality there might be some racing.

Tolstoi, in his open letter to the world, said:

No enlightened man can help knowing that the universal competition in the armament of States must inevitably lead them to endless wars or to a general bankruptcy, or else to both the one and the other.

Here you have the experts and a philosopher. Building for what? Take it from them, "bankruptcy or war."

They ask us to follow them. We ask where they are leading us. They answer, "Bankruptcy or war." "This is repeating the history of the world," says Admiral Fletcher. God of our fathers, is that what their system promises? That is not only what it promises; that is what it insures. Is the sweat of the masses to be coined into dollars for munitions manufacturers, shipbuilders, ordnance producers, powder makers, and officers bedecked with gold braid, that they may finally lead those whose faces they have ground to the trenches with pick and shovel, to bloody mines, to insanity, to slaughter? Tell me I must vote for it?

Go to, thou wretched babbler, and put thy gall in pickle; pour thy tale into the dull ears of ancient "toadeaters," and with it rob confiding partisans of their sense; but tempt not the righteous indignation of reasoning men.

Tell me I must be a party to it? No; I will not do it. If I must feed into the hopper depicted by Admirals Fletcher, Badger, and Fiske the masses that I represent or be the victim of the newspapers, the steel, the shipbuilding, the ordnance makers, the R. M. Thompsons, the S. Stanwood Menkens, and the Hudson Maxims, then victim let it be. And those who, cringing before the shining teeth of these vicious profit takers, surrender those they were elected to represent, have my pity and contempt.

THE REAL PREPAREDNESS LEADER.

Who is the real leader of this grand galaxy of self-styled patriots? Hudson Maxim. He wrote Defenseless America. He got up the picture show, The Battle Cry of Peace. He put it on in every town in the country, showing foreign soldiers in your bedchambers. Let us look at him. He says in his book he is a patriot. He is the crown prince of this band of preparedness patriots. I want to read a few extracts from his book. You all got one—

This country must first be whipped in order to prepare sufficiently to prevent being whipped. Therefore, our business at the present time is to pick our conqueror. I choose England. She would be satisfied with a good big indemnity which we could well afford to pay for the benefit that we should gain from the war.

He was born in Maine, married an English woman, invented smokeless powder, sold his patents to the Du Pont Powder Co., became stockholder and chief mechanical engineer in the Du Pont Powder Co. He has a brother in England, Sir Hiram Maxim, who is an inventor of ordnance and a partner in the Vickers Limited Ordnance Co., of England. He is the inventor of the Maxim rapid-fire gun, and was knighted because of his inventions. Of course, Hudson Maxim wants England to be the one to whip us. Sir Hiram would want us to be the one to whip England. Hudson and Hiram would furnish the ordnance at both ends of the line.

That is not all the interest that this Maxim bunch has in war materials. A Maxim munition company was incorporated on August 24, 1915, in Delaware, with a capital of $10,000,000. (Standard Corporation Service, Vol. IV, p. 939.)

Hudson Maxim, president (Standard Corporation Service, Vol. V, p. 1306), stated:

We have already acquired the services of a very efficient scientific-mechanical staff. Hiram Percy Maxim, the inventor of the Maxim silencer, and the son of Sir Hiram Maxim, and his business partner, M. H. Hazler, are among our different technical advisers and supervisors. Edwin B. Hotchkiss, who has had charge of large munition works both here and abroad, and J. S. Conradi, who was for some time superintendent of the Vickers Gun Works at Dartford and Erith, England, is under contract to do similar work for us. We have sold to a very strong financial syndicate in this city (New York) 200,000 shares of our treasury stock.

Maxim Munitions Co. states:

Hudson Maxim has taken the old Maxim gun and made many very important improvements in it, transforming it practically into a new gun. We have a provisional contract with the Russian Government, which is only awaiting confirmation, to manufacture 15,000 of these guns. The price of them I am not at liberty to state, but a regiment of men would be mowed down if in range of one of them. (Nov. 10, 1915, Standard Corporation Service, Vol. V, p. 1248.)

Says Hudson Maxim—

We could well afford to pay a big indemnity for the benefit we should gain from the war.

Can you imagine what benefit we common-sense common people would get from the war?

Here are the beauties he sees:

The unpleasant truth should be realized that invading armies must, with other luxuries, have women. As a result they leave a large progeny, wrens in the nests of the doves of peace. Hence, inasmuch as soldiers are the pick of the manhood of their country, they are likely to do about as much toward securing the survival of the fit in an enemy's country as they would have in their own country.

There is another very important consideration, which is that war is a great mixer of races, and that usually mixed types benefit enormously from their compound blood.

Furthermore, the mingling of races and peoples serves greatly to spread knowledge of one another, and they have always profited largely from the mingled knowledge.

He should have told us what benefits he expects for himself. He should let us know if he will be satisfied with a bunch of illegitimates. He is the real preparedness leader. He has done more with his moving-picture show to frighten the timid and make the public believe we were defenseless than any other dozen men in America.

We only have to read his book to find the benefits that interest him personally. On page 73 he says:

We have between forty and fifty million pounds of smokeless powder at the present time, whereas we ought to have 500,000,000 pounds.

He is chief mechanical engineer of the Du Pont Powder Co. Five hundred million pounds of smokeless powder, at 53 cents a pound, would amount to something like $250,000,000. Powder stock has gone, in some instances, from $8 a share to $1,100 a share since the foreign war started. The stockholders, of course, fear an invasion of their stock prices at the close of the war. The Book of Books says that where a man's treasure is, there will his heart be also.

Maxim says:

Every Congressman goes to Washington in the interest of his constituents. He goes there to dicker for them, to swap votes with other Congressman in exchanging congressional concession for congressional concession.

On page 18 Mr. Maxim gives his conception of the temperament and intelligence of the American people. He says:

In a small paragraph in an obscure place on the back page of a leading Boston paper I once saw the announcement that Herbert Spencer, the great philosopher, was very ill and not expected to live. On the front page of the same paper, under bold headlines, was a three-column article on the physical condition of John L. Sullivan. John L. Sullivan was a fighter, while Herbert Spencer was only a philosopher; hence the difference in public interest.

He and those who are like interested with him are trying to organize, crystallize, and capitalize the fighting public interest he saw manifested in that Boston newspaper and frighten the cowardly Congressmen by causing sentiment in their districts.

CONGRESS OBEYS PUBLIC SENTIMENT.

Nine Michigan Representatives voted for a standing army of 250,000 when the Army bill was on its first passage through the House. When it came back from the Senate, after the Ford vote in Michigan, only two voted for 250,000.

Congress is a barometer of public sentiment, if it can determine what the public sentiment is. In this instance these Michigan Representatives got scared too quick. The Ford vote gave them a different idea from the newspapers of what the public sentiment was.

THE FEAR THAT DISTURBS NEW YORK'S PEACE OF MIND.

Mr. Grace, president of the Bethlehem Steel Co., stated before our committee that under conditions existing throughout the entire steel, ordnance, and shipbuilding industries, the question with the directors of those industries was what they would do at the close of the foreign war to avoid a slump.

If we should follow the prophecy of Secretary Daniels, or the advice of the Navy General Board, and authorize all the building that shipbuilding, ordnance, and steel concerns in the country could take care of, the problem that confronts them would be solved, and the Congress of the United States, in their eyes, would be a galaxy of patriots for relieving them of the most serious problem that now confronts them.

The fear of a slump in stock values is the thing that is making New York, Boston, Philadelphia, Trenton, Paterson, and other Atlantic coast cities lie awake at night. Think of the concern of an individual who has 100 shares of Bethlehem stock, worth $3,000 before the war, to-day worth $53,000. Let him contemplate during his sleepless hours the sudden proclamation of peace abroad and $50,000 knocked out of his 100 shares of stock. Do not you know he is willing to parade and wants other people to parade? He is willing to encourage newspapers, and wants other people to encourage newspapers; he is willing to be taxed, and wants to encourage other people to be taxed to maintain that stock.

Fear of invasion? I have heretofore referred you to the statement of Admiral Knight, president of the War College, on the difficulties of transporting a fleet across a great expanse of water.

I want also to quote from Capt. McKean, a graduate of the War College, on the manner in which transports would be convoyed across a great expanse of water:

Mr. CALLAWAY. How much area would a fleet of 100 transports cover, with their accompanying fleet? That would carry about 100,000 troops?

Capt. MCKEAN. With the average transport; yes. They might, with bigger ships, actually accommodate more troops, but the transports you would not dare put in columns closer than a thousand yards apart, and 100 of them in a single column would be 100,000 yards long, or, if you put them in four columns a thousand yards between columns, that would be 25,000 yards long, or 5 miles one way and 4 miles the other way, and they would cover 20 square miles of the ocean.

Mr. CALLAWAY. Twenty-five thousand yards is lots more than 5 miles, is it not?

Capt. MCKEAN. It is 12½ miles; yes.

Mr. CALLAWAY. It would be 12½ miles long and how wide?

Capt. MCKEAN. In four columns it would be 3,000 yards wide; but you would probably put them closer together than that and shorten it up. You would probably put five columns.

Mr. CALLAWAY. You would have to have a screen fleet around them?

Capt. MCKEAN. You would have to have an escort that would screen them; yes.

Mr. CALLAWAY. To protect that troop of transports you would have to have a fleet one and one-half times greater than the opposing man's fleet to afford any character of protection, wouldn't you?

Capt. MCKEAN. To be reasonably safe; yes.

You will get from the above the difficulties that confront a commander in chief in an effort to carry troops across an ocean. You will get from Capt. McKean the immense area covered by the transports, surrounded, as they necessarily have to be, by a screen fleet. I now want to quote Capt. Sims, in my judgment one of the most capable men who appeared before our committee, certainly the most direct and straightforward, showing the impossibilities of protecting a fleet from night attack from torpedoes, scouts, and submarines. He said, in a letter of April 2, 1915, specifically describing the operations of a fleet attacked by torpedoes:

From the experience to date I think it may fairly be concluded that there is no solution to the problem of protecting a fleet against torpedo attack in the open sea. It seems equally clear that under similar conditions fatal damage could be inflicted by floating mines alone, and this without material risk to the attacking destroyers. As for sea-going submarines of high speed, it would be quite useless to try to keep them out at night by any form of screen at present known.

He stated to the committee:

It is true if you drive the scouts back on the fleet and your scouts are reporting to you every half hour the course and speed of that fleet, it enables you to wait until the sun goes down and launch an attack of destroyers through that screen, and we do not know of any means by which that attack can be resisted.

I also want to quote Admiral Fletcher, commander in chief of the Atlantic Fleet, and Admiral Badger, ex-commander in chief of the Atlantic Fleet, and at present a member of the Navy General Board:

Mr. CALLAWAY. You stated a moment ago that a fleet of battleships in the face of the auxiliaries would be in a most precarious condition. Now, analyzing that if the screen of the enemy is superior to your screen and drives it in, your battleships are unprotected in the face of the screen of the enemy?

Admiral FLETCHER. If the screen is annihilated our battleships rely on their speed and the power of their secondary batteries. Under these conditions our battleships would probably withdraw from the scene of operations.

Mr. CALLAWAY. I understood you yesterday that, when we had driven the screen fleet in and the battleships stood bare in the face of destroyers, swift cruisers, and submarines, that it was in a most precarious condition?

Admiral FLETCHER. If all our auxiliaries are destroyed and the enemy's auxiliaries and destroyers are still intact, our fleet would be at a serious disadvantage.

Mr. CALLAWAY. I understood you to say, when I asked you what they would do under conditions of that kind, that they would retire?

Admiral FLETCHER. They probably would; yes, sir; if they could not bring on a day action with the enemy's fleet of battleships.

Mr. CALLAWAY. My attention was called to a statement by Beresford in the Betrayal, in which he said that battleships are worthless against a night attack by cruisers and destroyers. I take it that statement was made prior to the development of the submarine, and to add to that submarines would make it much more forcible, would it not?

Admiral FLETCHER. That is true for unscreened battleships.

The CHAIRMAN. Do you accept that statement as true?

Admiral FLETCHER. He is assuming, and I am willing to agree with the conclusions.

Mr. CALLAWAY. I will follow that out. Do you consider Beresford as an A1 authority?

Admiral FLETCHER. He states that a battleship alone at night is helpless in the presence of destroyers, and I quite agree with that statement.

Mr. CALLAWAY. That is true?

Admiral FLETCHER. Yes, sir.

Mr. CALLAWAY. How about a battleship fighting a submarine?

Admiral BADGER. She will get out of the way just as quickly as she can. There is nothing for her to do but to charge or run, using her guns, of course, when possible; but the best thing is to run, if conditions permit.

Mr. CALLAWAY. How about a battle cruiser fighting a submarine?

Admiral BADGER. The same thing; there is only one way, as far as I know. The submarine, being submerged, can not be hit by gun fire. The only thing to do is to charge it; go for it end on, with the hope that you will ram it, or to run.

If a fleet of battleships in the open sea can not protect themselves against night attack, and no screen fleet has as yet been devised capable of protecting them against night attack by torpedo and submarine, if speed and changing course continuously is their only protection, I can not understand how any sane mortal can get anxious for fear some foreign power will come across either the Atlantic or the Pacific and land on our shores until our entire fleet of destroyers, scouts, and submarines have been cleaned from the ocean. No man who knows the facts has any fears of any foreign power reaching our shores and making a successful landing.

THE INABILITY OF BATTLESHIPS TO STAY IN SUBMARINE TERRITORY.

It has been conclusively demonstrated that battleships can not stay in submarine territory. The statement is often made that when you control the surface of the sea you can destroy the effectiveness of submarines. A look at the operations of the British fleet at the Dardanelles will convince the most obstinate that submarines can drive a battleship fleet, however well protected by small craft, from any place from which submarines are not shut out by means other than the mere control of the surface by destroyers and scouts.

The British made the landing at the Dardanelles April 25, 1915. There were no submarines there. Ashmead-Bartlett, famous English war correspondent, says:

The Dardanelles expedition, if it served no other purpose, is an object lesson on the difficulties encountered by a hostile fleet operating many hundreds of miles from its base in the face of submarine attack.

Up to May 20 an immense fleet of predreadnaught battleships was able to lie off the coast and render the expeditionary army immense moral support by protecting its flanks and encouraging the troops who love to hear the great shells whistling over their heads. On May 13 the *Goliath* was sunk in the Straits during the night by torpedo attack. On May 20 the first submarine was sighted. The entire fleet had to weigh anchor and steer about to avoid giving a sitting shot.

And now we come to these superdreadnaughts that my friend from Illinois [Mr. Foss] told you were the fighting strength of the Navy. Dreadnaught! The dread nothing. Watch what they did at the Dardanelles:

The more valuable battleships, like the *Queen Elizabeth*, the *Agamemnon*, and the *Lord Nelson* (they are among the finest ships afloat) faded away toward the west and were not seen again. On May 25 the *Vengeance* was narrowly missed by a torpedo, and the battleship *Triumph* was sunk. On May 27 the battleship *Majestic* was also sunk. On the following day there was not a single battleship off the Gallipoli coast. All had been obliged to fly to protected harbors for safety.

The facts are plain; dreadnaught fleets are useless for offensive purposes provided you are dealing with an enemy supplied with submarines. They are a poor defense, as well because they can only deal with the enemy's fleet as a whole, provided it chooses to come out and fight. Local defense must be left to the submarines destined to remain in home waters.

Now for the submarine in attack. Supposing the United States were engaged in war against a European power or an oriental. If there is to be a naval war at all, it necessitates one of the belligerents crossing either the Atlantic or the Pacific. It would be utterly useless for either a European power or an oriental to dispatch a fleet to the Atlantic seaboard or the Pacific unless they were already in possession of a prepared base where that fleet could lie at anchor in security against submarine attack. * * * To send a great fleet of modern dreadnaughts to an indefinite objective, namely, to cruise up and down the enemy's seaboard on the off-chance of the enemy coming out to risk an engagement would be merely courting disaster. Such a fleet would be in the nerve-racking position of being exposed to submarine attack from the moment it left its own shores to the moment the survivors regained the shelter of home waters. * * * Even supposing there was a base available within short distance of its objective, the attacking force would be little better off, and you would merely have a repetition of the stalemate which exists in the North Sea at the present time.

Col. Isaac Newton Lewis, United States Army, retired, whose machine gun has practically revolutionized certain phases of operations in the European war, and who has just returned from the scene of hostilities, said:

The effectiveness of the submarine as a weapon can never again be disputed. It has now come to the point where it must be considered as the controlling element in sea power.

Admiral Knight, testifying before the Naval Affairs Committee of the House, was asked:

What show has a battleship against a submarine? What can it do in submarine territory?

Admiral KNIGHT. Of course, it is in danger; and that is all you can say of it. The battleship running at high speed and changing course frequently is not in much danger from a submarine.

Capt. Sims, reporting on the practice of our fleet trying out the different craft, said:

As for seagoing submarines of high speed, it would be quite useless to try to keep them out at night by any form of screen at present known.

If the only thing a fleet of battleships can do in submarine territory is run, what value would battleships be in protecting a fleet of transports when they can do nothing in the presence of submarines but run? If submarines are the controlling element in sea power, if it is useless to try to keep them out at night by every form of screen known, and if they are destined to remain in home waters because they must have a base from which to operate, what reason have we to fear attack from across either the Atlantic or Pacific Ocean?

THE VICIOUSNESS AND INTOLERANCE OF THE PREPAREDNESS PATRIOTS.

Col. R. M. Thompson, proprietor and operator of the Navy League, spoke at Poli's Theater May 28, 1916, in behalf of preparedness. He claims to be a man of very high character, inspired in his work by purely patriotic motives. He was discussing the Army bill just passed and the contemptible inadequacy of it, and said sneeringly that Virginia was a great State, once the mother of Presidents, but now she was satisfied with JIM HAY—just HAY. HAY is the chairman of the Military Affairs Committee of the House, one of the purest and best men in the House of Representatives. Parade, pomp, street shows, and make-believe do not appeal to him. He does not suit the chairman of the board of directors of the International Nickel Co., Col. R. M. Thompson.

He does not suit the New York and Chicago papers either. Referring to the bill they make the following observations about the measure and those responsible for it:

The New York Globe (Ind.) declares that "it will not provide for an adequate system of military defense" and "in the event of trouble it would be necessary to scrap it." The Chicago Herald makes the calm, scientific observation that "a chemist could run the brains of HAY and his little Army pals through a Pasteur filter without getting a trace of an intellectual process above the mental grade of the *Pithecanthropus erectus*."

The preparedness patriots want universal military service. They know a larger force than we now have can not be kept up by voluntary enlistment. That has been clearly shown within the last few months. Expirations and desertions from the Army have been as many as new enlistments. The only way to have a larger force is to force them in by law.

It has become proverbial that the daily press of the country follows its financial interest, but this is the first time it has been so nearly a unit on any question.

It not only puffs everything favoring enormous additions to our Military Establishment, but taboos everything coming from the other side.

Members of Congress in private conversation freely state that there is no danger from without and the danger is from within, but they say the country is wild, and they fly before what they think is popular opinion. They get their conception of public opinion from the daily press.

A few independent papers have stood out against it. May their tribe increase.

TAX FOR INCREASE IN ARMY AND NAVY.

The President suggested in his December message that the stamp tax on notes, deeds, telephone calls, telegrams, medicines, etc., be continued, and that the tax be extended to bank checks, gasoline, and power engines to get money for Army and Navy increase. I protested against that, and, with 31 other Democrats, notified Mr. KITCHIN, chairman of Ways and Means Committee, that we could and would defeat the measure should that committee report it. We notified him that tax for increase of Army and Navy would have to be placed on war munitions, inheritances, and incomes. He and members of the committee, realizing the potency of that statement from 32 Democrats, placed or agreed to place such tax on munitions, inheritances, and incomes. I am proud of this accomplishment.

GENERAL AGREEMENT FOR DISARMAMENT OF ALL NATIONS.

We have secured a provision in this bill that, I think, may be of inestimable value to the nations of the world in the future. When war abroad ceases, when they are exhausted, sick, and horrified by the grim slaughter, and have stopped long enough to coolly survey the fruitless wreckage, I think they will be ready to consider the question of abandoning the competition in armament.

We have provided in this bill for a commission from this country to intercede for such purpose, and we further provide, should such agreement be reached, that all building authorized by this bill shall cease.

Nations at peace have already begun to recognize the efficiency and farsightedness of this provision and wires are coming from across the ocean showing their appreciation.

Think not that helm and harness are signs of valor true,
Peace hath higher tests of manhood than battles never knew.

SUMMARY.

Our Navy, coast defenses, and Army, equipped as they are, backed by the citizens of the land, are amply adequate to defend this country against any and every assault.

No great nation wants to attack us. They want our friendship. It is necessary to them.

We are divided by great oceans, which the development of torpedoes and submarines makes it impossible to transport great bodies of troops across.

It is necessary before this country can be conquered that great bodies of troops be conveyed across broad oceans.

If you want a Navy or Army to force our trade around the world, or for aggrandizement and conquest, you may elevate your sights—a billion and a half for the Navy and a billion for the Army will not give it to you; and a billion per year will not maintain it.

If you want a military establishment to obtain or defend "something intangible and visionary, some vision of the mind never seen by the physical eye," I can not tell, you can not tell, and no mortal man can tell, where we are going nor what will be necessary.

I can not follow the army and naval officers who state that they do not consider the amount of money it costs, nor where it is to come from, and that their plan leads in the end to bankruptcy or war.

Mr. BUTLER. Mr. Chairman, I yield 15 minutes to the gentleman from Illinois [Mr. BRITTEN].

Mr. BRITTEN. Mr. Chairman, as my time is limited, I desire not to be interrupted until I have finished my statement. Mr. Chairman, I listened with considerable interest to the remarks of the gentleman who just preceded me, and particularly so when he criticized my good friend from Pennsylvania [Mr. BUTLER] for desiring a tranquil peace of mind among the people of Pennsylvania, New York, Massachusetts, and other Eastern States. Does it ever occur to the gentleman from Texas that a satisfactory peace of mind is just as desirable for the border of Texas and the coast line of that great State as it is at other places in the United States? I believe the gentleman forgets that.

While the hearings on this bill have apparently been of a most exhaustive character, it was evident throughout that the muzzling of officers as well as the General Board itself by the Secretary had the effect of curbing free personal discussion in which the committee desired advice.

The bill as drawn is not a measure of real preparedness because it is unscientific, unbalanced, and a patchwork of log-rolling between pacifists and conservatives after the White House had radioed an S. O. S. to the Democratic members of the committee, when the little Navy men had their day.

This is probably the first time in the history of the country that the little Navy men on the committee actually framed the construction program of the Navy. [Applause on the Democratic side.]

Oh, I know you gentlemen of the South are pleased that this bill is framed by the little Navy fellows, but you probably forget—before I go to my other subject—you probably forget that the President went West recently to crystallize public sentiment in favor of a great Navy. He did not go into the South, where most of you gentlemen come from, in order to crystallize a sentiment that does not prevail there. Oh, no; he has got all you fellows and does not need any votes in the South, but he went into Illinois, into Iowa, into Wisconsin, and Ohio to crystallize public sentiment for a big Navy, and you gentlemen watch the votes on this floor on this bill next Friday afternoon and see how valuable his crystallization has been. Count the votes in favor of the bill after it has been properly amended, which will come from men of the East, North, and West, and not from the South, and that is where they always come from. Why does the President insist upon the Republicans in the House carrying the naval bill to a successful completion, as in the past, instead of going into the South where the crystallization of sentiment has evidently not yet occurred? Do you know that out of nine Southern States, including the great State of Texas, from which my distinguished friend [Mr. CALLAWAY] comes, that you only got eight votes two years ago for the one-battleship program? My friend CALLAWAY—and he is a very good friend of mine—was one of those who voted against authorizing even one ship, but after the White House radio S. O. S. he is out for five battle cruisers, at $20,000,000 apiece. That shows the effectiveness of wireless messages on the Navy. [Laughter on the Republican side.]

Mr. MADDEN. Will my colleague yield for a question?

Mr. BRITTEN. I do not desire to be discourteous to my friend, but I said that I did not want to yield to anybody until I have made my point.

In his opening address on the bill the chairman of the committee referred to Admirals Fletcher, Winslow, Knight, Grant, Taylor, Fiske, and others whose testimony indicated a desire for battle cruisers. In this the minority members of the committee fully agree, but the chairman carefully avoided making clear that the advice of these experts was based upon a limited number of first-line ships, principally four, and not upon an unlimited number of battle cruisers as against dreadnaughts, the real fighting ships of the Navy.

The Chairman never once referred to the recommendation of the Navy General Board for first-line ships and evidently forgot that this great body of experts less than 30 days ago recommended 16 first-line battleships—10 battle cruisers and 6 dreadnaughts.

In his opening address to the present Congress the President requested 16 first-line ships, basing the increase on a five-year program at that time, which was entirely ignored by the committee. The Secretary of the Navy in his annual recommendation requested 16 first-line ships. Now gentlemen on the floor of this House and my distinguished friend, the chairman of the committee, when he referred to various programs that have been submitted to Congress and to the Secretary, entirely forgot that the Naval General Board made a recommendation within the last 30 days in which it stated that it would require 16 first-line ships to put our Navy into second place among the navies of the world. Now, I assume when the President was speaking for 16 ships and when the Secretary of the Navy was requesting 16 first-line ships they had done so after conferring with the General Board, the highest naval expert authority in this country. There is no question about it. Now it is up to this Congress—a Democratic Congress—to put our Navy in the second place among the navies of the world or to retain us in fourth place, where the President says we are to-day, and your vote on next Friday afternoon will determine whether or not we are going into second place, because the minority will offer amendments for the construction of eight ships this year. Now, we do not want anything unreasonable of the other side of the House. Your President is for 16 ships, your Secretary of the Navy is for 16 ships, and the Naval Board is for 16 ships. Why not use the Sixty-fourth Congress as a vehicle with which to put our Navy in the second place among the navies of the world, where it belongs? [Applause on the Republican side.]

Surely the President and the Secretary of the Navy can not have forgotten the letter of November 9, 1915, when the General Board advised the Secretary that "our present Navy is not sufficient to give weight to the diplomatic remonstrances of the United States in peace nor to enforce its policies in war."

If Members of the House will carefully read the testimony of the commanders in chief of the Atlantic and Pacific Fleets, as well as that of Admiral Fiske, the foremost strategist in the Navy, they can not fail to be convinced that an efficient, well-balanced Navy is impossible under the present administration, while the figures which I will quote as coming direct from the Chief of the Bureau of Construction and Repair must further accentuate lack of ability to quickly provide a proper national defense in an emergency. With more than one-half of our fighting ships in reserve or repair and with diplomatic complications of a most serious character staring us in the face in Europe, Asia, and Mexico it is impossible for me to understand why the administration so ruthlessly ignores expert military advice.

The Secretary knows that 60 per cent of the crews of the various fighting ships now in reserve would have to be made up of green, untried men in the event of war—men who ordinarily should have had from six months to two years of actual training aboard ship in order to acquaint them with the many duties hurried upon them in the event of actual battle. He knows that our Navy has never been mobilized on account of lack of personnel and also knows of the acute diplomatic situation which brought forth from Germany a short, sharp reply to our note which was equally precise and undiplomatic. He must know that Japan very recently caused our administration to change its policy regarding the restriction of Asiatics as prescribed by the House immigration bill and so changed the phraseology of the measure as to make it look like a gerrymander of a political district to protect a favorite son rather than a piece of legislation covering a class of people. He surely knows that when Japan made this request she was prepared to back it up by force of arms and that her Navy is fully manned, fully equipped, and highly efficient.

It is a simple matter to bluff Germany, whose fleet is vastly superior to ours, when the British Navy stands between us, but

does the administration think that this condition will always exist and that we can look upon the British Navy as our protectors; and if so, is this really a desirable state of affairs? The bluffing of Japan is entirely a different matter, and her polite requests are granted, because we understand the Japanese spirit, while the equally polite request of China applying to our immigration bill is summarily rejected, because China is peaceful and has ignored military and industrial preparations while all other great powers were increasing in wealth and population and at the same time preparing to uphold their honor and dignity. [Applause.]

Let a Democratic Congress remedy the wrong that was made by a Democratic Congress, the Sixty-second, when they permitted the Navy to get out of second place, as they did in 1912, when they denied the recommendation of the Navy General Board and the Secretary of the Navy at that time for three battleships and two battle cruisers. We want to make it clear to you gentlemen. We are merely expediting the building of the 16 ships desired by the President of the United States. Instead of a five-year program, it is going to be a two-year program. Instead of stringing the appropriations over into the next Republican administration, we are giving the Democrats a chance to remedy a great wrong. The Democratic Congress allowed our Navy to get out of second place, and it should be a Democratic Congress that should restore the Navy to the second place among the navies of the world. That is all there is to this argument. I am firm in the belief that our Navy will never be efficient and adequate and will never be the second Navy in point of power among the navies of the world under the present administration, because they have not the ability nor have they the desire to put the Navy in second place excepting for political purposes, and I will prove it to you.

The President has been traveling around the country indicating to the public that the world was on fire, that a great emergency existed. It is perfectly natural that we will adopt or employ emergency measures if an emergency exists. Let us see what his lieutenant, the Secretary of the Navy, the honorable Josephus, has done with the 64 ships now being built for the Navy. Let us see how very ably he has conducted this emergency program and brought these ships to a successful completion in the shortest possible time.

Have any of you on the floor of this House ever heard of an emergency measure coming before Congress? Have any of you on the Committee on Naval Affairs heard the honorable Josephus say that the 64 ships now being constructed in different parts of the country should be rushed to completion? No. That is the best evidence that there is no emergency existing. Let me show you how we are getting along with our construction. And before I do this, I want to call your attention to a certain fact, and let my good friend from Texas, Mr. CALLAWAY, give me his ear. I would like to have his attention, because I hope to convert him to eight first-line ships before we get through. These figures which I have here, and dated May 10, this month, come from the Chief of the Bureau of Construction and Repair, Admiral Taylor. They show the percentage of completion of our ships being constructed in various parts of the country today when an emergency exists, and let me say to you right here on this side of the House that not even one auxiliary ship authorized under the present administration will be built during the four years of this administration. Think of it. During a great administration—the world on fire—the President telling us to keep cool, our diplomatic relations strained almost to the breaking point, with a most undiplomatic note to Germany and a most undiplomatic reply from Germany staring us in the face, and yet notwithstanding that 64 ships are being built by our Government, not one, not even an auxiliary ship authorized under President Wilson's administration will be completed before he goes out of office on the 4th of next March.

Now, of course, there is no need of playing politics with this country and saying that we on the other side expected you and your administration to authorize and build a battleship in the four years of your incumbency. We did not expect that. But when other countries are coming to this country and having ships built in four and five months, as they are doing with submarines, we certainly expect you to build a little submarine or a little destroyer in four years. But you can not do it, according to these figures.

Of battleships there are now seven dreadnaughts under construction. On June 30, 1914, the House authorized three dreadnaughts—the *New Mexico*, being built by the Government in the New York Navy Yard, under absolute control of the Government; the men, the materials, the time, the conditions, the money, and the place all under the control of the Government; and let us see how she compares in point of percentage completed with her two sister ships, the *Mississippi* and *Idaho*. Our good ship, the *New Mexico*, is 19½ per cent completed two years after being authorized. Her sister ships are 100 and 200 per cent nearer completion—that is, 100 and 200 per cent ahead of the *New Mexico*—and, of course, you gentlemen on that side of the House will say, "Well, that is because our honorable Josephus had nothing to do with the sister ships; he could not curtail their completion." But he certainly has water-logged the *New Mexico* in the New York Navy Yard.

Let us take the destroyers. We authorized six on June 30, 1914, two years ago. They are little ships, with no heavy armor or armament. We are constructing the *Shaw*, one of those six, in the Mare Island Navy Yard under the direction and supervision of the honorable Josephus. Let us see how that one has progressed. On May 10 of this year, two years after authorization, it is 31 per cent completed, so that two years from now it will probably be 60 per cent completed if the honorable Josephus lives and the present administration still stays in Washington. Let us see about the sister ships being constructed in private yards, over which the honorable Josephus has no control. The next nearest to the 31 per cent is the *Wilkes*, which is 62 per cent completed, and from that they go up to 87 per cent completed, all in private yards. Of course you understand the Government has nothing to do with the construction after it lets the contract. They can go ahead as fast as they please. Shipbuilders realize that an emergency exists to-day, the same as the General Board realizes it. That is the reason I claim there is an insincerity on the part of the administration in dragging these 64 ships to completion.

We have authorized $24,000,000 for the construction of submarines during past Congresses, and in March of this year we were informed that but six of these destructive water dogs were prepared to defend our thousands of miles of coast line on March 1 of this year.

England had 20 submarines completed in the United States last year in five months. Ten of them were built and reached England under their own power in that time, and 10 are still tied up in this country. Now, certainly if our manufacturers can build submarines for England, 20 of them in five months, surely the ones we authorized in 1914, two years ago, should be nearing completion. Let us see their condition.

Some of those ships are 5 per cent completed. They are 2 years old—5 per cent completed! Why, just imagine how many times this administration would have to be reelected in order to complete one of those ships. [Laughter on the Republican side.] We have heard much about being "too proud to fight," but the record of the Government construction of ships must surely be characterized as "too proud to work."

Mr. MEEKER. Amen! [Laughter.]

Mr. BRITTEN. Oh, I requested that I be not interrupted, and my regular "amen" friend is not annoying me. [Laughter.]

The bill provides for an addition of 300 civilians to the Engineer Corps, to immediately become line officers in the Navy.

This paragraph was written before the House increased by 50 per cent the number of appointees at the Naval Academy and was purely an emergency measure for more officers. Since the House has acted in the matter, this paragraph is most offensive to the service and is sure to provoke an unsatisfactory condition aboard ship, which will militate against the highest efficiency and which, it is agreed by naval experts, is now entirely unnecessary.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. BRITTEN. Mr. Chairman, can I get 10 minutes from the chairman of the committee, inasmuch as I am discussing the merits of the bill?

Mr. PADGETT. I would like to give the gentleman 10 minutes, but I have not any time at all.

Mr. ROBERTS of Massachusetts. Mr. Chairman, I will give the gentleman some of my time.

Mr. BRITTEN. I thank you very much. I thought I might get a little time from the chairman of the committee, inasmuch as I am discussing the merits of the bill and the Navy building program proper.

A year ago, Mr. Chairman, we authorized 16 little submarines, the kind that England had built in five months. Let us see their condition. The first 8 or 9 of them have a zero mark after their names, meaning that absolutely nothing has been done on them during this period of emergency. What do you know about that? Would not that make you cross if you were a "big Navy" fellow? [Laughter.] One of those with the zero mark after it is to be built in a Government yard, under the absolute control of the Hon. Josephus and his department. I do not like to say it in a feeling of sarcasm or of criticism. I like the Secretary of the Navy. He is a very estimable gentleman, but he has not the ability to run the Navy Department. There is no use mincing

words about it. He is not big enough for his job, and you gentlemen on that side of the House know it. [Laughter.]

Now, let us take aviation. The General Board has recommended that $7,000,000 be expended on aviation. With a total of 16 aeroplanes at Pensacola, the only aeronautic station of the Navy, 7 of which are being rebuilt or overhauled, and which are therefore not now serviceable, surely the most economical Member of Congress will admit that this most important branch of the service has been shamefully neglected in the past and should now receive the whole-hearted support recommended by the Navy General Board.

Recalling the statement of Secretary Daniels before your committee on March 30, this year, that every first-class aviator in Europe who is making frequent flights is furnished three machines, we are now splendidly equipped to keep three first-class aviators busy scouting along 5,000 miles of seacoast, maneuvering with the Atlantic and Pacific Fleets, training recruits for the aviation service, experimenting with launching devices not yet constructed on the decks of battleships, assisting in target practice and "spotting," bomb throwing, torpedo launching, submarine chasing, and a few other duties of such importance that thousands of lives may be sacrificed or gained through their failure or nonexistence.

In view of the advance that has been made in aeronautics during the past year and the demonstrations now being made of the vital importance of a proper air service to both land and sea warfare, our present situation can be described as nothing less than deplorable. In our present condition of unpreparedness, in contact with any foe possessing a proper air service our scouting would be blind. We would be without the means of detecting his plans and unable to attack him from the air, while our own movements would be an open book to him.

Considering that an appropriation of $10,000,000 for aeronautics alone would still leave us behind England, Germany, France, Russia, Austria, Italy, Japan, Spain, and the Netherlands, and that Capt. Bristol, who was ordered to take charge of the development of aeronautics by the Secretary of the Navy more than two years ago, on February 21 of this year told your committee that $7,076,000 was the very least amount which should be appropriated this year, the minority members feel that in recommending an appropriation of three and one-half million dollars they are subjecting themselves to criticism for not properly supplying the Navy with this most efficient weapon of war, which both protects and destroys, and without which the battle fleet of to-day is blind.

The minority have concluded that the $7,000,000 recommended for aviation construction by the Navy General Board on May 2 of this year could wisely be expended during the Sixty-fourth Congress—one-half in each session—and to appropriate less will be but a pretense of giving the people of our country what they really want and what they are prepared and willing to pay for.

The construction of large sea planes, of which our Navy has none, to be used for launching torpedoes, is a matter for serious consideration during the coming months.

And you gentlemen on the other side of the House who framed this bill have provided only $2,000,000 for aviation. Why, do not you know that the people of this country, who have lots of money and are willing to spend it in military defense, will simply characterize that appropriation as shameful, as scandalous? That is what your two millions for aviation is. There is no question about that. Last month our exports were $411,000,000 and our imports were practically $200,000,000. That indicates that we are going ahead, that we are getting richer at the rate of $200,000,000 a month. Is there any reason why we can not provide adequate national defense? Are we too poor? [Applause on the Republican side.]

THE CREATION OF A COUNCIL OF NATIONAL DEFENSE.

The profound weakness of this unscientific, unbalanced, patchwork of logrolling between pacifists and conservatives is the more accentuated by its failure to provide for a council of national defense, so urgently demanded by every student of real preparedness irrespective of his political faith.

If political rivals will unite even now in enabling Congress to establish a council of national defense, they will render a service which heretofore they have failed to recognize as of the first necessity. They will remove a vital national question from the dangers and uncertainties of politics to which it is especially exposed during the year of a presidential election.

The prattle about "preparedness" on the part of politicians already appealing for votes in view of the approaching presidential election would not have the sound of insincerity had they been willing that Congress should possess the machinery necessary for a continuing, complete, and comprehensive program.

Neither the legislative branch nor any official of the executive department, however high placed, has, under the present system, or could have, a complete and comprehensive plan for the national defense. Congress has before it the suggestions of the Chief Executive, the recommendations of the Secretary of War, and the Secretary of the Navy. There are legislative proposals from important leaders in the Senate and House. There are also the various recommendations of the General Board of the Navy and of the General Staff of the Army.

The Secretary of the Navy appears to be the one stumbling-block against this important legislation, requiring practically no appropriation but of the utmost importance to the country.

In the year 1912 the Senate and House Committees on Naval Affairs each unanimously reported favorably to their respective branches of Congress bills for the creation of a council of national defense and at which time President Taft urged upon a Democratic Congress the desirability of establishing this council in order to provide machinery by which the readiness of the Army and Navy might be improved and the programs of military and naval requirements could be coordinated and properly scrutinized with a view to the necessities of the whole Nation rather than of separate departments.

When the chairman of the committee referred to the increase of 13,500 to the enlisted personnel of the Navy, he called attention to the recommendation of the Navy General Board of November 9, 1915, for approximately a like number of men, but failed to state that that recommendation was made upon a building program of $100,000,000 a year, covering a period of five years, which the committee entirely ignored.

A most substantial recommendation of the General Board applying to personnel increase was made in December, 1914, more than one year ago, when 19,600 additional men were recommended, and this report was completely smothered by the Secretary of the Navy, who had his own opinion about the requirements of the service, and since which time the General Board has shown a decided disposition to recommend nothing which might be displeasing to the Secretary, because of the fear that Mr. Daniels might some day wipe the board, which has no legal status, entirely out of existence.

Has it occurred to you that notwithstanding the advice of Admiral Dewey and the Navy General Board, dated August 3, 1914, nearly two years ago, of the necessity of getting the Navy into a state of preparedness, and notwithstanding the letter of Rear Admiral Fiske, dated November 9, 1914, the senior adviser to the Secretary, warning the Navy Department of the Navy's unpreparedness, that no personal increase has been made since then, and that the naval reserve of which he expected so much has developed into a startling fizzle of a little more than 300 men.

Not to be outdone by the then President, the wise men in control of the Democratic national convention in Baltimore inserted in the national platform the following language:

> We approve the measure reported by the Democratic leaders in the House of Representatives for the creation of a council of national defense, which will determine a definite naval program, with a view to increased efficiency and economy.

As the presidential election occurs in November, this will be the last opportunity of the present administration to live up to an agreement solemnly entered into with the American people.

Had the council of national defense been formed at the outset of the administration, in accordance with the platform resolution, we would have long since had a naval and military program and a financial plan to carry it into effect.

It would not be a commission to do the work of Congress, but it would place before Congress a working plan.

The minority proposed to include in this bill, H. R. 9906, which provided for a council of national defense composed of 16 members, 12 of which were civilions and 4 representing the Army and Navy.

The council would help to coordinate the plans of the Army and Navy and furnish a means of reconciling the military and financial interests before submitting to the President and the Congress recommendation for measures of national defense, and would furnish the President and the Congress a ready means of ascertaining at any time the condition of the Nation for defense.

The council would report to the President for transmission to Congress a general policy of the national defense and such recommendations or measures relating thereto as it has deemed necessary and expedient.

Great Britain, France, Germany, Russia, Italy, and Japan all have their national defense boards. The necessity of having a definite policy worked out in advance of war has become of greater and greater importance, and it is not overdrawing the fact to say that Germany's complete success in the terrible war now devastating Europe is chiefly due to the policy and preparations resulting from the cooperation of the civil and military, embodied in Bismarck, the statesman, and Von Moltke, the soldier.

Our own Civil War has brought out the staggering price in blood and treasure a nation may pay for having no definite policy of defense, while Von der Goltz, one of the greatest authorities on the art of war, has said, "Without a good policy, a successful war is not probable."

The great weakness of our Nation, from the standpoint of national defense, has been the want of a definite policy and the lack of cooperation between the various agencies involved.

Thank God, we Americans are not yet so low and mean that we will not gladly pay any price to keep our land from being ravaged, to keep our homes and our women and children safe from rapine, to keep our flag flying in bright honor, to keep our dear country so armed that we can meet any foes that may storm against her, and smash them to pieces with our victorious and terrible weapons of defense.

You gentlemen who are opposing increases to this bill do not believe that war can come upon us as it has come upon every other nation. I wish I could have had you all with me on yesterday when I motored through Arlington Cemetery, just a few miles across the river. In that spot, so sacred and so holy that it is hard to tread its paths without tears, sleep many thousands of our fathers, our brothers who died, not in vain, to save this country from partition and destruction. Those dead did their duty to their country simply, bravely, heroically to the death, and your country expects every man of you to do his duty in the House this week.

Let us not deceive ourselves that these blood-stained powers of Europe and Asia, emerging from their conflict terribly strong in war preparation and desperately bankrupt in wealth, will leave us in peace and in possession of their gold and their trade unless they appreciate our patriotism, our nerve, our wealth, and, above all, our preparedness for defense against any foe or combination of foes.

The President has repeatedly said that he desires unalterably the strongest Navy in the world. Every Member in this House can do his full duty in making the Sixty-fourth Congress the vehicle by which our Navy again assumes second place among the navies of the world.

Remember that the day may come when, because we were not only "too proud to fight" over matters really trivial but also too dull to prepare to face the realities of this world as the last year has proved them to be, our situation will be what is to-day that of France, if not of Belgium and Serbia, and when we shall be in the peril that Britain is.

The CHAIRMAN. The time of the gentleman from Illinois has again expired.

Mr. PADGETT. Mr. Chairman, I would like to ask the gentleman from Pennsylvania [Mr. BUTLER] how many speeches he has on that side?

Mr. BUTLER. Only one, and I will ask the gentleman from Tennessee to consume all his time except the closing speech.

Mr. PADGETT. Very well. Then I will put in all I have except one. I will yield 10 minutes to the gentleman from Indiana [Mr. GRAY].

The CHAIRMAN. The gentleman from Indiana [Mr. GRAY] is recognized for 10 minutes.

Mr. GRAY of Indiana. Mr. Chairman, the same impassioned appeal made here to-day for arms and armament has been the prelude to war and bloodshed for a thousand years.

But I wish to speak to that paragraph of the bill providing for a conference of the great nations of the world when the European war is over.

The Biblical injunction, "For all that take the sword shall perish by the sword," has been vindicated by the history of all the warring nations of the world from ancient to modern times. I do not want this Nation to take the sword. Alexander the Great took the sword, and Greece perished by the sword. Darius and Cambyses took the sword, and Persia perished by the sword. Cæsar took the sword, and Rome perished by the sword. Napoleon took the sword, and France was humiliated and crushed by the sword. The charred ruins of mighty cities, the hoary columns of antiquity, the overgrown walls of fallen capitals, the crumbling remains of great architecture and ancient art all attest the criminal folly of military rivalry and war.

This is the hour of temptation in our Nation's history. If we abandon our ideals of peace for the standards of war, if we surrender moral force and the power of example to rely upon might, if we enter the contest for world power and control of the seas, if we yield to the alluring calls of rivalry in arms and armament, we will create distrust, engender antagonism, and arouse the world to enmity and the nations to unite against us. If we ignore the admonitions of Scripture and disregard the warnings of the past, posterity will read our history in a new chapter of the tragedy of nations. If we take the sword we will perish by the sword.

But, Mr. Chairman, there is even a higher reason why we as a Nation should now preserve the even tenor of our way in Navy building, why we should now maintain our traditional policy of peace and an Army and a Navy only for defense, why we should now renounce and disclaim a policy of military rivalry looking to world power and the control of the seas.

When the great European war is over and the smoke has lifted from the battle fields, when the echo of artillery has died away, when the censor's curtain screening the horrors of war has been rolled aside, and the world looks in upon the wounded, the mangled, and the dead; looks in upon the ghastly scenes of carnage and human slaughter; upon a continent littered with human skulls and the bleaching bones of the dead; looks in upon the havoc, the destruction, the devastation, upon the ruins, the débris, the desolation; when the world looks in upon the widows, the orphan children, the starving babes upon the breasts of frantic mothers, and the great multitude of cripples all left helpless and dependent upon the earth; upon the woe, the want, the destitution following in the wake of war; when the world looks in upon the bereaved and disconsolate survivors groping their way through the charred ruins, once their homes and abiding places, staggering under the crushing burden of a war debt, to weigh upon them and their children and their children's children for generations to come; when the great European conflict is over—I believe the world will realize the horrors and atrocities of war more than ever before; I believe the world will realize the awful crimes of war more than ever before; I believe the world will realize the awful costs of war, costs in life and limb and treasure, more than ever before; I believe the world will realize the supreme folly of war more than ever before; I believe humanity will be appalled; I believe the world conscience will be shocked and horrified; I believe civilization will stand aghast at the awful spectacle of blood and death and desolation; I believe mankind will revolt; I believe the inhabitants of the earth will appeal to us, as the last great Nation remaining neutral to rescue them from the horrors of human strife and combat; I believe the world will be ready to consider the end of war.

I believe that a great and glorious opportunity awaits this Nation, the opportunity of the centuries, the opportunity of the ages, the opportunity of all time in history, the opportunity to lead the way from cruel, devastating warfare in the settlement of international disputes to courts and commissions and to the planes of a higher and more exalted civilization. [Applause.] This opportunity coming to us is a rare opportunity coming to a nation or to a people; coming only once in a lifetime, only once in a century, only once in an age, only once in a long lapse of time.

I believe this opportunity is ours if we will only avail ourselves of it, if we will only hold ourselves neutral before the world, if we will only hold ourselves impartial before the world, if we will only hold ourselves blameless before the world, if we will only hold ourselves acceptable to the nations and to the peoples of the world. [Applause.]

I believe the opportunity is ours if we will only renounce and disclaim a policy of military rivalry, if we will only turn a deaf ear to the alluring calls for world power and control of the seas, arousing distrust and apprehension against us, arousing animosity and antagonism against us, arousing the enmity of the nations against us.

I believe the opportunity is ours if we will only resist the temptation to take advantage of the misfortunes of others and to gain power for ourselves while others are in war among each other, if we will only remain true to our traditional policies of peace and an army and navy only for defense, if we will only hold ourselves ready, acceptable, and qualified before the world for this great forward movement of civilization.

In the ordinary course of life men are naturally and necessarily more exclusively engrossed with their own, immediate and surrounding affairs; they are more concerned in their own home land where they live and move and have their being; they are more intensely interested in their own day and generation and the ever-engrossing present.

But there is a time when men should rise above their own immediate and surrounding interests for a broad consideration of the welfare of humanity at large. There is a time when men should look beyond their own home land to the world as their country. There is a time when men should extend their vision beyond their own day and generation to contemplate posterity, the future, and the generations to come. There is a time when men should realize their individual responsibilities in life and assume the obligations resting upon them separately as free moral agents among men. These are such times and these are questions upon which I do not surrender my convictions to any man, body of men, or to any party. [Applause.]

This is a duty which we owe not only to the people of our own country but to the people of all countries. This is a duty which we owe not only to our own Nation but to all nations. This is a duty which we owe not only to humanity here but to mankind everywhere; a duty we owe not only to our own civilization but to the civilization of the world, not only to our own day and generation but to posterity, the future, and the generations to come.

If we will only hold ourselves ready, acceptable, and qualified before the world for this great opportunity, our gain and material reward will be great by it. But let us forget the gain and reward of it. Our fame in history will be great by it. But let us forget the fame in history of it. Our glory in the world before men will be great by it. But let us forget the glory of it; let us forget all but the cause of humanity and the civilization of the world. [Applause.]

[By unanimous consent, Mr. BRITTEN was given leave to extend his remarks in the RECORD.]

Mr. PADGETT. Mr. Chairman, I ask unanimous consent to insert in the RECORD as an extension of my remarks some figures and explanations relative to the construction program.

The CHAIRMAN. Without objection, it will be so ordered.

The memorandum referred to is as follows:

MEMORANDUM.

MAY 26, 1916.

1. The naval appropriation act approved March 3, 1915, authorized the construction of 2 battleships, 6 torpedo-boat destroyers, 2 seagoing submarines, and 16 coast-defense submarines; also 1 oil-fuel ship.

2. The battleships *Nos.* 43 and 44, now named the *California* and *Tennessee*, are now under construction, the former at the navy yard, Mare Island, Cal., the latter at the navy yard, New York, N. Y. The usual time required between the authorization of a battleship and the placing of the contract therefor is from three months up. The lowest time possible is about three months, and in the past this has been accomplished only in several isolated cases where the vessel has been a duplicate of vessels authorized a year previously. Sixty days is the minimum time which has been allowed bidders to prepare their estimates. After the bids have been opened several weeks are required for a careful consideration of the bids submitted and the necessary legal formalities in connection with the signing of the contract. The following gives the length of time which has elapsed between the date of authorization and the date of contract for all battleships authorized subsequent to 1898:

Virginia, 23½ months.
Nebraska, 24 months.
Georgia, 23½ months.
New Jersey, 8 months.
Rhode Island, 8 months.
Louisiana, 3½ months.
Connecticut (navy yard).
Kansas, 3½ months.
Minnesota, 3½ months.
Vermont, 3½ months.
New Hampshire, 8 months.
South Carolina, 16½ months.
Michigan, 16½ months.
Delaware, 13 months.
North Dakota, 5 months.
Florida (navy yard).
Utah, 6½ months.
Wyoming, 7 months.
Arkansas, 6½ months.
New York (navy yard).
Texas, 5½ months.
Nevada, 10½ months.
Oklahoma, 10½ months.
Pennsylvania, 6 months.
Arizona (navy yard).
New Mexico (navy yard).
Mississippi, 5 months.
Idaho, 4½ months.
Tennessee (navy yard).
California (navy yard).

It will be noted from the above that in a number of cases a year or more elapsed between the authorization and placing of contracts. In each of these cases the delay was primarily due to the desirability of giving the most careful consideration to the major features of the design of the vessels in question, these features being based on the current developments in naval science. At the date of authorization of the *California* and *Tennessee* the great European war was in progress. The experience during the first months of the war, when a number of vessels of war were sunk by torpedo attack, had impressed upon the department the necessity of improving the methods of defense against underwater attack for capital ships. For some months before the authorization of battleships 43 and 44 an experimental investigation in this connection had been in progress, and this had already developed the great desirability of improving this particular feature. Upon the urgent recommendation of the chief constructor it was determined to hold back the designs in order to introduce such improvements as the experiments might indicate. By July, 1915, the experiments had shown the possibility of very great improvement and indicated the general features of the construction to be desired. It was necessary, however, to make numerous detailed experiments before the best arrangements could be settled on. This work was being pushed all the time to the limit of the facilities available.

3. As soon as there was a preliminary determination of the torpedo protection, which was radical departure in details from former practice, these vessels were advertised for on September 20 and the bids opened November 17, 1915. It was realized at the time of the advertisement that the final information would not be available until early in 1916, and one proviso under which the vessels were advertised required the contractor within three months of the date of contract to make the necessary improvements in this feature, being reimbursed if the changes from the plans as advertised involved any additional expense. All of the bids received refused to accept this condition except on condition of delay in construction.

4. By undertaking the construction of these ships in navy yards the department was enabled to adopt for them the indirect electric-drive method of propulsion, a method which hitherto the private bidders have been loth to adopt or bid upon, presumably in view of the fact that it requires them to purchase machinery instead of building it at their works. This method of propulsion enabled the department to rearrange the machinery in a manner which added very much to the protection of this vital feature against torpedo attack. Incidentally it enabled the speed characteristic to be made 21 knots instead of 20½ knots, as provided in the original design bid upon by outside contractors. By very prompt action in contracting for the structural material for these vessels in December the department was able to obtain it before the enormous rise of the last few months had made much progress. At present market prices the structural material contracted for in December would have cost about $1,450,000 more than the prices actually being paid.

5. The navy yards were instructed to prepare for the construction of these vessels and to proceed with the ordering of material about December 1, 1915, and the plans were entirely revised and completed before the end of February, 1916. It will thus be seen that the order for the construction of these vessels was placed within 9 months of the date of authorization, which compares favorably with the intervals given in the above table in the case of previous battleships. The three months required for the revision of plans was necessary whether these vessels were built in navy yards or by private contractors, as the revision was necessary to incorporate new features of the most vital importance, and the Navy Department would have been liable to the most serious criticism if it had proceeded with the construction of these ships without making provision for these features.

6. The destroyers authorized by this appropriation bill are *Nos.* 69 to 74. Their designs were completed and issued to prospective bidders on August 2, 1915, five months after their authorization. Bids were opened after the usual estimated period of 60 days, on October 6, 1915, and the notice of awards of contracts were issued to private bidders and to navy yards on October 20, 1915, about 7½ months after the date of authorization. The contracts were placed for delivery in 20 months after the date of contract which is the shortest contract period for building of destroyers which has ever been allowed by the Navy Department. This shortening of contract period for destroyers has been obtained despite the fact that American shipbuilders are busier on merchant work at the present time than ever before in their history.

7. The act provided for two seagoing submarines to have a surface speed of 25 knots or more, if possible, but not less than 20 knots. This required a design involving an unprecedented speed, not only as compared to previous United States submarines, but also as compared to any foreign submarines of which the Navy Department has any knowledge. The design for these vessels was completed in December, 1915, which is considered to have been an exceptionally short period for the preparation of a design involving now problems of such magnitude. Bids were opened after the usual 60-day period on February 16, 1916. Only one bid was received within the limit set by the appropriation, and this bid was made contingent on the acceptance of the vessels, even though they might attain a speed as low as between 19 and 20 knots. Under the wording of the act the department could not legally place a contract under these conditions and circumstances were accordingly reported to Congress under date of March 3, 1916. It will therefore be seen that the responsibility for not proceeding with the construction of these vessels rests upon Congress which made mandatory in the law a speed characteristic which no contractor in this country was prepared to accept.

8. The 16 coast-defense submarines authorized by the act were advertised May 29, 1915, less than three months after the passage of the act. The original date set for the opening of bids was August 2, 1915. The date of opening, however, was postponed to September 30, 1915, pursuant to a request of one of the shipbuilding companies which had not previously entered the field of submarine construction. This delay was justified in that it was for the purpose not only of obtaining a wider field of competition, but also for incouraging additional builders to enter this field, thereby increasing the country's resources for constructing this type of vessel. Notices of award of contract for these vessels were issued on October 20, 1915, only 7½ months after the date of authorization, which is a much shorter period than has generally been attained in the case of previous vessels of this class. In spite of the large amount of merchant shipbuilding on hand, and the great difficulties experienced in obtaining material of all kinds, the contracts for these vessels called for completion within periods ranging from 21 to 25 months, which is a shorter average contract period than has heretofore been provided for any class of submarines.

9. The oil-fuel ship authorized in the act of May 3, 1915, was assigned to the Mare Island Navy Yard. On April 19, 1915, the department authorized the construction at the Mare Island Yard, directed material to be assembled, etc. The keel was laid on December 15, 1915. The date for launching has been now fixed for June 17, 1916, having been accelerated beyond the date originally contemplated in order to clear the ways for the battleship *California*. The present estimates are that this vessel will be completed in March or April, 1917, or about two years from the date of its authorization.

Mr. BUTLER. Mr. Chairman, how much time have we left on this side?

The CHAIRMAN. Forty-seven minutes.

Mr. PADGETT. I yield 15 minutes to the gentleman from Alabama [Mr. OLIVER].

Mr. OLIVER. Mr. Chairman, the necessity for self-defense is not debatable. When that is lacking, there is nothing to defend and nothing to debate; but no informed man will or can truthfully assert that our country is in any sense defenseless. On the contrary, he must admit that it is immeasurably better defended than ever before in its history. While making no claim that our Navy is as large or as strong as it should be, yet to those really seeking information as to its present strength and needs, I cordially commend to their reading the very informing and full statement by Admiral Fletcher, the commander of the Atlantic Fleet, and also the comprehensive statement of Rear Admiral Benson, chief of naval operations, made before the House committee at this session. They will there find a full

answer to many of the misrepresentations so persistently uttered and circulated against our Navy and its present efficient head.

I briefly quote from Admiral Fletcher's hearing as to the efficiency of the men and ships:

The personnel now with the fleet meets every requirement. There is no body of officers in any navy of the world that are better educated. There are none more skilled in their profession and none required to maintain a higher standard of efficiency than those in our Navy. * * * The enlisted men who man our battleships are the best the country could produce. * * * As far as can be ascertained, there is no fleet that is more constantly drilled or exercised than our fleet on the Atlantic coast, or any fleet where more exacting requirements are demanded. This is borne out by the results shown in our maneuvers, our war games, our tactical problems, and our target practice. * * * In my annual report there I pointed out some defects in the matériel of the fleet and its needs and requirements to make it a more effective fighting force. These are of long standing, and are only now emphasized by events abroad. The Navy Department has done everything that lies within its power to remedy the shortcomings and carry out the recommendations from the fleet, but most of these requirements are beyond the control of the department and require the legislation of Congress.

The program now proposed in the majority report is the most noteworthy in the history of the American Navy, carrying not only for new construction by far the largest appropriation ever recommended to any Congress, but at the same time offering more far-reaching and constructive legislation than has ever been recommended before. In the type of ships, both capital and lesser craft, which the report recommends we have followed the best and highest expert advice of naval officers, and, if this report is adopted, it will not only add a large number of very effective and badly needed units to our fleet, but will mark a long forward step in the full development of a well-balanced and thoroughly efficient Navy.

With these additions we may still be short in numbers, as compared with some, but not in quality and high military efficiency.

Mr. Chairman, I now desire to address myself to the remarkable report filed by the minority members of the committee. It is to be regretted that in this report they have injected politics into the discussion of this important subject; partisanship should always stop at the water's edge, but nothing seems to deter the minority from considering every question from the standpoint of partisanship. In this report, remarkable for the great number of its gross inaccuracies and misleading statements, a comparison is made between the building program of capital ships under the present administration of President Wilson and that under the four preceding Republican administrations commencing with that of President McKinley, in the Fifty-fifth Congress, 1898.

A list of the capital ships authorized under each of these administrations is set forth on page 2 of the minority report, and the very surprising statement is made that following the Spanish-American War the United States, under Republican administration, entered upon a policy of building and maintaining a Navy superior to that of any great military country of the world, and that so long as we adhered to that policy our Navy was second only to that of Great Britain. It asserts that the decline of our Navy from second place began with the Sixty-second Congress, and would have you believe that during the 16 years of Republican administration the American Navy was elevated from a lowly position to that of the second naval power of the world, and held there just so long, and only so long, as the administration remained Republican.

While again condemning the injection of politics into this discussion by the minority, I gladly accept the challenge they offer in order that the truth may be made known. [Applause on the Democratic side.]

It is surprising, in the light of the real facts disclosed by the information given the minority at their request by the General Board, and on which they have based their report, that they would have the temerity to assert that it was decided upon by Republican administrations to build a Navy second only to that of Great Britain. It is true that a Navy superior to that of Germany was the desire of the General Board, which submitted its first report in 1903. The German laws of 1898 and 1900, with subsequent amendments, laid down a definite program of building ships and providing personnel. This was public law, of which every administration was fully informed. It was with full knowledge of these laws and the ships they proposed to build that the General Board was influenced in submitting the programs it recommended year by year, including 1903 and thereafter. The recommendations of the General Board, however, were never accepted, nor even were they considered deserving of transmission to Congress or of publication for the information of the people by the Republican administrations referred to in the minority report. [Applause on the Democratic side.] Not until the present Secretary of the Navy came into office in March, 1913, were the reports of the General Board made public.

No Republican Congress provided ships in any measure equal to the number recommended by the board. Any program providing fewer ships than were recommended by the General Board, it is admitted, could not have retained second place for us; and since no Republican Congress or Secretary ever recommended or provided ships to the number required by the program, how can the minority now assert that it was the policy of the Government under Republican administration to build and maintain a Navy superior to that of any great military country in the world? [Applause on the Democratic side.]

Do you know that during the six years of President Roosevelt's administration a Republican Congress built just one-half of the capital ships recommended by the General Board, although the amount recommended by the General Board was necessary, if the policy was to be adhered to of placing our Navy in second place? [Applause on Democratic side.]

What is more, in December, 1905, President Roosevelt sent a message to Congress in which he stated that our Navy was large enough and that he did not wish to increase its strength, but only desired in future to provide a building program to take the place of ships that might become obsolete or worthless from time to time, and in this message recommended that the naval strength could be maintained by providing only for the addition of one battleship each year. The General Board recommended three for that year; a Republican Congress and a Republican President only provided one. [Applause on Democratic side.]

Again, in December, 1906, President Roosevelt, emphasizing the same statement, said:

I still feel that it should not be our policy to increase the strength of the Navy. We have only to maintain it at its present strength.

This, he again said in his message, could be accomplished by the building of one battleship a year. The General Board that year recommended the building of three, yet a Republican President and a Republican Congress again only authorized one. [Applause on Democratic side.]

Do these facts prove the assertion made in the minority report as to the policy of maintaining our Navy as the second great naval power of the world?

But this is not all. In 1903, when the General Board first submitted its recommendations to the Republican Secretary for current and future building, the United States enjoyed a superiority in tonnage of about 100,000 tons over the German Navy. France was at this time the second naval power and the United States was third. The Navy of to-morrow can be measured only by the Navy of to-day plus the new construction on the stocks. We might have to-day a superior Navy, and yet a few years hence an inferior one, if, while a competitor builds, we remain idle. How was it that our superiority over the German Navy, which was about 100,000 tons in 1903, had been reduced to about 60,000 tons in 1907 and 50,000 tons in 1908, and that in 1909, long before the Democrats came into control of the House, it surpassed us? [Applause on Democratic side.]

The action of a Republican Congress, following the recommendation of President Roosevelt, and the absolute disregard of the recommendations of the General Board by Republican Secretaries, clearly account for this rapid decline. Facts in the possession of the minority leader, and on which the minority report is based, show that according to the General Board the United States fell behind Germany in 1909, if you gauge the naval strength by the ships built and building. This was at least two years before the Democratic Congress in December, 1911, assembled. Yet in the light of these undisputed facts, the assertion is brazenly made in the minority report that the decline of the Navy from second to third place began with the Sixty-second Congress. [Applause on the Democratic side.]

There is another comparison that this list set out on page 2 of the minority report suggests. The minority have very wisely omitted to set out the sums appropriated at each session of Congress under Republican administration during the 16 years which they have called attention to. Now, I want to supply this omission. Under the first McKinley administration you appropriated $48,000,000 in four years for capital ships. The greatest amount at any session of Congress during this four years was $20,000,000, and the amount carried in the bill now brought in by a majority of the committee at this one session of Congress represents for capital ships a sum five times what you appropriated at any single session under the McKinley administration and represents more than twice what you appropriated for this purpose during the first four years of the McKinley administration. [Applause on the Democratic side.]

The amount appropriated in three years under President Wilson's administration, including the amount now recommended

in this bill, is more than was appropriated in 12 years under the McKinley, McKinley-Roosevelt, and Roosevelt administrations, and when the next session of this Congress shall have ended the facts will show that in four years under President Wilson's administration more money has been appropriated for capital ships than under the entire 16 years of Republican administration, to which the minority refers. Yet, in the light of these facts, this minority report undertakes to insist that more should now be appropriated than is recommended in the majority report. [Applause on the Democratic side.]

If you will take the trouble to estimate the military efficiency of the capital ships authorized and yet to be authorized under the Wilson administration, according to recognized military formula, you will find that, stated in percentage, the military efficiency of such capital vessels is greater than that of all of the capital ships authorized in the 16 years of the Republican administrations to which the minority report refers. [Applause on the Democratic side.]

Now, if our friends on the minority side of the House can get any comfort out of the comparison which their report invites, they are welcome to it. [Applause on the Democratic side.]

When it is remembered that this bill carries an appropriation for capital ships alone from three to five times greater than any ever carried by any bill offered or passed at any single session of any Republican Congress, it may be interesting to inquire for some explanation of this seemingly enthusiastic desire on the part of the minority Members to add to this already ambitious building program. Perhaps I may be able to suggest such explanation by recalling an interesting incident which occurred during a recriminating discussion between two well-known Republicans.

Back in the Fifty-fourth Congress there was a distinguished Republican on the Naval Committee from the State of Indiana, Mr. Hanly, afterward governor of that State. Mr. Boutelle, of Maine, was the chairman of the Naval Committee at this time, and it so happened that in a Democratic Congress, just a short time preceding this date, Mr. Boutelle had spoken with great earnestness for 10 battleships. In the year now when he, shortly afterwards, became chairman of the Committee on Naval Affairs, in a Republican Congress, and when the war clouds were hovering around, to which frequent allusions were then made, as now, in fervid speeches urging an increase in the naval building program, which Mr. Boutelle had just reported and which carried an appropriation for only four ships, to cost not exceeding $20,000,000 in all; Mr. Hanly, speaking in favor of an increase of the number from four to six ships, made this very significant observation—I quote from Mr. Hanly, on page 3141 of the CONGRESSIONAL RECORD of the Fifty-fourth Congress:

> It has been dinned into my ears constantly in the committee room and out of it, Mr. Chairman, on every hand, that we ought not to make this appropriation because our Democratic friends would not make one when they were in power. Looking back over the debates I find the Democratic Party as a rule has been enthusiastically in favor of appropriations for the Navy when they were out of power and not responsible, and I find the Republican Party has pursued the same policy. Why, sir, the chairman of this committee, speaking in a Democratic Congress urged an appropriation for 10 warships. Why not now? Why not now when clothed with power and authority? Let him answer it. I do not for myself favor that kind of politics. I am heartily sick of it all, and so are the people of these United States.
>
> It seems [continued Mr. Hanly]—
>
> The age of virtuous politics is past,
> And we are deep in that of sold pretense.
> Patriots have become too shrewd to be sincere—
>
> And we need not be surprised if the people are too wise to trust us.

[Applause on the Democratic side.]

I wonder how many Hanly-pictured Boutelles there are among the signers of the minority report? [Loud applause on the Democratic side.]

Now, in conclusion, let me say that in the preparation of this bill the committee have not been unmindful that Congress, in providing for our Navy, should consider any potential dangers from without that address themselves to the calm judgment of reason; yet we have not undertaken, and I hope we never will, to prepare for national aggression, and so long as our preparedness is impressed with the character of self-defense, as opposed to aggression, there can be no merit in the argument that we are drifting into militarism. All recognize that an adequate Navy is the best bulwark of our safety, if the time should ever come when necessity and might become the supreme law. Yet our people have never, and I hope will never, give assent to that declaration attributed to Lord Nelson in the years gone by, to the effect that "a line-of-battle ship is the best negotiator in Europe."

Our country looks with confident hope to the time when peaceful argument can be relied upon in the settlement of national differences, and it was significant that only last week representative citizens from every section of our country gathered at the Capital of the Nation and discussed in serious and hopeful vein the probability, after the close of that almost indescribable struggle across the ocean, that the nations of the world might, by common consent, establish, along practical lines, some tribunal to which differences could be referred for advice and determination, subject to the final approval of the nations involved. This bill carries an appropriation of $200,000, which may be expended at the discretion of the President, in calling an international conference looking to this end.

It is but a recognition of that human truth that to strike a blow in wrath is simply the operation of passion, but to manfully restrain national passion, even under provocation, is the result of human reasoning. If civilization means anything besides the mere technical achievement, it is self-restraint, and the degree to which it is practiced is the measure of our real culture. It should be practiced by nations as well as by individuals.

And in the building program of the future, while it must be always sufficient for adequate defense, may we always remember that a Navy more powerful than is necessary for defensive purposes might invite its abuse and might prove, instead of a protection, a menace to the peace of the world and to our own liberty. Surely none of us will ever want to see our country in the rôle of an international bully. Let us hold to those traditions we have always been taught, and which enjoin on us to always set the world an example in the love of liberty and peace and in the ways of justice and fair dealing in all our relations with others.

What a nation does exclusively for themselves passes away; what they have done for the world remains. For a nation to place all people of all lands under a debt of conscious obligation, because of her real service to humanity, for that nation to send forth light from her high places to illumine the earth, to realize within herself that real righteousness which exalteth a nation, to champion the cause of justice, and to sacrifice the glory of conquest for the right of universal peace—this is indeed to conquer the world, and happy are they who can play a part in it. [Prolonged applause.]

The CHAIRMAN. The time of the gentleman from Alabama has expired.

Mr. OLIVER. I ask unanimous consent, Mr. Chairman, for leave to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection? The Chair hears none, and the leave is granted.

Mr. OLIVER. Under leave granted me to extend my remarks, I wish to say that it is evident from the discussion that the bill will pass substantially as reported, and I now desire to write into the RECORD some conclusions as to what the evidence, offered before the Naval Committee at its recent hearings, shows has been accomplished under the present administration by the Navy Department, and I am especially induced to do this by reason of the many incorrect statements set out in the minority report, and some of which have been reiterated on the floor of the House in the discussion of the pending bill.

It is my opinion that the Navy is to-day better organized, better balanced—though not well balanced—better officered, better manned, better armed, and better supplied with ammunition, and is more efficiently and ecomonically administered than ever before in its history. Every branch of the service has been improved and the organization of both the Navy Department and the Atlantic and other fleets developed to a high state of efficiency.

Quoting from Capt. J. O. McKean's hearing before the Naval Committee:

> We have made more real progress in the last two years than any previous five-year period in my experience in the Navy. I do not think I have ever known a time when everybody in the service, from top to bottom, was working as hard with their heads and hands to prepare the fleet for active service.

Admiral Benson, the Chief of Naval Operations, asserts that—

> Cooperation between the various bureaus and offices of the department with the office of the Chief of Naval Operations has been most cordial and complete, and the practical result has been all that could be desired.

And he adds:

> A thoughtful consideration of the work that has been accomplished will show that all is being done now that could reasonably be expected from a so-called General Staff. In my opinion the organization that exists in the department, and that is now in successful operation, is accomplishing in a purely American and businesslike manner all that could possibly be expected from the creation of a general staff, and is, I believe, doing this in a much more satisfactory way.

Says Admiral Dewey:

> Our own General board is, I think, the best General Navy Staff in the world.

Rear Admiral Knight, president of the War College, where high officers of the Navy are instructed in strategy and tactics, testified that—

Secretary Daniels has done more for the War College than any of his predecessors.

In his testimony, Admiral Winslow, a recent member of the War College faculty, after testifying to the great value of the institution, testified that it had nearly been done away with under several Secretaries, but had received better backing from Secretary Daniels than it has ever had.

The door of opportunity and of advancement has been opened to the enlisted man. He has been assigned hours for study that he may avail himself of the new opportunities for promotion. In the four years under President Taft only 3 enlisted men were commissioned ensigns from the ranks. In three years under Wilson 17 have been so promoted; commissions in the Pay Corps have been opened to enlisted men, and 15, who succeeded in passing the examinations, have been commissioned assistant paymasters. The positions of pay clerk and chief pay clerk, formerly held by civilians, have been reserved for enlisted men, and 187 have been appointed to these grades; a law has been passed allowing the Secretary of the Navy to appoint 15 enlisted men to Annapolis each year, and in its first two years 13 entered the Naval Academy. This year more than the number allowed have qualified.

The ironclad enlistment has been modified so that a man, under certain circumstances, may obtain his discharge before the expiration of his enlistment, if his presence at home is essential to the welfare of his family. In the last year over 2,000 men have been granted this privilege. Desertions, which were formerly so prevalent that in the four years of Taft they aggregated 10,360, have been so greatly reduced that they now number less than 90 a month and are steadily decreasing. In three years the number of prisoners, owing to the substitution of more enlightened, though stricter regulations, have decreased from 1,800 to 700.

The result is that the Navy has been increased in three years by 6,331 men, which is nearly double the increase made in Taft's four years. In his four years Secretary Meyer recommended an increase of only 5,000 men and left the Navy over 5,000 short of the number authorized. With this shortage overcome and the ranks now recruited to the maximum allowed by law, we are now proposing an increase allowance of 16,550 men. This number will be recruited probably during the year, making a total increase under Wilson of about 20,000 men, to less than 4,000 men under Taft.

The reenlistment of men discharged in good standing has increased from 52 per cent to 85 per cent, and the efficiency of the Navy greatly enhanced by the retention of these valuable seamen.

For 16 years the Republicans talked about a naval reserve. In their second year the Democrats authorized one. The provisions of this bill will be modified by this Congress in a manner regarded by naval authorities as the most certain to give us the best reserve possible, mustering into the Navy the ex-service men, seafaring people, yachtsmen, and mechanics whose services would be required in time of war. Anticipating the enactment of this legislation, the Navy Department has arranged a summer cruise for civilians, which will immediately add about 4,000 to the reserve of men with naval training.

The number of midshipmen at Annapolis has been increased by about 830 to overcome deficiencies in officers inherited by the Wilson administration, and to provide for the large program which this Congress is authorizing.

The appointment of civilian aviators, civilian engineers, and civilian instructors at the Naval Academy is provided for, that an immediate increase in the number of officers available for military duty may be effected without waiting for the graduation of the increased number of midshipmen appointed to Annapolis.

The Bureau of Ordnance has designed and ordered for new vessels a 14-inch gun, which will shoot farther, shoot straighter, and hit harder than any gun now in use in any foreign navy. It has designed and tested a 16-inch gun, which will be ready for use any time the experts of the Navy regard it as advisable to substitute 16-inch for 14-inch guns on our new ships. We had no antiaircraft guns, but have designed, manufactured, and tested a superior weapon of this type, and are now mounting them on board the ships of the fleet.

The amount of ammunition has been increased to an unprecedented extent, shortages which have existed for years being in the process of correction. For every 100 torpedoes on hand when the Democrats took hold there are now 158 more, making our stock on hand and in process of manufacture two and one-half times as great as it was three years ago. The capacity of our torpedo works has been increased 533 per cent. We have already increased the number of mines 244 per cent, and over $3,300,000 is being provided for the acquisition of more mines, this amount being sufficient to meet our requirements as estimated by the General Board.

The capacity of the Navy's powder factory has been increased from about 3,000,000 to 6,000,000 pounds per annum.

A system of providing for the supervision of the industrial departments of the navy yards by industrial officers instead of seagoing officers has been introduced, placing this most important work in the hands of officers who make it their speciality.

The Government's enormous investments in navy yards are being utilized to the fullest extent. Prior to 1913 these stations, costing millions, were considered mere repair shops and the enormous quantity of construction work went, without competition with the Government yards, to private concerns. Only two yards could construct ships, and only four ships were under construction. To-day seven yards are equipped for construction and are building, all told, four battleships, three destroyers, three submarines, three auxiliaries, and other small craft. Construction work at many yards renders more permanent the employment of skilled artisans, the pay of whom has been increased in every navy yard during the last three years.

By installing electric propulsion aboard the battleships *New Mexico*, *California*, and *Tennessee*, authorized by this administration, we have set the pace for the world.

Radio equipment has been successfully installed on submarines. A system of high-powered radio stations, extending over half the earth, is being pushed to completion, and antiquated radio equipment has been displaced by the most improved material available on over 100 ships.

From 4 unsatisfactory flying machines and 4 aviators our air fleet has grown to 17 machines and 30 aviators. The idle navy yard at Pensacola, Fla., representing an investment of nearly $8,000,000, has been utilized as a training station for aeronauts, and 13 officers and 120 enlisted men are now receiving instruction there. With a view to the development and acquisition of satisfactory motors, the cooperation of the great automobile manufacturers has been obtained and officers of the navy sent to their plants for study and investigation.

Since the United States has spent more money on its modern Navy than Germany, some contend that the American Navy should be that much superior to the German Navy. Since in Germany the pay of officers and enlisted men is infinitely less than the pay in the American Navy, and as the cost in wages in their Government dock yards, of living expenses, and of materials, is proportionately smaller, a dollar went further in Germany than it did in the United States; but the Navy Department, under this administration has shown that its affairs could be administered far more economically than they had been in the past.

Insistence upon competition among the armor-plate manufacturers in this country by Secretary Daniels has obtained reductions in the prices of armor under those paid by Secretary Meyer, which has already saved the Government $1,110,084. The establishment of a Government armor-plate plant will end the era of extortionate prices, and if we should accept the maximum price now offered by the armor-plate factories, it would mean a saving of about $500,000 on every battleship hereafter constructed.

Insistence upon competition among the projectile manufacturers saved the American people $1,077,210 on one contract, by manufacturing powder at a gross cost of 34.1 cents per pound, including all overhead charges, or in reality a net cost of 24.9 cents a pound, the difference between the cost and 53 cents was saved on every pound produced at the Navy's great powder factory, which will shortly produce about 6,000,000 pounds a year.

The cost of manufacturing torpedoes has been reduced from $4,202 to $3,245 each. This reduction has already saved over $300,000. By manufacturing our torpedoes instead of purchasing them, we save $1,000 on each torpedo. Thus it is that with $20,000 we could buy only four torpedoes, while we can, with the same amount of money, manufacture five.

We do not buy mines, we manufacture them; and every mine we manufacture costs the Government $145 less than the mine would cost if purchased.

These are some of the savings which have been effected among the big items that make up the Navy's enormous budget. Many other savings, small in amount but so numerous as to aggregate a very large sum, have been saved to the people each year. Only a year ago, out of savings effected in this manner, Congress was able to authorize an expenditure of $1,000,000 for aeronautics and $800,000 more toward the construction of submarines.

In the fleet, the out-of-date organization, inherited by this administration, has given way to the best the fleet has ever had,

The grades of admiral and vice admiral have been restored, so that when our fleet is obliged to cooperate with that of any other nation in handling a foreign situation the American representative will have all the prestige of his rank and not find himself subordinate to the representative of another nation at the head of an insignificant command.

The commander in chief of the Atlantic Fleet has been relieved of many administrative duties so that he may have more time for the big problems of his position. The battleships of the fleet are now under a vice admiral instead of constituting, as formerly, four separate groups, each responsible to the commander in chief. A rear admiral has displaced a captain in command of our destroyers. The submarines, which were so poorly regarded by preceding administrations that they were attached as an appendix to the destroyer flotilla, have been organized into an independent command under a rear admiral, and officers of experience have been assigned to submarine duty in an effort to develop its efficiency to the very maximum. Formerly no officers, except the youngest and most inexperienced from the Naval Academy, had been assigned to this most important duty. A cruiser squadron, under the command of a rear admiral, has been organized of vessels which formerly could not be commissioned because of lack of personnel. This squadron has been assigned to foreign patrol duty, relieving the battleship fleet, so that the fleet might give undivided attention to gunnery practices and fleet exercises. The auxiliaries of the fleet have been organized into a division, under a rear admiral.

We had no mine service in the American Navy up to three years ago. The last division of the fleet to be organized was a mine-laying and mine-sweeping division, and a division of armored cruisers is now being equipped for handling aeroplanes and will shortly join the fleet, and enable aeroplanes to cooperate in all its exercises.

Speaking of the organization of these divisions, Admiral Fletcher recently said: "During the past year the number of units assigned to the fleet has increased 15 per cent," and that "the addition of these vessels has provided a fleet better adapted for carrying on the various operations of war."

To back up the fleet, all merchant vessels, from trans-Atlantic liners to harbor tugs, which could be utilized in time of war have been surveyed and assigned a specific duty. This work was left undone for 16 years by Republicans, whose unfortunate experience in obtaining auxiliaries during the Spanish War should have prompted immediate action.

Every mile of the coast has been organized into naval districts for defensive operations, independent of the fleet, in time of war. This summer Naval Militia will be assigned to battleships of the reserve fleet, and for the first time in our history a general mobilization in time of peace will be effected.

When a fleet finally puts to sea its success depends upon its tactics and its marksmanship. Tactics and strategy are taught at the War College, where in 1913 there were 5 students under 6 instructors, and to-day 34 officers are receiving instruction in person, and 400 more by mail. As for gunnery and the execution of tactical problems, the fleet has devoted to them more time than ever before, and excellent results have been achieved. Marksmanship was at its lowest ebb in years when this administration entered office. "Our target practice," said Capt. Sims, "was all right until 1909, when it began to decline." By 1914, this administration had the problem well in hand, and Admiral Fletcher, commander in chief of the Atlantic Fleet, recently reported that—

> The scores recorded are higher than ever before made in the open sea, and show not only an increase in accuracy of pointing but in rapidity of fire as well.

It would be simple for the gunners, who last winter fired at 18,000 yards with such accuracy that from 10 to 20 per cent of the shots fired could have been landed on a battleship, to duplicate the best records ever made before.

The sufficiency of the Navy depends alone upon Congress. Its efficiency upon the Navy Department. The proof before our committee is convincing that it has been the effort of the present administration to make the Navy 100 per cent efficient, and more progress in elevating its standards has really been achieved in the last three years than in any other similar period, and the goal has been more nearly attained than ever before.

Statements have also been made during the discussion of this bill reflecting upon the rapidity with which work has been pushed upon ships authorized in this administration, one favorite allegation being that no ship authorized in President Wilson's administration will be completed before his present term expires. In this form this statement, I think, is incorrect, as a number of the vessels authorized in this administration will be completed before the 4th of March, 1917.

As regards capital ships, not only for this administration but for all other administrations, this statement is correct, and for a very simple reason. Each administration begins on the 4th of March. The first Congress of the administration assembles in the following December. The first naval bill of an administration is passed sometime in the following summer, or some 15 months after the administration begins. The result is that from the first authorization of a capital ship to the expiration of an administration is about 2 years and 9 months only, and this time is inadequate to prepare plans, advertise, award contracts, and complete the construction of a capital ship.

As a matter of fact, progress that has been made on ships authorized in this administration and the prospective progress between now and March 4, 1917, compare very favorably with that of preceding administrations.

The table below shows the number of vessels authorized during the first two years of the present and the three preceding administrations, and their average percentage of completion at the end of the administration, the percentages being estimated as regards the work under the present administration between now and March 4 next.

Progress of work on naval vessels authorized during first two years of present and three preceding administrations.

	Administrations.			
	1901–1905	1905–1909	1909–1913	1913–1917
Battleships authorized first two years	7	2	4	5
Average percentage of completion at end of administration	49	75	52	58
Destroyers authorized first two years	.....	5	14	12
Average percentage of completion at end of administration	.....	66	87	93
Submarines authorized first two years	.....	5	8	26
Average percentage of completion at end of administration	.....	69	65	88

Percentages for March 4, 1917, estimated from present and prospective progress.

The table below gives a list of all the vessels, both authorized and completed, during one administration since the administration beginning March 4, 1901. As before, the completion estimated during this administration is estimated, but there is no reason at the present time to doubt the accuracy of the estimates:

All vessels of the Navy authorized and completed during the same administration.

1901–1905	1905–1909	1909–1913	1913–1917
2 tugs	None	2 tugs 1 collier 6 destroyers	6 destroyers. 1 submarine. 1 fuel ship.

Particular stress has been laid in some statements upon the fact that vessels being built directly by the Government are much behind sister vessels being built by contract, it being stated, for instance, that the *Mississippi* and *Idaho*, being built by contract, are 100 and 200 per cent ahead of the sister vessel *New Mexico* being built at the New York Navy Yard. This is another case of figure juggling. When these three vessels were authorized by Congress, it was directed by the law that one of them should be built in a navy yard. The navy yard, New York, was the only yard fitted at that time to build battleships, and the single ways at that yard were already occupied by an earlier battleship—the *Arizona*. It was necessary to get this battleship launched and out of the way before the construction of the *New Mexico* could be undertaken. Hence the *New Mexico* was started some six months later than the sister vessels being built by contract. At the time she was started her sister vessels—using the methods of the critics—were some thousands per cent ahead of her, instead of a puny one or two hundred. On May 1, when the *New Mexico's* keel had been laid some six and one-half months, and that of the most advanced sister vessel over 15 months, the total percentage of completion was 59 in the case of the latter and 26 in the case of the former. The other sister vessel—the *Mississippi*—which had been under construction only a little over a year, was 44 per cent advanced.

As a matter of fact, at the present time work on the *New Mexico* is being pushed to the limit. This limit is fixed at present by the number of men available in the shipfitting trades. Many more men could and would be worked if the prevailing scarcity of skilled labor did not prevent them from being obtained. Though it has not been possible to obtain sufficient men to work shifts upon this vessel, certain shops are being worked night and day, and upon the ship itself the single shift available

is being worked overtime at materially increased expense wherever it will facilitate speed.

The truth is that the backward status of the *New Mexico*, as compared with the *Mississippi* and *Idaho*, is due primarily to the requirement of the law that she should be built in a navy yard when the ways were already occupied. Since laying the keel, her progress compares favorably with the progress of sister vessels for the same period, and she is now gaining on the latter.

The *Shaw*, building at the Mare Island Navy Yard—the first destroyer to be constructed in a Government Navy Yard—is progressing thoroughly satisfactorily, and there is no reason to doubt that she will meet her estimated date of completion, which is January 1, 1917, or only a month or two behind the date for completion of sister vessels building by contract. This is not a bad showing for the first Government-built destroyer where material had to be shipped to the Pacific coast, 3,000 miles away.

The critics are still repeating the story that England had 20 submarines completed in the United States last year in five months. They do not give the facts, which are that 10 submarines were assembled for England in Canada, and 10 built in the United States. The time was not 5 months but 10 months, and these submarines were duplicates of an old class of small submarines built for the United States, which the critics now allege are worthless.

The submarines being built for the United States are very different boats, and much superior. The submarines authorized two years ago vary from 56 to 63 per cent in their completion, with the exception of the *Schley*. The fact that on May 1 the *Schley* was only 12½ per cent completed is the foundation for the allegation that, as regards the submarines authorized in 1914, "some of these ships are 5 per cent completed." The *Schley* was contracted for a good deal more than a year ago, the contract date of completion being March 19, 1918, and the contractors express confidence in completing her by their contract date.

Quite as rapid progress has been made by the Wilson administration as under any former administration. This, too, in the face of the fact that to-day every shipbuilding yard is overcrowded with work; it is difficult to secure material, and it is impossible to obtain enough skilled labor to carry the three shifts which the Secretary of the Navy has been endeavoring to put at work to hasten construction. Under former administrations it was easier to obtain material quickly, there was a surplus of labor looking for work, and it was much easier to rush work than under present conditions. Democratic prosperity has done many good things, but the demand for skilled labor has made it impossible to secure enough labor to enable that quick construction which the Navy Department is doing everything possible to secure.

It may be interesting to here state that Mr. Foss in 1907, while chairman of the Naval Committee, stated on the floor of this House, as will appear from the CONGRESSIONAL RECORD, that the battleship *Nebraska* had been building more than six years and was only then nearing completion, and that many of the other ships building were then more than two years over contract time.

An examination of the records will further disclose that when the *Kentucky* and *Kearsarge* were first authorized under Republican administration they carried only an appropriation for $100,000 to cover the estimated cost of preparing the designs for these ships, and it was more than seven months from the date of authorization before any appropriation was even recommended to Congress for the building of these vessels.

A battleship requires time for its construction. The shortest time in which one has been built is three years and one month—the *North Dakota*, which was completed April 11, 1910, but its engines have never been satisfactory, and in order to make that ship fit for the fleet this Congress must appropriate $400,000. The time of building our other battleships has varied from eight years and three months to three years and four months, as the following table, giving the date of authorization, date of signing the contract, and the date of completion shows:

Vessel.	Builder.	Date authorized.	Date contract signed.	Date completed.	Time to complete from authorization

Mr. PADGETT. Mr. Chairman, I yield three minutes to the gentleman from Massachusetts [Mr. TAGUE].

Mr. TAGUE. Mr. Chairman and gentlemen of the committee, I have listened very attentively all during this day and also Saturday to the many speeches on both sides of this question, and I confess that the longer I have listened to the debate the more I am impressed with the importance of a bigger Navy. [Applause.] I come from a city wherein lies one of the navy yards of our Government, and during my life I have come in contact with the men who have made up the personnel of that Navy. I compliment the committee on the work that it has done, but I wish that it had gone further. [Applause.] I have listened to the speeches of the eloquent gentlemen from the South, who sit here and tell us of this war hysteria that is growing all over the country, and I realize that in a few days they will return to their pleasant homes in Texas, where they can smoke the pipe of peace and look over their lands in peace and comfort, while we who live along the shores of the Atlantic can look out upon the ocean and see before our eyes, as we have seen in the past two years, the smoke curling from the smokestacks of the British men-of-war as they parade up and down our seas. That is the condition that prevails in our part of the country to-day. I want to call the attention of gentlemen who wish us to believe there is no need of a Navy to the fact that the best insurance that this Nation has or ever will have is a Navy adequate to protect the shipping industries of the Nation. As I look about the harbor of the city that I have the honor in part to represent and see there the ships of foreign nations, and never see the flag of my own country flying from a ship carrying the commerce of the nations to these shores and our commerce abroad, I wonder what the reasons are, and the answer comes back, "No merchant marine and a Navy too small to protect the little we have." The House has been presented with this great document for preparedness and increase and upbuilding of the Navy, and as I sat in my seat I wondered where all of these ships were to be built. I wondered, as did the gentleman from Texas [Mr. CALLAWAY], whether or not these were to be built by the large shipbuilding companies now already overtaxed with orders for merchant marine, and think that the time has come when we should fit up our own navy yards so that we can build our ships for the Navy. I want a Navy large enough to protect our people in case of war, a Navy large and powerful enough to protect our merchant marine, and a Navy large and powerful enough so that no country would dare to molest it, and the lives of our people on the high seas would be protected. I want a Navy so large that when the mails of our merchants and our people

are on the seas that the English man-of-war will not dare to interfere with it.

Mr. BUTLER. Mr. Chairman, I yield to the gentleman from Illinois [Mr. COPLEY].

Mr. COPLEY. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. BUTLER. I now yield to the gentleman from California [Mr. CURRY].

Mr. CURRY. Mr. Chairman, the United States will not become involved in the European war so long as we can honorably and morally keep out of it. We are a peace-loving people, and if we do become involved it will not be on account of our violation of international law and the rights of neutrals nor caused by any overt act that has been or will be committed on this side of the Atlantic. Our country has never yet resorted to war except as a last recourse and never primarily for the acquisition of territory, exploitation, or for commercial expansion, and it never will; but we are a courageous and a patriotic people and, when necessary, always have and always will fight to defend our rights and to protect our liberty.

One of the duties of Congress is "to provide for the common defense." We can only do that by providing an adequate and efficient Navy at sea and an Army trained to fight on land, and supplying the Army and Navy with munitions and equipment. Of course, the Regular Army should be supplemented with a trained reserve, but this is not the time to discuss that feature of military preparedness. It has been said time and time again in the course of this debate that nations are like men—disarm them and they will not commit murder. We have been reminded that in Texas all but peace officers are disarmed. That law, however, is enforced by an armed constabulary. If the law of Texas disarmed law-abiding citizens, but allowed desperadoes to carry concealed weapons, it would not have stopped murder in that Commonwealth. I have no patience with the "pence-at-any-price" maudlin sentimentality that would sacrifice on the altar of the idea of universal peace this free Government of ours.

Under existing world conditions it would be little short of treason for Congress to refuse to make adequate appropriations for the enlargement, development, and maintenance of our Navy and our Army.

There are worse things than war. Loss of liberty, the sacrifice of the Nation's honor, peacefully submitting to vassalage is worse than death on the battle field, worse than devastating war. No people ever yet obtained liberty except by wielding the conquering sword, and no nation ever retained liberty longer than the people had the moral and physical courage and ability to defend it in battle on land and sea.

Our country was born of blood, was baptized with blood, and was saved and cemented by the shedding of blood. While the desire for liberty is as old as the aspiration of the human heart for higher and better conditions, the liberty we enjoy is a new thing in government and dates practically from the Revolutionary War. It is the result of the best thoughts and the best efforts of the best minds that have inhabited and benefited the earth by right living and exalted thinking. It cost unnumbered precious lives and untold treasure. It was, under Divine Providence, wrested from tyrants by the power of the sword. It is our obligation to transmit it to posterity as pure as we received it from the founders and preservers of the Republic who courageously fought the battles of liberty and who "pledged their lives, their fortunes, and their sacred honor" that they and we might be free. We can only so transmit it by being prepared to defend our country and our liberty with force of arms whenever the occasion may require.

The CHAIRMAN. Forty-seven minutes.

Mr. BUTLER. Mr. Chairman, I yield the remainder of my time to the gentleman from Massachusetts [Mr. ROBERTS]. [Applause.]

Mr. ROBERTS of Massachusetts. Mr. Chairman, I do not wish to appear discourteous to any Member of the House, but I do wish to continue my remarks without interruption until I have concluded, and if when I have concluded the things that I have in mind there is time remaining, I shall be very glad indeed to devote it in answering any questions that gentlemen may desire to ask.

The naval bill reported out this year, as stated by the chairman of the committee, contains a great many splendid features, things that are sadly needed in our Navy. On nearly every feature in that bill the minority does not quarrel with the majority. We are in accord, except respecting matters that have been pointed out in the views filed by the minority, which relate chiefly to the amount of money provided by the majority for aviation, to the number of men to be added to the enlisted personnel, for the so-called increase of the Navy as contained in the building program to be authorized, to provisions for speedy construction of ships to be authorized, and to the inclusion in the bill of provisions for a council for national defense.

I am going to take up first the matter of aviation. Last year Capt. Bristol, who is in charge of aviation in the Navy Department, asked that he be given $1,187,000 for new construction, together with $500,000 for maintenance of the aeronautical service, a total of $1,600,000, in round numbers. The committee, against the protest and influence of the Secretary of the Navy, granted $1,000,000 for aeronautics. This year Capt. Bristol recommended to the Secretary of the Navy an appropriation in this year's bill of $13,000,000 for aeronautics.

Of that amount $6,000,000 was for aircraft ships costing $3,000,000 each. Upon the suggestion of the General Board he agreed to eliminate this $6,000,000 from the estimate and said that the remaining $7,000,000—and I speak in round numbers—was the least amount that the Navy should have for aeronautics in this bill. The General Board, under date of May 3 of this year, have said that to place our Navy in second place there should be appropriated $7,000,000 for aeronautics, and the minority of the committee, having in mind the deplorable condition of England to-day because of her failure to recognize in season the great importance of aeronautics, believed that the amount we suggest, one-half of that named by Capt. Bristol, one-half the amount recommended by the General Board, namely, $3,500,000, is the least amount this Government should provide this year for this great and important service.

Capt. Bristol says that on the basis of the so-called five-year program recommended by the Secretary of the Navy for our battleships and other subsidiary and auxiliary ship construction we should have in 1921, 330 aeroplanes, 32 dirigibles, 70 kite balloons, which would cost $20,850,000, and that number of aircraft will require 638 officers and 1,160 enlisted men. I submit that if we are in any reasonable degree to meet the requirements of our service for aircraft we should increase this miserable, pitiful sum of $2,000,000 for the purpose to at least $3,500,000. What is the condition of England in aircraft service? For months the administration controlling the affairs of that country have been apologizing as best they could to the people of the country because of the lack of preparation to meet the German air attacks that are occurring almost daily and nightly. Mr. A. G. Balfour, First Lord of the Admiralty, said on the floor of the House of Commons:

> With regard to Zeppelins, looking back on events, I am sorry we did not develop that type of vessel, not so much for aggression and defense as for maritime and other scouting. We are doing what we can to remedy this state of things, but I do not pretend that when we began the race 10 years behind the enemy there is any reasonable probability of catching up. However, something must be done, and what can is being done.

Is not that statement most significant when our little Navy and our pacifist friends tell us that if the emergency comes we can supply quickly all the aircraft needed?

The First Lord of the Admiralty of England says that England started 10 years behind and can not now catch up. Are we to place this country in the deplorable position, that some time in the future, which may be months—and pray God may be years and many of them—we will need this most important weapon of offense and defense, that the country will look back to us and say, "Why did you not make provision when you could? Why did you not make preparation in this most important means of defense?"

Mr. Bonar Law, Secretary for the Colonies, stated:

> I make no pretense that the Government is satisfied with this branch of the service [the air service], but I assure the House that we are trying to effect remedies for all defenses.

Mr. Tennant, Under Secretary of War, stated:

> While we have made strides in providing proper equipment and defense for the arsenals and vulnerable points of the country, the safety of every part of the United Kingdom from attack by long-range aircraft never can be complete.

Why? Because they were 10 years behind in the race for preparation. Now, what are conditions in this country? Bear in mind that the Army of the United States was the first army in the world to have an aeroplane—in 1909—and that our Navy was the first to have a seaplane—in 1911. Where do we stand to-day in comparison with other nations? Why, the little, insignificant country of Bulgaria, which is hardly larger than the State of Maine, has 300 aeroplanes, and we in our Army and Navy combined have less than 100. France, which started behind us in the development of aeroplanes, has to-day in its air service more officers and men than are in the entire Army of the United States, and England has more officers and men in her air service than we have in our entire Navy, while Germany has not less than 9,000 aeroplanes.

Lord Montague, in the House of Lords, on the 9th of March of this year, said:

At the present time the air service is merely auxiliary to the fighting forces of the army and navy. I can see a time coming when the air service will be more important than the army and navy. We must get into the habit of looking at the air service not as an auxiliary to the army and navy but as a great service which is an establishment of itself and to which we shall have to look in future years for the defense of this country.

Lord Beresford, in the House of Commons, said:

The new air warfare is going to be of so tremendous a character that it may supersede the army and navy. Anyway, we should be ahead in the air, the same as we are on the water.

Another British statesman, in debate on the floor of the House of Commons, said:

The supremacy of the air lies ready to any Government which has sufficient initiative to see to it.

With such testimony by men familiar with air craft and their uses abroad, who with farseeing wisdom look into the future and foresee the effect of future conflicts between nations, I say again it is the part of blindness, of foolhardiness, for this country, which invented the aeroplane, to lag behind all the other countries of the world in its development and utilization, and that the minority of the committee are well justified in differing from the majority in the insignificant sum provided for aeronautics.

Now, Mr. Chairman, with regard to the enlisted personnel: The enlisted personnel of the Navy is of equal importance, to say the least, with its matériel. By matériel I mean vessels of war, capital ships, subsidiary fighting ships, and auxiliaries necessary to make them effective. Without the men to man your ships they are so much expensive and useless junk. The General Board, other than which there is no greater naval authority in this country, have stated, on November 9, 1915, in their report to the Secretary of the Navy, that we should have in our Navy in the year 1917, to man the ships already built and that will be commissioned in that year, not less than 67,000 men.

A substantial addition of 17,000 men required on a peace basis.

The majority of this committee, in their endeavor to have the House believe they had complied with the request of the General Board in the number of men, say in their report:

The committee recommends that the enlisted personnel of the Navy be increased by 13,500 men and the Marine Corps by 3,079 men, a total increase of the enlisted men in active service under the Naval Establishment of 16,579.

Now, mark these words:

Which in effect carries out the recommendations of the General Board regarding the increase of the enlisted personnel of the Navy and Marine Corps.

The impression sought to be conveyed is that the committee have met the requirements of the General Board for 17,000 men. To do so, however, the majority of the committee are including as the strength of the Navy to-day 1,500 men in excess of the authorized strength, plus 3,500 apprentices, boys under instruction, and 3,079 marines.

Now, the chairman of the committee and the majority members of the committee well know that the General Board in its estimates of men required exclude the 3,500 boys under instruction and exclude whatever increase of the Marine Corps may be made. The minority believe that we should at least furnish our Navy with the men required to man it in time of peace. And a little later I shall give you some reasons why that should be done.

In considering this number of authorized strength of the Navy, bear in mind the further fact that the bill now under consideration takes out of the effective fighting men of the Navy 3½ per cent of the combined authorized strength of the Navy and Marine Corps and puts them into a hospital corps, which would mean that, whatever the authorized strength of men in the Navy, 3½ per cent of that number plus 3½ per cent of the marines, were not fighting men. Their duties aboard ship and ashore are merely to care for the sick and the wounded. They take no part whatever in the battle or in the maneuvering of the ship. Their duties are purely the duties of the doctor and the nurse, and they can not and should not ever be classed as fighting men in any military organization.

Now, why should we have at least 17,000 additional men for our Navy in time of peace? Admiral Fletcher, before our committee, stated that the fleet he took into southern waters for drill last winter was short 5,000 men. He stated in answer to another question that of the 35 or 36 battleships, which include the dreadnaughts we now have, if he were called on to-morrow to put to sea and to meet an enemy he could man but 18 of those battleships. The other 18 would have to remain at the dock. Why? Because we have not men enough in the Navy to man all our battleships, and he further said, which was extremely significant on this question of men, that to man his 18 battleships it would be necessary to reduce the crews of the battle cruisers and the destroyers and all other subsidiary fighting ships, which would materially affect the efficiency of his 18 battleships.

Do you realize that since October 1, 1914, there have been placed in the reserve, with what is called a skeleton crew aboard, not exceeding 40 per cent of the usual complement, the battleships *Louisiana*, *North Carolina*, *Virginia*, *Georgia*, *Nebraska*, *New Jersey*, *Rhode Island*, and *Connecticut*, all ships less than 10 years of age, and that those ships were placed in reserve in order that we might find crews for three of our modern dreadnaughts, namely, the *Oklahoma*, the *Nevada*, and the *Pennsylvania*?

That is why the minority of the committee find their differences with the majority so great and so radical as to be irreconcilable, and come before this committee and ask that our Navy be provided with the minimum number of men, that the greatest authority that we have in naval matters says is necessary, in 1917.

We further believe that there should be provision of law whereby the President of the United States, in his judgment, knowing better and quicker than any other person can know the exigencies of our foreign relations, should have authority to enlist additional men from time to time and in such numbers as he may deem prudent and the necessities of the Navy require, up to and including the number recommended on a war basis.

Now, the number recommended in order to commission all our battleships with full crews, all our subsidiary craft and auxiliary ships, is 82,000, and some 700 or 800. We believe that the safety of the country demands that there be authority of law reposed in the President to quietly, without having to call Congress together and tell the world that we are getting ready for a fight, enlist the men that will be needed to put our ships on a war footing when he sees the danger coming. And to that end we make recommendation that the President be given the authority to enlist from time to time the number of men in excess of those provided for in this bill that will be necessary to put our vessels in full commission on a war complement.

That brings me down, Mr. Chairman, to the greatest point of difference between the majority and the minority of the committee. There have been before the committee during its sessions of these last four or five months, in one form or another, four different plans for the upbuilding of the Navy, based on four distinct and separate fundamental ideas. The first plan—and it should be borne in mind in considering the testimony of all the officers quoted by the chairman of this committee and all of the members of the majority that those officers testified when the committee had officially before it plan No. 1, to wit, the so-called five-year program—providing for the first year two battle cruisers and two battleships. That was the basis of the testimony of every officer who appeared before our committee—a plan covering five years—that for this year called for two battleships and two battle cruisers. I might say in passing that this five-year program, inadequate, as the minority believes, to meet the exigencies of the situation, the Democratic majority threw to the winds, although it had the indorsement of their Secretary of the Navy and of the President of the United States.

The next plan we had before us, and that was one, as you recall, which came out of the administration——

Mr. LINTHICUM. Will the gentleman yield?

Mr. ROBERTS of Massachusetts. I asked not to be interrupted, and I must decline.

It came out very reluctantly from the administration. It was only secured by the application of the senatorial corkscrew in the form of a resolution, and that was the General Board's program of July 30, 1915. That program, as stated by the General Board, was gotten up in compliance with the oral order of the Secretary of the Navy to express its opinion at the earliest practical date as to a policy which should govern the development of the Navy and a building program.

The General Board reported:

The Navy of the United States should ultimately be equal to the most powerful maintained by any other nation of the world.

That, you remember, is the attitude of the President to-day, that our Navy should at least be equal to the most powerful maintained by any other power of the world. Now, that program called for the building of four battle cruisers and four dreadnaughts this year. That I call the program No. 2. Then we had program No. 3, which was furnished to the committee in answer to a request that I made of Capt. McKean, which was that he inform us what would be necessary in the way of building program, munitions, and additional facilities to round out and balance the existing fleet we have. That came in and called, among

other things, for 12 battle cruisers and 12 large scout cruisers, 48 destroyers, 48 colliers, 48 tank ships, 100 trawlers. Those were some of the things recommended as necessary to make effective the battleships we already have built, building, and authorized. The fourth program before the committee was sent in by the General Board under date of May 3 of this year, and that program was to inform the committee what would be needed to place the American Navy in second place in three years. Among other things they recommended 6 additional dreadnaughts, 10 battle cruisers, 21 scout cruisers, 80 destroyers, and 78 additional submarines. Now, with four distinct programs before the committee, I ask any man on this floor to read those programs, then read the recommendations of the majority, and say if the strictures of the minority are not justified when we say they have ignored all competent naval authority and have gone contrary to the opinion of all naval experts who appeared before the committee.

The chairman of the committee, in his opening remarks, took perhaps half an hour or more in reading extracts from the testimony of various officers who had appeared before the committee. Well, now, let me say in the beginning, the minority does not differ with the majority as to the usefulness and the necessity of battle cruisers; not at all. Yet the quotations of testimony made by the chairman of the committee, if they mean anything, mean that they are strong arguments in favor of this, to our Navy, new type of capital ship. Where, in the testimony of any man who appeared before the committee do you find a recommendation of five battle cruisers this year? The only odd number recommended by any officer was nine, by Admiral Knight, and the same by Capt. Sims. Is it not a fair charge to say that when the majority comes in with only five, when their authority calls for nine, they have disregarded it and paid no attention to their recommendation, except in authorizing a particular type of ship?

Mr. Chairman, there is one feature of these extracts read by the chairman which I think is an injustice to the officers quoted. A great deal of testimony was taken, covering thousands and thousands of pages. By raking this testimony with a fine-tooth comb, they were able to extract such an answer as they wanted only when the officer was pushed into a corner, and asked to say, "If you must choose in the building of four ships, will you have them two and two or all of one type?" Some of them said, "All battle cruisers."

Admiral Fiske, who has been cited as an authority, says he would build two, four, or six battle cruisers this year, if we are to build only that number of capital ships, but when asked if we were to build eight capital ships replied, "I would have four and four."

[Page 2907.]

Admiral FISKE. I testified on Friday, in answer to a question here, that I would follow the recommendations of the General Board of July 30, which would mean if you are going to build eight capital ships, you should build four and four.

The CHAIRMAN. How would you get away from the six?

Admiral FISKE. There you are again. If you are only going to build six, I would make them all battle cruisers.

Mr. CALLAWAY. You had better answer according to your own judgment rather than to take the judgment of the board.

Mr. BROWNING. If you are going to build eight ships, what would you do?

Admiral FISKE. In that case, four battleships and four battle cruisers.

Mr. BROWNING. You would?

Admiral FISKE. Yes, sir; if you are going to build eight capital ships.

The CHAIRMAN. If you are going to build six ships, you would build six battle cruisers, and not four battle cruisers and two battleships?

Admiral FISKE. I do not contend that this is logical, and you must understand that in my judgment anything like this ought to be played out on the game board and worked out very carefully. But to answer and give a good "horseback" opinion here like this difference between six and eight is impossible, in any logical way I know of. It is impossible to say what you should do, but I do think we need the battle cruisers now much more than we need the battleships. If you are going to build a great many battleships, I would be in favor of some battleships and some battle cruisers; but if you are only going to build a limited number—four or six—I would be in favor of all battle cruisers.

[Page 2926.]

Admiral FISKE. The Secretary and I had a number of conferences on that matter.

Mr. BRITTEN. Have you seen the Navy General Board's recommendation of July 30, 1915, wherein they recommend the construction of four battle cruisers, four dreadnaughts, six scouts, etc.?

Admiral FISKE. Yes, sir.

Mr. BRITTEN. Do you agree with that recommendation?

Admiral FISKE. Would you mind letting me see that?

Mr. BRITTEN. I will hand it to you. The lead-pencil figures inside the General Board's figures are the number of ships of various kinds carried in this year's appropriation bill, and the printed figures, of course, are those from the General Board.

Admiral FISKE. I think that this comes from the best authority in the Navy in regard to its requirements, and from that point of view I agree with it. Personally I might differ as to some small particulars, but I think the General Board is the best thing you have now for telling what we need.

Mr. BRITTEN. And if Congress were to authorize four first-line ships this year, what, in your opinion, should they be—battle cruisers, or what?

Admiral FISKE. If they are only going to recommend four?

Mr. BRITTEN. Yes.

Admiral FISKE. Battle cruisers.

Now, Admiral Taylor, Chief Constructor of the Navy, when asked by Mr. CALLAWAY, "Why build two battleships and two battle cruisers if the cruisers, in your judgment, have an advantage over the battleships?" replied:

I think I have stated it is a very small advantage, and we need them both badly.

Mr. KELLEY. Do you mean why not build four battle cruisers?

Mr. CALLAWAY. If they are the thing to build; yes.

Admiral TAYLOR. The question put to me was, "If we had to sacrifice one or the other, which would I sacrifice first."

Mr. FARR. You do not believe in sacrificing any of them, do you?

Admiral TAYLOR. No, sir.

I think Admiral Grant was quoted as being for all cruisers, the inference being that he was against battleships as well. I read:

Mr. KELLEY. You did not mean that it was a better fighting ship than the battleship?

Admiral GRANT. I do not think it is.

Mr. KELLEY. We need them more because we have not any?

Admiral GRANT. Yes, sir.

The CHAIRMAN. Would you build all battle cruisers or would you build part battle cruisers and part dreadnaughts?

Admiral GRANT. If I had an unlimited amount of money, I think I would build both; having only a limited amount, I would probably build battle cruisers alone.

There comes in what I stated before, that we were only considering a program of four battleships. I read further:

Mr. CALLAWAY. Admiral, you were stating what we need in vessels besides the 183 submarines, the 4 battle cruisers, and the scouting vessels. You stated, I believe, the number of scouting vessels, but you did not state the number of destroyers and vessels of other character which we would need. I wish you would follow that out.

Admiral GRANT. I think I told you, Mr. CALLAWAY, that I am a poor person to give you much information on that subject, because I have not made it a study. It is work for the General Board and the War College. I can tell you briefly what I think right now, but I would not give it much credit.

Mr. LINTHICUM. Mr. Chairman, will the gentleman yield?

Mr. ROBERTS of Massachusetts. No; I must decline. I stated at the outset that I must refuse to yield. The gentleman, if he was not here, must understand it now. I decline to yield. I do not mean to be discourteous to him.

Mr. LINTHICUM. I did not want to interrupt the gentleman.

Mr. ROBERTS of Massachusetts. Now, Admiral Grant is one of the witnesses they bring here in support of the five battle cruisers and the exclusion of battleships. Capt. McKean, another able and efficient officer, in answer to Mr. FARR'S question:

Do you favor the recommendation of the General Board as presented?

And bear in mind the General Board's program was a five-year program, two and two—

Capt. McKean says:

I do not know any body of officers or any officer whose opinions about the necessities and preparation I would take against the General Board. Each officer that appears here, as you must have noticed, will give his point of view, but the best, complete, studied opinion that there is in the Navy to-day is represented by the official opinion of the General Board. There is not a set of officers better trained to give it. They have the information from the Office of Naval Intelligence; they have the assistance of the War College, trained people; they are officers of splendid judgment, splendid training, and they think over this thing in cold blood, and they do not get excited by events on the game board.

Mr. FARR. Following that up, I should like to ask whether you favor the recommendation of the General Board as presented now?

Mind you, two and two. Capt. McKean replied:

I would feel that I would be most egotistical if I attempted to oppose it.

And yet he is brought in here by the majority as a witness in opposition to the board which he says is of the highest authority in the Navy.

Again, on page 1769:

Mr. CALLAWAY. Since we have 17 battleships of the first line, it is your opinion that we should have 1 more battleship and 6 battle cruisers, and then keep that ratio running along?

Capt. MCKEAN. That would give you about the right ratio; yes, sir; the right number of divisions and the right proportion between the ships, according to my personal opinion.

Mr. CALLAWAY. In your judgment, we should not build any more battleships until we get the right proportion of battle cruisers?

Capt. MCKEAN. I did not say that.

Mr. CALLAWAY. I am asking you.

Capt. MCKEAN. I think we should build so that when the program is completed it will be in about that ratio, and then I would build in about the proportion of three to one.

Admiral Winslow has been quoted as being for all battle cruisers. On page 1424 he says:

Admiral WINSLOW. I think you will find that there is opinion that we should build battleships; that there is other opinion that we should build battle cruisers, but I think that you will find the majority of opinion is that we should build both.

Mr. BROWNING. Both?

Admiral WINSLOW. Both battle cruisers and battleships. I think you will find that that would be the majority of opinion. I myself

am very strongly in favor of battle cruisers. We have no battle cruisers.

Mr. BROWNING. How many would you build this coming year of each?

Admiral WINSLOW. I would build all that the country can build.

Mr. BROWNING. Would you build four of each? I think that was the recommendation of the General Board.

Of each, bear in mind. Is he a witness to uphold the claim that we should build only battle cruisers? Mr. BROWNING asked him:

Would you build four of each. I think that was the recommendation of the General Board.

Admiral Winslow answered:

No; I would build more than that.

So it goes right through the testimony offered. Take Admiral Knight. He says, on page 2013:

Admiral KNIGHT. I am sorry to say that I can not answer that definitely. I have talked of that matter with many officers. It has not come up officially before the General Board at any time when I have been present. You understand, perhaps, that I only attend the monthly meetings on the last Tuesday of each month. I am not usually present at the other meetings of the General Board. I should hesitate to speak for the other members. I am quite sure some of them would agree with me. You must all understand me as insisting that we must keep on building battleships.

[Page 2072.]

Mr. OLIVER. How many capital ships do you calculate you will have to build in order to have a navy of that strength? I will ask you how many additional capital ships you will have to build?

Admiral KNIGHT. I should like to go over that carefully and count these up.

Mr. OLIVER. I do not care for that. Just approximately, without making it too lengthy; just in numbers?

Admiral KNIGHT. Approximately 20 dreadnaughts.

Mr. OLIVER. Twenty more dreadnaughts?

Admiral KNIGHT. Twenty more dreadnaughts.

[Page 2073.]

Admiral KNIGHT. When I said what Great Britain had at the beginning of the war, I meant built and building.

Mr. OLIVER. Now, give me the number of capital ships that we should have.

Admiral KNIGHT. I think it should be approximately 20 more dreadnaughts.

Mr. OLIVER. And of battle cruisers, how many?

Admiral KNIGHT. It would be 20 capital ships in all.

Mr. OLIVER. Twenty capital ships in all, in addition to what Great Britain has.

Admiral KNIGHT. In addition to what she has built and is building and what we have built and are building.

Mr. OLIVER. Fifteen cruisers. That makes 35. I believe you gave us 20 dreadnaughts and 15 battle cruisers; 35 capital ships in all?

Admiral KNIGHT. Yes.

Mr. OLIVER. How many scouts would you say?

Mr. BUTLER. Do you mean additional?

Mr. OLIVER. Yes; in addition to what we have now.

Admiral KNIGHT. We have none now. I would say 24.

That is Admiral Knight, president of the War College, whose statement is the strongest authority for including only battle cruisers in the bill this year.

Admiral Fletcher, on page 2385, says:

Mr. CALLAWAY. If I understand your recommendation at this time, it is that if we were going to build two capital ships that we build battle cruisers and if we were going to build four capital ships that we build battle cruisers, and if we were going to build more capital ships than that that we add some dreadnaughts. Am I right about that?

Admiral FLETCHER. Yes, sir; that would be my conception, but I stated that I had not given this particular subject any study such as is given to it by the General Board, and I would prefer to accept their conclusions.

[Page 2392.]

The CHAIRMAN. During the whole of the war of 18 months battleships have been the controlling factor on the sea?

Admiral FLETCHER. The battleships are controlling the situation to-day, as they have ever since the war opened. It is the power of the battleships that has kept the German fleet and the German commerce off the sea.

The CHAIRMAN. Kept the German fleet locked up and her commerce destroyed.

And so I might go on, filling the RECORD with quotations.

Showing that the authorities cited by the majority of the committee, instead of sustaining the contention that we should build only battle cruisers, are battleship men as well, and want to see both types added to the Navy.

Mr. Chairman, how much time have I remaining?

The CHAIRMAN. The gentleman has seven minutes remaining.

Mr. ROBERTS of Massachusetts. I am going to say just a few words on the submarine feature of the majority program.

Mr. REILLY. Will the gentleman yield just at that point?

Mr. ROBERTS of Massachusetts. I can not yield. I have asked not to be interrupted. The General Board stated that to place us in second position we need 78 coast submarines in addition to those we now have built and building. The General Board say we need in all about 150 submarines, which means that we should have added to those now built and building in the neighborhood of 80.

Admiral Grant, who was before the committee on the matter of submarines, having been detailed to take charge of that very important branch of the naval defense, said to the committee that we could use 250 to 300 submarines. And yet, having in mind the extraordinary and wonderful performance of the submarine in the European war, its great effectiveness against even the battleship itself, its utility in coast defense and as a commerce destroyer, considering that we have only 72 built, building, and authorized, with our thousands of miles of coast to defend; considering the statement of Admiral Fletcher, the commander in chief of the fleet, that in no way can we as well defend our coasts in a limited time and with so small an amount of money as by submarines, the minority of the committee say that we should increase the number of submarines to be authorized in this bill to at least 47 of the coast-defense type. There is no difference between majority and minority on the three 800-ton experimental fleet submarines that are authorized. But we do say again that the United States, the home and birthplace of the submarine, is lagging far behind all other great powers in utilizing that device; and considering its great value to us in the defense of our seacoast alone, not to consider its usefulness in connection with fleet operations, this Congress will be derelict in its duty if it does not make adequate and liberal provision in this year's bill to make up a sufficient number of submarines for our coast and fleet needs.

As to destroyers: I must confess with a degree of shame that in the years past I have not been sufficiently impressed with the necessity of destroyers in our fleet and have been voting in years past against an adequate number of destroyers. I never yet, however, have voted against reporting any. We are 80 short in that most efficient subsidiary fighting ship. The majority, "to partly balance the Navy," recommend 10 to make up that great deficiency of 80. And mind you, that deficiency increases every time you increase the number of capital ships, for the plans of the General Board estimate 4 destroyers to each battleship. And if you do not provide for the additional destroyers at the rate of 4 to each battleship, every time you authorize a battleship, you make the discrepancy in destroyers that much greater. The minority of the committee believe there should be put into this bill at least 28 of these vessels and the others within the life of this Congress, so as to put our fleet where it belongs and where, until 1911, it was, in second place.

It must have struck many of those who heard the chairman's opening remarks, and those who have taken the trouble to read the report of the majority, that the majority of this committee have acted not on any definite, well-considered naval program to do anything particularly for our fleet, but with one eye, and I am not sure but both eyes, on the Treasury. Mr. Chairman, this is not a time when we should unduly consider the Treasury. If we are to believe the highest authorities, we know there is a critical time in the affairs of the world, there is a possibility of more critical times for this country by reason of the disturbances abroad, and we ought to do what we can and as quickly as we can without regard to a few million dollars more or less out of the Treasury in meeting the needs of the country to-day. If the gentleman from Alabama [Mr. OLIVER] will give me his ear just a moment, I do not want to say anything behind his back—the gentleman from Alabama by a very skillful juggling of what he alleged to be facts, of words and dates, would have it appear that this administration has been doing wonderful things for the Navy, because of the large total amount of appropriations. When my friend has been on the committee a little longer, and when he has read past naval history a little more thoroughly he will know that the total amount appropriated in any one bill or by any one administration by no means measures the increased strength of the Navy by reason of that greater expenditure. Battleships of to-day are two or three times larger than those of 10 or more years ago and cost about twice as much. It follows logically and conclusively that we must look to numbers rather than to the amounts expended if we are to form a correct idea of the relative strength of our fleet at different periods of its development.

The CHAIRMAN. The time of the gentleman has expired.

Mr. PADGETT. I yield 20 minutes to the gentleman from North Carolina [Mr. KITCHIN]. [Applause.]

[Mr. KITCHIN addressed the committee. See Appendix.]

The CHAIRMAN. The gentleman from Tennessee is recognized.

Mr. PADGETT. I have no further time.

The CHAIRMAN. Under special order all time has expired and the Clerk will read the bill.

The Clerk proceeded to read the bill.

Mr. BORLAND (interrupting the reading). I move to strike out the last word.

The CHAIRMAN. Under the rule the bill must be read without interruption.

The Clerk began the reading of the bill.

Mr. BENNET. Mr. Chairman——

The CHAIRMAN. For what purpose does the gentleman from New York rise?

Mr. BENNET. I ask unanimous consent that the further reading of the bill be dispensed with.

Mr. PADGETT. That can not be done, Mr. Chairman, under the rule which directs it must be read.

Mr. BENNET. It can be done by unanimous consent.

Mr. PADGETT. No; I do not think so. The first reading of the bill has already been dispensed with and the bill ought to be read once.

Mr. BENNET. Under the rule general debate was to stop at 1.30, but it did not.

Mr. PADGETT. There was a unanimous-consent agreement. There are two readings of the bill and the first reading was dispensed with and under the rule this ought to be read.

Mr. BENNET. Of course, the gentleman can object. A Member has a perfect right to ask unanimous consent.

The CHAIRMAN. Will the gentleman allow the Chair to put the request? The gentleman from New York [Mr. BENNET] asks unanimous consent that the further reading of the bill be dispensed with. Is there objection?

Mr. PADGETT. Mr. Chairman, I object.

The Clerk resumed and concluded the reading of the bill.

Mr. PADGETT. Mr. Chairman, I wish to offer an amendment embracing several items to correct misprints in the bill just before we take up the offering of other amendments.

The CHAIRMAN. The Clerk will report the amendments.

The Clerk read as follows:

Page 3, line 18, strike out the word "sixteen" and insert in lieu thereof the word "seventeen."

Mr. ROBERTS of Massachusetts. What is the amendment?

Mr. PADGETT. To correct the fiscal year, which was a misprint.

Mr. ROBERTS of Massachusetts. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. ROBERTS of Massachusetts. Under the rule adopted by the House on Friday last providing for the offering of amendments to any paragraph or any portion of the bill after the reading of the bill to-day, which has just been concluded, if an amendment is offered, for example, to paragraph 2 of the bill, adopted or rejected, and the committee then consider an amendment to paragraph 12, will it be in order at any time before 2 o'clock on Friday to offer another amendment to paragraph 2?

Mr. PADGETT. If it is a germane amendment, it would.

Mr. ROBERTS of Massachusetts. In other words, when a paragraph of the bill is under consideration for amendment by one motion, must all motions to amend the paragraph be made before action is had on that particular paragraph?

The CHAIRMAN. The rule does not provide for that.

Mr. ROBERTS of Massachusetts. I wanted to understand. Then we can go back and forth in the bill ad libitum until 2 o'clock on Friday and amend paragraphs as the committee sees fit?

Mr. WILSON of Florida. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. WILSON of Florida. I did not quite understand the gentleman.

The CHAIRMAN. The gentleman from Massachusetts inquired whether if an amendment was offered to any particular paragraph all amendments to that paragraph must be proposed before that paragraph is left, and the Chair stated the rule did not require it.

Mr. WILSON of Florida. I have an amendment to offer to page 6. May I offer that after we pass page 6 before the vote on Friday?

Mr. PADGETT. Yes.

The CHAIRMAN. It may be offered at any time before the time fixed——

Mr. WILSON of Florida. And debated?

Mr. PADGETT. When the gentleman gets recognition he can offer his amendment.

Mr. BENNET. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN The gentleman will state it.

Mr. BENNET. Under the rule as finally adopted an amendment may be offered even after 2 o'clock on Friday.

Mr. PADGETT. No, sir; I think not.

The CHAIRMAN. It may be offered under the rule after 2 o'clock.

Mr. PADGETT. But not debated.

Mr. BENNET. An amendment may be offered and debated up to 2 o'clock on Friday.

The CHAIRMAN. Yes.

Mr. BENNET. At 2 o'clock on Friday a vote will be taken on the then pending amendments, and after that any number of amendments could be offered and voted on without debate.

Mr. PADGETT. Certainly.

The question was taken, and the amendment was agreed to.

The Clerk read as follows:

Page 12, line 18, strike out the word "sixteen" and in lieu thereof insert the word "seventeen."

The question was taken, and the amendment was agreed to.

The Clerk read as follows:

Page 13, line 14, strike out the word "sixteen" and in lieu thereof insert the word "seventeen."

The question was taken, and the amendment was agreed to.

The Clerk read as follows:

Page 16, line 17, strike out the word "sixteen" and insert in lieu thereof the word "seventeen."

The question was taken, and the amendment was agreed to.

The Clerk read as follows:

Page 20, line 7, strike out the word "sixteen" and in lieu thereof insert the word "seventeen."

The question was taken, and the amendment was agreed to.

The Clerk read as follows:

Page 69, line 7, strike out the word "sixteen" and in lieu thereof insert the word "seventeen."

The question was taken, and the amendment was agreed to.

The Clerk read as follows:

Page 70, at the end of line 15, strike out the colon and insert a period.

The question was taken, and the amendment was agreed to.

The Clerk read as follows:

Page 73, line 4, strike out the word "sixteen" and in lieu thereof insert the word "seventeen."

The question was taken, and the amendment was agreed to.

Mr. PADGETT. Mr. Chairman, I will ask the Chairman now to recognize Mr. BUTLER or Mr. ROBERTS of Massachusetts who has an amendment in reference——

Mr. ROBERTS of Massachusetts. The gentleman from Pennsylvania yields to me for this amendment which I desire to offer.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 87, after line 17, insert the following:

"The provisions of sections 1493 and 1494 of the Revised Statutes of the United States shall apply to the Marine Corps."

Mr. ROBERTS of Massachusetts. Now, Mr. Chairman, I would ask unanimous consent that this motion be disposed of at the present time and either adopted or rejected. It will not need any discussion. I think two or three moments of explanation will convince every member of the committee of the absolute justice of making these provisions of law apply to the Marine Corps, the same now applying only to the regular officers of the Navy. The conditions are these:

Under section 1493 no officer of the Navy can be promoted to a higher rank unless the board of examining surgeons certify that he is physically capable of performing all the duties of that higher grade. Section 1494, however, provides that any officer who has been wounded in battle can be promoted to a higher grade if the board of surgeons certify he is capable of performing any of the duties of that higher grade. Under that provision of law many officers of the Navy who have received wounds in battle have gone up to high rank, because they could perform some of the duties of each grade to which they were promoted. Perhaps the most conspicuous instance is that of Admiral Winterhalter, who lost the sight of an eye under such circumstances, and has gone up by various degrees of promotion to the rank of admiral. Had section 1493 only been enforced, he would have been retired the next time he came up for promotion because the loss of one eye would have prevented him from performing all the duties of an officer of higher grade. It is supposed that all these provisions were service provisions—that is, they applied to officers of the Marine Corps as well as to officers in the Navy, and under those two provisions Maj. Leonard, who, I believe, was second lieutenant of marines in the Boxer rebellion, and lost an arm in that campaign, was promoted from second lieutenant to the grade of major, because he could perform some of the duties of the office.

Now, a case comes up, which was decided last Wednesday by the Judge Advocate of the Navy, too late to be brought up in the Naval Committee, under the following conditions: A young Marine Corps officer, a second lieutenant, was shot in a battle in Nicaragua during the early occupation of that country by our marines. He was shot in both feet. As a result of the wounds a portion of one or both feet was amputated, and when the wound healed the cords attached themselves in such a way as to make it impossible for him to get out and march with the

troops without great physical suffering; in fact, he could not do it. He came up for promotion, under the commonly accepted interpretation of sections 1493 and 1494, from second to first lieutenant and passed all his mental and professional examinations. He is a fine specimen of physical manhood. It was then discovered by somebody that these sections were not service provisions and did not apply. The Judge Advocate General has rendered a decision that these two sections, while applying to the officers of the Navy wounded in battle, do not apply to officers of the Marine Corps under similar conditions.

The CHAIRMAN. The time of the gentleman has expired.

Mr. ROBERTS of Massachusetts. Mr. Chairman, I ask unanimous consent for a minute more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. ROBERTS of Massachusetts. And the purpose of this act is to extend those provisions to all the officers of the Navy.

Mr. PADGETT. And to the Marine Corps on the same terms.

Mr. ROBERTS of Massachusetts. On the same terms. It seems to me there could be no objection in the mind of any man to that.

Mr. STAFFORD. Will the gentleman yield? Has the term "active list of the Navy" heretofore received any construction to exclude members of the Marine Corps?

Mr. ROBERTS of Massachusetts. This is the first instance I find on inquiry among officers of the Marine Corps where there has been any exclusion of any officers of the Marine Corps in at least 30 years, and the memory of the officer I consulted did not run back beyond that.

Mr. STAFFORD. In the pending bill there is phraseology of like language to include not only the Navy but the Marine Corps. As a matter of fact, there should be some change made to incorporate some members of the Marine Corps.

Mr. PADGETT. This legislation is proper in order to put the Marine Corps on the same basis as the Navy.

The CHAIRMAN. The question is on agreeing to the amendment of the gentleman from Massachusetts [Mr. ROBERTS].

The question was taken, and the amendment was agreed to.

Mr. BUTLER. Mr. Chairman, I will ask the gentleman from Tennessee if I shall offer this amendment now?

Mr. PADGETT. I shall be glad to have the gentleman do so.

Mr. BUTLER. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Pennsylvania offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 97, line 20, strike out the word "five" and insert in lieu thereof the word "six."

Mr. BUTLER. Mr. Chairman——

Mr. PADGETT. Mr. Chairman, if you will permit me just a moment, I wish to call attention to the suggestion that has been made——

The CHAIRMAN. Will the gentleman suspend a moment?

Mr. PADGETT. Does the gentleman intend to offer this entire thing as one amendment?

Mr. BUTLER. I have a statement to make as soon as the gentleman from Tennessee has finished.

Mr. PADGETT. I wish to explain the agreement that has been made between us.

Mr. BUTLER. I wish you would explain it, please.

Mr. PADGETT. The suggestion was made that the gentleman from Pennsylvania would offer this amendment as a whole.

Mr. BUTLER. It includes the whole building program.

Mr. PADGETT. It includes the whole proposition in reference to the increased building program, with the understanding that we will vote on the different items separately. For instance, it would be offered as one amendment and be debated and considered until 11.30 o'clock to-morrow morning, and then we would take a vote upon the first proposal and follow that later with a vote upon the other several items, voting upon the items separately.

Mr. ROBERTS of Massachusetts. Let me see if I understand it.

Mr. BUTLER. Let me first make a statement.

The CHAIRMAN. Let the gentleman first report what is proposed in the amendment.

Mr. BUTLER. There are several amendments there, Mr. Chairman—23 in all. Let me add this to the request made by the chairman of the Committee on Naval Affairs: To-morrow morning at 11.30 o'clock we will vote on the first amendment, which is on page 97, line 20, without debate; that then we proceed to the next amendment, and so on, voting separately upon all these amendments.

Mr. COX. There will be no debate to-morrow at all on those amendments?

Mr. BUTLER. Yes. It has been suggested by my colleagues that if any gentleman desires under the five-minute rule to debate any of the other amendments he will have the opportunity.

Mr. PADGETT. That is, under the rules of the House there will be five minutes' debate for and five minutes against?

Mr. BUTLER. Yes; there will be five minutes for and five minutes against.

Mr. PADGETT. Not general debate.

Mr. BUTLER. No; not general debate; but debate under the five-minute rule on all the items excepting the first one, which we will vote on to-morrow, providing for the increase of one battle cruiser.

Mr. STAFFORD. Mr. Chairman, will the gentleman yield there?

Mr. BUTLER. Yes.

Mr. STAFFORD. Does this agreement supersede the tacit understanding that on to-morrow morning the gentleman from Tennessee [Mr. PADGETT] was going to offer the armor-plate proposition, and that we were to vote on it at not later than 2 o'clock?

Mr. PADGETT. I did not agree to that—to vote on it not later than 2 o'clock. I said I would call it up to-morrow morning as soon as opportunity was offered, and these proposals would be voted upon; but we could get rid of those under this understanding not later than 1 o'clock. Then we would take up the armor-plate amendment and debate that and vote upon that to-morrow.

Mr. STAFFORD. Then the understanding of the gentlemen of the committee on both sides, as I understand it, is that after the disposal of the various propositions involved in the amendment of the gentleman from Pennsylvania [Mr. BUTLER], then the gentleman from Tennessee is to offer the armor-plate proposition and have it considered, and have a vote on the armor-plate proposition to-morrow afternoon not later than at what hour?

Mr. PADGETT. Well, I do not know what debate there will be.

Mr. EMERSON. Has any debate been agreed upon?

Mr. PADGETT. No; no debate has been agreed upon. That is an important question. We will allow a fair and proper debate.

Mr. STAFFORD. The understanding is that a vote will be had to-morrow afternoon on the armor-plate proposition?

Mr. PADGETT. Yes.

Mr. ROBERTS of Massachusetts. Mr. Chairman, let me ask the chairman of the committee if he does not think the increase of the Navy, including the proper number of cruisers, battleships, and other craft, is an important matter that ought not to be choked off by a five-minute speech on each side?

Mr. PADGETT. Oh, it has been so much discussed, and, as people have said to me, everybody has his mind made up, so that if necessary we should go ahead and vote on it without any debate at all.

Mr. ROBERTS of Massachusetts. And would not that be true as to armor plate, too?

Mr. PADGETT. I am willing to do that as to armor plate. I am willing that debate should be had for those who want to talk on it.

Mr. ROBERTS of Massachusetts. The gentleman says he is willing to debate the armor-plate proposition, but he is not willing to give full debate on battleships and cruisers.

Mr. PADGETT. That has been debated fully in this Congress and in other Congresses. It has been fully covered in the general debate on this bill.

Mr. BUTLER. Mr. Chairman, I will offer one amendment and see where we come out. That is the one on the battle cruisers. It is the one that was read at the Clerk's desk.

Mr. OGLESBY. Mr. Chairman, will the gentleman yield for a question?

The CHAIRMAN. Does the gentleman from Pennsylvania yield to the gentleman from New York?

Mr. BUTLER. Yes.

Mr. OGLESBY. Does this amendment which the gentleman offered include all of the propositions of the minority as amendments to this bill in substance?

Mr. BUTLER. On the building program; yes, sir.

Mr. OGLESBY. Now, I understand the gentleman proposes to introduce one, instead of the whole series contained in the resolution.

Mr. BUTLER. Yes. I find that over on this side I had not consulted with all my colleagues, and therefore I will offer only what the rules permit me to offer; that is, one amendment, on page 97, line 20, to strike out the word "five" and insert in lieu thereof the word "six," and with that I will stop. There can be no objection taken to that.

Mr. PADGETT. Let me ask the gentleman from Pennsylvania a question.

Mr. BUTLER. Yes.

Mr. PADGETT. The gentleman has made an agreement with me to offer this whole resolution as an amendment, and to let it be pending, with the understanding that we would vote upon the different items when they are reached to-morrow morning at 11.30?

Mr. BUTLER. I did. I know.

Mr. PADGETT. Now, then, upon that agreement Members on both sides of the House, Democrats and Republicans alike, came to me and asked me about the arrangement, and I told them what it was, and they have gone away from here.

Mr. BUTLER. And it would not be fair toward them to change it.

Mr. PADGETT. No; it would not be fair toward them for the gentleman to withdraw that agreement.

Mr. BUTLER. Yes, Mr. Chairman; let me make a promise to my friend: Never again will I make an agreement of any kind, even to stay home at night. [Laughter.]

Mr. PADGETT. I think if you carry out your agreement it will not militate against anything.

Mr. BUTLER. I can not carry it out. If the gentleman will give me time for a minute, I will gather myself together. [Laughter.] I am not going to break my word, and——

Mr. PADGETT. Let me say this to the gentleman: I know he is not going to break his word. Let me say to him, Go ahead and offer it as one amendment, with our understanding that it will be debated until 11.30 to-morrow morning, and then the other items will be considered under the five-minute rule of the House.

Mr. BUTLER. Yes.

Mr. PADGETT. But then, if occasion presents itself, where it appears proper that there should be an extension of the five-minute rule to more than one to a side, I am not going to take advantage of technicalities, but I am not going to allow just ad libitum debate.

Mr. BUTLER. I discover that if we consume to-morrow upon the discussion of this proposed building program it may result in postponing the consideration of the proposed amendment for the construction of an armor-plate factory until another day, and that that postponement will disappoint some of my colleagues. I had not thought of that when I agreed with the gentleman that I would offer this blanket amendment. Now, I will make my offer, because I agreed with the gentleman that I would do it, but I promise my colleagues right now to make no further agreements.

Mr. PADGETT. This is not going to displace the other. We will dispose of both the others to-morrow.

Mr. BUTLER. I am not sure about that. If I were sure about that, then I would feel more cheerful.

Mr. PADGETT. I do not think there is any trouble about disposing of it, because nearly all of those amendments are to correct the amounts.

Mr. BUTLER. They involve the important features of the bill, in our judgment.

Mr. PADGETT. I know; but you have there simply the question of battleships increase, the battle cruisers increase, the submarine increase, the destroyers——

Mr. BUTLER. Scouts.

Mr. PADGETT. Scouts and certain other ships.

Mr. ROBERTS of Massachusetts. There are four or five auxiliary craft.

Mr. PADGETT. Now, when they are voted on, if they are voted down the amounts in the bill stay as they are. If the House votes to increase the number, all you have got to do is to add the appropriate amount of money corresponding to what is now in the bill, applying to that increased number of ships.

Mr. LENROOT. Will the gentleman yield to me?

Mr. ROBERTS of Massachusetts. Will the gentleman yield to me for a moment? Who has the floor?

The CHAIRMAN. The gentleman from Pennsylvania [Mr. BUTLER] is supposed to have the floor, but gentlemen are evidently trying to reach some understanding.

Mr. BUTLER. Then there is the question of proposing to limit the time for construction of these battleships and other warships, which, to my mind, is more important than any other feature of the bill.

Mr. PADGETT. When one vote is taken upon that it will determine the feeling of the House on that question of policy.

Mr. BENNET. I ask unanimous consent that the request be put.

Mr. ROBERTS of Massachusetts. I desire to offer this suggestion as a compromise and a way out of what is to me a difficulty. Under the agreement made between the chairman of the committee and the minority leader we provide for a vote on all features of the increase of the program by 11.30 to-morrow.

Mr. PADGETT. No; we commence voting at that time.

Mr. ROBERTS of Massachusetts. With practically no speeches, or limited to five minutes on a side.

Mr. BENNET. No.

Mr. ROBERTS of Massachusetts. Now, I have never known the building program of the naval bill to be jammed through with only one five-minute speech on each side on this great and important part of our naval bill. In addition to that there are two other features involved in this so-called motion to recommit amendments that are of very great importance, and I want to be sure that there will be an opportunity for a separate vote before we come to 2 o'clock on Friday. My suggestion is that the minority leader offer all of the amendments that will be embodied in the minority motion to recommit, and that it be understood that at 1 o'clock to-morrow we begin voting on all those amendments, as stated by the chairman of the committee. Many of those amendments will take no discussion and no time in voting, because they will be immaterial if the main motion on which they are predicated is defeated. If the main motion is carried, then many of those subsidiary motions will necessarily have to be put.

Mr. PADGETT. I think it would be too long to extend it until 1 o'clock. I am willing to make it 12 o'clock. The minority leader [Mr. MANN], the gentleman from Pennsylvania [Mr. BUTLER], and others had all agreed on the idea of commencing voting at 11.30, and they thought that would be sufficient. This debate is not going to change anybody's opinion.

Mr. ROBERTS of Massachusetts. Would 1 o'clock be acceptable to the minority leader?

Mr. PADGETT. I will agree to make it 12 o'clock instead of 11.30. Then we will commence voting, and go on down.

Mr. ROBERTS of Massachusetts. And all the amendments be embodied in one motion.

Mr. BUTLER. And have one hour's debate to-morrow?

Mr. VARE. I would like to ask the chairman of the committee whether this rule would preclude the offering of additional amendments.

Mr. PADGETT. Oh, no.

Mr. VARE. Has there been any time fixed for voting on the armor-plate proposition?

Mr. PADGETT. No. I was trying to expedite this thing so as to make some provision for that.

Mr. BUTLER. It is impossible, Mr. Chairman, for me to join in any agreement to fix any specific minute in the day. I believe it is our business to do what we ought to do and sit here until it is done. [Applause.] I will agree that to-morrow, after one hour's debate, we shall vote on the different amendments, and vote them up or down and dispose of them.

Mr. PADGETT. I have no objection to that. Let the gentleman offer his amendments as one amendment, and then I ask that to-morrow morning we have one hour's debate, and at the conclusion of the hour's debate we proceed to vote on the various amendments.

Mr. STAFFORD. That we shall vote on the first amendment and then proceed to vote on the other amendments under the five-minute rule.

Mr. ROBERTS of Massachusetts. I understand that all the amendments are to be offered at one time, and after having one hour's debate on it, then we take them up and begin to vote on them under the five-minute rule.

Mr. PADGETT. With the understanding that the five-minute rule shall be adhered to, I agree to that.

Mr. ROBERTS of Massachusetts. I presume that we might take up some of them immediately after the amendments are read and dispose of them.

Mr. PADGETT. No; I have notified Members that we would not take a vote to-night—that there would be no vote this afternoon—under the agreement I had made with the gentleman from Pennsylvania [Mr. BUTLER].

Mr. BUTLER. Mr. Chairman, I am going to endeavor to state a request for unanimous consent. I ask unanimous consent to present this amendment, as a whole. It comprises a number of separate amendments. I ask that debate shall proceed upon all of these amendments this afternoon and to-morrow morning for one hour. At the expiration of that time we shall vote on the first amendment. That then we shall proceed to the discussion and consideration and disposition of these other amendments under the five-minute rule.

Mr. PADGETT. I have no objection to that.

The CHAIRMAN. The gentleman from Pennsylvania asks unanimous consent to offer at this time a series of amendments; that debate on these amendments shall take the remainder of the session this afternoon and for one hour after the committee convenes to-morrow morning; that at the end of the hour a vote shall be taken on the first amendment; and that thereafter the other amendments shall be taken up in order under the five minute rule, considered, and disposed of. Is there objection?

There was no objection.

The CHAIRMAN. The Clerk will read the amendments.

The Clerk read as follows:

Page 97, line 20: Strike out the word "five" and insert in lieu thereof the word "six."

Page 97, line 25: After the word "each" insert "said battle cruisers to be constructed within 24 months from the date of signing contract."

Page 98: At the top of said page and before the words "Four scout cruisers, etc.," insert a new paragraph as follows:

"Two first-class battleships to be of identical design in all respects as the battleships *Tennessee* and *California* authorized to be constructed in the act making appropriations for the naval service for the fiscal year ending June 30, 1916, approved March 3, 1915, to cost, exclusive of armor and armament, not to exceed $10,500,000 each; said battleships to be constructed within 24 months from the date of signing contract."

Page 98, line 1: Strike out the word "four" insert in lieu thereof the word "six."

Page 98, line 5: After the word "each" insert "said scout cruisers to be constructed within 15 months from the date of signing contract."

Page 98, line 6: Strike out the word "ten" and insert in lieu thereof the word "twenty-eight."

Page 98, line 9: After the word "each" insert "said destroyers to be constructed within 15 months from the date of signing contract."

Page 98, line 14: Strike out the word "twenty" and insert in lieu thereof the word "fifty."

Page 98, line 17: After the word "each" insert "said submarines to be constructed within 15 months from the date of signing contract."

Page 98, line 17: Strike out the word "seventeen" and insert in lieu thereof the word "forty-seven."

Page 98, line 20: After the word "each" insert "said submarines to be constructed within 12 months from the date of signing contract."

Page 98, line 21: Strike out the figures "$4,257,000" and insert in lieu thereof the figures "$9,387,000."

Page 99, line 3: Strike out the word "one" and insert in lieu thereof the word "two."

Page 99, line 4: Insert after the figures "$1,265,000" "said fuel ship to be constructed within 15 months from the date of signing contract."

Page 99, line 6: After the figures "$2,600,000," insert "said ammunition ship to be constructed within 15 months from the date of signing contract."

Page 99, line 7: After the figures "$2,250,000" insert "said hospital ship to be constructed within 15 months from the date of signing contract."

Page 99, after line 7, insert:

"One transport, to cost not to exceed $2,450,000; said transport to be constructed within 15 months from the date of signing contract.

"One supply ship, to cost not to exceed $2,230,000; said supply ship to be constructed within 15 months from the date of signing contract.

"One destroyer tender, to cost not to exceed $1,950,000; said destroyer tender to be constructed within 15 months from the date of signing contract.

"One repair ship, to cost not to exceed $2,600,000; said repair ship to be constructed within 15 months from the date of signing contract."

Page 99, line 22: Strike out the figures "$47,366,860" and insert in lieu thereof the figures "$73,133,852."

Page 100, line 4: Strike out the figures "$30,707,000" and insert in lieu thereof the figures "$44,196,689."

Page 100, line 7: Strike out the figures "$11,245,925" and insert in lieu thereof the figures "$20,296,850."

Page 100, line 9: Strike out the figures "$98,859,378" and insert in lieu thereof the figures "$152,296,984."

Page 100, after line 9, insert the following paragraph:

"To secure the speedy completion of all ships authorized in this act and to cover the additional expense incidental to the employment of more than one shift of men a day the Secretary of the Navy is authorized to increase the limit of cost of each of said ships not to exceed 10 per cent."

Mr. BUTLER. Mr. Chairman, I do not propose to speak to this amendment at this time. I have no control over the time, but I ask unanimous consent that my colleague, Mr. CANNON, from Illinois, may now speak on the amendment.

Mr. PADGETT. Mr. Chairman, I ask unanimous consent that the time for debate on this amendment be divided, and that one half of the time may be controlled by the gentleman from Pennsylvania and the other half by myself.

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent that the time for debate on these amendments be divided, one-half to be controlled by himself and one-half by the gentleman from Pennsylvania [Mr. BUTLER]. Is there objection?

There was no objection.

Mr. ROBERTS of Massachusetts. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. ROBERTS of Massachusetts. Under the unanimous-consent agreement recently made are all motions to amend to be held out of order from now until the motions made by the gentleman from Pennsylvania have been voted on to-morrow?

The CHAIRMAN. Unless they are amendments to the pending amendments.

Mr. ROBERTS of Massachusetts. And no amendments can be offered to any other section of the bill from now on until some time to-morrow afternoon?

The CHAIRMAN. No other amendment will be recognized by the Chair.

Mr. ROBERTS of Massachusetts. That was not my understanding of the agreement.

Mr. PADGETT. That was the agreement. I understood the gentleman wanted to put in the RECORD some amendments that he desires to offer with reference to the personnel, aviation, and so forth, and if he does, I will ask unanimous consent that he may print them in the RECORD for information so that they can be made familiar to the Members when they are offered later.

Mr. ROBERTS of Massachusetts. Mr. Chairman, I ask unanimous consent to have printed in the RECORD for information several amendments that appear on pages 1 and 2 of the printed list, down to and including the motion offered by the gentleman from Pennsylvania.

The CHAIRMAN. The gentleman from Massachusetts asks unanimous consent to print in the RECORD certain proposed amendments to be offered by him later in the consideration of the bill. Is there objection?

There was no objection.

The amendments to be offered by Mr. ROBERTS of Massachusetts are as follows:

AVIATION.

Page 6, line 2: Strike out the figures "$2,000,000" and insert in lieu thereof the figures "$3,500,000."

TRANSPORTATION.

Page 8, line 19: Strike out the figures "$862,000" and insert in lieu thereof the figures "$904,000."

RECRUITING.

Page 8, line 24: Strike out the figures "$174,670" and insert in lieu thereof the figures "$194,340."

OUTFITS—FIRST ENLISTMENT.

Page 9, line 25: Strike out the figures "$1,428,000" and insert in lieu thereof the figures "$1,638,000."

THREE THOUSAND FIVE HUNDRED ADDITIONAL MEN.

Page 36, line 21: Strike out the words "sixty-one thousand five hundred" and insert in lieu thereof the words "sixty-five thousand."

FULL COMPLEMENTS FOR SHIPS.

Page 36, line 22: After the first word, "men," insert the following: "and the President is hereby authorized to enlist, in his discretion, and from time to time, such additional men as the needs of the Navy may require, not to exceed a total authorized strength of 82,762 men."

PAY OF MEN.

Page 36, line 23: Strike out the figures "$27,563,988.50" and insert in lieu thereof the figures "$28,436,488.50."

CHANGE OF TOTAL.

Page 37, line 8: Strike out the figures "$46,876,246.86" and insert in lieu thereof the figures "$47,748,746."

PROVISIONS.

Page 67, line 9: Strike out the figures "$8,848,933.85" and insert in lieu thereof the figures "$9,088,508.85."

PAY CLERKS, MARINE CORPS.

Page 82, line 4: Strike out the word "seven" and insert in lieu thereof the word "eight."

PAY OF ADDITIONAL OFFICERS, MARINE CORPS.

Page 82, line 6: Strike out the figures "$1,328,749" and insert in lieu thereof the figures "$1,377,849."

SERGEANT MAJOR—QUARTERMASTER SERGEANTS.

Page 88, line 4: Strike out the word "seventeen" and insert in lieu thereof the word "eighteen"; also strike out the word "seventy-two" and insert in lieu thereof the word "eighty."

FIRST SERGEANTS—GUNNERY SERGEANTS.

Page 88, line 5: Strike out the word "sixty-five" and insert in lieu thereof the word "seventy-four"; also strike out the second word "sixty-five" in said line and insert in lieu thereof the word "seventy-three."

SERGEANTS—CORPORALS.

Page 88, line 6: Strike out the words "three hundred" and insert in lieu thereof the words "three hundred and forty-two"; also in said line strike out the words "five hundred" and insert in lieu thereof the words "five hundred and seventy-eight."

DRUMMERS—INCREASE OF MEN.

Page 88, line 7: Strike out the first word "thirty" and insert in lieu thereof the word "thirty-seven"; also in said line strike out the words "two thousand" and insert in lieu thereof the words "two thousand five hundred and forty."

PAY OF MARINES.

Page 88, line 20: Strike out the figures "$3,434,582.52" and insert in lieu thereof the figures "$3,509,850.52."

COMMUTATION OF QUARTERS.

Page 90, line 2: Strike out the figures "$56,000" and insert in lieu thereof the figures "$59,000."

TOTALS.

Page 90, line 25: Strike out the figures "$5,331,406.30" and insert in lieu thereof the figures "$5,458,774.30."

PROVISIONS—MARINE CORPS.

Page 91, line 15: Strike out the figures "$1,150,068.90" and insert in lieu thereof the figures "$1,195,068.90."

CLOTHING—MARINES.

Page 92, line 5: Strike out the figures "$926,423.50" and insert in lieu thereof the figures "$996,073.50."

FUEL.

Page 92, line 11: Strike out the figures "$217,092.66" and insert in lieu thereof the figures "$220,692.66."

MILITARY STORES.

Page 93, line 13: Strike out the figures "$713,648.78" and insert in lieu thereof the figures "$810,002.78."

TRANSPORTATION AND RECRUITING.

Page 94, line 13: Strike out the figures "$459,711.65" and insert in lieu thereof the figures "$492,156.65."

FORAGE.

Page 95, line 3: Strike out the figures "$39,246" and insert in lieu thereof the figures "$42,246."

COMMUTATION OF QUARTERS.

Page 95, line 15: Strike out the figures "$107,512" and insert in lieu thereof the figures "$121,048."

CONTINGENT.

Page 97, line 7: Strike out the figures "$654,345" and insert in lieu thereof the figures "$692,845."

TOTALS—QUARTERMASTER'S DEPARTMENT, MARINE CORPS.

Page 97, line 9: Strike out the figures "$4,469,048.49" and insert in lieu thereof the figures "$4,771,133.49."

TOTAL—MARINE CORPS.

Page 97, line 16: Strike out the figures "$9,800,454.79" and insert in lieu thereof the figures "$10,229,907.79."

Mr. BUTLER. Mr. Chairman, I yield five minutes to the gentleman from Illinois [Mr. CANNON].

Mr. CANNON. Mr. Chairman, I have not sufficient technical knowledge touching the Navy or the provisions of this bill to enable me to offer much from a technical standpoint for the consideration of the Committee of the Whole House. I have, however, generally, very decided notions about what the Navy ought to be. Of course, if I had to draw the designs to construct the ships and aeroplanes, there would not be any constructed. I believe in an efficient Navy. If I believed as some gentlemen do who have addressed this House, particularly upon the other side, and especially the gentleman from Texas [Mr. CALLAWAY], I would not vote for a single ship and I would destroy those that we now have, because we are all going to be good, and if we are not all going to be good, we are so far away from the balance of the world that they could not cross the ocean and get at us. I understand that to be the position of the gentleman. He was greeted with great applause, though not universal, upon the other side of the House, and by a goodly number of "Amens."

I am not very uneasy about the Army of the United States. I believe that we must rely principally for the national defense against the world upon the Navy, the first line of defense. It is free from any complications that we get with the Army. Why, you can not now fully utilize the National Guard, for there is a large number of people in the United States organized, who say, "You are members of our organization, and if you enter into the service of the National Guard or the militia, you lose your job." There are a good many people that most of us are afraid of who hold that notion. So we just want enough of an Army, say, 150,000 to 200,000. I would like to have 2,000 men for every million of inhabitants, and I think that would be sufficient to take care of Mexico and Central America and the Monroe doctrine, as far as the Army is concerned, as well as to take care of us at home if it is necessary for us to be taken care of.

Gentlemen say that the world can not get across the ocean to attack us. They do not have to. Take, for instance, Great Britain. She has Vancouver, Victoria, near by, right at the very entrance of the Sound upon which one of our principal navy yards is located. Then there are the Bahamas and the Bermudas, the British West Indies, and the French West Indies—not so difficult for Great Britain and France to get over with their navies, after all is said and done. Gentlemen of the minority as well as of the majority have commended this bill as far as it goes, and the only difference as I gather from the debate and the amendments offered is as to whether you have gone far enough—oh, I will say not the only difference, but practically the only difference upon each side of the House.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. BUTLER. Mr. Chairman, would the gentleman like me to yield him more time?

Mr. CANNON. If the gentleman desires to yield it to me, I would like to have a little more.

Mr. BUTLER. It would be a great pleasure to all of us. I yield five minutes more to the gentleman.

Mr. CANNON. I thank the gentleman and members of the committee. I believe this bill is short in making sufficient provision at this time. I do not believe it provides for a sufficient personnel of the Navy. I am told and I gather from what gentlemen say that probably one-half of the ships of our Navy have not sufficient men to man them in the event that we did have trouble. What is the use of having ships unless you have men to man them? I am told we are short of ammunition, short on this and that and the other, and I presume that is true and I assume it to be true; and it is a mistake equivalent to a crime not to be ready to fight the ships that we have. [Applause.] And they should be manned as rapidly as possible. It can not be done in a minute. Oh, too expensive, too expensive, it is claimed. One gentleman who addressed the House to-day harked back to old Isaiah:

> And they shall beat their swords into plowshares and their spears into pruning hooks.

I have heard it preached a hundred times; and we are as far off from that time as they were in old Isaiah's time. [Applause.] You have got to reconstruct the human animal before we will all be good. Nations in all the history of the race went with the strong hand to despoil the enemy who had the goods that they wanted. Why, God's chosen people marched out of Egypt and wandered 40 years in the wilderness; and they went in with, "Thus saith the Lord, according to his prophet," and seized the promised land and killed all the men, women, and children who were in possession of the land. They did it—all except one tribe, you know, that came in with moldy bread and tattered clothes and agreed to be slaves. So it has been and so it will be until the human race is, in my judgment, largely reconstructed.

Mr. MADDEN. Regenerated.

Mr. CANNON. Oh, you talk about the millennium, and pray for the millennium. But the millennium has not arrived, and until it does arrive we must protect our own against all nations who covet our possessions. Now, I am not afraid of any nation, not at all, but as I read the history of our country in the earlier part of the late century during the Napoleonic wars, because we would not take sides either with Napoleon or with Great Britain, we got into trouble and they seized our ships and declared them good prizes, each one of the contestants, and they will do it again if they have the power to do it. But it is said the world is afraid of us. It may be so. But nations will not be afraid of us unless we have the disposition to care for our own and are prepared to care for our own. If you take the hand off China, she would conquer the world from the frozen ocean to the Equator by her patient labor. We can not compete with her and therefore we shut her out, and yet she is dominated by Japan. Nobody has much respect for China. We can not take care of the Philippines; we can not take care of the Monroe doctrine; we can not take care of Porto Rico; we can not take care of the United States proper unless we have what is equivalent to an insurance policy. [Applause on the Republican side.]

That insurance policy is a Navy sufficient to be efficient against all comers. I am for peace, but the only way to have peace is to be ready to fight for peace if necessary.

The CHAIRMAN. The time of the gentleman has again expired.

Mr. BUTLER. Mr. Chairman, I yield five minutes to my colleague on the committee [Mr. BROWNING].

Mr. BROWNING. Mr. Chairman, one amendment offered by my colleague from Pennsylvania [Mr. BUTLER], on page 98, at the top of said page, and before the words "four scout cruisers, etc.," reads: Insert a new paragraph, as follows:

> Two first-class battleships, to be of identical design in all respects as the battleships *Tennessee* and *California*, authorized to be constructed in the act making appropriations for the naval service for the fiscal year ending June 30, 1916, approved March 3, 1915, to cost, exclusive of armor and armament, not to exceed $10,500,000 each; said battleships to be constructed within 24 months from the date of signing contract.

Mr. Chairman, I for one think that the amendment is one of the most important amendments to the bill.

Mr. Chairman, naval preparedness is either entirely unnecessary or it is of paramount necessity. The question for this Congress to decide is whether we need a real and effective Navy or whether no such necessity exists, and if the decision is in the affirmative, then in all reason let us bring forth a law that will achieve its object.

The bill we have before us takes a middle ground; it does not frankly admit that the majority side of the Naval Affairs Committee believe there exists no necessity for an increase in America's first line of defense, nor does it meet the very conservative recommendations of the Secretary of the Navy and the General Board of the Navy. It is neither fish nor flesh.

Mr. Chairman, the stand for a large and effective Navy is not a new one for me, as my votes in committee and in the House have shown, but after four weary months of the closest

study in continuous daily sessions of the Naval Affairs Committee, where we heard at length from our greatest naval experts, from scientists, from pronavy and from antinavy advocates, I am more than unwilling to even appear to approve of the bill before us, the provisions of which fall so far short of what I conceive to be the dire need of the Nation.

Rear Admiral Knight, president of the Naval War College, sounded a timely warning when he said that the ocean, unless its waters be blocked by a fleet strong enough to command them, is a highway, broad, spacious, and convenient beyond any military road the Romans ever built. Let us realize in time that the ocean instead of affording the protection of a blockade is in reality exactly the reverse unless adequately policed.

The battleship, the fighting instrument of the Navy, is conspicuous by its absence from this bill. The General Board on July 30, 1915, recommended the construction of four dreadnaughts for this year's program. The Secretary of the Navy, in his five-year program, recommended two dreadnaughts for this year. All of the admirals who appeared before our committee voiced the opinion that battleships are essential. The concensus of opinion of those to whom we must look for expert and valuable advice is undoubtedly in favor of augmenting the number of our fighting dreadnaughts, the big fellows that give and take the hard knocks, and I believe we should authorize at least two at this time. Personally, I would go further and authorize four, as recommended by the General Board. Our thousands of miles of coast line are mutely appealing to us for a degree of protection that will render them safe from attack. Our people from ocean to ocean are looking to us to keep them out of war and to defend them against any possible invading foe. Let us take the action that will best promote the safety of our country and the welfare of our people by building a Navy that will place us second in the navies of the world.

Mr. Chairman, I trust this important amendment will prevail. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. BROWNING. Mr. Chairman, I ask unanimous consent that I may extend my remarks in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from New Jersey? [After a pause.] The Chair hears none.

Mr. PADGETT. Mr. Chairman, I yield five minutes to the gentleman from Wyoming [Mr. MONDELL].

Mr. MONDELL. Mr. Chairman, I shall, in the main, support the bill as reported by the committee, but shall vote, if the opportunity is offered, to reduce the number of battle cruisers provided for by one. I shall vote to increase the number of submarines and provide the necessary men to fully man the fleet.

Mr. Chairman, during the 12 years immediately preceding the outbreak of the European war, to wit, 1901 to 1912, inclusive, the leading naval nations of the earth expended, according to the best figures I am able to secure, the following sums for all naval purposes:

Great Britain	$1,999,209,088
United States	1,331,721,206
Germany	854,055,078
France	791,244,187

There is always some difference of opinion as to the relative strength of two navies which in tonnage, number, and character of ships are anywhere near equal, and while at the time practically all of those who were demanding a large naval program in 1912 insisted that our Navy was then inferior to that of Germany, it is now, I think, generally recognized that at that time we had from the standpoint of efficiency and effectiveness the second navy in the world. The same class of people who in 1912 were insisting that our Navy was third or even fourth among the navies of the world are now insisting that our Navy occupies the fourth place among the navies of the world. The best expert opinion of the day, however, accords us the third place, though, except for our lack of battle cruisers, of which we have none, and from the standpoint of the main battle line of dreadnaughts, our Navy is equal, if not superior, to that of Germany, barring some mythical ships which some imagine Germany may have built during the progress of the present war.

Since the year 1912 our naval expenditures have been as follows:

1913	$141,050,643
1914	145,503,963
1915	149,763,563

The bill before us carries appropriations amounting to $241,449,151, an increase of $91,787,287 over the bill of last year. The building program proposed in the bill is as follows:

Five battle cruisers, to cost $20,433,531 each.
Four scout cruisers, to cost $5,571,900 each.
Ten destroyers, to cost $1,325,314 each.
Three 800-ton submarines, to cost $1,206,302 each.
Seventeen smaller submarines, to cost $731,302 each.
One fuel ship, to cost $1,363,272.
One ammunition ship, to cost $2,714,650.
One hospital ship, to cost $2,250,000.

The total cost of these ships is estimated at $160,087,357, and of this total cost the amount carried in the bill is $59,244,326, leaving in round numbers $101,000,000 to be paid for in future bills. The bill also carries appropriations of upwards of $11,000,000 for ammunition for these new ships.

If we are to assume that as large a building program is to be carried next year as the one proposed in this bill, and that next year's bill will carry as much for that program as the present bill for this year's program in addition to paying for one-half the remainder of this year's program, and the increased expenditures resulting from the bringing into commission of new ships which will be completed during the year, next year's naval bill will exceed the present bill by at least $75,000,000, and the continuation of such a program for five years would give us a naval bill at the end of that period in the neighborhood of half a billion dollars annually.

It is devoutly to be hoped that no condition shall arise or exist that will necessitate any such outlay. Short of the absolute certainty that such an outlay is essential for the preservation of the country, the American people will not approve such a program.

In addition to the sums carried in the bill amendments will be offered by the minority of the Naval Committee increasing the building program by adding 2 first-class battleships, 1 battle cruiser, 2 scout cruisers, 18 destroyers, 30 large and 30 small submarines, and 1 fuel-oil ship; 1 transport, to cost $2,450,000; 1 supply ship, to cost $2,230,000; 1 destroyer tender, to cost $1,950,000; 1 repair ship, to cost $2,600,000.

The minority also proposes an increase of $52,000,000, in round numbers, in the appropriation for construction, and a very considerable number of other increases.

I shall support in part the amendments offered by the minority for increase of submarines and auxiliary ships. I shall also vote for their amendment for the enlistment of sufficient men to man the ships and for speeding up the building program. On the other hand, while supporting in the main the bill as reported by the committee, I shall, if an opportunity is offered, vote to decrease the number of battle cruisers by one.

I believe the amount carried in the bill is all and even more than can be justified at this time for naval expenditures, and while I believe we should increase the number of submarines provided for, I would pay for that increased number by saving the cost of a battle cruiser. Thirty defense submarines could be provided for the cost of one battle cruiser and in less than a third of the time.

In a speech which I made in the House on the 17th of December, I expressed myself in favor of proper and reasonable preparedness, but against extravagant and unnecessary expenditures for great and permanent Military and Naval Establishments. At that time I expressed the opinion that a proper program of preparedness would not include, at this time, any dreadnaughts in addition to the 9 of the first line and the 25 of the second line already in commission, the 6 superdreadnaughts under construction, 2 of which are now practically completed, and the 2—the *Tennessee* and the *California*—authorized a year ago and not yet laid down.

I did not express that opinion as an expert, for I do not claim to be one, but from the impression which I in common with most of our people had received as to the lessons of the European war as indicating that the type and character of the future dreadnaught was in question and that of big ships the battle cruiser had proved its value as an essential factor of a naval establishment.

The almost unanimous opinion of the men in active command, as expressed before the Naval Committee, was in favor of the battle cruiser as the first essential to round out our Navy and fit it to cope with the navies of other powers having these big, fast ships, and I think the action of the committee in providing for battle cruisers rather than battleships was fully justified. Of course, if we were to build more than the number of capital ships proposed, it might be well to include some dreadnaughts, but I do not believe that is justified at this time. In fact, as I have stated, I believe the program proposed by the committee of capital ships is, if anything, too large. It would be better to spend more for submarines, destroyers, and auxiliaries. If there were no other reason for opposition to so large or a larger number of capital ships, the fact that they can not be laid down and their construction started within a year, is quite sufficient reason for not authorizing them. The fact is that the program proposed in the bill would tax the capacity of the shipyards of

the country capable of handling big ships beyond their resources and facilities. On the other hand, there are numerous yards in which submarines could be built.

Mr. Chairman, amid present conditions of world-wide war, the natural tendency is to emphasize the necessity or advisability for great military establishments and to minimize the strength and effectiveness of the defenses which we possess. Men who believe in the military idea, who would establish on our shores the military establishments, the existence of which have brought on and are perpetuating the horrors of the European war, take advantage of the situation to preach and argue for the military systems they approve. Such people, some of them, I regret to say, are in our military establishments; some of them familiar with things military through their interest in warlike invention and munition manufacture, have not scrupled to indulge in the most fantastic flights of imagination, to baldly misstate facts, and to attempt to incite terror through literature and utterances, treasonable in their exaggeration, their misstatement, and their adroit and unprincipled appeals to fear, cupidity, and prejudice. The most unprincipled, untruthful, and selfishlessly interested of this class of people have the most persistently and continuously veiled their true purposes under the guise and pretense of patriotism.

The fact is, that in all human probability we are less likely to attack by a powerful opponent now or any time in the near future than we have been for years. It is true that several of the belligerent powers have ruthlessly disregarded the rights of our people, and in a manner and to an extent that would have justified greater vigor than our administration has exhibited in its diplomatic correspondence. But it is also true that these powers will not be effected in their attitude by any authorization at this time of battleships and battle cruisers for completion three or four years hence. As to certain of these powers, we have an infinitely more effective weapon against their encroachment on the rights of our citizens in our power to curtail needed supplies than we would have with the most powerful Naval Establishment.

Nevertheless, we should be reasonably and properly prepared. We now have, according to the testimony of the best experts, harbor defenses superior to those of any other nation. Our Navy, while far from the largest, is ship for ship, according to the best expert testimony equal to that of any navy afloat, and in officers and men we do not believe it is equaled anywhere. Our mine material for harbor defense is first class in quality and will soon be abundantly sufficient in quantity. This bill and the fortifications bill soon to be passed will largely strengthen our defenses in quantity and extent, certainly all that can be justified.

My hope is that before all of the expenditures proposed by this bill are made, the return of peace in Europe, possibly the limitation of armaments there, may justify the curtailment of some of these expenditures, the abandonment of some of the program. In any event, I have an enduring hope that the world's condition will in the near future warrant the checking of the program of expansion, at the rate of approximately a hundred million dollars a year, contemplated by this bill, and that we may see our way clear to save for the people of the Union, or to provide for its expenditure in ways of peace and improvement and development, a portion, at least, of the vast sums which are now proposed to be expended for the engines and the agencies of destruction.

I can not close without again reverting to a thought that is ever present in my mind—that as our standing as a nation and our usefulness to the world as a people has in the past resulted from our devotion to peace, our adherence to the principles of liberty and justice, so in the future our contributions to the uplift and welfare and inspiration of mankind shall be based on our devotion to these principles. Even in the unhappy event of international misunderstanding, threatening to a breach of peaceful relations, our ability to enforce our just demands does and will depend infinitely more on our potential strength as a nation and the justice of our cause than on our armed power. In the event of threatened or actual war the outcome will depend infinitely more on our reserves of millions of virile patriotic citizens and our limitless resources for arming and equipping them than on any permanent war establishments we may maintain.

I do not agree with the gentleman who spoke a moment ago that the world is no better than it was 3,000 years ago. If men have not grown better, they have at least grown wiser, and the mighty struggle going on in Europe now is the best object lesson the world has ever had in all of the tides of time of the futility of great military and naval establishments in enabling any people to dominate the world. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. MONDELL. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. PADGETT. Mr. Chairman, I yield five minutes to the gentleman from New York [Mr. LONDON].

Mr. LONDON. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. LONDON. Mr. Chairman, this subject is so vast that I can touch only upon one or two points. I congratulate the National Security League upon its success. I extend congratulations to the Steel Trust and to the manufacturers of munitions; a plentiful harvest awaits them. They have triumphed. They have aroused a state of hysteria which has proven irresistible. Congress has yielded, and my voice of protest is a voice in the wilderness. When you analyze the present campaign, you will find it is preparedness, profit, and politics. The Democrats were afraid of the Republicans. They were afraid if they would not give five battle cruisers at $20,000,000 apiece that the Republicans might succeed in getting 10 battle cruisers at $20,000,000 apiece. It is purely a question of politics on the part of the Democrats. Were I in their place, I would have courageously defied the imperialist, the munition maker, the Steel Trust, the war contractor. I would have squarely raised the issue of genuine democracy against imperialism. I would have trusted to the verdict of the American people. Instead of doing the brave thing, the Democrats have surrendered. I am sorry for them. When people are scared you can not expect them to be wise. When men get up on the floor of this House and repeat, parrotlike, the phrase that war is a part of human nature I lose patience. War is no more a part of human nature than religious war was human nature. Catholics murdered Protestants and Protestants slaughtered Catholics because both were stupid and barbarous. Increased knowledge and increased intelligence have made religious wars impossible. If people will but understand the cause of modern wars, war will be made impossible. Wars that we have to-day are economic wars, wars for economic advantages, for aggrandizement, for acquisition of territory, for increase of imperial domain. Are you out to increase your imperial domain? Do you want additional colonies? Do you want an additional fleet to obtain additional markets? Or is there anybody fool enough to believe that some European power or combination of powers would attempt to conquer the United States in order to acquire a new colony?

I was never so firmly convinced of the insincerity of the preparedness agitation as when I saw the vote on the Philippine question. The Philippine Islands are the weakest part of the political organism of the United States. Thousands of miles away, you can not keep those islands unless you have near them a fleet stronger than the fleet of Japan. But you voted to keep the Philippine Islands. Just as a designing lawyer for self-aggrandizement advises his client to litigate instead of settling a case. The imperialist and the munition maker and the politician have advised you to retain the Philippine Islands so that they may come out and argue that you want more battleships, more cruisers, a greater fleet on the Pacific Ocean, because the present fleet on the Pacific can be destroyed by one warship.

There is another thing that I will touch upon if you will permit me. You talk about the need of a first-class navy, of a navy as big as the biggest. I heard the leader of the Democratic Party speaking with pride of having a navy second in rank. He is again a victim of phrases. What does a first-class navy mean, or a second-class navy, or a third-class navy?

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. LONDON. I would like to have just one minute more.

Mr. PADGETT. Mr. Chairman, I yield to the gentleman one minute.

The CHAIRMAN. The gentleman from New York is recognized for one minute more.

Mr. LONDON. A first-class navy is a navy that is best adapted for the purposes of the country which owns that navy. It is entirely immaterial whether it consists of half a dozen ships, of two ships, or of one. The question is, Is it suitable for the purposes of the country? The true criterion should be, To what extent can that navy help in carrying out the policy of the country? If your policy is to maintain and defend this Republic against attack, your present fleet is strong enough. This country is invulnerable against attack, and it is sheer madness to fear invasion. If it is a policy of aggression, a policy of imperialism, a policy of competing with European powers in acquiring new

markets, new colonies, and domains, and in extending your commerce by the sword, then your fleet is surely not big enough, and you had better vote with the Republicans to treble and quadruple your present fleet.

Mr. PADGETT. Mr. Chairman, I will ask the gentleman of the minority if he has anyone who desires to speak now?

Mr. BUTLER. Yes. I will ask the gentleman from Tennessee if he would generously agree that the time to-morrow be equally divided, and then we will entertain him with some good speeches now.

Mr. PADGETT. I was willing to do that before, but I want half the time to-morrow morning.

Mr. STAFFORD. If the gentleman accedes to the gentleman's request he will still have time to-morrow.

Mr. BUTLER. I will ask the gentleman from Tennessee to consume four minutes more, and then we will have another speech of five minutes on this side.

Mr. PADGETT. The gentleman can use such time as he may desire.

Mr. BUTLER. I know; but that will be charged against us to-morrow. I am tender about that. The gentleman who has just spoken [Mr. LONDON] might be willing to speak again.

Mr. PADGETT. Have you any speakers there?

Mr. BUTLER. Yes; we have them here. I want to be perfectly candid. Two or three of my colleagues have something they want to say. I say to the gentleman, be generous, and to-morrow we will go in with the speechmaking and save you much embarrassment. Will you divide with us to-morrow equally?

Mr. PADGETT. Yes; I will divide with you half and half in the morning, and we will go on this afternoon.

Mr. BRITTEN. Mr. Chairman, will the gentleman from Pennsylvania yield?

The CHAIRMAN. Does the gentleman yield?

Mr. BUTLER. Yes.

Mr. BRITTEN. Is there any desire to have this bill passed quickly?

Mr. BUTLER. I do not know.

Mr. BRITTEN. I see this Alphonse and Gaston act has been passing on here for five minutes. I wanted to know if it was the desire to pass this bill soon, or to daily along as we have been doing in committee for the last six months?

Mr. BUTLER. Oh, no. We were just conferring about the distribution of time.

Now, Mr. Chairman, I yield to the gentleman from Wisconsin [Mr. LENROOT] five minutes.

The CHAIRMAN. The gentleman from Wisconsin [Mr. LENROOT] is recognized for five minutes.

Mr. LENROOT. Mr. Chairman, I have in the past been classed, I suppose, with those who have been termed "small Navy men." I have sometimes voted for one battleship. I have sometimes voted for two battleships. I have no apologies to make for the position that I have taken, nor shall I have any apology at any time in the future for the position that I propose to take now.

Some say that we ought to have a Navy equal to that of any other country in the world. More say that our Navy ought to be the second in the world. Now, Mr. Chairman, whether our Navy should be first or whether our Navy should be second, it seems to me, has depended, depends now, and will depend in the future to a very large degree on the balance of power in Europe.

Now, I lay no claim to having any technical knowledge of this subject. As to how the Navy should be balanced, I shall be glad to follow the Navy experts and the Committee on Naval Affairs; but as to the source from which we may expect trouble in the future, a Member of Congress ought to be just as competent to decide that question as any naval expert in the world.

Now, in the past I have been for a small Navy, because up to the beginning of this European war neither the power that had the first nor the power that had the second navy was in such a position that there was any possibility of our expecting trouble from them. It was not even a remote possibility so long as each was watching the other and had to reckon upon the other's aggression upon it if there was trouble with us. This European war has changed that situation. We can not now tell what the condition will be with reference to the balance of power in Europe when this war is over. If either side crushes the other and absolutely dominates the situation, then we may need a Navy that is equal to the best in the world. [Applause.]

Mr. CALLAWAY. Mr. Chairman——

The CHAIRMAN. Does the gentleman from Wisconsin yield to the gentleman from Texas?

Mr. LENROOT. I can not yield now. So long as that possibility exists I believe it is our duty to make the utmost preparation possible at this time, not as a naval policy for the future, for we are not in any position to fix our future naval policy now until we know what conditions are abroad, but we should take every precaution possible to prepare for the conditions that may flow from this European war, and that is to build such dreadnaughts and battle cruisers as it is possible to build with our present yards and facilities, and to build them just as quickly as possible. [Applause on the Republican side.]

For that reason I am for this amendment. I am willing to vote now for six battle cruisers. I am willing to vote now for two dreadnaughts. [Applause.] I would rather vote for eight capital ships now than to vote for four now and four next year, because if we need to use them at all, we will need them at the earliest moment that we can secure them. I would rather vote for eight now and none next year than four now and four next year.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BUTLER. I yield to the gentleman two minutes more.

Mr. LENROOT. I want to make it plain that voting for this very large increase now does not mean that I am committed to any increase next year or when this European war shall be over. I may vote against any increase at that time. That will depend entirely upon conditions which then prevail. I believe it is the duty of every Member of Congress to meet this situation as it now exists, not to frame a definite policy for the future, but to take care to the utmost extent possible of the conditions that now confront us. [Applause.]

Mr. PADGETT. Mr. Chairman, I yield to the gentleman from Massachusetts [Mr. TAGUE] five minutes.

Mr. TAGUE. Mr. Chairman, during all the discussion on this bill one of the main and most important amendments presented has been that of the speeding-up policy, the haste with which these ships shall be built. Yet in this bill now before us there is not one single item that provides for the equipping of the navy yards of the United States for the building of these battleships, cruisers, and torpedo boats. I believe there is one thing that we owe to ourselves in this Congress, and one thing that we owe to the people of the country, and that is to see that the property now owned by the Government—the navy yards of the United States—shall be equipped, and once for all to put down the story that we are trying to build battleships in order to enable the rich shipbuilding and armor-plate manufacturers to procure more of the money of the Nation. The place for us to do this work of building our ships is in the navy yards of the United States, and the navy yards to-day are unable and unfit to accommodate even two or three of the ships now specified in this bill. There are only two navy yards in the country equipped to build dreadnaughts. There are only two navy yards in the country equipped to build a battle cruiser. Yet we ask for speed, when every shipyard in the Nation is going at top speed and running three shifts at the present time. Why, Mr. Chairman, the deplorable condition of the navy yard in Boston is a lesson for any man who will sit and reason for himself as to what the conditions are. Just imagine, when we need ships so badly and there is such a pressing need for equipping the navy yards of the United States, on Saturday night last the ship fitters and riveters in the Boston Navy Yard were notified that their services for the present were no longer required in the service of the Government, because the Boston Navy Yard was not equipped, because there was no work for them to do, because there was no money appropriated for it.

Mr. Chairman, we hear so much to-day about what has been accomplished in the past. I think it is a disgrace to the former Secretary of the Navy that the navy yards of this country are in the deplorable condition that they are at the present time. With millions of dollars of United States property tied up, with enough millions of dollars' worth of property to equal the amount in this bill rotting away in the navy yards of the Nation, it is a disgrace to former administrations. Mr. Chairman, I was surprised to-day to pick up a Boston paper and read an interview with a former Secretary of the Navy who is now attempting to make presidential nominations, former Secretary of the Navy George von L. Meyer, of my State:

[From the Boston American, Sunday, May 28, 1916.]

NAVY USELESS IN EMERGENCY, SAYS MEYER—FLEET UNBALANCED AND SHIPS UNDERMANNED, DECLARES FORMER SECRETARY—PERIL TO MONROE DOCTRINE.

Former Secretary of the Navy George von L. Meyer calls attention to the "unpreparedness" of the United States Navy in the following article:

[By George von L. Meyer, Secretary of the Navy during the Taft administration.]

"The United States Navy at the present time is inadequate. Either we must have an adequate Navy or we must give up the Monroe doctrine, which is no stronger than the Navy.

"A navy is of little service unless it is prepared for sudden emergency.

"England's navy was of incalculable value because it was prepared. Had it not been prepared its vast expenditures would have been of little service.

"Our enormous expenditures for the past 15 years are of little service to the country because our fleet is unbalanced, our personnel is deficient, and our ships consequently undermanned.

BLAMES CONGRESS.

"Our fleet is unbalanced because Congress has failed to listen to the counsel of naval experts, and our money has, in addition, been frittered away on useless navy yards that have no strategic value.

"To make our Navy efficient we must, in the first place, have an up-to-date organization to run the Navy with a continuity of policy taking military necessities into consideration.

"To meet these exigencies, we should have a general staff and a national council of defense.

"Business men thoroughly realize that a great combination that has not an up-to-date organization can not compete with another organization especially well equipped in that direction.

"So also our Navy, not equipped with a military organization, can not compete with a navy of another country that has an efficient military organization for the conduct of naval affairs.

"Furthermore, after increasing the Navy personnel to the extent of 20,000 men, we should have a naval reserve of 50,000 men, and in order to meet the present military requirements we should reduce the age limit of our captains and our admirals.

CRITICIZES WILSON.

"The Wilson administration has particularly failed during the past 18 months to make the necessary effort to strengthen the strong right arm of the Government, which is the Navy, and in which direction public sentiment has been thoroughly aroused and prepared to support the President as never before.

"Had the President arisen to the occasion, much might have been accomplished immediately after the breaking out of war by mobilizing the fleet and demanding of Congress necessary preparations in order that the Navy should be put on an adequate basis of defense and preparedness.

"It is not necessary that our Navy should be the first in the world, but it is necessary and possible to be the second."

He was Secretary of the Navy, and what did he do for the navy yards of Massachusetts or the other yards in this country. Yet he comes out in the face of preparedness and says to the people of the country that the Navy of the United States is useless in an emergency. That is from a former Secretary of the Navy, who is as much responsible as any other man in the country for the present condition of the Navy of the United States.

Why, Mr. Chairman, a few weeks ago in an address before an audience in Boston this same distinguished gentleman, this gentleman who to-day is all preparedness, told the people of the country that if France lost in this war inside of six years the United States of America would be a monarchy.

What is the condition all over the country? Every shipyard is running day and night. In our State shipbuilding companies run with three shifts a day, and working on the battleships of the United States which we should be building in our own navy yards.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. PADGETT. I yield the gentleman five minutes more.

Mr. GALLAGHER. I would like to ask the gentleman if there is any provision in the bill to equip navy yards with larger dry docks.

Mr. TAGUE. No; there is not; there is not a dollar appropriated in this bill, so far as I know, for the building or extension of ways or the equipping of the yards.

Mr. ROBERTS of Massachusetts. If the gentleman will pardon me, there is a provision in the bill for a large dry dock in Norfolk and one at League Island, Philadelphia.

Mr. GALLAGHER. That would not apply to other great navy yards where they are just as essential.

Mr. TAGUE. Our State has taken time by the forelock. They are building to-day, and it will be completed soon, the largest dry dock in the United States, at an expense of $3,000,000, and the provision is that the ships of the United States Government shall have preference over any other ship in the use of it. Our State had in mind that at some time the Government of the United States would see to it that our navy yard lying almost idle would be equipped sufficiently to take care of the wants of the Navy.

Mr. CAMPBELL. Will the gentleman yield?

Mr. TAGUE. Yes.

Mr. CAMPBELL. Will the gentleman tell the committee why the Boston Navy Yard is idle?

Mr. TAGUE. Yes; I will tell the committee, because it has never been equipped to do the work. The provision for equipping it was given in the last Congress under the present Secretary of the Navy, when he got Congress to appropriate $148,000 for the building of ways that are only large enough to accommodate a small supply ship. We have asked of this committee an appropriation large enough to equip the navy yard for building a battleship. We have the finest harbor, with one or two exceptions, that there is in the United States. We have 35 feet of water at low tide. The Government property there is valued at about $20,000,000, and all that is being done there is to manufacture rope for the Government and chains used on the battleships, with the exception of minor repairs that are being done on ships for the Government.

Mr. FESS. Will the gentleman yield?

Mr. TAGUE. Yes.

Mr. FESS. I want to ask, for information purely, is it not a fact that the change of patterns for dreadnaughts is the thing that puts a yard out of commission to do the work—that you do not keep up with the changes of the patterns?

Mr. TAGUE. No; the navy yard, in order to build dreadnaughts, has to be equipped with ways that are large enough. You must have ways, you must have machine shops, you must have chain shops. We have the machine shops, we have the chain shops, and we have the water in the harbor, and we have the protection of the forts at the mouth of the harbor, but we have not the ways for the building of the ships.

Mr. FESS. There are only two navy yards, are there, equipped for building battleships?

Mr. TAGUE. There are but two.

Mr. ROBERTS of Massachusetts. New York and Mare Island.

Mr. TAGUE. With that condition, I think it is the duty of this Congress to appropriate for these navy yards, so that they can do their own work and build our own battleships. We are building better battleships than any private concern in the country, notwithstanding to-day that we are being told that we are unable to build a ship except by an enormous expenditure over and above other private shipyards.

The gentleman forgot to state that the men employed by the Government are taken from work on the battleship in order to perform the work necessary for the repairs of ships when lying and waiting to go into the service of the Government.

Mr. BRITTEN. Will the gentleman yield?

Mr. TAGUE. Yes.

Mr. BRITTEN. The gentleman understands that the Secretary of the Navy has the power to build submarines at the Boston Navy Yard, does he not?

Mr. TAGUE. If we give him the money.

Mr. BRITTEN. The money was authorized last year and the year before.

Mr. TAGUE. I do not know that the Secretary is authorized to do it.

Mr. BRITTEN. The Secretary has the money authorized in the last Congress, and he has taken no steps to build submarines there, notwithstanding the fact that right in your own bay you built 20 for England last year in 12 months.

Mr. TAGUE. I believe that there are over 20 to-day tied up there, the property of the British Government, built by the Fore River Co.

Mr. BRITTEN. That is merely another evidence of the inefficiency of the present Navy Department.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. PADGETT. Mr. Chairman, I yield one minute more to the gentleman.

Mr. TAGUE. I will take issue with the gentleman upon the efficiency of the present Secretary of the Navy. [Applause on the Democratic side.] I said this morning that I had been around the navy yard in my district during my life, and I have seen the work they do. We have had three Secretaries of the Navy from Massachusetts. We have had Moody, we have had Long, and we have had Von L. Meyer, and Meyer recommended that we close the Boston Navy Yard and other navy yards of the country and build at a tremendous expense a navy yard at Narragansett, R. I.—to satisfy selfish land speculators, and during his régime the navy yard at Boston was practically closed, and the other navy yards were closed, and for that reason the repairs which were so important on the ships that should have been done was neglected.

Mr. STAFFORD. The gentleman does not mean to say that Secretary Meyer advocated the closing of all navy yards. He was for the efficient management of navy yards, by concentrating the work in those best suited for the benefit of the Navy.

Mr. TAGUE. It is a question whether he was right or wrong, and we take issue with him and say that he was wrong.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. PADGETT. Mr. Chairman, he advocated the closing of all on the Atlantic except one, and to establish another one at Narragansett.

Mr. STAFFORD. Did he ever advocate the closing of the League Island Navy Yard?

Mr. PADGETT. I said on the Atlantic.

Mr. GALLAGHER. He has not dared to—it is in Pennsylvania. [Laughter.]

Mr. PADGETT. All along the Atlantic coast, except the Norfolk yard.

Mr. STAFFORD. The League Island?

Mr. PADGETT. No.

Mr. STAFFORD. If my memory serves me right, he never advocated the closing of League Island.

Mr. PADGETT. He did, and he wanted to establish one at Narragansett, and even close the New York yard.

Mr. BUTLER. Mr. Chairman, I wish to congratulate my friend from Illinois [Mr. GALLAGHER] upon his knowledge of geography.

Mr. GALLAGHER. But the gentleman from Illinois can not congratulate the gentleman from Pennsylvania that the Mare Island Navy Yard is the only one provided for in this bill.

Mr. BUTLER. Does the gentleman mean with building slips?

Mr. GALLAGHER. Yes.

Mr. ROBERTS of Massachusetts. It is not equipped with building slips in this bill.

Mr. GALLAGHER. Dry docks.

Mr. PADGETT. We have not any building slips in this bill for any yard.

Mr. GALLAGHER. A dry dock will be a slip when it is done.

Mr. BUTLER. Mr. Chairman, I yield five minutes to the gentleman from New York [Mr. BENNET].

Mr. BENNET. Mr. Chairman, I have never permitted myself to say that we have no Navy. Ship for ship, man for man, gun for gun, I have always believed the American Navy was the equal of any other navy. I do, however, sincerely believe that we need some more ships. I do not agree with the gentleman who said that these new battle cruisers will not add any strength to the Navy. It seems to me very obvious that a ship that costs $20,000,000 and carries 14-inch guns will add strength to the Navy. Of course it will.

For a moment or two I want to address myself to what I consider really a basic matter here, and that is the question as to whether we are discharging the responsibility that lies upon us as men. My colleague from the twelfth New York district [Mr. LONDON] said that there was no such thing inherent in the race as a fighting spirit. I absolutely disagree with him. From time immemorial it has been the burden of the man to discharge the responsibility of protecting and defending the clan, the tribe, or the country, and if he will look at his own Hebrew psalms, in the eighty-ninth, he will find that when the psalmist desired to describe a man whom the Lord had deserted he described a man the edge of whose sword had been turned, and who could no longer stand in battle; and that has been history always. The duty and responsibility of defense has been upon man. The woman has had her place and, in the main, has discharged her duty better than the man has discharged his.

It is not my purpose now to discuss the duty of woman, but I do rise to discuss the duty of man, and ask whether after these centuries, because of education, because of luxury, because of trade, because of commerce, because of business, we have forgotten that the responsibility is upon us to provide the measure of sure defense? Why, gentlemen talk about cost. It is expensive. As I have figured roughly, it will lay a tax on the people of the United States amounting to something like $4 per capita per year; but in the old times the tax that was laid upon the clan or the tribe or the people was everything they possessed over the amount of the bare means of subsistence. We have progressed unquestionably. We devote the greater part now of our earnings, of our surplus over the bare means of existence to progress; but have we reached the time when we, who have been distinguished by our districts each as a preeminent man, scruple to spend that portion of the money that is necessary for the national defense? That raises the question whether we are not only false to our country but to humanity and to our manhood, for the duty has always been discharged faithfully by the man to provide the sure defense; and here and to-day, upon our consciences and responsibilities, we are to decide whether in this twentieth century, because of the fact we have had ease and opportunity, we have ceased to be virile and become epicene. [Applause.]

For one, I propose to do a man's duty and to vote to give my country a sure defense. I shall vote for all the new construction in this bill, for two battleships, for additional submarines, and aeroplanes, and, generally, for the Naval Board's program.

Mr. BUTLER. Mr. Chairman, I yield five minutes to the gentleman from Delaware [Mr. MILLER].

Mr. MILLER of Delaware. Mr. Chairman, I thank the gentleman from Pennsylvania for the time, and although I did not expect it, however, I am willing to speak extemporaneously if the committee will bear with me.

One of the questions before the committee to-day is whether we are going to add two battleships to the naval bill, and an additional battle cruiser. I, for one, am very glad the committee saw fit to bring out five battle cruisers, and I am going to support the amendment of the gentleman from Pennsylvania to make it six battle cruisers.

A few moments ago the gentleman from Wisconsin [Mr. LENROOT] stated that the time when we would need these boats would be within the next few years and not within the next decade, if we were going to need them at all. I trust that the time will never be when we will have to use them in actual combat; but in the face of the situation that has been forced on other nations of the world we should provide these ships now. Throughout all the world the brunt of combat has been borne by the battleship. If it was the battleship of the War of 1812, like the *Constitution*, the brunt of combat fell on it. If it was in the Civil War with the heavy line ship, that was the battleship of that day. In the Spanish War we all know very well it was the battleship at Santiago that won the day. To be sure, they were only fighting so-called armor crusers; but at that time Spain possessed the highest type of armored cruisers represented in the four ships at Santiago. And in the war between Japan and Russia it was the Japanese battleships that won the battle of the Tsu Shima Straits, where the Russian fleet came all the way from the Baltic and were annihilated off the coast of Japan. And so on down. It is the English battleship fleet to-day that causes her to hold the seas, and although she lost a few at the Dardanelles, no one can deny that if it were not for her home battle fleet the German ships of battle would not have remained so securely in the Kiel Canal, but would have ventured forth more often. To-day we are told that it is the battle cruisers that have been doing the fighting on the other side; but the battle cruiser is in reality a battleship except that it has not the armor of a battleship, although it has practically the same gun power. It sacrifices armor for speed. Therefore we should have ample capital ships, be they battleships or additional battle cruisers.

I heard the gentleman from Alabama [Mr. OLIVER] say to-day that he was going to answer the accusation made by certain men on the Republican side whom he accused of bringing politics into the discussion on this bill, and he quoted figures from this bill to show it was a larger bill in money appropriated for capital ships than any heretofore passed under Republican administrations. Certainly it is, because battleships and capital ships cost more now than they did in former administrations. That is no criterion to go by, because the cost of these ships is increasing annually as they get larger. The old *Oregon* cost one-fourth as much as a dreadnaught of to-day. He did not call attention to the fact that the average number of battleships provided per year under the Republican administrations was two ships a year, nor did he call attention to the fact that since the Sixty-second Congress in 1911, when this country first elected a Democratic House, there was provided an average of only one battleship a year until last year, when two were authorized. I will qualify that by saying that the year before last—1914—we had three battleships, because we sold the old *Idaho* and *Mississippi* to Greece, and in place thereof substituted one dreadnaught——

Mr. BUTLER. Two.

Mr. MILLER of Delaware. Two dreadnaughts. I do not like to refer to a gentleman's statement when he is not present on the floor, and I did not interrupt him this morning, because I knew he had only a limited time, and I thought I might have a chance a little later on to put in the RECORD an answer to his statement. I expect to vote for two battle ships, and I expect to follow the minority members of the Committee on Naval Affairs in their recommendation, not because I happen to be on their side, but because I agree with what the gentleman from Michigan [Mr. KELLEY] said, that the Navy is the first line of defense that will have to meet the enemy when it comes. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. MILLER of Delaware. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD in connection with the few remarks I have made.

The CHAIRMAN. The gentleman from Delaware asks unanimous consent to extend his remarks in the RECORD. Is there objection? [After a pause.] The Chair hears none.

Mr. GREEN of Iowa. Mr. Chairman, I can not at this time attempt to describe the ships of all of the great navies, but I wish to make some comparisons that may be useful in voting upon the amendments before the House. For this purpose I shall speak first of the navy of Germany, which now is generally

considered to occupy the second place in rank among the navies of the world. The English Navy is so much superior to ours that I shall not now consider it.

Taking the Naval Yearbook that has been issued by the Senate and considering the first five battleships which are listed in the German Navy, we find what are called the *Kaiser Fricdrich* class. Of these ships Mr. Archibald Hurd, the English naval expert, says:

In their original form each ship carried eighteen 5.9-inch guns, but all, excepting the *Kaiser Karl der Grosse*, underwent complete reconstruction six or seven years ago, when four 5.9-inch guns and much of the clumsy top-hamper were removed. This reduction in weight brought the lower edge of the armor belt dangerously near the surface, with the result that when the ships are rolling the belt comes out of the water, and the lower hull is thus exposed to the smallest projectile.

Owing to this grave defect the ships were withdrawn from active service and have been in reserve ever since they were reconstructed.

So we find some other nations have some ships in reserve as well as our own. These vessels in fact are very much inferior to the *Indiana* and *Massachusetts*, which we no longer include in our list, but which carried very much heavier armor and four 13-inch guns 35 caliber, while the German ships carried 9.4-inch guns 35 caliber as the very largest.

Then we pass to the next five battleships, completed in 1902 and 1903, called the *Wittelsbach* class. Of these ships, Mr. Hurd says:

In service they have been found defective in sea-keeping qualities, and the high freehold and lofty superstructure offer an inviting target to hostile guns.

Normally these ships form part of the reserve fleet. Proposals to reconstruct and modernize them two years ago were rejected on the ground of their insignificant fighting value.

These ships also carried no big guns, the armament being practically the same as the first five mentioned, while we continued to build ships in which the main battery was 13-inch guns 35 caliber, and with much larger guns in the secondary batteries than the German ships.

In planning the next five ships the Germans corrected the error of making the main battery only 9.4-inch guns, and the five ships of the *Braunschweig* class were provided with 11-inch guns. They are much smaller, however, than our vessels built at the same time which carry four 12-inch guns with a heavier secondary battery and heavier armor. The Germans had also increased the range of their guns by making them 40 caliber in the main battery, but we had done better in our *New Jersey* class by not only making the main battery 40 caliber, but the secondary battery 45 and 50 caliber, with heavier projectiles.

The next five battleships of the German Navy, being the *Deutschland* class, completed in 1906 and 1908, are the last of their predreadnaughts. They are a little larger than the *Braunschweig* class and have a little heavier armor belt, but their size, 13,000 tons, is small compared to those battleships of the *Connecticut* class in our own Navy, built at the same time, which have 16,000 tons, and the German ships have four 11-inch guns in the main battery as against four 12-inch guns on our ships, which also carry a heavy secondary battery and heavy armor.

Coming now to the dreadnaughts of the German Navy, the first four belong to what is called the *Nassau* class, completed in 1909 and 1910. Of these ships, Mr. Hurd says:

For their size they have an extremely powerful armament, but too much was obviously attempted on the displacement, and they are admittedly failures.

It is held by experts that these ships would be quickly put out of action if subjected to heavy fire, and it is considered doubtful whether they would be able to stand for long the concussion of their own numerous heavy guns.

I would not, myself, class these ships as failures. They are extremely steady boats and some of the best shooting in the German Navy has been done from them. Their armament comprises twelve 11-inch 45-caliber guns, but owing to the fact that four of the turrets are placed on the broadside, only eight of the big guns can be used on one broadside—the same number as on the first dreadnaught of the English Navy. This has an important bearing on their fighting value. The horizontal deviation in long-range gunfire is much less than the vertical deviation. All naval experts agree that future naval fleet actions will be fought at long range and in broadside, as in this way the ships are less likely to be hit. Inability to use guns in broadside fire has thus become a very serious defect. Our *Michigan* and *South Carolina* are not classed as dreadnaughts in the Naval Yearbook, although as the gentleman from Michigan [Mr. KELLEY] said yesterday, they should be.

Mr. KELLEY. I think the *Michigan* ought to be so considered. [Laughter.]

Mr. GREEN of Iowa. Both, as the gentleman said yesterday, and quite properly. They are better fighting ships than the first four German dreadnaughts, which in broadside fighting could only oppose eight 11-inch guns to eight 12-inch guns of the *Michigan* or *South Carolina*, while the latter carry about as heavy armor. I know these two ships are a little slower than the *Nassau*, but the difference is not great enough to affect their fighting value. They roll heavily, but with modern appliances fine records for shooting have been made from them.

The next four dreadnaughts of the German Navy, the *Helgoland* class, were completed in 1911 and 1912. They carry twelve 12-inch guns, but the same mistake was made in their plans by which four of the turrets were placed on the broadside and only two on the center line fore and aft, a disposition which allows only eight guns to be trained on either beam. In other words, only 66 per cent of the heavy armament is available on the broadside. This error has been avoided in all of our construction. Our constructors started out with the principle that the proper place for the big-gun turrets was on the median line; that none should be placed where their broadside fire would be cut off or restricted by the superstructure of the ship, and all other nations now follow this plan.

The next five dreadnaughts of the German Navy are of the *Kaiser* class, completed in 1912–13. Smaller than our *Arkansas* and *Wyoming*, completed in 1912, our ships being of 26,000 tons and the German ships of 24,300 tons, they carry only ten 12-inch guns against the twelve of the same kind carried by our ships, but have a very strong armor belt of 13¾ inches. This is heavier than our ships last named carry, notwithstanding they are larger. There is, however, in the German ships the same defect, only to a lesser extent, in the arrangement of the big-gun turrets, the broadside fire of which is somewhat restricted. These vessels are excellent sea boats, are fitted with turbine engines, and are undoubtedly very powerful fighting ships.

The five German dreadnaughts of the *König* class, completed in 1914–15, are considered by German experts to be very successful ships. The main armament has ten 12-inch 50-caliber guns, so mounted that all ten can be fired on their broadside and four ahead or astern. They are heavily armored, having a belt 13¾ inches thick amidships, but their armament of ten 12-inch guns is much lighter than that of our *Texas* and *New York*, which carry ten 14-inch guns. Our ships are larger, being of 27,000 tons against the 25,500 tons of this class of German vessels. Our *Nevada* and *Oklahoma*, recently built, and sometimes called superdreadnaughts, are a little larger still, being of 27,500 tons. They also carry ten 14-inch guns, with very heavy armor—13½ inches on the belt. In the *Idaho*, *Mississippi*, and *California*—superdreadnaughts—the thickness in the armor belt is expected to be raised to 14 inches amidships, but as the last two are not started, the details of the plans are uncertain. No details are known concerning the latest class of the German dreadnaughts, except that it is understood that they will carry 15-inch guns. If so, the number of guns must be reduced, and experts differ as to whether our new ships should carry larger guns.

In the latest fighting machines—the dreadnaught and battle cruiser—we are outnumbered by the Germans. The most powerful armored cruiser ever built lacks the speed to escape from the battle cruiser and the guns and armor to fight it.

The German battle cruisers, which up to the time of the war were four in number, including the *Goeben*, which was subsequently sold to Turkey, are fine fast ships of high speed, carrying heavy guns, but with comparatively light armor. Four other battle cruisers of the *Derfflinger* class were then building, of 28,000 tons, to carry eight 12-inch guns and have a speed of 27 knots. Some and possibly all of these vessels have now been completed. We have never built anything in this class and in their line have nothing to oppose them. If, however, we carry out the plans of this bill, it is understood that the battle cruisers provided for therein will be larger, faster, and carry a heavier battery. We will be late, but we will have better designed and more powerful vessels.

My study of these matters leads me to conclude that, ship for ship, the American Navy is superior to any in the world. Our early ships, of course, are defective in many respects, but the defects are not so serious in comparison. We have built later than the other powers, and thus have been able to take advantage of their mistakes. Our plan has been to build larger vessels, with heavier batteries and heavier armor than those which could oppose them. In fast vessels we are deficient, but that will be remedied by the provisions of this bill. The battle cruiser, of course, can not stand in the fighting line as against the dreadnaught, but its value for other purposes is very apparent. It has made the armored cruiser, which is a vessel inferior in speed, armor, and armament, a thing of the past. No naval power will build any more of them, and we are fortunate in that we have not very many. Our Navy is often compared to that of France, and it is said that it is inferior in tonnage. It may be, but when we consider that in 1914 over 200,000 tons in the French Navy, out of 665,000 tons, consisted of armored

cruisers whose day has passed, while we have only 140,000 tons of these almost obsolete vessels, it will be seen that such a comparison is very unfair to our Navy.

I do not have time to compare our ships with those of France. Notwithstanding the frequent statements to the contrary, I consider that a comparison, not only of the ships but of the actual fighting strength, would be greatly in our favor. At the outbreak of the war France only had four dreadnaughts completed, while we had eight. It is true that she then had eight under construction or authorized, and may since have taken over one that was being constructed for another power. I do not believe, however, that she has been able as yet to complete the construction of all of these vessels, and consider the present rank of the American Navy is third; but I hope to see it raised to second place among the navies of the world as fast as can reasonably be done.

Mr. BUTLER. Mr. Chairman, I will yield to the gentleman from Nebraska [Mr. SLOAN] five minutes, which he will occupy to-morrow, so that I will not stand in the way of the committee rising now.

Mr. PADGETT. The gentleman has nothing further now?

Mr. BUTLER. No.

Mr. PADGETT. I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. FITZGERALD, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 15947) making appropriations for the naval service for the fiscal year ending June 30, 1917, and for other purposes, and had come to no resolution thereon.

EXTENSION OF REMARKS.

Mr. ROUSE. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing a speech delivered by Gov. A. O. Stanley, of Kentucky, at the Democratic State convention last Wednesday; also a speech by Senator OLLIE M. JAMES on the same occasion.

The SPEAKER. The gentleman from Kentucky [Mr. ROUSE] asks unanimous consent to extend his remarks by printing in the CONGRESSIONAL RECORD a speech delivered by Gov. Stanley, of Kentucky, at the Democratic State convention recently, and a speech delivered by Senator JAMES on the same occasion. Is there objection?

Mr. MANN. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

Mr. ROUSE. The speech of Gov. Stanley will appear elsewhere in the RECORD of to-day's proceedings, and the speech of Senator JAMES will appear later.

The SPEAKER. What was the request of the gentleman from Illinois?

Mr. MANN. To extend my remarks in the RECORD.

The SPEAKER. The gentleman from Illinois asks unanimous consent to extend his remarks in the RECORD. Is there objection?

Mr. FITZGERALD. Reserving the right to object, Mr. Speaker, I want to ask the gentleman if we can have some understanding about printing the speeches to be made in the two national conventions?

Mr. MANN. I suppose we have started in to print all the speeches made at all the State, county, and village conventions, and that the others will follow.

Mr. FITZGERALD. Well the gentleman has not said anything lately, and I will not object. [Laughter.]

The SPEAKER. Is there objection?

There was no objection.

Mr. BENNET. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. HICKS. Mr. Speaker, I make the same request.

Mr. FOSS. And I make the same request, Mr. Speaker.

The SPEAKER. Is there objection to the request of the gentleman from New York [Mr. HICKS] and to the request of the gentleman from Illinois [Mr. FOSS]?

There was no objection.

Mr. AUSTIN. And I make the same request, Mr. Speaker.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Waldorf, one of its clerks, announced that the Senate had insisted upon its amendments to the bill (H. R. 7617) to provide that in order to promote agriculture, afford better facilities for rural transportation and marketing farm products, and encourage the development of a general system of improved highways, the Secretary of Agriculture, on behalf of the United States, shall in certain cases aid the States in the construction, improvement, and maintenance of roads which may be used in the transportation of interstate commerce, military supplies, or postal matter, disagreed to by the House of Representatives, had agreed to the conference asked by the House and had appointed Mr. BANKHEAD, Mr. SWANSON, and Mr. TOWNSEND as the conferees on the part of the Senate.

ROCK CREEK AND POTOMAC PARKWAY COMMISSION.

The SPEAKER. The Chair lays before the House the report of the Rock Creek and Potomac Parkway Commission, with a request from the Committee on Appropriations that the order to print be so modified as to include three illustrative maps. Without objection, it will be so ordered.

Mr. MANN. Mr. Speaker, let us know about it. Does this come from the Committee on Appropriations?

The SPEAKER. Yes.

Mr. MANN. Has there been an order to print?

The SPEAKER. There has been an order to print the words, but not the maps.

Mr. MANN. Does this print all the maps?

Mr. FITZGERALD. Only the maps, not all the illustrations; the maps that are necessary to make the document intelligible.

Mr. MANN. I want to print all the maps that are there.

Mr. FITZGERALD. There are only three maps.

Mr. MANN. I have no objection.

The SPEAKER. Is there objection?

There was no objection.

LEAVE OF ABSENCE.

Mr. FAIRCHILD, by unanimous consent, was granted leave of absence, indefinitely, on account of sickness.

ADJOURNMENT.

Mr. PADGETT. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 5 minutes p. m.) the House adjourned until to-morrow, Tuesday, May 30, 1916, at 11 o'clock a. m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, a letter from the Secretary of War, transmitting with a letter from the Chief of Engineers report on preliminary examination of White Oak River, N. C., from its mouth to the head of navigation at or near Maysville (H. Doc. No. 1169), was taken from the Speaker's table, referred to the Committee on Rivers and Harbors, and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. RAKER, from the Committee on the Public Lands, to which was referred the bill (H. R. 15096) to amend the act entitled "An act to amend sections 2275 and 2276 of the Revised Statutes of the United States providing for the selection of lands for educational purposes in lieu of those appropriated," and to authorize an exchange of lands between the United States and the several States, reported the same with amendment, accompanied by a report (No. 779), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. SHALLENBERGER, from the Committee on Military Affairs, to which was referred the bill (H. R. 9856) granting to the St. Louis, Iron Mountain & Southern Railway Co. and to the Anheuser-Busch Brewing Association, and to the Manufacturers' Railway Co. permission to transfer certain rights of easement for railway purposes heretofore granted by the United States to the St. Louis & Iron Mountain Railroad Co. and to the Anheuser-Busch Brewing Association, respectively, reported the same without amendment, accompanied by a report (No. 780), which said bill and report were referred to the Private Calendar.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills were introduced and severally referred as follows:

By Mr. MURRAY: A bill (H. R. 16093) to amend an act entitled "An act to provide for the payment of drainage assessments on Indian lands in Oklahoma; to the Committee on Indian Affairs.

By Mr. BRUMBAUGH: A bill (H. R. 16094) for purchasing a site for the erection of a public building at Columbus, Ohio; to the Committee on Public Buildings and Grounds.

By Mr. McKENZIE: A bill (H. R. 16095) authorizing the Secretary of War to donate to the city of Freeport, Stephenson County, Ill., two bronze or brass cannon or fieldpieces; to the Committee on Military Affairs.

By Mr. OLNEY: A bill (H. R. 16096) authorizing the Secretary of War to sell certain magazine rifles; to the Committee on Military Affairs.

By Mr. BORLAND: A bill (H. R. 16097) to extend the time for constructing a bridge across the Missouri River near Kansas City, Mo., authorized by an act approved June 17, 1914; to the Committee on Interstate and Foreign Commerce.

By Mr. McLAUGHLIN: A bill (H. R. 16098) providing for a site and public building for a post office at Ludington, Mich.; to the Committee on Public Buildings and Grounds.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills were introduced and severally referred as follows:

By Mr. BEAKES: A bill (H. R. 16099) granting a pension to Margaret Wallace; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16100) granting a pension to Martha Hyn..s; to the Committee on Invalid Pensions.

By Mr. BLACKMON: A bill (H. R. 16101) to authorize the reinstatement of entry and issuance of patent to certain lands in Alabama to William J. Whitworth; to the Committee on the Public Lands.

By Mr. CHIPERFIELD: A bill (H. R. 16102) granting an increase of pension to Richard Burge; to the Committee on Invalid Pensions.

By Mr. COOPER of Wisconsin: A bill (H. R. 16103) granting an increase of pension to Dick Ransom; to the Committee on Invalid Pensions.

By Mr. DOOLITTLE: A bill (H. R. 16104) granting a pension to Missouri L. Black; to the Committee on Invalid Pensions.

By Mr. EAGAN: A bill (H. R. 16105) granting a pension to Maria Schmidt; to the Committee on Invalid Pensions.

By Mr. FAIRCHILD: A bill (H. R. 16106) granting an increase of pension to Fred W. Porter; to the Committee on Pensions.

By Mr. GANDY: A bill (H. R. 16107) for the relief of Oscar Smith; to the Committee on the Post Office and Post Roads.

By Mr. HASKELL: A bill (H. R. 16108) granting an increase of pension to Zachariah Camp; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16109) granting an increase of pension to Mary E. English; to the Committee on Invalid Pensions.

By Mr. HAWLEY: A bill (H. R. 16110) granting a pension to James O. Singleton; to the Committee on Pensions.

By Mr. HINDS: A bill (H. R. 16111) granting a pension to Bryant Libby; to the Committee on Pensions.

By Mr. HOUSTON: A bill (H. R. 16112) granting an increase of pension to Mrs. Mamie M. Carter; to the Committee on Pensions.

By Mr. McFADDEN: A bill (H. R. 16113) granting an increase of pension to John Robinson Davis; to the Committee on Invalid Pensions.

By Mr. MURRAY: A bill (H. R. 16114) granting a pension to Charles F. Updegraff; to the Committee on Pensions.

By Mr. OGLESBY (by request): A bill (H. R. 16115) for the relief of the Union Trust Co., of the District of Columbia, trustee for Bessie J. Kibbey, owner of lot 75, square 628, Washington, D. C., with regard to assessment and payment of damages on account of changes of grade due to construction of the Union Station, District of Columbia; to the Committee on Claims.

By Mr. PATTEN: A bill (H. R. 16116) for the relief of the widow of Robert M. Gibbs; to the Committee on Claims.

By Mr. ROUSE: A bill (H. R. 16117) granting an increase of pension to Margaret Catherine Shotwell; to the Committee on Invalid Pensions.

By Mr. STEPHENS of California: A bill (H. R. 16118) granting an increase of pension to Alfred E. Neal; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16119) granting an increase of pension to Christopher C. Watkins; to the Committee on Invalid Pensions.

By Mr. STINESS: A bill (H. R. 16120) granting an increase of pension to Harriet N. Saunders; to the Committee on Invalid Pensions.

By Mr. SULLOWAY: A bill (H. R. 16121) granting an increase of pension to James W. Smith; to the Committee on Pensions.

By Mr. TAGGART: A bill (H. R. 16122) to amend the acts of July 1, 1862, and July 2, 1864, and June 24, 1912, relating to the construction of a railroad from the Missouri River to the Pacific Ocean, the legalizing of certain conveyances heretofore made by the Union Pacific Railroad Co., and more perfectly disposing of the excess portions of the company's right of way; to the Committee on the Public Lands.

By Mr. TAYLOR of Arkansas: A bill (H. R. 16123) granting a pension to Mrs. Julia McFarland; to the Committee on Pensions.

By Mr. TILLMAN: A bill (H. R. 16124) for the relief of John Curtis; to the Committee on Military Affairs.

Also, a bill (H. R. 16125) granting an increase of pension to Ahi S. Loudermilk; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16126) granting an increase of pension to James A. Duncanson; to the Committee on Invalid Pensions.

By Mr. TRIBBLE: A bill (H. R. 16127) granting a pension to David S. Harrison; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16128) granting a pension to Arthur Culbertson; to the Committee on Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By the SPEAKER (by request): Memorial of Federal Watchman's Union, Local No. 14964, American Federation of Labor, favoring passage of the Nolan bill, House bill 11876; to the Committee on Labor.

Also (by request), petition of Grand Army of the Republic of the State of New York, favoring preparedness; to the Committee on Military Affairs.

By Mr. BAILEY: Petition of Thomas Kerr, James W. Stephenson, H. A. Morris, Richard Scollon, John R. Musser, William McPherson, Louis Luxenberg, E. M. Binder, Hart Commons, Max Lipman, McMillen & Killins, J. J. Barnes, Sam Ratonsky, F. J. Pandracki, Robert Taylor, Max Freidman, H. A. Shruller, and Frank McAnulty, all of Barnesboro, Pa., favoring a tax on mail-order houses; to the Committee on Ways and Means.

By Mr. CAREW: Petition of Bakery and Confectionery Workers' International Union of America, favoring House bill 10318—employers' liability act; to the Committee on the District of Columbia.

By Mr. COLEMAN: Petition of sundry organizations and citizens of Wilkinsburg and Turtle Creek, Pa., favoring amendment relative to polygamy; to the Committee on the Judiciary.

By Mr. DALE of New York: Memorial of Young Men's Christian Association, of Concord, N. H., and Katharine H. Shaw, of Ithaca, N. Y., favoring passage of Owen-Hayden bill relative to probation system in United States courts; to the Committee on the Judiciary.

Also, memorial of the Colonial Dames of America of New York City, favoring national defense; to the Committee on Military Affairs.

Also, memorial of Pennsylvania Branch of the Congregational Union for Woman Suffrage and Women of the West, favoring woman suffrage; to the Committee on the Judiciary.

By Mr. DARROW: Memorial of the Colonial Dames of America, favoring national defense; to the Committee on Military Affairs.

By Mr. DAVIS of Texas: Petition of John McCellan, of Houston, Tex., favoring the passage of Rainey bill, House bill 10585, for a nonpartisan tariff commission; to the Committee on Ways and Means.

Also, petition of Glenn W. Smith and commissioners of Mason County and Mason Business Men's Club, of Mason Tex., favoring passage of the Bankhead good-roads bill; to the Committee on the Post Office and Post Roads.

By Mr. DILLON: Memorial of the Dakota Conference of the Evangelical Association, favoring prohibition in the District of Columbia and national prohibition; to the Committee on the Judiciary.

By Mr. DOOLING: Memorial of the Colonial Dames of America, favoring preparedness; to the Committee on Military Affairs.

By Mr. EAGAN: Memorial of the Colonial Dames of America, favoring preparedness; to the Committee on Military Affairs.

By Mr. EDMONDS: Petitions of sundry citizens of Philadelphia, Pa., and National Security League, favoring national defense; to the Committee on Military Affairs.

By Mr. ELSTON: Petition of Woman's Home Missionary Society of Methodist Episcopal Church of Oakland, Cal., favoring bill to prohibit exportation of liquors to Africa; to the Committee on Alcoholic Liquor Traffic.

Also, petition of Woman's Home Missionary Society of Methodist Episcopal Church of Oakland, Cal., favoring bill to prohibit sale of liquors in Philippine Islands and Porto Rico; to the Committee on Insular Affairs.

By Mr. FLYNN: Memorial of the Colonial Dames of America, favoring preparedness; to the Committee on Military Affairs.

By Mr. GRAY of Indiana: Petition of Samuel E. Vertreez, of Richmond, Ind., favoring legislation to prevent slaughter of young calves; to the Committee on Interstate and Foreign Commerce.

By Mr. HAWLEY: Petition of citizens of Salem, Oreg., favoring national prohibition; to the Committee on the Judiciary.

By Mr. JAMES: Petitions of sundry citizens of Lake Linden, Mich., against any change in the parcel-post law; to the Committee on the Post Office and Post Roads.

By Mr. O'SHAUNESSY: Memorial of Diamond Machine Co., of Providence, R. I.; Libermore & Knight Co., of Providence, R. I.; and the Master Printers' Association of Rhode Island, opposing passage of the Tavenner bill; to the Committee on Labor.

Also, memorial of Mixer & Co., of Buffalo, N. Y., favoring House bill 651; to the Committee on Interstate and Foreign Commerce.

Also, memorial of Rhode Island Chiropodists' Society, indorsing House bill 13717; to the Committee on the District of Columbia.

By Mr. RAINEY: Petition of 533 citizens of Illinois, favoring woman suffrage amendment; to the Committee on the Judiciary.

By Mr. RANDALL: Petition of 220 citizens of National City, Cal., against bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. ROWE: Memorial of Gadsden (Ala.) Chamber of Commerce in re water-power legislation; to the Committee on Military Affairs.

Also, memorial of Mental Hygiene Societies of the United States, favoring establishing a division of mental hygiene in the United States Public Health Service; to the Committee on Appropriations.

Also, petition of J. B. Komdorfer, of Bensonhurst, N. Y., in favor of House bill 11539; to the Committee on the Post Office and Post Roads.

By Mr. SMITH of Michigan: Petition of Mrs. S. H. Hough and 117 others, of Comstock, Mich., favoring national prohibition; to the Committee on the Judiciary.

Also papers to accompany House bill 15910, for relief of George M. Woodard; to the Committee on Pensions.

By Mr. STINESS: Petition of Branch No. 5, Amalgamated Lace Operatives of America against the bill providing for the registration of designs; to the Committee on Patents.

Also, petition of Rhode Island Antituberculosis Association against Senate joint resolution 120; to the Committee on Appropriations.

By Mr. TILSON: Petition of H. G. Ford and 54 others, of Highwood, Conn., against passage of House bill 13048, relative to juvenile courts; to the Committee on the Judiciary.

By Mr. WINSLOW: Petition of citizens of Worcester, Mass., against bills to amend the postal laws: to the Committee on the Post Office and Post Roads.

HOUSE OF REPRESENTATIVES.

TUESDAY, *May 30, 1916.*

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

O God, our Father, we come to Thee with gratitude in our hearts and praise upon our lips for the spirit of patriotism which lives in the hearts of our people and will manifest itself to-day in memory of our sacred dead. Floral tributes will cover their graves and the emblem of liberty float over their ashes. We thank Thee that time not only assuages grief, but sweeps away the unhallowed passions of men, for to-day we would honor the Blue and the Gray, in memory of their valor, since each fought for the right as it was given him to see the right. We thank Thee that the sons of those who followed the Stars and Stripes and the sons of those who followed the Stars and Bars would rally round the old flag and bear it to the breeze in defense of the honor and integrity of our beloved country. Thus we would hallow this day and consecrate it to the soldiers living and the soldiers dead and teach in song and story the value of patriotism in peace no less than in war; that our Nation may continue to live and grow in all that makes it sacred to our hearts; and pæans of praise we will give to Thee, in the name of Him who taught us liberty, justice, mercy, love, peace. Amen.

The Journal of the proceedings of yesterday was read and approved.

PERSONAL EXPLANATION.

Mr. BROWNING. Mr. Speaker, on Friday, May 26, my colleague [Mr. SCULLY] was paired with the gentleman from Michigan [Mr. LOUD] on some of the measures that were being voted on at that time. There seems to have been an error in the way in which he was paired, and I ask unanimous consent to print in the RECORD a statement made by Mr. SCULLY on that subject.

The SPEAKER. The gentleman from New Jersey asks unanimous consent to print in the RECORD a statement by his colleague [Mr. SCULLY] as to a certain vote. Is there objection?

There was no objection.

The statement is as follows:

"On the afternoon of Friday, May 26, 1916, Mr. SCULLY, by force of circumstances, was absent from the House during the consideration of the transfer of H. R. 6915 and H. R. 10130 from the Committee on Reform in the Civil Service to the Committee on the Post Office and Post Roads.

"Mr. SCULLY was paired with Mr. LOUD, of Michigan, on this vote, with Mr. SCULLY for the transfer and Mr. LOUD against. Through an error on the part of some one, the pair appears under the vote on the District of Columbia appropriation bill and not on the vote on the transfer of the Tague and Griffin bills.

"I talked with Mr. LOUD about asking for a correction of the RECORD, and after I explained what the transfer meant, he said he did not care to bother about it; that it made very little difference; and that if he had known about the bills and voted on them he would have probably voted as Mr. SCULLY did."

FOURTH-CLASS POST OFFICES.

Mr. MOON. Mr. Speaker, I desire a few moments to correct a statement made by a Member of the House in the RECORD yesterday.

The SPEAKER. The gentleman asks unanimous consent to proceed for five minutes. Is there objection?

There was no objection.

Mr. MOON. Mr. Speaker, when the bill in relation to the postal savings bank was before the House it was discussed by the gentleman from Minnesota [Mr. STEENERSON], myself, and others, and finally passed. I find in the RECORD yesterday an extension of remarks of Hon. HALVOR STEENERSON, in which he refers to the fact that he opposed the provision of the bill known as the nonaccounting office provision, by which the department would have been enabled to cover into the civil service some 56,000 postmasters of the United States. Mr. STEENERSON takes entire credit to himself in this matter—I think inadvertently, because he is a very correct and estimable gentleman, and I do not believe he would do a thing intentionally that reflected upon the other members of the Post Office Committee or the conferees. After referring to his remarks in the House on the 17th of March he quotes from some communications, newspaper clippings, which he had received and publishes them as a part of the extension of his remarks, headed:

STEENERSON saves the postmasters—Minnesotan defeats proposition to abolish all except 3,000 post offices.

And also—

STEENERSON SAVES POSTMASTERS' JOBS IN 56,000 TOWNS—MINNESOTA CONGRESSMAN DEFEATS PLAN TO ABOLISH FOURTH-CLASS OFFICES—REPRESENTATIVE COMMENTS UPON TENDENCY TO INCREASE DEPARTMENT POWERS.

WASHINGTON, *May 15.*

Representative HALVOR STEENERSON won his fight to prevent the abolishment of fourth-class postmasterships throughout the country. At the instance of the Post Office Department the Senate placed in the bill to increase the limit of postal savings to $1,000 a provision authorizing the establishment of a central office in each county in the country, with the other post offices as branch stations.

Although the same provision had been submitted to the House Post Office Committee and rejected, the House Members generally were not informed upon it, and the Minnesota Member had to make his fight practically alone for a time, when he won over the Democratic House conferees.

When the conference report was before the House Thursday Representative STEENERSON made a short speech telling what the department was seeking to accomplish.

Now, Mr. Speaker, the statement that he won over the Democratic conferees on that proposition is clearly incorrect. There never was a time during the pendency of the bill when the two Democratic conferees favored the proposition which Mr. STEEN-

ERSON says he opposed and won them over against. In his speech of March 17, to which he refers, he quotes from the hearings before the Post Office Committee, and in the very beginning of those hearings the question was raised as to the meaning and effect of that section. The chairman of the committee called upon Mr. Roper to explain it. He asked a number of questions which showed opposition to it. So did Mr. FINLEY, the other Democratic member of the conference committee, and so did Mr. STEENERSON. I do not want to take any credit from Mr. STEENERSON, but he has not saved any 56,000 postmasters of the United States. He has not won over to his way of thinking the other two House conferees, and he ought not to leave the impression that they had been in favor of this section, and that by his superior ability and intelligence he had won them over to his way of thinking. The hearings before the committee, the speech of the chairman of the committee and others in this House, as well as of Mr. STEENERSON, the conference report, and the conference itself with the Senators shows that that is incorrect.

Now, this is a civil-service proposition. I had opposed the covering into the civil service, by Mr. Taft's order, of 45,000 fourth-class postmasters, and attempted to have it in part revoked in the House. Mr. STEENERSON did not vote with me on that question, but against it. Upon the same reasoning that I opposed 45,000 Republicans being held in service by an Executive order under the civil service, I opposed 56,000 Democrats being held in office under an order of this House that would place them practically under the civil service. It is not right for any man, in my judgment, to oppose a proposition that would inure to the benefit of the Republican Party and favor the same proposition because it inured to the benefit of the Democratic Party. A man ought to be consistent upon these questions. I have always opposed the civil service and any attempt to extend it. The gentleman from Minnesota can not say as much. In his anxiety to obtain credit in this matter he has put these letters or clippings into the RECORD in the extension of his remarks. I do not think he ought to have done it. I believe he is a clean enough man to correct it and not put his fellow conferees in a false position, as he has done in this matter, and it is for that reason that I call attention to it. I have never favored any law that by Executive order or by the order of this House would put Democrats in office for life or Republicans either. I have felt that it was proper to call attention to that fact. He has not won over anybody. He simply agreed with the balance of us. All three of the House conferees were united on this question; and I want to say, so far as the Senate was concerned, that when we explained our position the Senate conferees readily receded. There has been no contest upon that matter, and while I would not take away any credit from Mr. STEENERSON, I am not willing that he shall take all of the credit as against all of the Post Office Committee on the subject, if, in fact, there is any credit to anyone due in this matter. Personally I care nothing about it except that the record be made correct.

Mr. MOORE of Pennsylvania. Will the gentleman yield?

Mr. MOON. Yes; I yield to the gentleman.

The SPEAKER. The time of the gentleman from Tennessee has expired.

Mr. MOORE of Pennsylvania. I did not know that he had any specified time, Mr. Speaker.

The SPEAKER. He had five minutes.

Mr. MOORE of Pennsylvania. I ask unanimous consent that the gentleman may have two minutes more.

The SPEAKER. The gentleman from Pennsylvania asks unanimous consent that the gentleman from Tennessee may have two minutes more. Is there objection?

Mr. MOORE of Pennsylvania. I have read the extension of remarks to which the gentleman refers, attributed to the gentleman from Minnesota [Mr. STEENERSON], and I think it is fair to Mr. STEENERSON, who is not present, to say that the references to which the gentleman from Tennessee has called attention are clippings from newspapers.

Mr. MOON. I said that.

Mr. MOORE of Pennsylvania. Mr. STEENERSON'S own statement was not quoted by the gentleman.

Mr. MOON. Mr. STEENERSON'S own statement is printed in the RECORD, and I said that he quoted from these clippings in newspapers and he makes them a part of his speech, and gives faith and credit to them by putting them in the RECORD as confirmatory of his position.

Mr. MOORE of Pennsylvania. The gentleman will concede, I am sure, that other Members of the House are in the habit of extending remarks in which they do not hesitate to speak of the things they have done in the interest of their constituents.

Mr. MOON. I am very sure of that, and I have no objection to that; only I say this, that a gentleman in extending his remarks ought not to put other gentlemen in a bad attitude in reference to anything that has been done, and that is one of the dangers in this House. I do not believe we ought to allow a man to extend his remarks and say anything that reflects directly or indirectly upon any other member of the committee whether named or unnamed, and I would be glad to see a prohibition of extension of remarks at all. No man ought to be permitted to say anything in the RECORD that he does not say on the floor of the House.

Mr. MOORE of Pennsylvania. Mr. Speaker, I would be glad to join the gentleman in stopping the extension of remarks if it could be done fairly to all Members, but I suggest to the gentleman from Tennessee, who has labored hard and earnestly in the Committee on the Post Office and Post Roads, that this now appears to be a matter of credit as between the gentleman from Minnesota [Mr. STEENERSON] and the gentleman from Tennessee [Mr. MOON].

Mr. MOON. Oh, no; oh, no.

Mr. MOORE of Pennsylvania. To this extent, that the gentleman from Tennessee, as indicated in his criticism of the extension of remarks by the gentleman from Minnesota, in certain proceedings heretofore had, did certain things for which he thinks he is entitled to credit, whereas the gentleman from Minnesota may have been entitled to some of the credit.

The SPEAKER. The time of the gentleman from Tennessee has expired.

Mr. ADAMSON. Mr. Speaker, I would like to ask the gentleman a question that will take perhaps one minute.

The SPEAKER. What does the gentleman from Georgia ask for now?

Mr. ADAMSON. I ask that the gentleman's time be extended for one minute.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none.

Mr. MOON. Mr. Speaker, it looks to me as though the gentleman from Pennsylvania [Mr. MOORE] has taken up all of the time in asking questions, so that I could not answer him.

Mr. MOORE of Pennsylvania. That is true—merely to put the gentleman from Minnesota right, so long as he is not here.

Mr. MOON. I do not want to put the gentleman from Minnesota in a bad position, but I do not want him to say in the RECORD that he has brought over to his way of thinking two Democratic conferees when they were never of any other way of thinking.

Mr. MOORE of Pennsylvania. Probably the newspaper clippings may be responsible for that.

Mr. MOON. The gentleman must not put such things in the RECORD.

The SPEAKER. What did the gentleman from Georgia wish to ask?

Mr. ADAMSON. I wish to ask one minute's extension for the gentleman from Tennessee.

The SPEAKER. The gentleman has already obtained that.

Mr. ADAMSON. I want to ask the gentleman if he does not think that blessed beatitude, "Blessed is he who bloweth his own horn, lest it be not blown," extends to permitting a blast against anyone else?

Mr. MOON. Maybe so; but I do not think that is a legislative or a parliamentary proposition.

PROBATION SYSTEM IN UNITED STATES DISTRICT COURTS.

Mr. OGLESBY. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing a letter from the Hon. Homer Folks, president of the New York State Probation Commission, on the subject of the establishment of a probation system in the United States district courts.

The SPEAKER. The gentleman from New York asks unanimous consent to extend his remarks in the RECORD in the manner stated. Is there objection?

There was no objection.

NAVAL APPROPRIATION BILL.

The SPEAKER. Under the rule, the House will automatically resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 15947, the naval appropriation bill, and the gentleman from New York [Mr. FITZGERALD] will take the chair.

Accordingly, the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the naval appropriation bill, with Mr. FITZGERALD in the chair.

The CHAIRMAN. There is one hour of debate left upon the amendment of the gentleman from Pennsylvania [Mr. BUTLER] under the agreement reached yesterday.

Mr. PADGETT. Mr. Chairman, I yield five minutes to the gentleman from Illinois [Mr. WM. ELZA WILLIAMS], and I

understand that the gentleman from Pennsylvania yields him five minutes also.

Mr. BUTLER. Mr. Chairman, I also yield the gentleman five minutes.

The CHAIRMAN. The gentleman from Illinois is recognized for 10 minutes.

Mr. WM. ELZA WILLIAMS. Mr. Chairman, before proceeding I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. WM. ELZA WILLIAMS. Mr. Chairman and gentlemen of the House, I have not the time that I would like to discuss this bill. To say that I am wholly satisfied with the bill would not be correct, but in the main I feel that the bill which has been presented by the majority of the committee is a good bill and will go a long way toward establishing a Navy such as we need.

I am a poor hand at finding fault, and particularly dislike to find fault with my old colleagues on the Committee on Naval Affairs. I served with that committee two years and during that time I never knew politics to creep into the action of the committee or its members to be influenced by political considerations.

I notice that the minority report is signed by eight members of the committee, all Republicans. I notice the majority report, while not signed, is authorized by all the Democratic members of the committee. In this minority report I see a very plain attempt to introduce politics into the consideration of this bill. We find here a reference to a Democratic Congress and to a Republican Congress, and a reference to a Democratic administration and to a Republican administration, with a comparison or contrast of what was done under one that was not done under the other. I mistrust that was thrown in with a view of introducing politics into the bill—a bill of all bills which ought to be free from considerations of that kind.

While doubting the sincerity of the minority, I concede some merit in their recommendations. I believe the lessons of the European war have demonstrated that submarines are a very efficient means of sea warfare, and, situated as we are, we ought to have a larger number than provided in this bill.

I believe that we ought to have the battle cruiser, and I congratulate the committee that it has reported here in favor of five battle cruisers, a very essential part of our Naval Establishment. If I had been in control and made that report, I perhaps would have added to the report the usual quota of battleships. [Applause.] It was my belief when a member of the committee that the battleship is essentially our first line of defense, and that we ought to continue the construction of the battleships at the rate of two a year; but the committee in its wisdom has seen fit to report in lieu of two battleships five battle cruisers, and I am not disposed to question their judgment. The committee knows better than I what is necessary to constitute a well-balanced Navy.

We are entering on an era of preparedness. We have passed an Army bill providing for an Army of 211,000 men, besides nearly half a million militia. It must be apparent to anyone who has studied the lesson of the European war that our natural defense is the high seas. That being so, that being our natural defense, it is our duty to prepare to defend ourselves upon the high seas. We must not overlook the fact that we are approached or liable to attack from the east and from the west on two widely separated oceans.

Mr. Chairman, I am one of those who believe that we ought eventually to have a Navy equal to any navy in the world. I believe that we should take an advance step, as this bill does take, in the direction of a great Navy, not only a Navy second among the navies of the world, but ultimately equal to any. With such a Navy we will be able to protect our shores against a hostile foe and avoid the necessity of having to maintain a great standing army.

Mr. BRITTEN. Will the gentleman yield?

Mr. WM. ELZA WILLIAMS. I will.

Mr. BRITTEN. Is the gentleman in favor of obtaining a second place for the Navy as quickly as possible?

Mr. WM. ELZA WILLIAMS. I will not say as quickly as possible, but in a reasonable time. I believe that we ought to enter upon a program of construction that will speedily give us second place and, continued, will give us a Navy equal to any in the course of time.

There is room for men to differ as to the character and size of our standing Army, but there is little room for doubt as to what our Navy should be. Members of the House and Senate ranged in their opinions from 140,000 to 250,000 men for the Regular Army, and finally compromised on 211,000 maximum in time of peace. The compromise provided in the conference report between the two Houses, for which all Democrats voted, seems to me to be sufficient, and, judging from the favor with which it has been received throughout the country, I must believe that the best judgment of the land accepts an Army of 211,000 as amply sufficient for all possible contingencies. This total is a large number of men to be quartered on the country in time of peace merely that they may be in readiness in time of war. Aside from those stationed in the Philippines, the Hawaiian Islands, and Panama, we have provided more than a hundred thousand men to be held in reserve and in readiness in case of sudden or threatened hostilities, besides a half million more in the National Guard. We can not maintain in time of peace a Regular Army of the size and number that would be required in case of actual war. We must in such case rely on the National Guard and the volunteer. Many have contended that we need no standing Army beyond the number requisite for local or internal disturbances, outside the number necessary to garrison the Philippines, the Hawaiian Islands, and Panama, and that inasmuch as we must rely almost entirely upon the militia and volunteers in case of hostilities, it is useless to maintain any standing Army in excess of that required for domestic purposes in ordinary times. To this doctrine I can not subscribe. However well trained a National Guard may be, and however zealous and devoted the volunteer, an army of 200,000 well-trained, well-equipped Regulars, ready to be summoned in a moment to constitute the first line of defense, is to my mind a wise provision against possible contingencies, and it was with pleasure that I supported the bill providing for the Army of 211,000 men.

When we consider our geographical location in the light of the world's experience, as well as common sense, we must all agree on one proposition, and that is that our Navy is our reliance, and that no scheme of preparedness is complete that does not provide for a great naval establishment. We have one neighbor on the south, Mexico, and Canada on the north, neither of whom for centuries need be regarded as a menace to our national safety. All the rest of the world must approach us from across the seas. The two oceans constitute a barrier which, if sufficiently fortified and guarded, will be our defense. The example of England, which has not felt the tread of the invader for a thousand years, with but 26 miles of water intervening between her shores and the continent of Europe, is a sufficient argument to convince me that the United States, with 3,000 miles intervening between us and warlike Europe on one side and 7,000 miles between our western shores and Japan and the continent of Asia, with the sea guarded by a strong Navy and modern fortifications, we need have no fear of the landing of a hostile force on our shores. But without a Navy sufficient to intercept the enemy at sea and prevent them from gaining a foothold on American soil, we are subject to attack at any time, and if attacked, powerless to defend ourselves against the trained soldiers and modern guns and other instruments of warfare which could be brought against us from across either ocean unless we maintain a great standing Army, have universal military training, man our forts and fortifications with great engines of destruction, and maintain in readiness and reserve enormous stores of arms and ammunition.

I have spoken of the defense of continental United States, the safety of which is our first thought. But we have outlying possessions, which we are under as much obligation to defend as continental America, and which can only be defended by means of the Navy. It is manifestly impossible to maintain an army in the Philippines sufficient to defend those possessions against a foe having unobstructed approach and access. It is burden enough to maintain an army there sufficient to suppress insurrection and maintain domestic order. In case of war the only means by which we could defend the Philippine Islands would be by a superior Navy.

The same is true of the Hawaiian Islands and essentially and particularly true of the Panama Canal, which is subject to attack from both oceans, from Europe and from Asia. Then there is Alaska in the Pacific and Porto Rico in the Atlantic, to say nothing of our wards, Cuba and Haiti, which we are under obligation to defend, none of which can be safeguarded except by means of the Navy. Men may differ as to the size of the Army, but I can not conceive how men can find room for disagreement on the subject of our Navy. Second place is all that is asked by the advocates of a great Navy, and perhaps that is as far as we ought to go for the present. But if we continue to gather in the wealth of the world and hope to retain our place in the sun, we must be prepared to defend ourselves against a combination of the great powers of the world. Greed and avarice dictate the policies of nations as well as individuals. Trade rivalry and commercial supremacy have involved the world in the

present struggle, the most gigantic in history. Territorial acquisition, conquest, and subjugation for glory and for power have engulfed the world for ages in seas of blood. Those who but a short time ago dreamed of the millennium and the disarmament of nations now realize that the brotherhood of man and the federation of the world is but a dream.

The increase authorized in this bill, together with the sum necessary for the continuation of work on vessels heretofore authorized, for ammunition, and expenses of the Naval Establishment, carries a total appropriation of over $241,000,000, nearly a hundred million dollars in excess of that heretofore authorized in any one year. I have the highest confidence in the judgment and wisdom of the Committee on Naval Affairs, with whom I had the honor to be associated in the last Congress, and in the main entirely agree with their conclusions and the wisdom of the pending bill. It is evidently a compromise measure, and the result of a getting together of the advocates of a big Navy and of a little Navy among the majority members of the committee. I have heretofore advocated a continuous building program, two battleships a year, not less, and have supported a material increase in that new, novel, and effective instrument of sea warfare, the submarine. This bill authorizes 5 battle cruisers, in lieu of the 2 battleships heretofore authorized, and 20 submarines, 17 for coast defense and 3 of the seagoing type.

I am satisfied with the number of battle cruisers authorized, but would prefer not to abandon our program of enlarging from year to year the dreadnaught fleet, which necessarily must constitute our first line of defense. Some one has said that the dreadnaught has played no part in this war. To my mind that is the strongest argument in its favor. The mere fact of its existence, the known fact that England has in reserve a dreadnaught fleet equal to any two nations of the world, is the very reason why there have been so few naval engagements. The superiority of the English Navy has deterred attack and safeguarded English commerce and the safety of the seas to all the world, except to the extent that it has been infringed by the submarine in violation of international law. Now that Germany has yielded to the President's contention and consented to refrain from the indiscriminate destruction of merchant vessels engaged in the world's trade and commerce, it is to be hoped that, although the war continues to rage on land, the highways of the seas will remain open for the interchange of the world's commodities.

Let the navies of Europe contend in battle on equal terms and the theater of war be removed from the land to the sea, the commerce of the world would be destroyed, the seas run red with blood, and piracy resume its sway. The war is confined to Continental Europe by reason of the existence of a superior naval power, otherwise it would extend from sea to sea and from land to land and involve the whole world. I use the case of England as an illustration of how impregnable the sea is when sufficiently guarded, and to demonstrate the fact that 3,000 miles of water constitutes our natural defense against the world. What we need to do is to avail ourselves of natural conditions and fortify and guard the seas against the approach of the enemy. So convinced am I of the importance and necessity of a great Navy that I would gladly vote for even a larger naval program than that provided in this bill. I deprecate the talk indulged in by men who know better to the effect that we have not a good Navy, that with all the money that has been expended we have been relegated to fourth or fifth place. We have a good Navy, and until preparations for the present war commenced and Germany facilitated naval construction, we were a close contender for second place among the navies of the world. We can easily regain second place, and I feel that it is a duty that we owe ourselves and our country to take an advance step in that direction at this very time.

Mr. KINKAID. Will the gentleman yield?

Mr. WM. ELZA WILLIAMS. Yes; I yield.

Mr. KINKAID. While bringing the Navy of the United States up to second place and then proceeding further to bring it up to first place, what would the gentleman advise if these other countries, one standing at the head and the other second, should compete in the meanwhile in the increase of their navies? Suppose the other countries now ahead of us, having superior navies to the United States, should go on increasing their navies at the same time we are increasing our Navy? What would the gentleman advise as to keeping pace with them? Would the gentleman say that we should keep pace with them and outrun them, or what would the gentleman advise?

Mr. WM. ELZA WILLIAMS. What else could we do? If the world has entered upon a mad race of naval construction, with the greatest resources and the greatest wealth to protect and defend we ought not to lag behind, but should augment our construction.

Mr. KINKAID. I admit our country is the greatest country and we have the greatest people, but I wish to bring out the question what would be proper to do in such a case as I have suggested of the other nations increasing their navies while we are doing so. How are we going to get ahead? When and where the end? To me this is a problem.

Mr. WM. ELZA WILLIAMS. I assume we can facilitate our construction, and our resources are such that we can easily approach second place, and I have no doubt within a few years can approach first place and equal any navy, with a basic and substantial building program.

This is a good bill; it is a step in the right direction; it is an advance step, with $100,000,000 more appropriated for naval construction than by any preceding Congress. There are men who believe we ought to go further; there are some who believe we ought not to go so far; but in any view we are headed in the right direction and from year to year should facilitate our program until we have acquired a place that will render us immune from foreign attack. [Applause.]

Mr. BUTLER. Mr. Chairman, I yield seven minutes to the gentleman from Michigan, a member of the committee [Mr. KELLEY].

Mr. KELLEY. Mr. Chairman, there never was so much uncertainty in the world's history as at this hour. No man can forecast the needs of this Nation when the warring countries of Europe emerge from the great struggle now going on there. I believe at a time like this it is a mistake not to take a longer step than we are taking in this bill toward the national defense. If it turns out that these guns and ships are not needed, so much the better. On the other hand, if we fail to provide them now, and later on the need should arise, he who votes against them to-day will never forgive himself for not making his country safe in a time of storm and stress.

We should add to the program in this bill two great fighting ships of the dreadnaught type. [Applause.] These five cruisers are all right. We need the five and more. In the event of war they would be used to scour the seas to locate the enemy. So far, so good; but while we are building ships with which to find the enemy we should not neglect to provide also for ships powerful enough to destroy the enemy after he has been found. [Applause.]

Into the hands of the Navy the Nation largely commits its defense. Let us give our defenders out on the seas the ships and the guns, and we can trust them to defend the country as they have ever defended it from the days of John Paul Jones down. [Applause.]

A few months ago I took my 14-year-old boy over to Annapolis. I wanted him to see something over there which I hope none of you will miss when you go that way. Preserved in cases along the sides of the auditorium in Bancroft Hall and festooned under glass on the ceiling are 176 trophy flags of the American Navy—priceless symbols of heroic victories on the high seas. There is the flag that Capt. Isaac Hull, in command of *Old Ironsides*, snatched from the masthead of the British frigate *Guerriere*. There is the faded battle flag of Commodore Perry, with the words of Capt. Lawrence inscribed upon it—"Don't give up the ship." There are six battle flags taken by Perry on Lake Erie. There are flags taken by the *Constitution*, the *Hornet*, and the *Wasp*. There on the ceiling is a great British royal standard, the only British royal standard ever captured in the history of the British Empire—we took it away from her. [Applause.] There is the flag of the Algerian pirates taken by Commodore Stephen Decatur in the far-off waters of the Mediterranean, whither he had been sent by this young Republic to teach the world that we have millions for defense but not one cent for tribute. [Applause.] And, looking at all those captured flags of other lands, I was filled with a new and a deeper appreciation of our Navy, as I recalled that in all the battles in which our country has ever been engaged on the seas the Stars and Stripes have never yet once been hauled down in surrender. Let us give the boys on the seas the ships and the guns, and if need comes we will be safe. [Applause.]

On what day could we more appropriately vote for the Nation's defense than on this, the Nation's Memorial Day, when everywhere throughout the country our people are paying tribute to brave men living and dead, and when the North and South alike are sending up thanks to the throne of God that way back in the sixties the Union of these States was saved from the wreck of war. Let us all from the North and from the South unite on this Memorial Day in a vote to build up the American Navy for the defense of our common country, reunited and happy. [Applause.]

Just a word more in conclusion. It would seem when this great conflict in Europe is over that the common sense and sanity of the world would return and control the actions of men. It would seem, when the nations of Europe count the terrible cost of the war, when they count the dead, when they count the widows and the orphans, when they count the young manhood maimed and crippled for life, when they come to realize the burden of debt which will be placed on the shoulders of generations of their people yet unborn, it would seem that the statesmanship of the world would unite in putting an end to war for all time to come. It would seem so to me. And in any great movement of that kind this mighty Republic will be the first to offer its support.

In the meantime, however, we must not take too many chances. We have too much at stake here for ourselves and for our children and for all mankind. This is a good time to let the world know that America is here to stay and that our people, without regard to race or fatherland, are united for its defense. The crisis through which the world is passing only emphasizes the blessings of American civilization. We must protect it at all cost. This should be a great revival time for America and for Americans. This is a good time to proclaim anew the faith of the fathers of the Republic. This is a good time to dedicate ourselves anew to all the high and holy purposes symbolized by the flag of the Republic itself, and to provide for its defense. But what does the flag of the Republic stand for? First of all, it stands for liberty regulated by law; there can be no such thing as liberty except it be through the orderly processes of the law. It stands for the rights of persons and the rights of property. It stands for the universal enlightenment of the people; for every wise person knows that free schools and free government go up and down in the scale together and that we can not long continue to have one without the other. It stands for popular rule and in this it is our destiny to lead the way. It stands for the protection of American citizens at home and abroad, when they are where they have a right to be and when they are behaving themselves; for the nation that does not protect its citizens under such circumstances will wake up sooner or later to find that it has lost the protection of its citizens. It stands for a Christian civilization, the cleanest and best on the globe. And finally it stands for the home and for all the virtues which thrive and cluster around the hearthstone. Standing for all these things, may the God of our fathers protect it and defend it, and may it ever continue to be the emblem of liberty and the bow of promise for all mankind. [Applause.]

Mr. BUTLER. Mr. Chairman, I yield to the gentleman from Louisiana [Mr. DUPRÉ].

Mr. DUPRÉ. Mr. Chairman, this is a good bill. That is to say, it is good as far as it goes; but the trouble is that, in my belief, it does not go far enough. For that reason I intend to support amendments offered from either side of the Chamber to make the bill a better one. [Applause.] It is immaterial to me from what source these amendments are offered, as I do not regard, nor have I ever regarded, the question of adequate naval defense as a partisan one. Ever since I came to Congress in the Sixty-first, I have been voting for increases of the Navy, even when a majority of my own party associates took a different position.

I especially favor an increase in the item of aeronautics. It is an incredible thing that the home of Langley and of the Wrights should be among the last of the great nations to recognize the military value of the aviator. I shall also support an increase in the item of submarines. If there is one thing this war has shown it is the importance of this instrument as an adjunct to twentieth century warfare, whether from an offensive or a defensive standpoint. [Applause.]

I, of course, commend the committee for recognizing the demonstrated necessity for including in our scheme of naval preparation a sufficient number of battle cruisers and scout cruisers, but provision for them is no justification for omitting any authorization of additional battleships or dreadnaughts, which even the Committee on Naval Affairs in the majority report says are "the backbone of the fighting efficiency of any proper naval defense of a country." [Applause.]

In this attitude toward the pending measure, my own judgment and inclination are in accord with the views of my constituency and with the convictions of the Democracy of the State of Louisiana, as shown by the following extract from the platform unanimously adopted at the convention of that party held in Baton Rouge, on Tuesday, May 23, 1915, to select delegates to the national Democratic convention at St. Louis, which reads as follows:

That we call to the attention of this national Democratic administration that of all the great nations of the earth we have the most extensive and vulnerable seaboard, while all possible enemies are separated from us by the seas, and that the horrors of war can never be brought to our shores until after the American Navy is destroyed; that as a powerful Navy is the first line of defense and if made sufficiently strong guarantees us peace, we therefore urge that our Navy be increased and enlarged until it is demonstrably stronger than any possible enemy, or any two of them combined.

[Applause.]

Mr. PADGETT. Mr. Chairman, I yield to the gentleman from Georgia [Mr. TRIBBLE].

Mr. TRIBBLE. Mr. Chairman, I do not think anyone can truthfully say that I have not always given the Navy my honest and sincere support. I represent a district that gets no benefit from the Navy in the way of yards and manufactures or anything of that kind. It is an interior district. But, mark you, Mr. Chairman, that does not prevent me from supporting the defense of this country upon the sea. I have raised many objections to the naval bill since my service upon the Naval Committee, and many times I have seen my objections vindicated and the committee and this House come around to the positions I have taken.

Mr. Chairman, I shall continue to advocate a good Navy and fight extravagance. The position I have always taken—and the members of this committee will bear me out in it—is that this country should have a sea Navy, and not a land Navy. I have favored the construction of battle cruisers when the members of the Naval Committee and Navy Department opposed it. Mr. Chairman, I am opposed to the proposition of the gentleman from Pennsylvania to add to this bill battleships at this time for the simple reason that the battleship has not sent to the bottom of the sea a single vessel of the enemy in the European war, while the battle cruiser has shown itself to be effective. Why? On account of its speed, on account of its large guns, on account of its ability to get upon the scene of battle quickly and to fight with the enormous guns it carries aboard when it does get there, and also its ability to clear the sea of destroyers and torpedo boats, thereby preventing night attacks on the fleet. You remember the battle in the North Sea, when one of the greatest of the German vessels went to the bottom of the sea—the *Blücher*—fired upon by a cruiser and went down, and yet with all of her heavy armor she could not turn upon the battle cruiser and save herself from destruction.

Mr. BRITTEN. The *Blücher* was not one of the great naval vessels of Germany. It was one of the vessels that had not speed enough to get away.

Mr. TRIBBLE. The gentleman is as mistaken in that proposition as he is in many others. And I will show him where he is mistaken.

I think it ill becomes the membership to bring politics on the floor of this House on this question. I would not have mentioned it, but the gentleman interrupted me. The gentleman has precipitated politics in this House time and time again and in this debate, and so have other gentlemen on the Republican side. I will state to the gentleman that when he charges upon the floor of this House that the Democratic Party has not supported the Navy, as he frequently does, he does not know the facts or just refuses to give the facts.

Now, I am going to show you that misstatements have been made by the gentleman and his party by the facts as found in books that lie here before me and can not be contradicted. I take the last four years of the Republican administration—I skip two years when there was a Republican President in the White House, and the Senate and the House of Representatives were Democratic—and then I take up the last four years, when the Democratic Party has had complete control, and I find that the Democratic Party has appropriated $192,000,000 more than the Republicans in the four years that preceded.

Mr. BRITTEN. Will the gentleman yield?

Mr. TRIBBLE. Yes, sir.

Mr. BRITTEN. Why does the gentleman eliminate the Sixty-second Congress, which was Democratic?

Mr. TRIBBLE. You can include that Congress if you want to do so, and you will find that in the last five years of Democratic administration there was appropriated for naval purposes $216,000,000 more than the Republicans appropriated during the last five years of the Republican administration preceding.

Mr. BRITTEN. What did that Congress do with the recommendations of the General Board and of the Secretary of the Navy at that time?

Mr. TRIBBLE. The Democratic Congress ignored the recommendation of the General Board just as the Republican Congress does. [Applause on the Democratic side.]

Mr. BRITTEN. Oh, the gentleman does not——

Mr. TRIBBLE. I will tell you another thing. I am not through with the gentleman yet. He interjected this question here. I carry you back to the record of the Democratic Party when it was in power in this House the last time, under Cleve-

land's administration, and I am here to say to you, sir, that the Democratic Party when it was in control here the last time, under the Cleveland administration, built and equipped an adequate Navy.

Mr. BRITTEN. Oh, that was 20 years ago.

Mr. TRIBBLE. That is all right. You called the record of the Democratic Party in question, and you did not specify the time; and I will say that that Democratic House appropriated for the Navy $29,000,000 more than your House did in the four years that preceded Cleveland's administration. And I am here to say to you again, sir, that the Democratic Party under the Cleveland administration prepared, equipped, and made ready the Navy that sent the Spanish vessels to the bottom of the sea. [Applause on the Democratic side.] That was a Democratic House that did that. The Democratic Party turned over to you just before the Spanish-American War a Navy that was equipped with vessels, ammunition, and men of the highest type. The officers and men were trained and they used the ships and guns prepared by a Democratic administration and vanquished the enemy in the Bay of Manila and at Santiago. The enemy ships were sent to the bottom of the sea with Democratic material, and not Republican. [Applause on the Democratic side.]

Mr. BRITTEN. Mr. Chairman, will the gentleman yield for another question?

Mr. TRIBBLE. Yes.

Mr. BRITTEN. Is the Democratic Congress going to put the Navy back again to second place?

Mr. TRIBBLE. Yes. The Democratic Congress is going to do more than your party would do if you were in power. If we had reported six battle cruisers instead of five, you would have tried to amend the bill with seven; if we had brought in four, you would have brought in five. You want to get a little ahead of us in this period of excitement. But we have to account to the people for the condition of the Treasury as well as a Navy, and you are trying to account to the people by misrepresenting this bill and the condition of the Navy at the present time. As a matter of truth, this bill carries $119,252,000 more than any Republican naval bill ever brought into this House, and I am tired of hearing these misstatements. [Applause on the Democratic side.] Furthermore, this bill appropriates $241,499,151, while the largest Republican bill was $122,247,365, and still you keep telling the people that the Democrats refuse to provide a Navy in these perilous times.

Mr. BRITTEN. No, Mr. Chairman——

Mr. TRIBBLE. I do not care to yield further at this time.

Mr. BYRNES of South Carolina. Yield to him!

Mr. HUGHES and Mr. HOWARD. Yield to him!

Mr. TRIBBLE. All right. Gentlemen want me to yield. Go ahead.

Mr. BRITTEN. Do I understand from the gentleman's reply that the Democratic Congress is going to do everything in its power to put the Navy back in its place as second during the Sixty-fourth Congress?

Mr. TRIBBLE. Yes. That is what we are going to do.

Mr. BRITTEN. We will watch your vote on Friday afternoon and see what you will do.

Mr. TRIBBLE. The Democratic Party is going to pass a program of nearly $120,000,000 more than the Republican Party has ever brought into this House, and it will continue a program that will put the Navy of this country in the second place in the world, if our party stays in power; and for one I do not propose to sit silently by and permit you to succeed at the ballot box next fall by making the people believe the Democratic Party is not responsive to the demands of the people for an adequate Navy. [Applause on the Democratic side.]

Mr. BRITTEN. Let me say to the gentleman——

Mr. TRIBBLE. Oh, you asked me a question, and I yielded, but I did not give you time to make a speech. However, go ahead.

Mr. BRITTEN. I want to say to the gentleman that his conscience must be bothering him. Now the gentleman is talking about——

Mr. TRIBBLE. I have no navy yard in my district and I have no factory in my district to be interested in. I have nothing in my district but patriotism. [Applause on the Democratic side.]

Mr. BRITTEN. I congratulate the eighth Georgia district in being so well represented in Congress. [Applause.]

Mr. TRIBBLE. I am opposed to a large standing Army in times of peace, requiring compulsory service, but the Army should be ready and adequate for an emergency. The military bill has provided for considerable increase and pay for State militia. I am in favor of a Navy large enough to drive away a foreign foe and prevent the shedding of blood on American soil at the hands of an invading army.

Mr. Chairman, there are many unreasonable, extravagant practices in the Navy administration, but these evils have grown up under laws enacted many years ago. The committee knows that I have never lost an opportunity to expose them and repeal the laws if possible. I have said so much in this House and in the committee on this subject that I shall refrain from going into these extravagant questions at this time.

Mr. Chairman, I want to applaud the sentiment expressed by Hon. Francis D. Winston in a recent speech in Atlanta, Ga. Commending the work of the Hon. Josephus Daniels, one of the greatest Secretaries this Nation has ever had, Mr. Winston said, in part:

> Wherever the Stars and Stripes float from the masthead, at home or in foreign port, it proclaims to North Carolina the integrity, the character, and the high purposes of Josephus Daniels, the typical North Carolinian. * * * Eminent as have been his predecessors in that great office, the State of North Carolina recognizes his great merit there and places him primus inter pares. Criticism of him we invite. Calumny of him we resent. * * * Doubtless the armor-plate manufacturers consider him a failure. In this their judgment is as much in error as when they undertook to browbeat the Government with the threat to add enormously to the price of armor plate if the Congress concurred in the Secretary's recommendation for an armor-plate factory owned by the Government. Joe Daniels "don't scare." Possibly he may not know where to locate the "mizzen royal braces," but he has that high character which braces him when a thing of dubious import is proposed.
>
> He may not know whether the American sailor sleeps "in the spanker boom tapping loft" or not, but he is convinced that the American sailor is entitled to the best bed and most wholesome surroundings, no matter where he sleeps, and in the name of the American people he is determined to give them to him.
>
> * * * * * * *
>
> One part of his ship he does know especially well, and that is the rudder; and to hold the rudder fast and the ship true to its course is the necessary result of his birth and training in North Carolina, where he never betrayed a trust or a friend; where he ever stands for all good causes and decries the base; where neither frowns nor threats have ever deterred him, and where he is esteemed by all men of whatever party or creed as an honest man.
>
> He may not have his "sea legs" on when storms toss one of our leviathans of the deep, on which he is in highest command for the voyage, but I declare to you, having known him child, boy, and man, that along that straight, narrow, and difficult path that leads to eternal life he walks with firm and steady tread. Special interests and those who speak for them may malign him; those in whose way he stands for place, patronage, or unwarranted favor and privileges may speak of him in derision, but the fair-minded American people, whose pocket he protects and whose honor he upholds, will hold him in high esteem when his maligners and deriders are forgotten.

Mr. Chairman, the country feels perfectly safe with such a distinguished citizen directing naval operations, and he is fast making the Navy what it should be.

Mr. Chairman, answering further the question of the gentleman from Illinois, who desired to know if we had followed the recommendations of the Secretary of the Navy, I will say for his information that the Secretary is delighted with the building program in this bill, and the bill now before the House represents the wishes of the administration and meets the approval of the Secretary of the Navy.

Mr. Chairman, God knows I wish we could have peace, forever peace, but from the foundation of the world there has been war. The horrors of the European war can not be described in words. Judging by the experience of all history, wars are not over, and our country looks to us to prepare for a proper defense of our homes should war come.

When I travel upon the oceans and land in our insular possessions and I see the flag of my country floating there; when I go to the Panama Canal and see the flag of our country floating there; when I travel to the various State capitals and see the flag of our country floating there, in my love for this great country I would wrap the flag around the cluster of States and possessions and say, as a Representative of this the greatest country on earth, the Navy should be able to protect them all.

Mr. Chairman, my friend, Hon. D. G. Bickers, scholar and editor, beautifully describes a real nation in a poem sent me to-day, and I desire to add his valuable contribution to my remarks:

> There was a time when nations came to be
> Because they were locked in from sea to sea;
> Because they lay between great mountain ranges high;
> Because a people spoke one language commonly;
> Because they claimed one common worship creed;
> Because they were of but one race, one breed;
> Because some institution held them true—
> The church, the army, or the union through
> Peculiar mode of living, government—but none
> Of these things counts, when all is said and done,
> For perpetuity in any nation's life there needs must be
> A greater element, a purpose grounded in real unity;
> There must be underneath and over all that strong,
> True, vital principle, unselfishness, which lives
> For service to the race; which grows because it gives.

Mr. PADGETT. Mr. Chairman, I yield two minutes to the gentleman from Maryland [Mr. TALBOTT].

The CHAIRMAN. The gentleman from Maryland is recognized for two minutes.

Mr. TALBOTT. Mr. Chairman and gentlemen of the committee, I did not intend to take any part in this debate. My mind is made up, and the minds of the members of the committee generally are made up. But following the line of the argument by my friend from Georgia [Mr. TRIBBLE], a member of the committee, I want to say that we have no higher authority than that of Col. Roosevelt himself. He sent for the minority members on the Naval Committee to come up to the White House. I went up there, and with me were the gentleman from Texas, Mr. GREGG, with Mr. Lamar, of Missouri, and Capt. Hobson. Mr. Roosevelt took us in a room and appealed to us to vote for four battleships. I was for the four battleships personally, and I voted for the four. He stated that it was not a political question, that it was a question of national honor and national defense, and he said, "I am frank enough to admit that we could not have carried on the war with Spain successfully except for the Navy that was furnished to the country during Cleveland's two administrations." [Applause on the Democratic side.]

The CHAIRMAN. The time of the gentleman from Maryland has expired.

Mr. PADGETT. Mr. Chairman, I yield five minutes to the gentleman from Missouri [Mr. BORLAND].

The CHAIRMAN. The gentleman from Missouri is recognized for five minutes.

Mr. BORLAND. Mr. Chairman, I am thoroughly in accord with my friend from Georgia [Mr. TRIBBLE]. I am going to vote for this bill and I am going to vote against these amendments, because I want to vote for a navy and not for buncombe. [Applause on the Democratic side.]

I make no pretense of being a naval expert, and for the details of a naval program I must rely upon the opinions of those who have made a professional study of the subject. I feel, however, that it is our duty to provide this country with an adequate Navy for the following reasons: First, The Navy is the first line of defense of the Nation. The standing army may be called the second line of defense. If the Navy be adequate to guard against the approach of a hostile fleet or an invading force, it will not be necessary to rely upon the Army or the coast defenses, and thus a smaller standing army will be sufficient for safety. It is better to fight our battles on sea, if possible, than on land. England to-day might be in the position of Belgium if it were not for the British Navy. At least the battles which are now raging on the soil of France might be fought on English soil instead.

Second. The objections made to a large standing army, and the fears of militarism which are expressed, do not apply to a navy. A navy can be used only to a very limited extent for the purposes of aggression upon other countries. It can never be used for the purposes of oppression, or for destroying the liberties of the people of the country which supports the Navy.

Third. This country needs a navy because of the enormous extent of coast line that we must defend. The Atlantic seaboard, the Gulf coast, Porto Rico and Cuba, the Panama Canal, the Pacific coast, and Alaska constitute a coast line far greater than that of any other country. Our boasted isolation by water is disappearing before the advance of modern science. The ocean is a highway—the best highway in the world. Coast defenses are all right in their way, but floating coast defenses that can go where they are needed are better, and cost very little more.

Fourth. We need a navy because the time has come when we must build up a foreign trade, and to do so we must restore the American merchant marine to the seas. A merchant marine needs the protection of a navy—one able to command and, if necessary, enforce respect to American rights in every part of the world. A navy and a merchant marine work hand in hand in furnishing trained men, each for the support of the other. We have never known a nation to have a merchant marine that did not also have a navy.

Fifth. Our international relations which, with our present dominating position in the world, are growing more important, require that we possess a navy of respectable size, well balanced, and efficient. We want to make our word good, our views respected, and our neutrality secure. The Monroe doctrine that no European country shall attempt to colonize or to acquire further territory in North or South America is deeply imbedded in the hearts of our people, and is regarded as vital to our national safety. Our neutral rights, also, must be protected and neutral commerce must be made secure. Our President, who is required to defend the dignity and honor of this Nation, must also represent its power.

In conclusion, as to the cost. This is the richest Nation on the globe and one of the largest. It can afford to protect itself against any nation on earth without undue burden upon its people. We spend an undue amount in the administration of our Government. We conduct the most expensive Government in the world, because we have not the political courage to follow the plain path of retrenchment and efficiency. If the people want defense, if they want peace, prosperity, and the enlargement of our foreign commerce, they can have it at a cost very little more than our present expenditure. [Applause on the Democratic side.]

Mr. PADGETT. Mr. Chairman, did the gentleman from Pennsylvania use all of his time?

The CHAIRMAN. The gentleman from Pennsylvania has used 15 minutes.

Mr. PADGETT. I will ask the gentleman to use all of his time. I shall have only one other speech.

Mr. BUTLER. Mr. Chairman, I yield seven minutes to the gentleman from Nebraska [Mr. SLOAN].

The CHAIRMAN. The gentleman from Nebraska [Mr. SLOAN] is recognized.

[Mr. SLOAN addressed the committee. See Appendix.]

Mr. BUTLER. Mr. Chairman, I yield four minutes to my colleague from Pennsylvania [Mr. VARE].

Mr. VARE. Mr. Chairman, according to Secretary Daniels's own estimates the House naval bill is an inadequate preparedness measure. It is inadequate, according to the Secretary's own standards, because it does not provide for any dreadnaughts. He recommended two dreadnaughts and this bill provides none at all. The first line of warships has already been depleted by the relegation of seven of our battleships to the reserve, and this Nation is headed inevitably toward a place below Japan in the list of naval powers.

The experts of the Navy have been consistently ignored. If the advice of the General Board of the Navy is not to be taken, what is the General Board for? Why not abolish it altogether? Why have advisers whose advice is continuously rejected? The General Board of the Navy, back in 1903, worked out a program designed to provide safety for the United States. That program contemplated two battleships each year. It was expected that by this regular addition of two battleships there would be 48 battleships by 1919. That program was evolved before the European war began; before it became apparent that preparedness on a much larger scale would be required; yet we have already lapsed behind even in that program. There have been a number of years since then when only one battleship was authorized, and this year, when there is greater need than ever before, there is to be none at all. The present Congress, if it votes for this bill, will vote in favor of giving the United States a place among the naval powers below that occupied by Japan. Our naval officers have admitted that Japan has a secret program for naval expansion; that she replaces all her old ships that go into reserve with new dreadnaughts of the costliest type, without making any announcement whatsoever. It is a fair presumption that Japan will pass us in a few years, if she has not done so already.

The Secretary of the Navy himself said that there should be no less than two dreadnaughts a year for the next five years. This, he said, would give us 27 battleships in the first line by 1921, and with the addition of the number of battle cruisers which he recommended we would have 6 of that type in addition and 25 battleships of the second line. But recently there have been 7 ships taken out of the first line. There is no assurance now that we will have 48 battleships by 1919. In fact, there is every assurance that we will not have. We can not get them by dropping out of the dreadnaught race altogether. And yet the 48-battleship program was designed to satisfy the needs of this Nation before the European war.

Secretary Daniels also recommended an appropriation for extending the shipways at the Philadelphia Navy Yard so that battleships might be constructed there. When bids for the battleships authorized by the last Congress were advertised, the Philadelphia Navy Yard's estimates, as usual, were the lowest received. Either one of the two battleships could have been built there with a saving of hundreds of thousands of dollars. The Secretary, however, pointed out that unfortunately the shipways were not large enough to accommodate battleship construction. The contract would have to go to Mare Island, Cal. But later we find that Mare Island is not equipped either, since an appropriation has to be made for new equipment there also. And even though Mare Island had been equipped, there would have been a saving in constructing the battleship at the

Philadelphia Navy Yard, even including the cost of increasing the slips there, because the labor market, materials, and transportation facilities are exceptional.

The Secretary said that the shipways could not be extended in time to accommodate the construction of a battleship then, but that he would recommend enlargement at this session. He did so, and the Democratic Naval Affairs Committee turned him down. If the committee denied the appropriation for an extension of the shipways on the ground of economy, it was false economy. The committee need not rely on my statement for proof of this. The facts prove it. I said in a speech on the floor of the House more than a year ago, when the estimates of the officers of the Philadelphia Navy Yard for the construction of a Government transport were challenged, that the workmen would do the work within the estimates. Another Member of this House said that although the Philadelphia Navy Yard estimated that the work could be done for $200,000 less than the lowest bidder among the private yards had figured, the Philadelphia Navy Yard had merely made an estimate, which was not binding upon it, while the private yard had made a bid, for which it would be held financially and legally responsible. I said at that time that if it were possible I would be glad to give my own bond that the Philadelphia Navy Yard would keep within its estimate; that the officers and workmen there were responsible, honorable, and capable men upon whom the Government could depend for performances in keeping with promises. The Philadelphia Navy Yard got the contract, based on its estimates. And what do we find? Has the yard kept within the estimate? It has. It has, in fact, done better than its estimates. There has been a saving of not merely $200,000 but of at least $400,000 and possibly one-half million in the amount that the transport would have cost if built by the lowest private bidder. If there has been this saving with the transport, there would be a greater saving in the construction of dreadnaughts. [Applause.]

Mr. BUTLER. Mr. Chairman, I yield such time as I have remaining, which I believe to be four minutes, to the gentleman from Maine [Mr. GUERNSEY].

Mr. GUERNSEY. Mr. Chairman, last Saturday I listened with intense interest to the statement of the distinguished chairman of the Naval Affairs Committee [Mr. PADGETT], and particularly to that part of his statement in which he said that, in his opinion, $100,000,000 was sufficient in the way of an increased appropriation for the building up of the Navy at one session of Congress. I admit that is a large sum, and perhaps it is sufficient, but these are critical times and may turn out to be the most critical times in the history of this country. Was the limit set for the increased building plan of the Navy measured by the necessities of the Nation in this crisis, or was the amount arbitrarily arrived at? I wondered how that sum was arrived at. I hardly believed it was fixed by the distinguished chairman himself. Of course, it was not set by the minority of the Committee on Naval Affairs. I doubt if it was named by the committee as a whole. Was the limit placed by the Democratic caucus or by Woodrow Wilson at the White House? I am forced to the conclusion at least that the limit on the amount for the upbuilding of the American Navy was made prior to the preparation of the bill.

When it came to the question of the allotment of this sum of $100,000,000 it was found necessary, if I can judge anything by the statements that have been made here, to apply the entire amount to the building of battle cruisers in order to balance up the Navy of the United States properly; that is, establish proper proportions in its fighting equipment.

Battle cruisers are undoubtedly necessary, and I do not question the judgment of the gentlemen of the majority for providing for their construction; but it seems to me that it is a sad mistake that in fixing the limit at $100,000,000 it left nothing with which to build battleships.

The cities along our coast, from Eastport and Portland in Maine to Galveston in Texas, are inadequately defended at the present time. Battleships are floating forts, and in time of war those cities along the seaboard, with the billions of property in them, would almost wholly be dependent on battleships for their defense. Who is there that is ready to advocate here the abandonment of the construction of battleships? They are the great fighting units of the Navy and will continue to fill an important place. The chairman of this committee does not question their efficiency or importance. The British Isles are surrounded by water. There has been within easy reach of the British Isles during the present great European war for now nearly two years a hostile navy, the second navy in the world, and yet not a particle of territory of the British Isles has been touched by the German Navy for the very reason, I believe, that their coasts are guarded by the great battleships of the English Navy ready to defend her ports. The very knowledge that these great ships are on duty has been sufficient to protect the interests of the English people. I believe it would be a great mistake to disregard the recommendation of this minority and not provide for two battleships at this time, because if we fail to do so our battleship line will go down, as we are not providing in this measure to keep it up to its present strength. [Applause.]

The CHAIRMAN. The time of the gentleman from Maine has expired, and the gentleman from Tennessee has eight minutes remaining.

Mr. PADGETT. Mr. Chairman, I think it might help us to arrive at a correct solution of the question before us to take stock of the situation. The building program in the bill would cost one hundred and sixty million and several hundred thousand dollars. The program submitted by the minority would cost $283,183,945, and the additional powder would make it $303,480,795.

Mr. OGLESBY. Does that include the 10 per cent?

Mr. PADGETT. No; it does not. It just includes the cost of construction and the cost of the powder or ammunition. Now, I believe that I can submit to this House, as an intelligent body, that that amount is wholly and absolutely unnecessary, and that an appropriation and authorization in one Congress for $160,000,000 is amply sufficient when we have another Congress to convene in less than eight months, when we will have another bill.

Now, I want to make another statement. It has been stated here by those who are criticizing the bill as submitted by the committee, and the question has been repeatedly asked, If it is the purpose of the Sixty-fourth Congress to put the Navy in second place. I want to say that this program in this bill will put our Navy in a broadside gunfire superior to the German Navy [applause], not in the aggregate of ships but in the character of the ships, in the construction and arrangement, and in the gunfire of the ships. Under this program that we are submitting in this bill the broadside gunfire of the American Navy will be superior to the broadside gunfire of the German Navy.

The gentleman from Iowa [Mr. GREEN] yesterday afternoon in a hurried way called our attention to the construction and defects in the construction of the German ships. We are not confronted with those.

Now, in the next Congress, I want to say, we will duplicate this bill, except that in the next bill there will be some dreadnaughts and not so many battle cruisers, because I say the five battle cruisers we are authorizing now in this bill are superior to the eight which the Germans had on the last authority that we had any account of, and not counting the one which they sold to Turkey, which reduced their number to seven. Our five battle cruisers will be superior to the German eight.

In the next bill it will be the pleasure and privilege on the part of this Congress to present and to pass a bill for the construction and upbuild of the American Navy which, in my judgment, will, beyond all question, put the American Navy in the second place.

Now, that answers the criticism that the gentlemen have been making on that subject. We do not have to do this all at one time. We are proceeding to submit to the people an intelligent, safe, and sane proposition.

I want to call your attention to another matter. The program suggested by the minority in the amendments that they have offered, of which they have given notice that they will offer, would increase the appropriation in this bill fifty-six million seven hundred and fifty thousand and some odd dollars. There is no necessity at this time of this increase of appropriation and burdening the American taxpayer, when we are offering a program that will meet all the necessities and will meet the requirements. The gentleman from Maine [Mr. GUERNSEY] wanted to know something about the formation of this program. I will say to him very frankly that the chairman does not disclaim and does not seek to free himself from the responsibility of this building program. Every item in it was agreed to heartily by the chairman and was suggested by the chairman originally except one provision. The chairman had indicated that he stood for four battle cruisers, and there is a little interesting history right there. The chairman had made that known generally. The chairman is informed that the minority members of the committee who have signed the minority report had a conference among themselves in which they agreed to offer in the committee five battle cruisers. When the chairman offered five battle cruisers in the committee every one of the minority members voted against five, although they had agreed to it in their conference or caucus before. [Laughter and applause on the Democratic side.]

Mr. BUTLER rose.

The CHAIRMAN. All time has expired, and the question is on the pending amendment. [Laughter.]

The Clerk read as follows:

Amendment by Mr. BUTLER: Page 97, line 20, after the word "construct," strike out "five" and insert "six."

The question was taken; and on a division (demanded by Mr. BUTLER) there were 83 ayes and 109 noes.

The CHAIRMAN. The Clerk will read the next amendment.

The Clerk read as follows:

Page 97, line 25, after the word "each" insert "said battle cruisers to be constructed within 24 months from the date of signing contract."

Mr. POWERS. Mr. Chairman, I want to address the House for a short time upon that delightful theme, "Woodrow Meets Wilson Coming Back," or to be more exact, "The President Changes His Mind." President Wilson has performed that feat so often and with such lightning-like celerity, even upon the gravest and most weighty problems of state, that it has become a subject of almost universal discussion among the average American voters. For the purpose of gathering these changes together, so to speak, I want to call attention to a few of the things upon which the President has changed his mind; and I need no other witness to prove this than Woodrow Wilson himself.

He was in favor of the Garrison continental army plan. He is now opposed to it.

He was opposed to increasing the Navy. He now demands that our Navy be so increased in size that it will be the largest in the world.

Before his election he was for labor unions. He was their outspoken advocate. He is now opposed to them.

He was in favor of his party's platform pledge of protection to American lives and American property in Mexico and other foreign countries. After he was elected, he said in his Columbus, Ohio, speech this in regard to Mexico:

The Mexicans may not know what to do with their government; but that is none of our business, and so long as I have the power to prevent it nobody shall "butt in" to alterate it for them.

He later did "butt in" and has been butting in ever since.

The President was opposed to young men spending any time in military training. He now demands that 400,000 of them have such training.

A good long time before he was elected President he wanted to "knock Bryan into a cocked hat." He later made him the premier of his Cabinet. Since Bryan has left him he would, no doubt, like to "knock him into a cocked hat" again.

President Wilson was strenuously opposed to preparedness but a short while ago. He is now preaching preparedness most eloquently and fervently.

President Wilson started out to oppose the initiative and referendum; then, when later everybody seemed to want to smash the Constitution, the President joined the throng and declared himself in favor of the initiative and referendum. The world has gotten back to sanity again on that subject, and the President has forgotten all about the initiative and referendum or is now opposed to it. You can not lose Woodrow.

President Wilson was only a short time ago opposed to the creation of a tariff commission, and helped to kill the one that President Taft created. He has changed his mind on that subject and now demands the creation of a tariff commission.

President Wilson has been an out-and-out free trader all of his life. Now that the country has had a dose of it in the form of the Underwood-Simmons Tariff Act and the voters are anxious to put it upon the scrap heap forever, Woodrow says that he does not care anything about free-trade theories, anyway. You can not lose Woodrow.

President Wilson was against intervention in Mexico. Then he decided he would intervene and declared war on old Huerta, the individual, in order to make him salute the American flag. But old Huerta never saluted it and the President changed his mind about making him do it.

President Wilson demanded that all the claimants in Mexico get together and establish at least a de facto government. He threatened nonrecognition to all who refused. Carranza refused. President Wilson then recognized Carranza.

President Wilson was in favor of Panama Canal tolls. He is now against them.

President Wilson has declared himself as opposed to woman suffrage, yet he voted for it in New Jersey.

The President is accustomed to dictate dogmatically and command arrogantly, first on one side and then on the other of the same question. He is swayed around by the pressure of events. He is like the boy who replied, "I am for anything to get the coon."

The President was in favor of presidential primaries. He is surely not in favor of them now, because out of the 22 primary States in the Union the South has but 1, and that is the State of Alabama. In the face of this record, what becomes of that Democratic slogan, "Let the people rule"?

The President came into office declaring that he was going to have "pitiless publicity" concerning the doing of things in and about Washington and elsewhere. Secrecy and King Caucus now rule the roost.

Before election President Wilson was in favor of Government economy in expenditures. He must be now opposed to it because the Democratic administration has been the most extravagant of any in the entire history of the country, and yet no word in any of his public utterances has ever come from the President's lips to check or call a halt on these extravagant expenditures.

Before he was elected the President was in favor of civil-service reform. Aye, he was the vice president of the league to enforce it. Judging from his own and the acts of his administration he is now opposed to civil-service reform, for he and his party have debauched civil service openly and flagrantly.

President Wilson was in favor of free sugar, but since the cane-growing States of the South and the beet-growing States of the West and Northwest all threaten to go Republican, the President has changed his mind on the sugar question, and is now opposed to putting it on the free list.

The President said he was in favor of keeping business out of politics, and spurned its advice in the framing of the Underwood tariff law. He now courts its opinions and seeks its support.

President Wilson was in favor of a single presidential term and was elected on a platform declaring for it. He is now unalterably opposed to it.

When half the world went to war, President Wilson delivered a curtain lecture to Americans and bade them be neutral—neutral in thought, neutral in deed. He himself soon became one of the most active of partisans in his desire to injure Germany and her allies and to help England and hers.

When the *Lusitania* sank—blown up without warning, with the loss of more than 100 American lives—President Wilson extolled the virtues and merits of the man and the nation "too proud to fight." In the next breath we hear of him manifesting his purpose by words to hold Germany to a "strict accountability."

President Wilson condemned in his writings undesirable immigration. He said it was a "coarse crew" that was landing on our shores from southern Italy. But when he had an opportunity to do so he vetoed the bill which would have prevented it.

About a year ago President Wilson said he had an adequate Army. He now says, "I have not enough men to keep bandits from raiding into the United States territory."

President Wilson told Congress that he hoped it would "sanction and put into effect Mr. Garrison's continental army scheme." President Wilson then abandoned the continental army scheme without telling Garrison anything about it, and when Mr. Garrison found out that President Wilson had changed his mind he abandoned him.

The Underwood tariff law designed to produce enough revenues for the running expenses of the Government, having failed to do so, and President Wilson having failed to get enough money for that purpose, even after the enactment of the income-tax law and the war-tax law, he then advocated placing a tax on naphtha, gasoline, automobiles, bank checks, pig iron, and other things, but he has changed his mind on this subject and no additional tax will be placed on any of them. The people would not stand for it. He now proposes to tax, instead of these, munitions, inheritances, and to increase the income-tax law.

At any rate, it may be said that the President has been right at least about half of the time, for he has been on both sides of most all questions before the American people.

You know it takes a mighty lively man to reverse himself more quickly than does President Wilson. On January 18, 1916, in a note addressed to all the warring powers, President Wilson said, through his Secretary of State:

While I am fully alive to the appalling loss of life among noncombatants, I do not feel that a belligerent should be deprived of the proper use of submarines in the invasion of commerce, since those instruments of war have proved their effectiveness in this practical branch of warfare on the high seas.

And in his last ultimatum to Germany so far, issued April 18, 1916, the President completely reversed himself when he said:

It has become painfully evident to it [the United States Government] that the position which it took at the very outset is inevitable, namely, the use of submarines for the destruction of an enemy's commerce, is, of necessity, because of the very character of the vessels employed and the very methods of attack which their employment of course involves, utterly incompatible with the principles of humanity, the long established and incontrovertible rights of neutrals, and the sacred immunities of noncombatants.

It will be observed that on January 18, 1916, President Wilson conceded the right to destroy enemy merchantmen by submarine attack. On April 19, 1916, he denied the right and said it was a violation of the laws of nations and humanity.

In his note of January 18 the President said:

That merchant vessels of belligerent nationality should be prohibited from carrying any arms whatsoever.

But in his ultimatum to Germany, delivered on April 19, the President said:

The law of nations has long recognized the right of merchantmen to carry arms for protection and to use them to repel attack.

So in as weighty a matter as the controversy with Germany, the President changes his mind from day to day.

President Wilson further said in his note to Germany on January 18:

My Government is impressed with the reasonableness of the argument that a merchant vessel carrying an armament of any sort * * * should be held to be an auxiliary cruiser and so treated by a neutral as well as by a belligerent.

Of course if merchant vessels carrying armament of any sort should be held to be auxiliary cruisers, they are then a part of the fighting force of the country who owns them and subject to attack without warning, but when the McLemore resolution was before Congress, warning American citizens not to travel on such vessels, the President changed his mind on this subject and demanded that the resolution be defeated.

Senator SHERMAN, of Illinois, said:

The Democratic administration is the greatest aggregation of political acrobats who ever performed in the field of American politics.

Before the President was elected he and his Democratic cohorts declared that J. Pierpont Morgan was the evil spirit of the money power. Now, President Wilson invites him to confer with him at the White House.

Before election, President Wilson and those acting with him denounced the Aldrich bill as a product of Wall Street and characterized the Vreeland provision as the height of stupidity. The President changed his mind about all this, however, and the editor of the Wall Street Journal was procured to write and did write the Democratic banking and currency law; and the law, as finally passed, incorporates most of the Aldrich bill. That Vreeland measure, which was described by the Democrats as the height of stupidity, was later resorted to by them to avert a financial panic. President Wilson first denounces and then embraces the Republican financial policy.

President Wilson declared before his election and since, that the high cost of living was due to the high protective tariff law of the Republicans. He put sugar on the free list. The price of sugar still went up along with other articles. The President changed his mind on sugar. May we not look now for other changes?

President Wilson and the Democrats declared that they were in favor of the rule of the people, yet they have brought in more than 52 gag rules, forcing their measures through the House of Representatives and shutting off debate.

President Wilson declared, before his inauguration as President, that he proposed to do away with big business that was bad; that he was going to have enacted radical and comprehensive trust legislation. That is about the last that has been heard on the subject.

President Wilson denounced the appropriations of the last Republican Congress, which amounted to $1,019,000,000, as profligate waste of the people's money. He promised economy and reform; nevertheless the first annual appropriation made by a complete Democratic Congress was $100,000,000 in excess of the appropriations that the President had been denouncing.

President Wilson pledged that legislation under his administration should not be controlled by special rules, and denounced the Republicans for the use of them. For the 16 years the Republicans were in control of the House they averaged bringing in less than seven special rules a year. In the first three and one-half years the Democrats were in, they averaged more than 15 a year. The President may still be possessed of a single-track mind, as he once described himself, but no one can deny that it is provided with excellent switching facilities.

A number of Republican newspapers have been challenging for some time any Democrat or any Democratic newspaper to give a list of important questions now before the American people upon which the President has not changed his mind since his election. So far, no one has been rash enough to attempt to furnish the list. There is none that can be furnished.

It is unfortunate that the President has not the foresight of mind to see the right side of great public questions as they arise and stability of purpose enough to maintain them. It is hard upon the Democracy of the Nation that he is so constituted. No Democrat can tell when he goes to bed at night what his political beliefs are going to be the next morning. The morning papers may announce that the President has changed his mind, and, being "the captain of the team," the team of necessity must change its mind, too, and obey orders. This is true of the thick-and-thin partisan, but I am glad to say that it is not true of an increasing number of Democrats throughout the country who have sense enough to have convictions and courage to maintain them.

In his History of the American People, third volume, President Wilson maintains the doctrine of Republican protection in these words:

Peace changed the face of trade. English merchants poured their goods once again into the American ports, so long shut against them by embargoes of war.

Manufactories had sprung up while the ports were closed. In the year 1815 close upon $50,000,000 had been invested in the manufacture of textile fabrics alone. The new movement did not stop with the establishment of cotton fabrics. The manufacture of wool and flax and hemp and even silk was added. Iron manufacturers, long ago set up but tentative and feeble hitherto, increased from hundreds of thousands to millions in value under the stimulation of foreign trade cut off. Almost everything in general use in the country was sooner or later added to the growing list.

Industry, although begun upon a small scale, took heart to grow, and those which Americans had hitherto not dreamed of attempting were heartily embarked upon. Distinct manufacturing regions began sensibly to develop in the Middle States and in the East, with interests and characteristics which statesmen could not afford to overlook. It was manifestly injurious to every young industry that a flood of English imports should continue to pour into the country at the open ports. The remedy was a protective tariff, such as Mr. Hamilton had wished to see at first, and the young Republican leaders of Congress did not hesitate to advocate and establish it.

In what way could there be written a stronger argument upholding the Republican doctrine of protection than this? It is protection to the core. As a historian President Wilson is a protectionist, as a teacher he is a free trader, as a Democratic candidate he holds that it is unconstitutional to levy tariff duties for the purposes of protection. He lacks the vision to discern the right and the stability to maintain it. It is not safe to have a President in the White House who is wrong four-fifths of the time on four-fifths of the important questions before the country.

Mr. MANN. Mr. Chairman, I do not wish to speak to the amendment, but to call attention to the fact that this is Memorial Day. I do not intend to make a speech upon that subject, but I desire to say that I suppose this is the only body in the United States that is working to-day where work can possibly be avoided. I really think that it is not only due to the memory of the dead, the heroic dead, but also due to our own self-respect that we quit earlier to-day than usual, out of respect to the memory of those dead. [Applause.]

Mr. PADGETT. Mr. Chairman, I wish to say to the gentleman that I full appreciate the force of what he says, and will cordially cooperate with him. I should be glad later on in the day, when we reach an appropriate time, to agree with the gentleman that the House, as a mark of respect, shall adjourn earlier than usual.

Mr. MANN. If we adjourn early, many gentlemen here will be desirous of knowing what they are going to do the balance of the day and make arrangements accordingly.

Mr. KITCHIN. What hour would the gentleman suggest?

Mr. MANN. I suggest that we could probably rise and adjourn at 3 o'clock.

Mr. PADGETT. I think that will be agreeable.

Mr. KITCHIN. Is that agreeable to the gentleman from Pennsylvania [Mr. BUTLER]?

Mr. BUTLER. Perfectly so. If I had had my way about it, I would have held no session to-day at all. I will be very glad to agree to adjourn at 3 o'clock.

Mr. MANN. We will have that understanding?

Mr. PADGETT. The chairman is very willing to do that.

Mr. SMITH of Michigan. Mr. Chairman, I ask the indulgence of the House for a brief moment to digress from the strict letter of the rule to speak briefly not upon the pending measure, but to call to the mind of the membership of this great law-making body that this is a legal holiday in some States, and in all others it is a day set apart to commemorate the sacrifices and deeds of valor of the gallant defenders of our country and to pay tribute to the living and to the dead of the brave men who fought our battles in war.

Mr. Chairman, there will be gathered in every hamlet in this grand Republic of ours and from every hillside and every valley the citizenry of a united, patriotic, and peace-loving Nation to pay tribute to the sacred memory of those who in the flower of their young manhood offered and gave their lives for their country. And for what? That the greatest, the grandest, and most beneficent of all the nations of the earth should remain in perpetuity with its priceless heritages for us the living of to-day, our children, and their children. To-day from thousands of

tongues will be proclaimed the daring deeds of valor of a thousand battle fields. Again and again will the martial renown of those who fought for the establishment of our free institutions or to defend and preserve them be related. Many will live over again in remembrance the days and times when the fate of our Nation was trembling in the scales and rested in their hands.

To me it has always been a source of sorrow that those who lost their lives in the conflicts could not have lived to enjoy the fruits of their victories. "Don't give up the ship," said the great Lawrence. "I have not commenced to fight yet," said the intrepid Paul Jones. "Millions for defense, but not one cent for tribute," declared Pinkney to France. "I only regret that I have one life to give to my country," said the martyred Hale. These and many others are words left to warn and inspire us of the cost of liberty. Horror follows in the wake of war. Of all things that make for dissolution and destruction, war holds a place. But from the beginning of recorded time there has been war.

I was one of those who thought that war would be averted by education, enlightenment, civilization, and Christianity, but my predictions and hopes have been entirely destroyed. To-day the great cultured, Christian nations have entirely eclipsed the slaughter of the barbarians and the pagans. The siege of Troy, the encounter of Grecian and Roman mythology, Pharaoh and his hosts, Alexander, Cæsar, Hannibal, Napoleon, and the struggles of the great chieftains of all ages, added to those of Holy Writ, do not record such destruction of life as the war of to-day. Nations are wiped out and the map of the world changed.

When I was a boy I read Butler's book of the Civil War. I read the statement that there would be a war in every generation of our race, and that the art of war could not be ignored. For many years after the rebellion we had peace and prosperity. I then wondered if that was a true prophecy. Then came the Franco-Prussian War, the Spanish War, the Russo-Japanese War, and now the greatest of all the allied wars of Europe, and a serious disturbance in Mexico. I am now commencing to think that Butler knew much about war.

Mr. Chairman, it has been 140 years since our forefathers dedicated their lives, their fortunes, and their sacred honor to the birth of our Nation. Since then we have engaged in the War of the Revolution, the War of 1812, the War with Mexico, the Civil War, and the Spanish War; four of those with foreign foes, one between ourselves, besides innumerable Indian wars. We have to a certain degree been a fighting nation. When our first war was had with our mother country we were a nation of only 4,000,000 people. When we fought the War of the Rebellion we were a nation of 31,000,000. Now we are a nation of over 100,000,000. We now have an aggregate wealth of $188,000,000,000. We are the richest Nation on earth. We doubled in population three times in the last 50 years. We double our wealth every 10 years. At first our armies fought with flintlocks; now they are armed with automatic repeating rifles. Then every soldier was a marksman. Now the training camp is a necessary experience preceding military service. Now liquid fire and the curtain of fire supplants the ancient Greek fire. Now war is conducted with the greatest engines of destruction the mind can conceive. The Old World to-day is fighting as predicted in Holy Writ—in the "heavens above, the earth beneath, and the waters under the earth."

There is a revolution even in modern warfare. The most modern devices are the aeroplanes and submarines. Any military program, to my mind, is weak which does not provide amply for them. I have every faith in the great American soldiery. He is the greatest fighting man of all the nations. He has earned that distinction in battle and has proven his prowess under fires of steel.

But the sacrifices in war, great as they are, are not all borne by the soldier. The faithful wife and mother are no less patriotic. She keeps the silent vigil at home, praying for victory and the return of the victors. President Lincoln immortalized the sacrifice of one, among many, in a letter to a mother, in which he stated:

LETTER TO MRS. BIXBY, OF MASSACHUSETTS.

NOVEMBER 21, 1864.

DEAR MADAM: I have been shown in the War Department a statement of the adjutant general of Massachusetts that you are the mother of five sons who have died gloriously on the field of battle. I feel how weak and fruitless must be any words of mine which should attempt to beguile you from the grief of a loss so overwhelming. But I can not refrain from tendering to you the consolation that may be found in the thanks of the Republic they died to save. I pray that our Heavenly Father may assuage the anguish of your bereavement and leave you only the cherished memory of the loved and lost and the solemn pride that must be yours to have laid so costly a sacrifice upon the altar of freedom.

Very respectfully, yours, ABRAHAM LINCOLN.

I am impressed by the great civic parades for preparedness, but I am likewise obvious of the fact that enlistments are few. I am for preparedness and efficiency, and in the language of Commodore Decatur: "My country, may it always be right; but right or wrong, my country." These are no peaceful times. We should mobilize our resources and enroll our military strength. We should put out sufficient literature explaining the latest arts and discoveries in the manual of arms; civilian camps should be opened and some useful practice given as first aids. Attention should be paid to the detail and routine of preparatory army life as well as to the dreadnaught and the cannon. The individual counts for everything in war as he does in every other walk of life, else there would be no one to operate the great fighting ships, the submarines, aeroplanes, or man the guns.

And so to-day, dedicated to the great American soldier, will tribute be paid by a grateful Republic to the luster of his military achievements. To the private in the ranks as well as to the leaders; to the known and to the unknown; to all the glorious dead and the valorous living we pledge anew our lives, our fortunes, and our sacred honor, that liberty, independence, and the happiness of our people, and the customs and institutions of our Nation, shall remain ours forever.

What constitutes a State?
Not high raised battlements or labored mound,
Thick wall or moated gate,
Nor cities proud with spires and turrets crowned;
Not bays and broad, armed ports,
Where, laughing at the storm, rich navies ride;
Not starred and spangled courts,
Where low-browed baseness wafts perfume to pride.
No! Men, high-minded men,
With powers as far above dull brutes endued,
In forest, brake, or den,
No beasts excel cold rocks and brambles rude,
Men who their duties know,
But know their rights, and knowing dare maintain,
Prevent the long-aimed blow
And crush the tyrant while they rend the chain;
These constitute a State.

Mr. PADGETT. Mr. Chairman, with reference to this amendment, providing that the battle cruisers shall be built within 24 months, I beg to say that none of the officers who appeared before the committee could give us any assurance that the ships could be constructed within that time. The department is doing all that it can. Delays have been occasioned by the shipbuilders themselves refusing to sign contracts. The Secretary has tried and tried to get contracts for Nos. 43 and 44 to be constructed within three months, and they will not even do that.

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. Certainly.

Mr. MADDEN. The gentleman states that the delay is due to the busy conditions of the private shipbuilding yards.

Mr. PADGETT. They will not bid on that time.

Mr. MADDEN. What about the navy yards that we own and control? We are not making any more progress in them than in the private yards.

Mr. PADGETT. We are doing the best we can.

Mr. MADDEN. Then we are not able to do very much.

Mr. PADGETT. The gentleman must remember that the great difficulty is in getting the steel and the materials. The steel mills of the country will not furnish the material nor agree to furnish it within that time.

Mr. COX. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. Yes.

Mr. COX. Will this further proposed amendment offered by the gentleman from Pennsylvania [Mr. BUTLER] help that condition, wherein it is provided that the Secretary of the Navy may increase the cost 10 per cent, if the trouble now is due to the inability of the department to get steel?

Mr. PADGETT. I think that would not help. This provision would simply hinder in the long run the construction of the ships. I shall ask the House to vote it down. The department is doing all it can to expedite matters.

Mr. GARLAND. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. Yes.

Mr. GARLAND. The gentleman stated that it was impossible to get steel. Does the gentleman mean now to infer that it is impossible to get armor plate?

Mr. PADGETT. No; I refer to structural steel. The armor plate can be furnished within about the time of two years or two years and six months.

Mr. GARLAND. Does the gentleman know that there are three armor-plate mills now idle in this country?

Mr. PADGETT. Yes; I know that.

Mr. FARR. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. Yes.

Mr. FARR. Was not the information before the committee that the Government could get all of the steel and iron that it wanted?

Mr. PADGETT. Not in the time, because the mills have been refusing to furnish it under existing contracts.

Mr. FARR. Did not the representative of the Bethlehem Steel Co., representing the Fore River Shipbuilding Co., say to us that they would guarantee to construct ships within two years?

Mr. PADGETT. I do not remember any such statement.

Mr. FARR. Mr. Grace made that statement.

Mr. BUTLER. Yes.

Mr. FARR. We ought to be able to do as well as Japan has done.

Mr. PADGETT. Japan is not building any.

Mr. FARR. Japan has built two in two years. I will read from the statement of Admiral Benson to that effect.

Mr. PADGETT. Oh, you get all sorts of reports. For instance, take England. The reports published about England as to when the ships are constructed, when you come to analyze them, are found to be inaccurate, because they have simply partially constructed the ships and the rest of it goes over under another name.

Mr. FARR. This is information that Admiral Benson put in his statement, and I will read it:

In December, 1913, each yard received a contract for a large battle cruiser. The *Kirishima* having been completed in 1915 by the Mitsubishi yard and the *Haruna* in 1915 by the Kawasaki yard. Both of these were present at the fleet review in honor of the Emperor's coronation in December, 1915.

The contract was made in 1913, and at this affair in honor of the Emperor's coronation they were completed in December, 1915.

Mr. PADGETT. That does not show they were fully completed. They may have been held there, just as we have had ships for months——

The CHAIRMAN. The time of the gentleman has expired.

Mr. PADGETT. Mr. Chairman, I demand a vote on the question.

Mr. BUTLER. Mr. Chairman, I hope the chairman of the committee will not do that.

Mr. FARR. Mr. Chairman, I move to strike out the last word.

Mr. BUTLER. Mr. Chairman, this is my amendment, and I move to strike out the last word.

The CHAIRMAN. The gentleman from Pennsylvania is recognized.

Mr. BUTLER. Mr. Chairman, I will ask the committee to give me its attention. There has been too much "round-the-table" talk. Gentlemen make a statement upon one side and some gentleman upon the other denies it. Let them go to the record for accuracy. The gentleman from Tennessee has said that no officer said these ships could be built within two years. In answer to a question put to him by Mr. OLIVER the Chief Constructor of the Navy said that under stress orders these ships can be built within two years, or about two years.

Mr. PADGETT. Under stress orders, working three shifts a day.

Mr. ROBERTS of Massachusetts. We are providing in the bill——

Mr. PADGETT. It is not necessary, as I said, and if you do that it will cost 25 per cent more to build the ships and you would have to add $5,000,000 to the cost of a $20,000,000 ship to do it.

Mr. BUTLER. Mr. Chairman, I do not want our esteemed chairman to hedge. We were talking about stress orders. We are endeavoring to have these ships launched and put in commission, and those we provided 15 months ago have not had their keels laid yet. I do not believe that *No. 43*, if that is the number of the battleship, will have its keel laid in the New York shipyard before Christmas, or that *No. 44* will have its keel laid in the shipyard in San Francisco before Christmas. Let the committee understand what we are doing. It is absolutely purposeless to vote these appropriations and not fix the time in which these ships shall be built. The Chief Constructor of the Navy, answering further, said—I am unable at this moment to put my finger upon his answer, but I will later, I am sure of it—that he can build these battleships in 20 months, and if gentlemen see fit to determine whether or not I speak accurately I suggest they examine the record. I repeat what I have already said, that the Chief Constructor of the Navy said that these ships can be built within two years, and then our esteemed chairman says it is not necessary to build them within that time. Let the country pass on the necessity of expedition in construction.

Mr. GORDON. Will the gentleman yield?

Mr. BUTLER. I yield to the gentleman.

Mr. GORDON. Was the statement of the chairman correct, that it would cost $5,000,000 more to build one in two years?

Mr. BUTLER. No.

Mr. GORDON. How much more would it cost?

Mr. BUTLER. Mr. Chairman, I want to answer the gentleman accurately. It is my impression it would be about 10 or 15 per cent more to build a great dreadnaught——

Mr. PADGETT. Will the gentleman yield?

Mr. BUTLER. I yield.

Mr. PADGETT. I have just received information that the General Board state that to build under stress orders the three ships would cost 40 per cent more. I said 25 per cent more a while ago, but I have received information that it would cost 40 per cent.

Mr. BUTLER. Mr. Chairman, our esteemed chairman turns at the last minute to some evidence none of us has had a chance to examine.

Mr. SHERLEY rose.

The CHAIRMAN. Does the gentleman yield to the gentleman from Kentucky?

Mr. SHERLEY. Mr. Chairman, I did not want to interrupt the gentleman, but I desire to be recognized when the gentleman has finished, in order to oppose his motion.

Mr. BUTLER. Mr. Chairman, has my time expired?

The CHAIRMAN. No; it has not.

Mr. BUTLER. I had handed to the chairman in advance the evidence that I had obtained from the General Board concerning the completion of these ships within three years. It was not furnished within a day or two, but it was last month. Since then everybody has had a chance to examine it. Let us play this game openly and above the table, so all can see what the others may have discarded. Now, let me repeat that a dreadnaught—listen—that a dreadnaught can be built within three years, and this Navy contended for by us can be completed within three years, each battleship costing $17,215,431.

Mr. PADGETT. Three years; that is a vast difference between two years.

Mr. BUTLER. Well, for the completion of these 16 ships within three years.

Mr. PADGETT. No; the gentleman said build a ship in three years. That is the statement he made.

Mr. BUTLER. If it is necessary to build some of these ships by increasing the cost, why, let us do it.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BUTLER. Mr. Chairman, I ask for one minute.

The CHAIRMAN. The gentleman from Pennsylvania asks unanimous consent to proceed for one minute. Is there objection? [After a pause.] The Chair hears none.

Mr. BUTLER. The country is not satisfied with the delay——

Mr. GORDON. Yes; they are.

Mr. BUTLER. You will discover your mistake. The country is not satisfied when we appropriate for ships to have their keels laid two years from the date of the appropriation. You consult your constituents and see whether they are satisfied, and you will discover they are not. We are going on record. It is proposed we shall duplicate these two battleships and build them upon the same plan of the last type—*Nos. 43* and *44*.

Mr. SHERLEY. Mr. Chairman——

Mr. BUCHANAN of Illinois. Mr. Chairman——

The CHAIRMAN. The gentleman from Kentucky [Mr. SHERLEY] is recognized.

Mr. BUCHANAN of Illinois. I am in accord with the Chairman's position that he give the floor to some one else than a member of the committee, but——

The CHAIRMAN. The gentleman will be in order and take his seat. The Chair under this rule will protect everybody's rights. The gentleman from Kentucky [Mr. SHERLEY] indicated that he intended to ask for recognition.

Mr. BUCHANAN of Illinois. I will say to the Chairman that I did it before the gentleman from Kentucky [Mr. SHERLEY] had the floor.

The CHAIRMAN. The Chair did not see the gentleman rise.

Mr. BUCHANAN of Illinois. I am not complaining. But I think it is a good plan to give some others the same chance as members of the committee. I am in complete accord with the Chair in that respect.

Mr. SHERLEY. Mr. Chairman and gentlemen of the committee, I believe that the overwhelming desire of every member of the committee is to speed up the building of battleships. But none of us likes to do a thing that may be unwise. It occurs to me, if it be not now the custom in the Navy, that it could well be made the custom with good results to offer bonuses for early

completion, as is done by private concerns. Now, an amendment of that kind would receive my support. I am not in a position to-day to determine whether these ships can be built in 24 months or not, and I do not want to tie up the department in its contracts, and perhaps, with the desire to hasten, actually delay the building of ships.

Now, the gentleman from Pennsylvania [Mr. BUTLER] sincerely believes it can be done. The gentleman from Tennessee [Mr. PADGETT] equally believes it can not. Some of us who are not able to follow the details of the hearings—and I have had enough experience in appropriation bills to know that only the few men on the committee can be accurately informed of the details—are properly in doubt. What I would like would be to have some one on the committee propose a proper amendment undertaking to pay bonuses, in the discretion of the department, for early completion—just as business men do—and without undertaking to tie hard and fast with a time limit or the amount of the bonus; but make it one in reason and leave it to the discretion of the administrative officers. The mistake that legislative bodies constantly make is undertaking to usurp the functions of administrative officers, and we have not the information and the knowledge to enable us to wisely legislate this way, but we have the opinion, which ought to be expressed, that we think there should be a speeding up in the building of these ships, and that we are willing to pay, as any other customer pays, for getting a thing done earlier than it would be done otherwise. Now, I suggest that in all good faith, as a common-sense business proposition, and I hope that some member of the committee will be prepared to offer an amendment to that effect, which I will gladly support. [Applause.]

Mr. BUCHANAN of Illinois. Mr. Chairman, if I may be permitted to digress for a moment on account of the Chairman apparently misunderstanding what I said before, I happen to be a member of the Committee on Naval Affairs, and it has been a practice of the Chairman to recognize members of the committee in preference to others. I have never been in accord with that practice. I believe that any Member of the House has equal rights with those of the members of the committee. But as it happened, I was on the floor when the gentleman from Pennsylvania [Mr. BUTLER] asked for the floor, and I sat down in favor of him, and therefore I thought I had at least an equal chance with my good friend from Kentucky [Mr. SHERLEY]. But in my statement that I was in accord with the Chairman in regard to the recognition of the gentleman from Kentucky, I was sincere.

When the Chairman talks about impudence, I want to say to the Members of the House and to the Chairman that it is not my purpose to practice anything of that sort. But let no one deceive himself, so far as I am concerned, in thinking that I am coerced or in any way frightened or bluffed on account of a fraudulent indictment by a crooked Federal officer in the city of New York, nor do not be deceived by the libelous statements in the mouthpieces of the munition traffickers, the big daily war-trust newspapers, that my rights have been impaired as a Member of this House.

I rose for the purpose of saying something in regard to this bill. If there was any great emergency that made it necessary to expedite the construction of these ships I do not believe that it would cost any great amount extra to work two or three shifts. I do not believe it would necessarily increase the costs of the ships to double up the shifts. It does not make it necessary to pay any more money to the workmen. But I do not see any emergency necessary for that. In fact, when I support this bill, as I may with the view of preventing a greater expenditure and waste of the people's money, I will feel that I am acquiescing in one of the greatest crimes that was ever perpetrated on the people of America, because there is absolutely no use for this increased expenditure for the Navy. There is less use for the increase than there has ever been in the history of the country, because any possible foe lies exhausted and bleeding, so to speak, and there has been proven beyond any question of doubt that battleships and craft of that sort are obsolete and inoperative, due to submarines, aircraft, and other destructive weapons. And still, due to the fact that the military hydrophobia seems to be prevalent in high places, we are acquiescing in what the representatives of the Steel Trust and other profit-seeking corporations of the country wanted when their propaganda was started more than a year ago. I will ask any Member of this House if he thought that when Judge Gary, the head of the Steel Trust, a year or more ago, proposed that this country spend $500,000,000 in preparedness the Congress of the United States would ever acquiesce in such a proposition as that. But that is the result of a propaganda that has been brought forth by the extravagant expenditures of money and by the purchase of newspapers that have diluted and poisoned the minds of the people both in legislative bodies and elsewhere to that extent that it seems to me that the problem begins to confront the people of this country, so that if they would listen to the wild-eyed expressions of the militarists and the jingoists the problem next to consider would be to criticize the Creator for not making the seas bigger, so that they will be able to hold the number of ships that will satisfy some of our militarists of to-day. I say to you that the people of this country are opposed——

The CHAIRMAN. The time of the gentleman has expired.

Mr. BUCHANAN of Illinois (continuing). To this proposition, and I want to say to my good friends from the city of Chicago and the State of Illinois that when the people realize and feel the burden of these unnecessary appropriations under the name of preparedness those who are responsible for it will be relegated to the political scrap heap.

Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

The CHAIRMAN. The Chair desires to make a statement. The House is proceeding under a somewhat unusual rule. The Chair desires to protect every Member of the House in his rights. Under the practice of the House the gentleman in charge of the bill has a preferential right to recognition. Recognition alternates from one side of the House to the other, and so far as possible the members of the Committee on Naval Affairs will be given preferential recognition. But the members of the Committee on Naval Affairs can not expect the Chair to permit them to monopolize all of the debate upon all of the amendments to be preferred to the bill. [Applause.]

The Chair intends, as in the case that has just happened, when some Member not a member of the committee upon the side of the House that is entitled to the next recognition indicates a desire to be recognized—unless the chairman of the committee in charge of the bill or the senior Member on the minority side claims recognition—to give recognition to such gentleman in order that all the Members of the House may be treated fairly. The Chair is not infallible, and is likely to make errors both in recognition and in rulings; and the Chair can only ask the indulgence of the members of the committee to be somewhat lenient when from one cause or another mistakes are made. It is the honest intention of the Chair to protect the interests of all the Members entitled to participate in the proceedings.

Mr. GILLETT. Mr. Chairman, I agree entirely with much of what the gentleman from Kentucky [Mr. SHERLEY] says. I think an admirable plan would be to grant to the department power to give a bonus for speeding up, but the gentlemen in charge of this bill have not offered anything of this kind.

Mr. PADGETT. Mr. Chairman, will the gentleman permit an interruption at this point?

Mr. GILLETT. Certainly.

Mr. PADGETT. I will state to the gentleman and to the House that it is my expectation to offer an amendment at the conclusion of the building program to give to the Secretary of the Navy at discretion an opportunity to offer a bonus for speeding up.

Mr. GILLETT. Mr. Chairman, I am exceedingly glad to hear that, and if it is offered, I shall certainly vote for it.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. GILLETT. No; I can not. I want to continue what I was saying. That proposition from the gentleman from Tennessee is an excellent one. I am glad it is going to be offered. But on the other hand, you can hardly expect this side of the House to accept the proposition which the gentleman from Kentucky [Mr. SHERLEY] suggested, that it is not well to tie the hands of the department or hamper Executive discretion when for the last 15 months they have had authority to construct two ships and not a keel has been laid. We certainly ought to try to do something unless some plan is suggested by the majority side to speed up.

Now, as the gentleman from Tennessee says, to use three shifts does not do the work three times as quickly as to use one shift. Actually it only does it two and one-half times as quickly, and it costs three times as much money.

The gentleman from Tennessee says it should only be done in time of stress. Does he not call this a time of stress? It seems to me it is a wrong theory upon which that side of the House has been acting. To me this is a time of stress, and to me expense is of little account compared with speed. I was surprised to hear the gentleman from Virginia [Mr. HAY] the other day telling us that the Army reorganization bill was not an emergency measure, but that it was only an ordinary measure. I

had supposed it was to meet a condition of emergency. The President had told us that firebrands were dropping all over the country, and I had supposed that was enough to impress this House that we were in a state of emergency. Always before, until last year, I had been on the side called the little Navy. I had been against an increase in the number of battleships. But I changed my mind because I supposed there was a great emergency confronting the country, and I supposed you thought we were in a time of stress, and that the one thing needed more than anything else was speed. Why, if this is not a time of stress, have you gentlemen on that side brought in this bill, so very different from the attitude you have always taken before? The reason why I changed my mind is because I thought an emergency faced us, a time of stress. I thought the old protection which made a large Navy unnecessary had gone, the balance of power in Europe had been upset, and the rule of reason and international opinion had been supplanted by the rule of force. We do not know what the conditions are going to be when this war in Europe is over, and I supposed it was for that reason that the gentlemen on that side of the House, abandoning their own theories, had brought in this bill.

If it is not a time of stress, why are you bringing it in? If it is a time of stress, then the emergency is pressing and time is the most important condition, and the one thing we want to accomplish more than anything else is to hasten whatever program is brought in; and I shall vote for any measure which does that. [Applause on the Republican side.]

The CHAIRMAN. The time of the gentleman from Massachusetts has expired. The question is on agreeing to the amendment offered by the gentleman from Pennsylvania [Mr. BUTLER].

The question was taken, and the Chair announced that the noes seemed to have it.

Mr. BUTLER. Mr. Chairman, inasmuch as this is the first amendment proposed on the speeding-up program, I demand tellers; not with the purpose of delaying the consideration of the bill.

The CHAIRMAN. Tellers are demanded.

Tellers were ordered, and the Chairman appointed Mr. PADGETT and Mr. BUTLER to act as tellers.

The committee again divided; and the tellers reported—ayes 96, noes 108.

So the amendment was rejected.

The CHAIRMAN. The Clerk will report the next amendment.

The Clerk read as follows:

Page 98: At the top of said page and before the words "Four scout cruisers, etc.," insert a new paragraph, as follows:

"Two first-class battleships to be of identical design in all respects as the battleships *Tennessee* and *California* authorized to be constructed in the act making appropriations for the naval service for the fiscal year ending June 30, 1916, approved March 3, 1915, to cost, exclusive of armor and armament, not to exceed $10,500,000 each, said battleships to be constructed within 24 months from the date of signing contract."

Mr. PADGETT. Mr. Chairman, I will ask the gentleman from Pennsylvania if he wants debate on this; and if so, can we agree upon time?

Mr. BUTLER. Mr. Chairman, in answer to the gentleman from Tennessee, I presume that the disposition of this amendment will largely dispose of the other amendments, because it will indicate the temper of the House, except on the subject of submarines. Therefore I ask that we may have a little debate. Some colleagues suggest 30 minutes on each side and then take a vote.

Mr. PADGETT. What would the gentleman say to 20 minutes on a side? We want to get through with this.

Mr. BUTLER. I want to facilitate the passage of this bill through this committee, but I think this will largely dispose of the dispute, except on the submarines, and I hope we can finish it this afternoon.

Mr. PADGETT. Then, Mr. Chairman, I ask unanimous consent that there be one hour debate on this, the gentleman from Pennsylvania to control one half the time and I to control the other half.

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent that debate on the pending amendment and all amendments thereto be limited to one hour, one-half to be controlled by himself and one-half by the gentleman from Pennsylvania [Mr. BUTLER]. Is there objection?

There was no objection.

Mr. BUTLER. I yield to the gentleman from Washington [Mr. HUMPHREY] five minutes.

Mr. HUMPHREY of Washington. Mr. Chairman, last summer I made a visit to the three forts at the entrance of Puget Sound. When I was there I went out to Fort Worden, which is the greatest of the three forts. The commander took me out to the heaviest battery, and I asked him what was the range of the guns in that battery. His reply was that the range was about 11,000 yards. Then I asked him what was the range of the largest guns upon a modern battleship, and his reply was about 21,000 yards. Or, in other words, a battleship could anchor in the Straits of Juan de Fuca, and without coming within 5 miles of the reach of our largest guns batter those forts to pieces.

So far as I know, there is not a single fort upon the Pacific coast that is so constructed as to defend itself from land attack. So, if we are going to have defense upon the Pacific coast at all, it must be by naval vessels. And I want to call the attention of the committee to the fact that there has never been a battleship squadron upon the Pacific Ocean but once, bearing the flag of our country, and that was on a brief holiday trip, when they went around the world. There is only one battleship upon the Pacific Ocean to-day, and that is the old, antiquated *Oregon*, and she is the only battleship that has been upon the Pacific Ocean for years. A single modern battleship could entirely sweep every vessel that we have off the Pacific Ocean, and lay tribute upon every city upon the Pacific coast.

We are often told that since the Panama Canal was constructed they can send a battleship squadron from this side through to the Pacific; but I ask you who think that is true to take down your map and look at it for a moment. You will discover that it is 1,500 miles farther from New York through the Panama Canal to Puget Sound than it is from Japan to Puget Sound; or, to put it in another way, if a battleship squadron started from New York and one started from Yokohama at the same time, both traveling at the same rate of speed, the one from New York going through the Panama Canal, their destinations being Puget Sound, the one from Yokohama would be in Puget Sound from 10 days to two weeks ahead of the one from New York. And if San Francisco was the objective point the difference would be from five to seven days in favor of Japan. So that if we are to have protection upon the Pacific Ocean it must come through a squadron permanently upon the Pacific. And what we upon the Pacific coast are asking for to-day, not for aggression but as a matter of defense and protection, is that Congress proceed to construct a battleship squadron and keep a navy upon the Pacific equal to that kept upon the Pacific by any other nation. [Applause.]

If I have any time, I yield it back.

The CHAIRMAN. The gentleman yields back two minutes.

Mr. BUTLER. Shall I yield again?

Mr. PADGETT. If you please.

Mr. BUTLER. I yield to the gentleman from Illinois [Mr. GALLAGHER] five minutes.

Mr. GALLAGHER. Mr. Chairman, I am in favor of two additional battleships and will vote for the amendment. [Applause.] I have voted for additional battleships every time I have had a chance to do so in this House. I voted for Capt. Hobson's program when it was looked upon as a joke in this body. I believe that a majority of the Members to-day realize the necessity of additional battleships, and I further believe I represent a majority of the Democratic Members from Chicago in this House who, with me, will support the amendment for the two additional battleships.

There is a great deal of talk here about our assuming second place. I am for a Navy that will take first place. I do not care whether it is a greater Navy than Germany has or a greater Navy than England has. I want it big enough to command respect no matter what kind of alliance is made against us. If we have a Navy that does not care for that of any other nation, then I am satisfied we are doing business in the right kind of a way. [Applause.]

We read in the papers that the mails are being interfered with by the British Government, mails coming to and going from this country. I do not believe that Great Britain has any right to interfere with the mails coming to this country, and I hope there will be a protest against it that will make them stop their interference not only with the mails, but with the commercial and business interests of this country that are trying to do business with other neutral countries.

Now, so far as this naval program is concerned, I do not come from a section of country that is going to make any profit by the building of additional battleships. We have no navy yards to look after out my way, but I am in favor of battleships as a necessity. Not only am I in favor of the battleships, but also additional submarines. I believe we ought to appropriate a sufficient amount of funds to put every navy yard in this country in proper shape to handle the business that we are going to make for the navy yards by this Navy program that we are adopting. The talk that we ought to assume second place among

the nations does not appeal to me in any way, shape, or manner. I believe that the United States is big enough, strong enough, and rich enough to assume first place as a naval power; that we have the money to do it with; and that we should not be niggardly about spending it for a good cause. [Applause.] We can secure plenty of funds for defense, and the country does not object to our spending the money in the right way.

The only objections I have ever heard to the spending of money as ordered by a legislative body was when the people believed that it was not spent rightly. If we convince the people that we are spending the money honestly, economically, and for the best interests of the people, I do not believe there is going to be any objection to it anywhere, and I do believe that the country is in favor of this naval program that we are going to try to put through, and I hope we will be successful in getting the two additional battleships. [Applause.] With the countries of the whole world forming alliances and the bringing together of the naval powers of four and five different nations as at present for offensive and defensive purposes, what is the use of our talking of assuming second place as against any other nation?

With the immense coast line we have to look after and our different possessions in the Atlantic and Pacific Oceans that will need protection, and with the Monroe doctrine to maintain, why should we be content to assume second place among the navies of the world? Because the navies of the powers now at war in Europe have cut little or no figure in that disturbance up to the present time, that is no reason or excuse for our not going ahead with our naval program. The very fact that England is the greatest naval power to-day gives her an advantage over her adversaries in that she can bring supplies for herself and allies from all sections of the world to the detriment of the countries with which she is at war.

We are not building a Navy for war purposes. Defenselessness invites insult. So far as we are concerned, we are building a Navy to maintain peace.

We are looking for no advantage over any other nation, but I do believe that we should build a Navy and assume a position that will maintain and secure to our people all that this republican form of government stands for. I am in favor of a greater number of men for the Navy than this bill provides for, and we should arrange for them. The great parades that are taking place in all the centers of population plainly indicates that public sentiment is in favor of preparedness, and the money to furnish all that is needed to make our country secure will be forthcoming.

This Congress will make a grave mistake if it allows other countries to proceed with their naval programs of building ship after ship, which will give them the advantage which they are after and at the same time the liberty to do as they please on the high seas, without we here and now make an effort while this bill is before us to help our country to continue to assume its proper place among the nations of the world. The safest way to preserve peace is to be in a position to maintain it. [Applause.]

Mr. PADGETT. Mr. Chairman, I yield five minutes to the gentleman from Illinois [Mr. BUCHANAN].

Mr. BUCHANAN of Illinois. Mr. Chairman, this amendment provides for the 24 months' proposition. The reason that the construction of battleships and submarines has been obstructed or arrested is because the industries of the country have been turned over to the disposal of the belligerent nations. Of course, if the administration that acquiesces in belligerent nations utilizing the industries of our country to manufacture machines of death really believed that there was an emergency confronting the people at this time it would not permit the allies to utilize the industries of the United States, but would bring pressure to bear on the manufacturers of the country to manufacture ships for the American Navy instead of the foreign nations.

It has been stated here that it is impossible to secure steel for the manufacture of these ships, which is true. That also applies to other industries of our country. Not only has the price of steel doubled and trebled as a penalty on the American people for their acquiescence in the despicable business of manufacturing machines of death to shoot down those who are our friends and to widow their wives and orphan their children to satisfy the greed of the financial and commercial pirates of Wall Street, who are the beneficiaries of the extortionate profits in munitions of war; but furthermore, one of the most important industries of our country, the building industry and construction work, is being arrested and obstructed by the abnormal high prices of steel and the inability to secure same as well as other building materials. Those responsible are giving the war as an excuse, but it is really the criminal trusts operating in violation of the law without regard for justice or equity.

Not only is the price of steel and building materials abnormally high, but the prices of all the necessities of the common people have increased by leaps and bounds due to the power of monopoly. This so-called Democratic administration is making no effort to protect the people against this infamous and outrageous plunder, and the silence of the "patriots" who are clamoring for these large and unnecessary expenditures of the people's money under the name of preparedness is quite significant when it comes to protecting the people against this high-handed robbery in the abnormally high prices on the necessaries of life being collected from the people by the invisible government, the house of Morgan, and their Wall Street allies.

I wonder what has become of the real representatives of the people, the men who stood steadfast in upholding the principles of real, genuine democracy. Has that brand of statesmen become extinct? Have they disappeared entirely from our legislative halls? We hear our legislators clamor loud and long in support of propositions that will not only rob the present generation of our people, but will prove disastrous and detrimental to the best interests and welfare of our posterity and the future of our country, but little is said by our patriotic legislators to protect the people from the arrogant plunder of the trusts and monopolies of our country.

So far as the battleships are concerned, if there has been any doubt about the obsoleteness and inoperativeness of a battleship, there is no doubt at this time after 20 months of the war in Europe, because Great Britain, with the greatest fleet, allied with France, Japan, Russia, and Italy, which leaves a surplus of battleships, with a battle ground within a few miles of their base of supplies, has not made a successful move. Ah, they say they have control of the seas; but they could have the same control with modern submarines and other vessels that are much cheaper to manufacture and maintain. But that would not satisfy the Munitions Trust and armor-plate ring, so we must build more battleships, that their greedy appetities for extortionate war profits may continue to be satisfied at the expense of the already overburdened wealth producers of our country.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. MAGEE. Mr. Chairman, I want to say a word in behalf of the American Navy, always our first line of defense, probably our main defense in case of foreign attack. If we are to protect and defend the Panama Canal, the construction of which has cost many millions of dollars, and the maintenance of which is so vital to the security of the country; if we are to uphold and promulgate the Monroe doctrine, as we must; if we are to continue to be the dominant power upon the Western Hemisphere, we must have a strong, modern Navy. If a foreign power should contemplate attack, it is quite likely that the first blow might be struck in Mexico or in Central America, or more indirectly in a threatened landing in South America. In such event substantially our sole reliance would be the Navy.

Why, then, should we haggle about increasing the Navy in accordance with the recommendations of our naval officers and experts? You sit here and in the most nonchalant manner vote millions of dollars from the Public Treasury in appropriations for good roads, rivers and harbors, rural credits, flood control, and for a governmental ship experiment, projects commendable or otherwise, but which are not so pressing but that they would keep a while. When, however, it comes to making provision for the defense of the country, the gentlemen across the aisle say that an increase of $100,000,000 for naval purposes at this time is sufficient. What we say is that the needs of the Navy now should not be measured by cost; that the cost is immaterial. If the Navy needs two more battleships, costing some $35,000,000, it is our duty to authorize their construction. [Applause.] I believe, as the distinguished gentleman from Illinois [Mr. Foss] said, that the battleship must be the dependence of the fleet, and that all other naval craft must be auxiliary thereto. The submarine is all right for purposes of defense and as the sniper of the sea, but the battleship is supreme.

Give the Navy the battleships. You need not worry about the cost. It will take a long time to build the ships. Create the obligation and some future Congress will gladly pay the bill, and perhaps, by indirect means, to the material relief of the taxpayers. It is unfair to tax the State of New York heavily for every kind of experiment and then refuse needed appropriations for the national defense.

The American Navy should be our pride. [Applause.] We should be proud of its personnel, proud of its achievements, proud of its traditions. In all the history of the Republic I

do not recall that the American Navy has ever been whipped upon any lake or upon any sea. [Applause.] Whenever the Navy has been called upon for action it has performed its work with marked efficiency and success. It has defended and upheld the honor of the country at all times, at all places, and at all hazards. No one has ever questioned the fighting spirit of the Navy, its absolute devotion to the country, and the remarkable daring of its officers and men. It must be a great pleasure for a real American citizen to honor and salute the American Navy—our greatest safeguard and our best guaranty of peace. [Applause.]

Mr. PADGETT. Mr. Chairman, I yield five minutes to the gentleman from Missouri [Mr. RUCKER].

Mr. RUCKER. Mr. Chairman, my observation is that there are three classes of American citizens when it comes to the consideration of the bill now pending. All of these classes are represented upon this floor. There is one class represented by some of the gentlemen who have spoken here to-day which thinks that no naval program that the mind of man can conceive is too great. They would go to the utmost limit of the most hysterical advocate of a big navy, and they tell us, as has just been said, that when it comes to battleships the question of dollars and cents ought not to be considered. There is another class, a somewhat larger class, which believes that we need no preparation for defensive purposes at all. That class has some representation here, but not much. There are those in the country, loyal and patriotic citizens, who believe that this whole alarm, this whole theory of national "preparedness," is not well founded; that no hidden danger lurks anywhere and that we can go on in the peaceful ways we have been pursuing with absolute safety, without taxing the people one dollar for additional battleships. There is another class, and a much larger class, which believes in preparedness along reasonable lines, not because they are alarmed by the apprehension that some nation may cross the waters and assail us, but because they realize that some nation might do so, and therefore in order to protect the integrity of this great Government from encronchments from any power or from all powers on earth they favor a reasonable preparedness. For the first time since I have had the honor to serve on this floor I find myself in the frame of mind to support a great naval program.

I can support most heartily the pending measure. I support it, not because I believe there is danger but I support it because there might be danger; but, feeling as I do about it, I am not going to cast my vote to impose a burden of taxation upon the American people, already heavily burdened, which no circumstances in the present and no reasonable apprehension of the future justifies. When I have voted for a measure like the one now pending I feel that I have discharged every patriotic duty that I owe, and I feel at the same time that I am keeping in mind my obligations as a Representative not to overtax and unnecessarily burden the taxpayers of this Republic. If our country was in imminent danger, I would join those who think the amount of appropriation should not be considered.

Mr. Chairman, much is being said here about the necessity of speeding up—hastening the construction of battleships. My notion is that even in the slow processes employed at the present time every war vessel authorized in this bill will be constructed long before it will become necessary for this Nation to fire a single shot in defense of our national honor or in the preservation of the safety of our people.

The CHAIRMAN. The time of the gentleman from Missouri has expired.

By unanimous consent, Mr. RUCKER was granted leave to extend his remarks in the RECORD.

Mr. BUTLER. Mr. Chairman, I yield five minutes to the gentleman from Wisconsin [Mr. STAFFORD].

Mr. STAFFORD. Mr. Chairman, the bill reported by the committee is lame and lacking in naval preparedness. How any committee can justify in this critical time a bill that does not provide for any first line of battleships is hard for me to understand. True, they bring in a bill providing for five battle cruisers, but they acknowledge in apology for that lame policy that they are merely auxiliary to the fleet to be used as scout cruisers, not in any wise to be utilized in time of real action on the firing line. The apologists say that during the present European war the dreadnaughts have not shown their efficiency. They have not been called upon so far in any battle to determine whether they are more efficient than any other arm of defense. England has by her superior number of dreadnaughts controlled the sea and has prevented up to the present time any conflict with the navy of the central powers. In these times not to provide for one or two battleships seems to me to be deserting the naval program entirely. Let it go out abroad to the foreign countries that the bill to be passed by this House provides for no real battleships, and it will be reasonably understood that this Government is deserting its policy of providing adequate fighting ships. I hold in my hand a report of the naval board as late as May 3 last, in which they recommend not two dreadnaughts, but six dreadnaughts, to place this Government second in naval power in the world. No one can claim that but two are unreasonable.

Mr. MONDELL rose.

The CHAIRMAN. Does the gentleman yield?

Mr. STAFFORD. In a moment. Heretofore I have in my votes in times past voted for one as opposed to two battleships; but I believe that in these times we should prepare as a matter of insurance to adequately equip our Navy. With the equilibrium in world affairs completely destroyed, it is safe and sane, at least until normal times are restored, to continue to maintain our fighting force. I yield to the gentleman.

Mr. MONDELL. Mr. Chairman, I was about to ask the gentleman if I was correct in my recollection of a year or two ago that the gentleman voted for only one capital ship of any kind?

Mr. STAFFORD. I just stated that heretofore in times past I did.

Mr. MONDELL. This bill provides for five.

Mr. STAFFORD. The bill provides for five auxiliary cruisers, and the chairman of the committee in all his talk could not explain away the fact of not providing for some battleships that would be used in the first line of attack, and here we have the General Board advocating six dreadnaughts, and the amendment under consideration is for but two, a very reasonable proposal. There are many Members on our side who have voted heretofore for but one battleship; but our vision has changed, the times have changed, and we recognize the crucial and critical condition that may beset this Government at any minute, and, if for no other reason than that of insurance, I believe that we should provide for two battleships in this bill. [Applause.]

The CHAIRMAN. The time of the gentleman from Wisconsin has expired. The gentleman from Alabama.

Mr. OLIVER. Mr. Chairman, I assume that the gentleman from Wisconsin [Mr. STAFFORD] who has just spoken makes no claim as a naval expert, nor is this claim made by any member of the Committee on Naval Affairs. The gentleman seems to be greatly surprised and shocked that the bill as proposed by the majority of the committee recommends the building of battle cruisers and fails to include in the building program any battleships. This report of the majority is in strict accord with the views and advice of the best recognized experts of our Navy, and in our Navy can be found the brightest and most accomplished scientists and the greatest naval experts of the world. The admiral in charge of the Atlantic Fleet, Admiral Fletcher; the admiral in charge of the Pacific Fleet, Admiral Winslow; the head of the War College, Admiral Knight; and the commander of the *Nevada*, Capt. Sims, than whom there is no more distinguished or capable officer in our Navy; and other distinguished officers have urged and strongly advised the committee to exclude battleships from the building program and to include only battle cruisers, provided the building program adopted for capital ships by Congress at this session is to be a limited one. On page 2637 of the hearings Capt. Sims states as follows:

Capt. SIMS. If you built 10 battleships right now and you had no battle cruisers, you would be up against it if you got into a war with a country that had them. Such an enemy could take his fleet practically where he pleased, as he did in the war game last May, and you would know nothing about it until he got his 40-centimeter guns planted on the shore to keep your fleet off.

The CHAIRMAN. Just for purposes of assumption, and to illustrate your opinion: Suppose that the committee should report in favor of four capital ships, would you recommend, under all the existing conditions in our Navy, that there should be four battle cruisers and no dreadnaughts, or two battle cruisers and two dreadnaughts?

Capt. SIMS. Without the slightest hesitation I would recommend the four battle cruisers, and if the following year you should decide on four more capital ships, I should recommend that you build four more battle cruisers, until we had eight or nine battle cruisers before we built any more battleships, because you are up against it if you have not got them.

Mr. ROBERTS. If we should recommend eight capital ships this year, you would recommend that they be eight battle cruisers?

Capt. SIMS. Absolutely. I do not want you to take this solely as a personal opinion from me, but what I base it on is this: I have talked it over, of course, with a good many other people. In fact, away back in 1912, I was required as a student at the War College to write a paper on the tactics of the whole fleet. My analysis brought out very strongly then the necessity of the battle cruisers. However, what impressed me much more than my own opinion—and it is something to be able to say that, sometimes—was that the War College itself, represented by a man who came down here to talk to you about it, recommended six, and finally changed his mind to nine, battle cruisers. That was not solely Admiral Knight's personal opinion, I believe. That was an opinion he has doubtless formed by association with 40 officers at the college, who are fighting battle after battle against each other, where they see the necessity of the battle cruisers; and if I did not know anything about it, and had not made any study of the subject at all, I would unhesitatingly, as I would in a good many other cases, bend my own opinion to that of a man who comes here to represent the War College, because if the War College is wrong in those matters there is only one thing for you to

do, and that is to abolish it as soon as possible, because that is the institution of practical fleet officers that is telling us how we should handle our fleet when we come to war; and God knows if it is wrong it wants to be suppressed right away. The Navy has been run long enough on individual opinions, and it is time to make use of all the accumulated brains and experience we can get together for thorough continuous discussion.

On page 2692 of the hearings appears the further statement:

Capt. SIMS. I would like to see eight or nine battle cruisers built at the earliest possible date. That would enable us to put up a good stand against anybody who might come on us.

Mr. BUTLER. Would you discontinue building dreadnaughts?

Capt. SIMS. Until I had those cruisers, yes, sir, absolutely, because if you build 10 more dreadnaughts of the most powerful character in the world, you have not anything to screen them, and the enemy can come after you in the night with his torpedo-boat destroyers, submarines, etc.

I also strongly commend to the gentleman the very graphic description given by Capt. Sims of a final attack on the fleet recently planned, and played out in the Caribbean Sea, and which demonstrates the use and value of battle cruisers and the absolute helplessness of battleships against night torpedo attack. This will be found on page 2694 of the hearings.

The gentleman should also carefully consider the very interesting and informing statement by Admiral Knight on page 2013 of the hearings, as follows:

Admiral KNIGHT. As regards the battle cruiser, I will say that I never agreed with that statement as to battle cruisers, and I do not agree with it now. You will understand, of course, that there are differences of opinion in the General Board, just as there are differences of opinion elsewhere, and I thought on the 9th day of November, and I think now, that the battle cruiser has shown itself to be very much more important than it was believed to be in the beginning of the war.

The CHAIRMAN. Your recommendation with reference to postponing the construction of battleships at the present time and emphasizing the importance of the immediate construction of battle cruisers is made in view of our particular situation, having the number of battleships we have and having no battle cruisers?

Admiral KNIGHT. That is one part of my reason, and there is another part, which I tried to bring out when I made my statement. It is that I believe the design of battleships to be now in a condition of flux. I believe that within the next year changes will be made, not in the essential nature of the battleship, but in its detailed nature, which will enable us a year from this time to design a battleship which will meet measurably some of the dangers which have developed during this war.

And then on page 2014:

The CHAIRMAN. With those limitations?

Admiral KNIGHT. Yes. But I think I ought, before closing, to bring in this point which I have not made fully; that is to say, that the experience of the War College, repeated day after day and month after month and year after year, emphasizes the absolutely vital necessity for scouts and battle cruisers. Of course, if we could make them all battle cruisers, as was said in that report, that would be fine, because then the moment contact is made with the enemy, the battle cruiser breaks through their scouting line and finds out what is behind it. When he comes closer to the enemy, he finds the enemy's main fleet, surrounded by what we will call a defensive screen, and he is able to make touch with that, and perhaps to break through it and find out what lies beyond it. In other words, he has all the powers of the scout and a great many more, as stated in the General Board's report; but if we can not have every one of our scouts a battle cruiser—and it seems a little too much to ask—then we should have our line of scouts backed up by battle cruisers, so that when the scout sees something that looks a little dangerous, he calls for the battle cruisers to deal with the situation.

This is the experience of every officer who comes to the War College. Officers come there not very friendly to the battle cruiser; they do not know just what it really is. But I venture to say there is not one of them there now, and there are 36 there, who to-day would not say, "Give us battle cruisers first of all." Before I left there to come down here, a number of officers urged me to speak out strongly for this type.

And then, on page 2066, Admiral Knight says:

In other words, I wish you to accept what I say about the needs of battle cruisers and scouts as coming not from me individually, as Rear Admiral Knight, but as coming from the president of the War College and from the War College; and I really think that that entitles me to ask you to attach more importance to it than you attach on that one point, about types of ships, to the statement of almost any other officer who can come before you. We try these things out there week after week and month after month and year after year, and we have been driven irresistibly to the conclusion that a considerable number of battle cruisers and a large number of scouts are an absolute necessity. So that I say I claim to speak on that subject with an authority quite different from that of officers who have only the general experience of service behind them.

About the number of battle cruisers: During the course of my remarks yesterday I think I made it clear—I hope I made it clear—that the number for which I was standing was the largest number that could be built, and it was represented yesterday that more than I had suggested could be built. I have made some inquiries since, and have satisfied myself that more could be built, and I should therefore like to be understood as standing not for six but nine battle cruisers. I think that was implied all through my testimony yesterday, but I did not make it as definite as I wish to make it now.

From these statements and many others set out in the hearings made by naval officers before the committee it will be seen that they now recognize we have emphasized too much in the past the building of battleships and have neglected to build that valuable, indispensable type of capital ship called the battle cruiser. It was forcefully pointed out that in order to make efficient the fleet we now have it was of supreme importance to devote our attention to the building of battle cruisers until we construct at least six or eight of this type. Admiral Knight called attention to the further fact that it was wise to postpone the further building of battleships, not only because we now find an urgent need for battle cruisers but because many lessons of great value will be later learned from the present war, and we can wisely appropriate the information thus obtained if the now unnecessary construction of battleships be postponed.

Mr. STAFFORD. Is not the entire testimony which the gentleman refers to merely in justification of the need of battle cruisers and not as against the need of dreadnaughts?

Mr. OLIVER. None of the officers appearing before us discredited in the slightest the value of the battleship.

Mr. STAFFORD. That is my point. I am not speaking against the battle cruisers; I say they are needed.

Mr. OLIVER. The gentleman has fallen into this error, however, that he fails to recognize that according to the high expert opinion from which I have heretofore quoted we now have a fleet that is unbalanced, because we have a number of battleships and absolutely no battle cruisers. The military value of the battle cruiser is so great as to cause all of the naval officers to now advise the immediate construction of these cruisers, and many of the officers, as I have already shown, urge with great emphasis that no more battleships be constructed until we shall have added at least six or eight battle cruisers to our fleet.

There must be some rational limit set on the amount to be appropriated at this session of Congress for the building of capital ships, and the committee feels that the large sum of $100,000,000, which this bill carries for this purpose, represents the rational, nay the extreme limit. This sum is more than three times what any Congress in the history of this country, prior to the Sixty-third Congress, ever appropriated for the building of capital ships, and surely no one will insist that three times the amount heretofore appropriated by a single Congress at one session is not a reasonable limit upon the appropriation to be made at this time. The committee has endeavored in planning the building program to follow the advice of the well-recognized experts.

Mr. MEEKER. Would the gentleman suggest that the recommendation of the General Board is irrational?

Mr. OLIVER. I will say to the gentleman that Admiral Knight, who is in charge of the War College, is a member of the General Board. He stated to the committee that at the time the General Board made its recommendations differences of opinion were then entertained as to the importance of emphasizing the building of battle cruisers to the exclusion of battleships. He further said that his study of the use made of battle cruisers in the foreign war and their very great importance, as shown in the games played at the War College, now clearly demonstrated to him and the other officers of the War College the urgent and impelling necessity of adding a large number of this type to the fleet.

As early as 1905 England began the building of battle cruisers and Germany laid down the same type of ships in 1907. Our officers all frankly admit that until recently they had not become thoroughly convinced of the great importance of adding this type of ship to our fleet. They now find that to send our fleet of battleships to sea without battle cruisers would be like depriving it of its real eyes. The battle cruiser which this bill proposes to build will have a speed of not less than 35 knots and will carry either ten 14 or eight 16-inch guns, and will be a vessel of wonderful destructive power and of great informing power, powerful enough to drive in or destroy the cruiser screen of any attacking fleet and discover readily the whereabouts of such attacking fleet, and communicate that information to its own fleet, thereby opening the way for torpedo attack at night on the battleships of such attacking fleet. I feel that this House, in the light of this overwhelming expert advice, will fully concur with the majority report recommending the building of five battle cruisers to the exclusion of battleships. The importance of this type of capital ship in the developing and balancing of our present fleet can not be overestimated. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. BUTLER. Mr. Chairman, may I make an inquiry? How do we stand as to time?

The CHAIRMAN (Mr. SAUNDERS). The gentleman has 12 minutes remaining and the gentleman from Tennessee [Mr. PADGETT] has 5.

Mr. OLIVER. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD?

The CHAIRMAN. Is there objection?

There was no objection.

Mr. BUTLER. Mr. Chairman, I yield five minutes to the gentleman from Ohio [Mr. RICKETTS].

Mr. RICKETTS. Mr. Chairman and gentlemen of the House, the question of preparedness has been the chief topic of public discussion of the American people for the past year. Congress, from the very beginning of this session, has had this question under consideration at various times. The debate in the House has been heated at times between Members favoring the proposition and those who are opposed to it. The result of these debates has developed that the membership of this House is divided into three separate and distinct classes with reference to the question of preparedness. First, the class known as favoring a small navy; second, the class known as favoring a large navy; and third, the class favoring a slight addition to the present Navy. There is another class of individuals known as the pacifists who do not believe in the maintenance of a navy. This latter class is small and has not made great headway in support of its claims.

I have listened to the various discussions on this floor with reference to this great problem. I have read all the literature that I could get hold of on the subject. Since last Saturday I very carefully have read the bill through two or three times. I have read the report of the Committee on Naval Affairs of the House, and I have also read the minority report of that committee; and I have listened to the debate since last Saturday morning, and, after having this matter under consideration for some considerable time, and after having sifted the arguments pro and con, I have reached the conclusion that this country should have at least the second best navy in the world. No other country has so much coast line to protect as we have, and the coasts of our country can be protected only in one way, and that is by a good, strong, and efficient navy. We do not need as large a navy as England, because England has possessions scattered all over the world. She is required to use the seas in order to acquire raw material for her manufacturers and certain foodstuffs for her citizens. She is a dependent nation, while ours is an independent Nation to a very large extent. We can live within our own resources. England survives by the resources that she obtains from other countries.

I have never been in favor of a large standing army. Our present emergency military strength is about 631,000, officers and men. Our normal military strength in time of peace is about 200,000 men, and, to my mind, this is even a greater army than is necessary in time of peace. I opposed the continental army scheme, because I thought it tended too much toward national militarism. It has always been my belief that in order to stimulate the Army of this country the National Guard should be federalized, and the President should be empowered with the authority to require military service on the part of the guard in the event of an emergency. Under the Hay bill, that passed during this session, these provisions have been provided for, and the Hay bill is now a law.

There is a great diversity of opinion with reference to the size of the Navy that should be maintained on the part of this Nation, as I said in the beginning.

Even the naval experts can not agree as to what the size of our Navy should be, and that makes the problem much more difficult to the ordinary man.

OUR PRESENT NAVY.

I shall here give a summary of the vessels of the United States, as shown by the report of the Secretary of the Navy, up to and including July 1, 1915. We have in the Navy—

First-line battleships	8
Second-line battleships	25
Armored cruisers	10
First-class cruisers	5
Second-class cruisers	4
Third-class cruisers	15
Monitors	9
Destroyers	53

This Government has under process of construction—

First-line battleships	7
Destroyers	15
Submarines	22
Tenders for torpedo boats	2
Gunboat	1
Transport	1
Supply ship	1
Fuel ships	2
Total	50

We have authorized the construction of the following:

First-line battleships	2
Destroyers	6
Submarines	18
Total	26

INCREASE OF NAVY.

It is proposed by the present House bill 15947, known as the Padgett bill, to increase the Navy as follows:

Battle cruisers	5
Scout cruisers	4
Destroyers	10
Submarines of a surface displacement of about 800 tons	3
Small submarines	17
Fuel ship	1
Ammunition ship	1
Hospital ship	1
Total additional ships	42

This addition is recommended by the Committee on Naval Affairs on the theory that it will better balance our fleet and increase its fighting efficiency. The majority report of the committee states that this bill recommends an appropriation of $142,389,773.99, exclusive of the increase of the Navy, and for the increase to the Navy it recommends an appropriation of $98,859,378, and then states that for the expenses of the peace commission, it advises and provides for the appropriation of $200,000, making a grand total of $241,449,151.99, which is an increase over the total appropriation for this purpose of last year of $91,781,278.11.

This bill does not provide for the building of any dreadnaughts. Some of the gentlemen upon the floor of this House have insisted that such a provision should be made in order to make our Navy more stable. It will require about five years to make the additions proposed in this bill.

The question of increasing the Navy is not a political question. It is one that interests the people of the Nation as a whole, and our action in connection with this bill should be moved by a spirit of patriotism, and any attempt to inject politics into it should pale into insignificance.

During the administration of President McKinley, in the two Congresses of his first term, we authorized the building of the *Maine*, the *Missouri*, the *Ohio*, the *Georgia*, the *Nebraska*, the *Virginia*, the *New Jersey*, and the *Rhode Island*—a total of 8 ships in three years. Then, under the McKinley-Roosevelt administration, in the Fifty-seventh Congress, we authorized the building of the *Connecticut* and the *Louisiana*. During the first session and the second session we authorized the *Idaho*, the *Kansas*, the *Minnesota*, the *Mississippi*, and the *Vermont*. In the Fifty-eighth Congress we authorized the *New Jersey*, the *Michigan*, and the *South Carolina*—a total of 10 battleships in four years under Roosevelt's administration. During the four years of Roosevelt's second administration we authorized the *Delaware*, the *South Dakota*, the *Florida*, the *Utah*, the *Arkansas*, and the *Wyoming*—a total of 6 ships. In the Sixty-first Congress, during the first two years of President Taft's administration, we authorized the building of the *New York*, the *Texas*, the *Nevada*, and the *Oklahoma*. So it is plain that during the 14 years under McKinley, Roosevelt, and Taft we authorized the building of 28 battleships. The Sixty-second Congress was Democratic, and that Congress authorized but 2 battleships. In 1910 our Navy ranked second among the navies of the world; to-day it ranks fourth. It is therefore evident that our Navy since 1910 has been on the decline, and in my judgment this should not have happened. Had it not been for the great, cruel, crushing war that broke out in Europe it is possible that the people of this Nation would have been lulled into an unenviable position with reference to its Navy. There is but one way by which the coasts of this country can be defended, and that is in and through the Navy. The Navy is the first line of defense to our country, and I am one Member in this House who believes in building and maintaining a Navy second only to that of England. If we could look into the future and determine what a day, a week, a month, or a year might bring forth, then in all probability we would not need to spend this vast amount of money in strengthening the Navy, but we can not determine what the future holds in store for this or any other nation. There is no way by which peace may be guaranteed to the people of this Nation. There is but one way by which the interests of the people of this Nation may be protected from invasion by any foreign foe.

At present we are at peace with the world; and let us hope that we may continue at peace for all time to come. While I am in favor of a large Navy, at least one large enough to defend us against attack of any nation, yet it is my sincere hope that the time will never come when we will need our Navy except for the sole and only purpose of delivering a salute to the Stars and Stripes. We all want peace now and forever. I believe the les-

son that American citizens are getting from the great, brutal war that is raging across the seas will incline our people to the pursuit of peace, and let us hope and pray that our people may continue to be a peace-loving Nation. Washington said, "War is to be abhorred," and everybody knows what Sherman said about it.

I am going to support this bill, although it is not what I had hoped it would be; but, after having studied the matter carefully, I am inclined to believe it to be my duty to support it, and I shall be governed in this matter by the dictates of my conscience after mature and earnest deliberation. [Applause.]

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. RICKETTS. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. GALLAGHER. Mr. Chairman, I make the same request.

The CHAIRMAN. The gentleman from Illinois [Mr. GALLAGHER] asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. BUTLER. Mr. Chairman, how many minutes have I remaining?

The CHAIRMAN. The gentleman has seven minutes.

Mr. BUTLER. I yield seven minutes to the gentleman from Missouri [Mr. MEEKER].

The CHAIRMAN. The gentleman from Missouri [Mr. MEEKER] is recognized for seven minutes.

Mr. MEEKER. Mr. Chairman, there is just one question before this Congress, and that is, Are we satisfied in our own minds that the provisions of this bill provide ample defense for our coast line? If it does not do that, the bill is not what it should be. Anything short of ample defense is only a little better than none.

The chief discussion here seems to be between the value of a cruiser and a battleship. I have listened patiently and carefully to all the addresses while I was here on the floor, and I have read those that were made when I was not here. As I understand it, to use the parlance of a landsman, a battleship is a floating fortification. On the Pacific coast to-day we have on the sea, if I am correctly informed, no gun greater than an 8-inch gun on any ship. Japan is equipped with 14 and 15 inch guns, and if any man on the floor of this House will take the time to go out here to the navy yard and see that tiny little 8-inch gun alongside of a 14-inch or a 16-inch gun and look the people of this country in the eye and say he believes that those 8-inch guns can keep off a 16-inch gun, he will declare that we can do the impossible thing.

Why is it that you refuse consistently and constantly to put at least two floating forts on the Pacific coast, equipped with guns of sufficient range to outreach any gun from any quarter whatever? I can not understand it.

Mr. HUMPHREY of Washington. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Missouri yield to the gentleman from Washington?

Mr. MEEKER. Yes.

Mr. HUMPHREY of Washington. I want to suggest to the gentleman that according to naval authorities—and I am not one—all the vessels we have on the Pacific Ocean would be able to make no resistance whatever to a modern battleship.

Mr. MEEKER. Am I correct in saying that they have only 8-inch guns there?

Mr. HUMPHREY of Washington. That is my information.

Mr. MEEKER. Now, Mr. Chairman, it is not a question of patriotism. I am getting weary of men getting up on each side of this aisle and assuring the country of their patriotism before making their arguments. It is a question of practical sense. Does anybody believe that an 8-inch gun will take care of a 16-inch gun, and that patriotism will add 8 inches to the deficiency of the gun? [Laughter.] There are some men who would like to substitute their speeches and their "hot air" for guns, but it will not do in war. Why is it that men who on this floor and before this committee plead that you extend the range of the guns so that they will make up the difference in the range between our guns and those of other nations? We do not know who our enemy will be, but the question is, Will we be able to overreach the guns of other nations? Why is it that we men here are charged with being in the hands of the trust, or scared to death, one or the other?

I do not suppose the gentleman from Texas would start out to meet a Texas Ranger and himself be armed with a .22 gallery target pistol. When you start out on land to meet a man who carries a .45 you do not go armed with a set of resolutions. You try to be equipped with something a little better than what he has. Yet because men here are pleading for the arming of the Pacific coast with guns of sufficient range to match the range of any that may come against that coast we are charged with being sold out to the trusts, charged with being scared to death. You on the Texas border would be mighty glad to know that on this side of the line there were soldiers enough with guns enough to reach a little farther than the greasers could shoot. But when men come from the Pacific coast and ask you for adequate protection you say they are frightened to death. Men in the harbors of Boston and New York have the same right to protection as have you.

I am from St. Louis myself, and it would take an enemy a long time to reach us; but I say that the man from the safe interior of the country who is not as much concerned in the protection of our coasts and our seaports and in the protection of every American as is the man who lives at the water's edge is not to my mind a real, thoroughbred, all-around sportsman. [Applause.] The man who thinks only of the safety of his own hide is not, as I understand it, a true American. [Applause.] Of course I know plenty of you gentlemen here do not take much stock in what your President says. You might as well admit it. [Laughter.] He has told you to jump through on this bill, and you will jump through. Almost all of you men here have said that your Secretary of the Navy and your General Board are advising a big naval-construction program. You gentlemen are going to turn down their recommendations for the construction of additional battleships. [Applause on the Republican side.]

[Mr. LANGLEY addressed the committee. See Appendix.]

Mr. PADGETT. Mr. Chairman, in the outset I simply want to say, in answer to a good deal of what the gentleman from Missouri [Mr MEEKER] has said, that there is not a ship provided for in this bill that carries an 8-inch gun, or is intended to do so. So all of his dissertation about 8-inch guns is beside the question. The battle cruisers are to carry either 14-inch guns or 16-inch guns, it has not been decided which.

Mr. MEEKER. Does the gentleman wish the House to understand that he considers a battle cruiser as competent to meet a battleship?

Mr. PADGETT. Not in a pitched battle; no. They are not intended for that; but with the 42 battleships that we have and no battle cruisers, as I said the other day, every naval officer who appeared before our committee said that the effective ships that are needed now above all others are battle cruisers, to make effective and efficient the battleships that we now have, to round out the battle fleet that we have.

Another thing. The gentleman said that we did not follow the recommendation of the Secretary of the Navy, who recommended a big program. I want to say that we have reported a bigger program than he recommended, so that falls to the ground.

Mr. MEEKER. Will the gentleman yield?

Mr. PADGETT. I have only five minutes.

Mr. MEEKER. Did not the Secretary recommend the building of battleships?

Mr. PADGETT. We put in five battle cruisers, and that is better than he recommended. We have a better program. Now, the simple proposition is this: I dare say that if the committee had recommended three battle cruisers and two battleships, there would have been no fight here between battleships and battle cruisers. But the committee took the advice of the naval authorities and recommended five battle cruisers, because they would be better and more efficient, and meet the naval conditions far better than two battleships and three battle cruisers. Because we have left out the battleships, you take up the words, and you are making a shibboleth out of the names "dreadnaught" and "battleship." The thing I want to emphasize is that five battle cruisers are better than two battleships and three battle cruisers; yet, as I have said, if we had divided the five ships, and had reported two battleships and three battle cruisers, I dare say there would have been no controversy in this House.

Now, this amendment imposes a limit of 24 months on construction. If that goes in, there is not a shipbuilding yard in this country that will bid on these ships. You can not get it, and you might just as well understand it. I am opposed to it, because I do not want to hamper the construction of our program.

Now, I submit again, as I submitted before, that the program we have submitted to the House, carrying $160,000,000 for new construction, as against $50,000,000, the biggest amount ever reported in any bill heretofore in the history of the Congress of the United States, an increase of about $110,000,000 in one year.

meets the legitimate and proper demands of the country. In the next session, which meets in about eight months from now, we will have another bill, in which this Congress will meet the necessities and requirements of that time, and we will have a Navy that will be, as the American Navy always has been, the pride of the American people. [Applause.]

I want to say that I have got no patience with those who are going around libeling the Navy that we have. [Applause.] Ship for ship, gun for gun, man for man, it is the best Navy in the world. [Applause.] Take it and compare the ships, compare the qualifications of our officers, compare our guns, and there is no navy in the world that will equal it. And this program which we are now about to adopt will put it forward by leaps and bounds.

Mr. Chairman, I ask for a vote. [Applause.]

The CHAIRMAN. The time of the gentleman has expired. All time has expired. The question is on the amendment proposed by the gentleman from Pennsylvania [Mr. BUTLER].

The question being taken, on a division (demanded by Mr. BUTLER) there were—ayes 104, noes 116.

Mr. BUTLER. Mr. Chairman, I ask for tellers.

Tellers were ordered, and the Chairman appointed Mr. BUTLER and Mr. PADGETT.

The committee again divided; and the tellers reported—ayes 114, noes 130.

Accordingly the amendment was rejected.

The CHAIRMAN. The Clerk will report the next amendment.

The Clerk read as follows:

Page 98, line 1, strike out the word "four" and insert in lieu thereof the word "six."

The question was taken, and the amendment was rejected.

The CHAIRMAN. The Clerk will report the next amendment.

The Clerk read as follows:

Page 98, line 5, after the word "each," insert "said scout cruisers to be constructed within 15 months from the date of signing contract."

Mr. ROBERTS of Massachusetts. Mr. Chairman, I suggest that amendment be not voted on, inasmuch as it was dependent on the previous one, which was rejected.

The CHAIRMAN. The committee must dispose of the amendments.

The question was taken, and the amendment was rejected.

The Clerk read as follows:

Page 98, line 6, strike out the word "ten" and insert in lieu thereof the word "twenty-eight."

The question was taken, and the amendment was rejected.

The Clerk read as follows:

Page 98, line 9, after the word "each," insert "said destroyers to be constructed within 15 months from the date of signing contracts."

The CHAIRMAN. The question is on agreeing to the amendment.

The question was taken, and the amendment was rejected.

The Clerk read as follows:

Page 98, line 14, strike out the word "twenty," and insert in lieu thereof the word "fifty."

Mr. BUTLER. Mr. Chairman, I will ask the gentleman from Tennessee whether or not it will be agreeable to have some debate on this submarine amendment.

Mr. PADGETT. I am willing.

Mr. BUTLER. I do not wish to interfere with the adjournment at 3 o'clock, but would 20 minutes on a side be agreeable to the gentleman?

Mr. PADGETT. That would run us beyond 3 o'clock.

Mr. BUTLER. Could we not finish it to-morrow? If we should agree to that time to be consumed on this amendment it would not interfere with adjournment although we might not finish it.

Mr. PADGETT. But I want to finish these amendments this afternoon.

Mr. BUTLER. If the gentleman will give us 20 minutes on the submarine——

Mr. PADGETT. I will agree to give the gentleman 20 minutes on that side, and I will take 10, and then we will vote on this amendment before we adjourn. That would run us to five minutes past 3.

Mr. MOORE of Pennsylvania. May I ask the gentleman from Tennessee if that will make it absolutely sure that the armor-plate amendment will not come up this afternoon?

Mr. PADGETT. Yes.

Mr. MANN. Mr. Chairman, I ask unanimous consent that the rest of the amendments be submitted in bulk except the amendment that has just been read.

Mr. PADGETT. I have no objection to that.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent that all pending amendments, except the one just read, shall be voted on at one time. Is there objection? [After a pause.] The Chair hears none.

Mr. PADGETT. Now, Mr. Chairman, I ask unanimous consent that debate on this amendment be limited to 30 minutes—20 minutes to be controlled by the gentleman from Pennsylvania [Mr. BUTLER], 10 minutes by myself, and then the vote be taken on the amendment before we adjourn.

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent that debate on the pending amendment be limited to 30 minutes—10 minutes to be controlled by himself and 20 minutes by the gentleman from Pennsylvania [Mr. BUTLER]. Is there objection?

Mr. MOORE of Pennsylvania. Reserving the right to object, will the gentleman from Tennessee indicate at this time whether he proposes to bring in the armor-plate proposition to-morrow?

Mr. PADGETT. I do, just as soon as these amendments are disposed of, before we take up other amendments.

Mr. MOORE of Pennsylvania. The present arrangement includes only the submarine amendment?

Mr. PADGETT. And a vote in bulk on the others.

Mr. MOORE of Pennsylvania. Individual Members will have a right to bring in their amendments in the morning?

Mr. PADGETT. Yes.

Mr. MOORE of Pennsylvania. About what time will the armor-plate proposition be brought in?

Mr. PADGETT. About 11.15.

The CHAIRMAN. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

Mr. BUTLER. Mr. Chairman, I yield 10 minutes to the gentleman from Massachusetts [Mr. ROBERTS].

Mr. ROBERTS of Massachusetts. Mr. Chairman, whatever our individual views may be as to the needs of the Navy, whether it shall be the greatest in the world or second place or a well-balanced Navy, I think we all agree that we want the shores of this country safe from invasion. [Applause.]

Now, what can we do quickly with a comparatively small expenditure of money to insure our safety from invasion? We do not need experts to form an opinion for us as to the value of the submarine. The daily press is telling us and has been telling us for 20 months past of the value of the submarine as a weapon of war. I have read through a list of warships that have been sunk by submarines in the course of the European war, and I find 6 battleships, 5 armored cruisers, 3 protected cruisers, 1 light cruiser, 2 auxiliary cruisers, 4 cruisers, 3 submarines, 4 torpedo boats, 1 mine layer, 2 gunboats, 5 transports, 5 destroyers, 1 scout, 2 armor-board vessels—all fighting ships of the enemy that have been sunk by submarines.

What is it that keeps the German fleet shut up in the Kiel Canal, that prevents it from operating in the North or the Baltic Seas? One thing, and one thing alone; not the great English fleet, but the English submarine. What is it that keeps the British fleet, the greatest in the world, in hiding behind a cloud of destroyers? Is it the German Navy? Not at all; it is the German submarine. What was it that drove the English fleet out of the Dardanelles waters? Was it the gunfire of the Turks? Was it the German Navy? No, indeed; two or three German submarines compelled the retirement of the British fleet from those waters.

I do not need an expert to inform me that the weapon that will drive a battle fleet out of these waters and keep it out will keep that same battle fleet from returning to those waters. And so I say that if we are to make our shores safe from invasion or attack by hostile fleets, give us plenty of submarines and I will guarantee that the submarine will keep any enemy fleet out of gunshot of the American coast. [Applause.]

And it will not only keep them out, but it will keep them from coming within gunshot of the American shores.

Mr. GREEN of Iowa. Mr. Chairman, will the gentleman yield?

Mr. ROBERTS of Massachusetts. If the gentleman will wait until I finish a few things I have to say. Mr. Chairman, we have had testimony before the committee as to the necessity of submarines and the necessity for them in great numbers. I am not going to read much, but I just want to read one statement from Admiral Benson, Chief of Operations in the Navy Department. He says, at page 3197, as to submarines:

As to submarines, I think we should build a large number of what we call the coast submarines, for coast defense—the smaller type. I am advocating the building of a great number of those, fully as many as we have recommended, and possibly more. I would rather see that appropriation for five-fleet submarines, exclusive of the three 800-ton submarines—or possibly altogether—used for coast submarines. I believe in building a large number of coast submarines as quickly as possible.

Again, Admiral Fletcher, when before the committee, in answer to the question of Mr. OLIVER, testified as follows:

Mr. OLIVER. If it were possible to build a sufficient number of submarines and torpedo-boat destroyers, and to have on hand a sufficient supply of mines and means for laying those mines rapidly, and likewise good coastal defenses, that would furnish, in connection with the fleet that we now have, pretty adequate defense against an attack from a foreign power to our naval yards and coasts, would it not?

Admiral FLETCHER. That would furnish the best means that you could get within the next two or three years.

And I submit to this committee that that is what the country is demanding to-day—the best defense that can be furnished in the quickest time to guard us from invasion. [Applause.] The question of a greater Navy is one that can be considered after our people feel that we are safe from invasion.

Mr. Chairman, had the majority of the committee, instead of putting into their bill five battle cruisers, put in place of it four battle cruisers, and taken the cost of one, that extra one, the fifth, $20,000,000, it could have added 32 coast-defense submarines to the number that is now in the bill.

Mr. SLAYDEN. Did the gentleman favor that?

Mr. ROBERTS of Massachusetts. I do favor that, and I want to call the attention of this committee also to the fact that the majority of the Naval Committee ignored the recommendation of the Secretary of the Navy in the matter of the number of submarines we should put in the bill. The Secretary recommended 25, which the committee voted down, and inserted instead 20. I say, and I repeat it, that the best and most efficient and quickest means of assured defense for the least expenditure of money, and requiring the smallest number of officers and men to man efficiently, is the submarine, and we are disregardful of the desires and the demands of this country and of our duties as legislators if we refuse to largely increase the number of submarines provided for in this year's bill.

Does the gentleman from Iowa wish to ask me a question?

Mr. GREEN of Iowa. Just a suggestion in the line of what the gentleman was already saying, as to what it was that stopped the British fleet in the North Sea battle. It was the submarine, according to reports.

Mr. ROBERTS of Massachusetts. Oh, there is no question whatever as to what the submarine is doing in this war abroad. There is no doubt that it is shutting up most of the British and most of the German fleets behind their safe shore defenses, because of their fear of the submarine if they take the open sea.

Mr. REILLY. Then, from the gentleman's knowledge and experience as a member of the Naval Committee, submarines will absolutely protect our coast from foreign invasion?

Mr. ROBERTS of Massachusetts. With the suitable mines and coast defenses I believe as firmly as I believe anything in this world that with a sufficient number—mind you, a sufficient number—of these coast submarines no enemy, even the most powerful naval nation on earth, can ever make a landing upon our shores. [Applause.]

Mr. EMERSON. How much do these submarines cost, and how long does it take to build one?

Mr. ROBERTS of Massachusetts. The gentleman asks what they cost. We are providing a cost of $625,000 each in this bill. The minority are attempting to insert a provision that they shall be built within 12 months. As to the speed with which they can be constructed, England had 20 built in this country and delivered in less than six months, and I believe and feel confident that if this Congress were to authorize 100 of this type they could all be built within 18 months, every one of them—built and delivered.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. ROBERTS of Massachusetts. Yes.

Mr. MOORE of Pennsylvania. This bill provides for 20 submarines, most of which are not to cost more than $625,000. The total cost of the 20 approximates $14,000,000. The bill appropriates $4,257,000 for that purpose.

Mr. ROBERTS of Massachusetts. That is for the first year's expenditure, and the balance will come along in succeeding appropriation bills.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.
